a. ABC first carries $400,000 of the hypothetical net operating loss[21] of $2,000,000 from 20X3 back to 20X0 recovering $132,000 in taxes paid. The difference between the total 20X0 taxes paid at 35% ($140,000) and the amount recoverable ($132,000) through carryback of the $400,000 represents an $8,000 AMT credit generated as a result of the 90% AMT net operating loss[22] limitation. This AMT credit is not treated as a new DTA as of 12-31-20X2. The remaining $1,600,000 of the hypothetical net operating loss ($2,000,000 – $400,000) is available for utilization in years 20X1 and 20X2.

b. ABC would carry an additional $600,000 of the remaining hypothetical net operating loss of $1,600,000 from 20X3 back to 20X1 recovering $198,000 in taxes paid.[23] The difference between the total taxes paid at 35% ($210,000) and the amount recoverable ($198,000) through carryback of the $600,000 represents a $12,000 AMT credit generated as a result of the 90% AMT NOL limitation. Again, this AMT credit is not treated as a new DTA as of 12-31-20X2. The remaining $1,000,000 of hypothetical net operating loss ($1,600,000 – $600,000) is available for utilization in 20X2.

c. ABC would carry the remaining $1,000,000 of the hypothetical net operating loss from 20X3 plus an additional $200,000 of the hypothetical net operating loss from 20X4 back to 20X2, recovering $396,000 in taxes projected to be paid.[24] The difference between the total taxes projected to be paid at 35% ($420,000) and the amount recoverable ($396,000) through carryback of the $1,200,000 represents a $24,000 AMT credit generated as a result of the 90% AMT NOL limitation. As noted previously, this AMT credit is not treated as a new DTA as of 12-31-20X2.

[21] It should be noted that if ABC's hypothetical 20X3 carryback was insufficient to fully offset all positive taxable income in 20X0, the company would not be allowed to carryback any of the hypothetical loss from 20X4 or 20X5 to 20X0 per paragraph 11.a., as 20X0 is outside of the timeframe corresponding with tax loss carryback provisions for a life insurance company.

[22] A life insurance company incurs an "operating loss deduction" rather than a "net operating loss". The term "net operating loss" or "NOL" will be used generically throughout this document to refer to any operating loss incurred or expected to be incurred by the reporting entity.

[23] If ABC would not have had sufficient hypothetical NOL from 20X3 to carryback to 20X1, the company would have been able to carryback its hypothetical NOL of $1,500,000 from 20X4 back to 20X1 pursuant to the applicable tax loss carryback provisions.

[24] If ABC would not have had sufficient hypothetical NOL from 20X4 to carryback to 20X2, the company would have been able to carryback is hypothetical NOL of $2,000,000 from 20X5 back to 20X2 pursuant to the applicable tax loss carryback provisions.

The fact that the full $5,500,000 of reversing deductible ordinary temporary differences available for carryback were not used in the paragraph 11.a. calculation does not prevent their inclusion in the paragraph 11.b. and 11.c. calculations.

2. ABC can admit $1,050,000 of adjusted gross DTAs under paragraph 11.b. Since ABC has an ExDTA ACL RBC ratio of 600%, the Realization Threshold Limitation Table provides that the company can use the thresholds of 3 years for projected realization and 15% of adjusted capital and surplus. The company expects to realize a federal income tax benefit of $1,925,000 ($5,500,000 X 35%) in 20X3 through 20X5 related to its reversing deductible temporary differences. The $1,925,000 amount must be reduced by the $726,000 of admitted adjusted gross DTAs under paragraph 11.a. to prevent double counting of the same income tax benefit. As a result, ABC has projected adjusted gross DTAs available for admission under this component of $1,199,000 ($1,925,000 – $726,000), all of which is ordinary in tax character. However, 15% of adjusted capital and surplus is a limiting factor in this example. As such, admission of reversing deductible temporary differences that are projected to be realized during 20X3 through 20X5 is limited to $1,050,000 ($7,000,000 X 15%).

3. ABC can admit $724,000 ($324,000 Ordinary, $400,000 Capital) of adjusted gross DTAs under paragraph 11.c. Even though ABC has $2,324,000 of adjusted gross DTAs available for admission under this component ($4,100,000 – $726,000 – $1,050,000) and only $1,400,000 DTLs, these DTAs are made up of $324,000 Ordinary DTAs ($2,100,000 – $726,000 – $1,050,000) and $2,000,000 of Capital DTAs. Thus, the tax character of the DTAs and DTLs becomes the limiting factor for this component. There is $1,000,000 of Ordinary DTLs available to offset against the $324,000 of Ordinary DTAs. There is $400,000 of Capital DTLs to offset against the $2,000,000 Capital DTAs. While ordinary DTAs can be offset against both ordinary and capital DTLs, the reverse is not allowed in the tax return (see Question 4.13). In this situation, ABC can admit $324,000 and $400,000 of its Ordinary and Capital DTAs, respectively.

4.19 Summary of ABC's Admitted Gross DTA Calculation:

Gross DTAs at Enacted Tax Rate		$4,375,000
Less: Statutory Valuation Allowance Adjustment		275,000
Adjusted Gross DTAs at Enacted Tax Rate		4,100,000
Admitted Gross DTAs (paragraph 11.a.)	$ 726,000	
Admitted Gross DTAs (paragraph 11.b.)	1,050,000	
Admitted Gross DTAs (paragraph 11.c.)	724,000	
Total Admitted Adjusted Gross DTAs(sum of 11.a., 11.b., and 11.c.)	2,500,000	(2,500,000)
Nonadmitted Adjusted Gross DTAs		1,600,000
Admitted DTA		2,500,000
Gross DTL		(1,400,000)
Net Admitted DTA/DTL		$1,100,000

4.20 Facts:

Financial Guaranty or Mortgage Guaranty Non-RBC Reporting Entity Example

1. Financial Guaranty Insurance Company DEF has the same facts as Life Insurance Company ABC except:

a. DEF is not an RBC reporting entity and therefore does not calculate an RBC percentage. DEF is a financial guaranty insurer and has an ExDTA Surplus plus Contingency Reserve/Required Aggregate Risk Capital ratio of 105%. This ratio represents the sum of surplus to policyholders (excluding any admitted DTA from 11.a.) plus contingency reserves divided by the minimum aggregate capital required.

b. DEF reported $1,000,000 of taxable income and $350,000 of tax expense on its 20X1 federal income tax return. It has also projected taxable income of $1,200,000 and $420,000 of federal income taxes for 20X2 that have been reflected in its current statutory income tax provision calculation. There are no differences between its regular and alternative minimum taxable income in 20X1 or 20X2.

4.21 Calculation of DEF's Admitted Adjusted Gross DTAs:

1. DEF can admit $726,000 ($330,000 + $396,000) of adjusted gross DTAs under paragraph 11.a, all of which are ordinary in tax character.

a. DEF first carries $1,000,000 of the hypothetical net operating loss[25] of $2,000,000 from 20X3 back to 20X1 recovering $330,000 in taxes paid. The difference between the total 20X1 taxes paid at 35% ($350,000) and the amount recoverable ($330,000) through carryback of the $1,000,000 represents a $20,000 AMT credit generated as a result of the 90% AMT net operating loss limitation. This AMT credit is not treated as a new DTA as of 12-31-20X2. The remaining $1,000,000 of the hypothetical net operating loss ($2,000,000 – $1,000,000) is available for utilization in 20X2.

b. DEF would carry the remaining $1,000,000 of the hypothetical net operating loss from 20X3 plus an additional $200,000 of the hypothetical net operating loss from 20X4 back to 20X2 recovering $396,000 in taxes projected to be paid.[26] The difference between the total taxes projected to be paid at 35% ($420,000) and the amount recoverable ($396,000) through carryback of the $1,200,000 represents a $24,000 AMT credit generated as a result of the 90% AMT net operating loss limitation. As noted previously, this AMT credit is not treated as a new DTA as of 12-31-20X2.

The fact that the full $3,500,000 of reversing deductible ordinary temporary differences available for carryback were not used in the paragraph 11.a. calculation does not prevent their inclusion in the paragraph 11.b. and 11.c. calculations.

2. DEF cannot admit any additional adjusted gross DTAs under paragraph 11.b. Since DEF has an ExDTA Surplus plus Contingency Reserves/Required Aggregate Risk Capital ratio of 105%, the Realization Threshold Limitation Table provides that the company can use the thresholds of 1 year for projected realization and 10% of adjusted capital and surplus. The company expects to realize a federal income tax benefit of $700,000 ($2,000,000 X 35%) in 20X3 related to its reversing deductible temporary differences. The $700,000 amount must be reduced by the $726,000 of admitted adjusted gross DTAs under paragraph 11.a. to prevent double counting of the same income tax benefit. DEF admitted $26,000 more adjusted gross DTAs based on carryback of the hypothetical net operating loss under paragraph 11.a. than is

[25] It should be noted that if DEF's hypothetical 20X3 carryback was insufficient to fully offset all positive taxable income in 20X1, the company would not be allowed to carryback any of the hypothetical loss from 20X4 or 20X5 to 20X1 per paragraph 11.a., as 20X1 is outside of the timeframe corresponding with tax loss carryback provisions for a non-life insurance company.

[26] If DEF would not have had sufficient hypothetical NOL from 20X3 to carryback to 20X2, the company would have been able to carryback is hypothetical NOL of $1,500,000 from 20X4 back to 20X2 pursuant to the applicable tax loss carryback provisions.

projected to be realized within the 1-year applicable threshold limitation. As a result, there is $0 of expected additional reversing deductible differences available for admission under paragraph 11.b.

3. DEF can admit $1,400,000 ($1,000,000 Ordinary, $400,000 Capital) of adjusted gross DTAs under paragraph 11.c. Even though DEF has $3,374,000 of adjusted gross DTAs available for admission under this component ($4,100,000 – $726,000), these DTAs are made up of $1,374,000 Ordinary DTAs ($2,000,000 – $726,000) and $2,000,000 of Capital DTAs. Thus, the tax character of the DTAs and DTLs must be considered as a potential limiting factor for this component. There is $1,000,000 of Ordinary DTLs to offset against the $1,374,000 of Ordinary DTAs. There is $400,000 of Capital DTLs to offset against the $2,000,000 Capital DTAs. While Ordinary DTAs can be offset against both Ordinary and Capital DTLs, the reverse is not allowed in the tax return (see Question 4.13). In this situation, DEF can admit $1,000,000 and $400,000 of its Ordinary and Capital DTAs, respectively. If DEF's adjusted gross DTAs, after reduction for the amount of adjusted gross DTAs admitted under paragraphs 11.a. and 11.b., were less than $1,400,000 in this example, DEF would be limited to the balance of its adjusted gross DTAs in the paragraph 11.c. calculation, subject to the rules of offset under existing enacted federal income tax laws and regulations.

4.22 Summary of DEF's Admitted Gross DTA Calculation:

Gross DTAs at Enacted Tax Rate		$4,375,000
Less: Statutory Valuation Allowance Adjustment		275,000
Adjusted Gross DTAs at Enacted Tax Rate		4,100,000
Admitted Gross DTAs (paragraph 11.a.)	$ 726,000	
Admitted Gross DTAs (paragraph 11.b.)	0	
Admitted Gross DTAs (paragraph 11.c.)	1,400,000	
Total Admitted Adjusted Gross DTAs (sum of 11.a., 11.b. and 11.c.)	2,126,000	(2,126,000)
Nonadmitted Adjusted Gross DTAs		1,974,000
Admitted DTA		2,126,000
Gross DTL		(1,400,000)
Net Admitted DTA/DTL		$726,000

4.23 Facts:

Other Non-RBC Reporting Entity Example

1. Title Insurance Company GHI has the same facts as Life Insurance Company ABC except:

a. GHI is not a RBC reporting entity and therefore does not calculate a RBC percentage. GHI is also not a financial guaranty or mortgage guaranty insurer. As such, GHI must use the Other Non-RBC Reporting Entity Threshold Limitation Table under paragraph 11.b.

b. GHI reported $1,000,000 of taxable income and $350,000 of tax expense on its 20X1 federal income tax return. It has also projected taxable income of $1,200,000 and $420,000 of federal income taxes for 20X2 that have been reflected in its current statutory income tax provision calculation. There are no differences between its regular and alternative minimum taxable income in 20X1 or 20X2.

4.24 Calculation of GHI's Admitted Adjusted Gross DTAs:

1. GHI can admit $726,000 ($330,000 + $396,000) of adjusted gross DTAs under paragraph 11.a, all of which are ordinary in tax character.

a. GHI first carries $1,000,000 of the hypothetical net operating loss[27] of $2,000,000 from 20X3 back to 20X1 recovering $330,000 in taxes paid. The difference between the total 20X1 taxes paid at 35% ($350,000) and the amount recoverable ($330,000) through carryback of the $1,000,000 represents a $20,000 AMT credit generated as a result of the 90% AMT net operating loss limitation. This AMT credit is not treated as a new DTA as of 12-31-20X2. The remaining $1,000,000 of the hypothetical net operating loss ($2,000,000 – $1,000,000) is available for utilization in 20X2.

b. GHI would carry the remaining $1,000,000 of the hypothetical net operating loss from 20X3 plus an additional $200,000 of the hypothetical net operating loss from 20X4 back to 20X2 recovering $396,000 in taxes projected to be paid.[28] The difference between the total taxes projected to be paid at 35% ($420,000) and the amount recoverable ($396,000) through carryback of the $1,200,000 represents a $24,000 AMT credit generated as a result of the 90% AMT net operating loss limitation. As noted previously, this AMT credit is not treated as a new DTA as of 12-31-20X2.

The fact that the full $3,500,000 of reversing deductible ordinary temporary differences available for carryback were not used in the paragraph 11.a. calculation does not prevent their inclusion in the paragraph 11.b. and 11.c. calculations.

2. GHI can admit $1,050,000 of adjusted gross DTAs under paragraph 11.b. Since GHI has an Adjusted Gross DTA to Adjusted Capital and Surplus ratio of 48% ($3,374,000/$7,000,000), the Realization Threshold Limitation Table provides that the company can use the thresholds of 3 years for projected realization and 15% of adjusted capital and surplus. The company expects to realize a federal income tax benefit of $1,925,000 ($5,500,000 X 35%) in 20X3 through 20X5 related to its reversing deductible temporary differences. The $1,925,000 amount must be reduced by the $726,000 of admitted adjusted gross DTAs under paragraph 11.a. to prevent double counting of the same income tax benefit. As a result, GHI has projected adjusted gross DTAs available for admission under this component of $1,199,000 ($1,925,000 – 726,000), all of which is ordinary in tax character. However, 15% of adjusted capital and surplus is a limiting factor in this example. As such, admission of reversing deductible temporary differences that are projected to be realized during 20X3 through 20X5 is limited to $1,050,000 ($7,000,000 X 15%).

3. GHI can admit $724,000 ($324,000 Ordinary, $400,000 Capital) of adjusted gross DTAs under paragraph 11.c. Even though GHI has $2,324,000 of adjusted gross DTAs available for admission under this component ($4,100,000 – $726,000 – $1,050,000), these DTAs are made up of $324,000 Ordinary DTAs ($2,000,000 – $726,000 – $1,050,000) and $2,000,000 of Capital DTAs. Thus, the tax character of the DTAs and DTLs becomes the limiting factor for this component. There is $1,000,000 of Ordinary DTLs available to offset against the $324,000 of

[27] It should be noted that if GHI's hypothetical 20X3 carryback was insufficient to fully offset all positive taxable income in 20X1, the company would not be allowed to carryback any of the hypothetical loss from 20X4 or 20X5 to 20X1 per paragraph 11.a., as 20X1 is outside of the timeframe corresponding with tax loss carryback provisions for a non-life insurance company.

[28] If GHI would not have had sufficient hypothetical NOL from 20X3 to carryback to 20X2, the company would have been able to carryback is hypothetical NOL of $1,500,000 from 20X4 back to 20X2 pursuant to the applicable tax loss carryback provisions.

Ordinary DTAs. There is $400,000 of Capital DTLs to offset against the $2,000,000 Capital DTAs. While ordinary DTAs can be offset against both ordinary and capital DTLs, the reverse is not allowed in the tax return (see Question 4.13). In this situation, GHI can admit $324,000 and $400,000 of its Ordinary and Capital DTAs, respectively.

4.25 Summary of GHI's Admitted Gross DTA Calculation:

Gross DTAs at Enacted Tax Rate		$4,375,000
Less: Statutory Valuation Allowance Adjustment		275,000
Adjusted Gross DTAs at Enacted Tax Rate		4,100,000
Admitted Gross DTAs (paragraph 11.a.)	$ 726,000	
Admitted Gross DTAs (paragraph 11.b.)	1,050,000	
Admitted Gross DTAs (paragraph 11.c.)	724,000	
Total Admitted Adjusted Gross DTAs (sum of 11.a., 11.b. and 11.c.)	2,500,000	(2,500,000)
Nonadmitted Adjusted Gross DTAs		1,600,000
Admitted DTA		2,500,000
Gross DTL		(1,400,000)
Net Admitted DTA/DTL		$1,100,000

4b. Q – How is the ExDTA ACL RBC ratio calculated? [Paragraph 11.b.i.]

4.26 A – The December 31 ExDTA ACL RBC ratio is calculated in the same manner as in the ACL RBC Ratio computed in the Annual RBC Report, where Total Adjusted Capital (TAC) is divided by ACL RBC. However, for purposes of paragraph 11.b.i., TAC does not include any DTAs of the reporting entity. The ACL RBC would be the amount calculated in the Annual RBC Report.

4.27 The interim period (March 31, June 30, and September 30) ExDTA ACL RBC ratio calculation is discussed in 4.29-4.33.

4.28 For all companies, the TAC will include current period capital and surplus, excluding any DTAs of the reporting entity. Other TAC adjustments are dependent on whether the company is a Life, P&C or Health insurer.

4.29 For life companies, the AVR adjustment is calculated as a required part of the development of capital and surplus each quarter, and is one of the major adjustments to TAC (added back to surplus). As noted on the illustrative interim TAC calculation in 4.33 for life companies, there are other TAC adjustments such as subsidiaries' dividend liabilities, etc., that are drawn from the Quarterly Statement.

4.30 For P&C and Health companies, except for the AVR and life subsidiaries' dividend liability amounts (both of which are only applicable to P&C companies with life subsidiaries), which are readily available on the quarter, the prior year's annual TAC adjustments should be used in the current quarter's TAC calculation. The P&C and Health interim TAC illustrations in 4.33 provide example details of various interim RBC TAC adjustments.

4.31 The ACL RBC used for the interim RBC calculation is the ACL RBC from the most recently filed Annual Statement for the most recent calendar year. For example, for June 30, 20X3, the ACL for the interim RBC calculation is taken from the 20X2 RBC Report based on the 20X2 Annual Statement.

4.32 In most instances, the prior year's annual ACL RBC will suffice. A company should only revise its interim ACL RBC for a material change in its risk profile when requested to do so by its domiciliary state or subject to domiciliary state approval.

4.33 The above principles are illustrated below:

Interim Life RBC Example					
Based on the 2011 Life RBC Report page LR033					
		Reported		Interim Period	
	SOURCE OF THE DATA	12/31/20X2		3/31/20X3	
Capital and Surplus	P3, L38	$1,800,000,000		$1,700,000,000	
Adjustments:

Total Adjusted Capital ExDTA/ Authorized Control Level Risk-Based Capital		449%		405%	
* ACL RBC amount for interim period is the 12/31/20X2 amount					

4c. Q – What is meant by the phrase "an amount that is no greater than"? [Paragraph 11.b.ii.]

4.34 A – As discussed in 4.11 the amount of admitted adjusted gross DTAs under paragraph 11.b.i. is also limited to an amount that is no greater than the applicable percentage of statutory capital and surplus test specified in paragraph 11.b.ii. For purposes of this test, statutory capital and surplus as shown on the statutory balance sheet of the reporting entity for the current period's statement filed with the domiciliary state commissioner is adjusted to exclude any net DTAs, EDP equipment and operating system software and any net positive goodwill.

4.35 The phrase "an amount that is no greater than" in paragraph 11.b.ii. allows an entity to utilize an amount lower (e.g., from the reporting entity's most recently filed statement) than what would be allowed if it utilized the amount of statutory capital and surplus adjusted to exclude any net DTAs, EDP equipment and operating system software and any net positive goodwill as required to be shown on the statutory balance sheet of the reporting entity for the current period's statement filed with the domiciliary state commissioner. This ability to utilize a lower amount is for administrative ease if a reporting entity's surplus is increasing.

4.36 For example, at 12/31/20X2 if adjusted capital and surplus is $100M and at 9/30/20X2 it was $80M, the entity may utilize the $80M amount from the prior quarter.

4.37 If instead 12/31/20X2 adjusted capital and surplus were $60M, the entity may not utilize the $80M amount from the prior quarter as that would overstate the limitation under paragraph 11.b.ii.

4.38 If at 12/31/20X2 an entity's adjusted capital and surplus was initially determined to be $150M, the entity can still utilize that amount under paragraph 11.b.ii., if there is a late accounting adjustment that increases that amount to $160M.

5a. Q – How is the timing of reversals of temporary differences and carryforwards determined for SSAP No. 101 purposes? [Paragraphs 7, 11.a., 11.b.i. and 12.a.]

5.1 A – The timing of temporary difference reversals is critical in determining the amount of admitted adjusted gross DTAs. Determining the reversal of temporary differences impacts the adjusted gross DTA admitted pursuant to paragraphs 11.a., 11.b.i. and potentially 11.c. of SSAP No. 101.

5.2 Paragraph 12.a. of SSAP No. 101 states that "For purposes of paragraph 11.a., existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years, shall be determined in accordance with paragraphs 228 and 229 of FAS 109." The timing of reversals of temporary differences and carryforwards for purposes of paragraph 11.b. of SSAP No. 101 shall be determined under similar principles.

5.3 Paragraph 228 of FAS 109 states, in pertinent part, that "[t]he particular years in which temporary differences result in taxable or deductible amounts generally are determined by the timing of the recovery of the related asset or settlement of the related liability." Question 1 of the FASB's Special Report on Statement 109 provides additional guidance on scheduling. It defines "scheduling" as the analysis performed to determine the pattern and timing of the reversal of temporary differences. It also provides certain guidelines to be followed, including the need for the method employed to be systematic and logical, that a consistent method be used for each category of temporary differences, and that a change in the method used be considered a change in accounting principle.

5.4 Assume Company A purchases its only asset for $1,000, an asset that is admissible for statutory accounting purposes and depreciated over five years on a straight-line basis. Assume also that the asset is depreciated over seven years for tax purposes using the Modified Accelerated Cost Recovery System (MACRS). The following table summarizes the statutory and tax basis of the asset at the end of each year.

Year	Cost	Statutory Depreciation	Statutory Basis	Tax Depreciation	Tax Basis	Deductible/ (Taxable) Temporary Difference
1	$1,000	$200	$800	$143	$857	$57
2	-	200	600	245	612	12
3	-	200	400	175	437	37
4	-	200	200	125	312	112
5	-	200	-	89	223	223
6	-	-	-	89	134	134
7	-	-	-	89	45	45
8	-	-	-	45[29]	-	-

5.5 At the end of year one, the Company would conclude that $45 ($57 - $12) of the $57 outstanding deductible temporary difference would reverse within one year, leaving a temporary difference of $12 at the end of year two. However, for computing a two or three year reversal, the Company would not project a reversal of the temporary difference by the end of year three or four as the deductible temporary difference is scheduled to increase (from $12 to $37 and from $37 to $112, respectively). If the Company had decided to sell the asset in year two, it may be appropriate to conclude that the outstanding deductible temporary difference of $57 would reverse in year two.

5.6 A similar rationale would apply in the instance of a nonadmitted asset. Assume the same facts as aforementioned, except that the asset is nonadmitted for statutory accounting purposes. The results are summarized in tabular form below.

[29] Due to the mid-year convention applicable to most asset acquisitions for tax purposes, the asset is treated as acquired in mid-year, meaning that a seven (7) year asset is depreciated over eight (8) tax years.

Year	Cost	Statutory Charge to Surplus	Statutory Basis	Tax Depreciation	Tax Basis	Deductible/ (Taxable) Temporary Difference
1	$1,000	$1,000	-	$143	$857	$857
2	-	-	-	245	612	612
3	-	-	-	175	437	437
4	-	-	-	125	312	312
5	-	-	-	89	223	223
6	-	-	-	89	134	134
7	-	-	-	89	45	45
8	-	-	-	45	-	-

5.7 In this example, the Company has a steady decline in the deductible temporary difference that is not complicated by competing depreciation regimes. This is due to the fact that the Company took the large surplus charge when the asset was nonadmitted, thereby creating a significant deductible temporary difference. The Company would project a $245 temporary difference reversal in year two (from $857 to $612), a $175 temporary difference reversal in year three (from $612 to $437), and a $125 temporary difference reversal in year four (from $437 to $312). Although the Company will take income statement charges for depreciation on the nonadmitted asset, the statutory basis is nonetheless zero from the moment the asset was nonadmitted. Future statutory depreciation deductions will not impact the statutory basis and have no impact on the analysis.

5.8 The above examples assume a single asset. However, the analysis becomes more complicated when the Company has hundreds or thousands of assets within its fixed asset pool. In this instance, it is expected that management will make its best estimate of the expected reversal pattern determined in a manner consistent with the grouping for measurement (see question 2 for more discussion about grouping).

5.9 As indicated above, the timing of the reversal of a particular balance sheet item will depend on the expected recovery of the related asset and liability. For example, the temporary difference associated with property & casualty loss reserves would be expected to reverse in a manner consistent with the payout pattern ("development") of the underlying loss reserves. Historical loss development triangles may be useful in substantiating a reversal pattern. For instance, assume Company A writes two types of property and casualty policies: auto liability and workers' compensation. The following table details the components of the statutory and tax reserves for Company A as of December 31, 20X2.

Private Passenger Auto Liability	Statutory Reserves	Tax Reserves	Temporary Difference
AY + 0	$1,000	$900	$100
AY + 1	850	690	160
AY + 2	700	580	120
AY + 3	550	490	60
AY + 4	400	385	15
AY + 5	300	275	25
AY + 6	200	175	25

AY + 7	100	90	10
AY + 8	80	75	5
AY + 9	70	65	5
Prior	50	45	5
Total	$4,300	$3,770	$530

Workers' Compensation	**Statutory Reserves**	**Tax Reserves**	**Temporary Difference**
AY + 0	$1,000	$825	$175
AY + 1	900	800	100
AY + 2	850	770	80
AY + 3	790	695	95
AY + 4	725	610	115
AY + 5	695	600	95
AY + 6	655	575	80
AY + 7	605	545	60
AY + 8	575	505	70
AY + 9	550	495	55
Prior	505	450	55
Total	$7,850	$6,870	$980

5.10 One option in analyzing the reversal of the temporary difference would be to calculate the historical loss development patterns for the two lines of business by accident year for each year in the applicable reversal period. By applying these development patterns to the individual temporary differences, the Company could estimate the expected reversal of the temporary difference as a whole for each year in the applicable reversal period.

5.11 Another option would be to apply the average development factor by line of business to each reserve for each year in the applicable reversal period. If the average one-year development factor for all accident years for auto liability and workers' compensation were 70% and 35%, respectively, the one-year temporary difference reversal would be $371 ($530 x 70%) for auto liability and $343 ($980 x 35%) for workers' compensation. The same approach could be used in determining the reversal for any other year in the applicable reversal period.

5.12 The temporary difference related to property and casualty unearned premiums is typically twenty percent (20%) of the outstanding statutory unearned premium reserve. If a company issues only one-year policies, it is reasonable to assume that the entire temporary difference will reverse in one year. If a company writes multi-year contracts, management will be required to estimate the percentage of the unearned premium that will be earned within each year of the applicable reversal period and apply these percentages to the outstanding temporary difference.

5.13 The reversal of the temporary difference related to life insurance reserves may require actuarial assistance, normally involving anticipated development of the statutory and tax reserves for policies issued prior to the end of the current reporting year. In computing the anticipated development, it would be expected that reasonable assumptions be used, which may include cash-flow modeling of the entity's reserves. Deferred acquisition costs on life insurance policies are amortized over prescribed periods pursuant to federal tax law. The amortization schedules should provide management with the ability to estimate the reversal for each year in the applicable reversal period with reasonable accuracy.

5.14 For those temporary differences that do not have a defined reversal period, such as unrealized losses on common stock or deferred compensation liabilities, management will need to determine when the temporary difference is "expected" to reverse. For instance, assume a company has an unrealized loss of $200 in its equity portfolio and that, on average, the portfolio turns over twenty-percent (20%) per year. It would be appropriate for the company to conclude that $40 of the temporary difference will reverse in each year in the applicable reversal period. When determining when the temporary difference would be "expected" to reverse, management should normally take into account events that are likely to occur using information, facts and circumstances in existence as of the reporting date. The estimates used in this circumstance should not be extended to other tests of impairment. For instance, when the entity assumed a 20% turnover in its equity portfolio, it is not involuntarily required to record an impairment in accordance with paragraph 9 of SSAP No. 30—*Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)*.

5.15 In summary, the methodology used to develop the reversal pattern should be consistent, systematic, and rational. Although consistency is encouraged, business conditions may dictate that certain factors be given more or less weight than in previous periods. Factors to be considered include historical patterns, recent trends, and the likely impact of future initiatives (without regard to future originating temporary differences). For instance, if a company has migrated to a more efficient claims management system, outstanding reserves may be settled more quickly than historical payment patterns may indicate. A company that expects to enter into a loss portfolio transfer reinsurance transaction should consider the implications of that treaty in determining the reversal of the loss reserve temporary difference.

5b. Q – How **should future originating differences impact the scheduling of temporary difference reversals during the applicable period? [Paragraphs 11.a., 11.b.i., 11.c. and 12.a]**

5.16 A – Future originating differences, and their subsequent reversals, are considered in assessing the existence of future taxable income. However, they should not impact the scheduling of existing temporary difference reversals during the applicable period. Paragraph 229 of FAS 109 provides the following:

> 229. For some assets or liabilities, temporary differences may accumulate over several years and then reverse over several years. That pattern is common for depreciable assets. Future originating differences for existing depreciable assets and their subsequent reversals are a factor to be considered when assessing the likelihood of future taxable income (paragraph 21(b)) for realization of a tax benefit for existing deductible temporary differences and carryforwards.

6. Q – What is meant by the phrase "expected to be realized"? [Paragraph 11.b.i.]

6.1 A – A reporting entity calculates the amount of its adjusted gross DTAs and gross DTLs under paragraph 7 using the enacted tax rate. The amount of adjusted gross DTAs and gross DTLs is not recalculated under paragraph 11. The purpose of paragraph 11 is to determine the amount of adjusted gross DTAs that can be admitted in the reporting period.

6.2 An excerpt of SSAP No. 4 – *Assets and Nonadmitted Assets* indicates:

> 2. For purposes of statutory accounting, an asset shall be defined as: probable[30] future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.

6.3 The phrase "expected to be realized" encompasses a reasonable expectation as to the value of the DTAs consistent with SSAP No. 4. This means that if a reporting entity's management expects that deductible temporary differences that reverse in the applicable period will produce a federal income tax benefit at a rate that is lower than the enacted rate, the expected rate should be taken into consideration in

[30] *FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements* (CON 6) states, "Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, Accounting for Contingencies, par. 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved."

the determination of the amount of admitted adjusted gross DTAs under paragraph 11.b.i. In other words, available evidence causes the reporting entity to expect the asset to be realized at less than the enacted rate. In such cases, it would not be appropriate to calculate the amount of admitted adjusted gross DTAs under paragraph 11.b.i. on the basis of reversing deductible temporary differences at the enacted tax rate.

6.4 The following examples illustrate situations where the amount of admitted adjusted gross DTAs under paragraph 11.b.i. would be less than the adjusted gross DTAs calculated using deductible temporary differences reversing in the applicable period at the enacted income tax rate. The approach in these examples is to determine the tax savings that the company would expect to realize from its reversing deductible temporary differences. This is accomplished through a calculation of the company's income tax liability "with and without" these temporary differences. It is assumed that in these examples there are no prudent and feasible tax-planning strategies that would cause the entity to expect the asset to be realized at a rate different than that presented in the examples.

Example 1:

6.5 P&C has a significant portion of its investment portfolio in municipal bonds. It is estimating regular taxable income to be $6,000,000 in 20X3, $4,000,000 in 20X4, and $5,000,000 in 20X5. Included in these amounts are $10,000,000 ($8,500,000 net of 15% "proration") of excluded tax-exempt interest per year and $2,000,000 of reversing deductible temporary differences per year that were included in P&C's deferred inventory at 12/31/X2. The Company's ExDTA ACL RBC percentage is 700% and therefore required to use the three-year applicable period under paragraph 11.b.i.

20X3	**Without Reversing Temporary Differences**		**With Reversing Temporary Differences**	
	Regular Tax	AMT	Regular Tax	AMT
Regular Taxable Income	$8,000,000	$8,000,000	$8,000,000	$8,000,000
AMT/ACE Adjustment		6,375,000[31]		6,375,000
Reversing Temporary Differences			(2,000,000)	(2,000,000)
Taxable Income	8,000,000	14,375,000	6,000,000	12,375,000
Tax (35% regular/20% AMT)	2,800,000	2,875,000	2,100,000	2,475,000
Tax Liability	$2,800,000	75,000	$2,100,000	375,000
Total Tax		$2,875,000		$2,475,000

20X4	**Without Reversing Temporary Differences**		**With Reversing Temporary Differences**	
	Regular Tax	AMT	Regular Tax	AMT
Regular Taxable Income	$6,000,000	$6,000,000	$6,000,000	$6,000,000
AMT/ACE Adjustment		6,375,000		6,375,000
Reversing Temporary Differences			(2,000,000)	(2,000,000)
Taxable Income	6,000,000	12,375,000	4,000,000	10,375,000
Tax (35% regular/20% AMT)	2,100,000	2,475,000	1,400,000	2,075,000
Tax Liability	$2,100,000	375,000	$1,400,000	675,000
Total Tax		$2,475,000		$2,075,000

[31] $10,000,000 x 85% x 75%

20X5	Without Reversing Temporary Differences		With Reversing Temporary Differences	
	Regular Tax	AMT	Regular Tax	AMT
Regular Taxable Income	$7,000,000	$7,000,000	$7,000,000	$7,000,000
AMT/ACE Adjustment		6,375,000		6,375,000
Reversing Temporary Differences			(2,000,000)	(2,000,000)
Taxable Income	7,000,000	13,375,000	5,000,000	11,375,000
Tax (35% regular/20% AMT)	2,450,000	2,675,000	1,750,000	2,275,000
Tax Liability	$2,450,000	225,000	$1,750,000	525,000
Total Tax		$2,675,000		$2,275,000

Total[32]	Without Reversing Temporary Differences		With Reversing Temporary Differences	
	Regular Tax	AMT	Regular Tax	AMT
Regular Taxable Income	$21,000,000	$21,000,000	$21,000,000	$21,000,000
AMT/ACE Adjustment		19,125,000		19,125,000
Reversing Temporary Differences			(6,000,000)	(6,000,000)
Taxable Income	21,000,000	40,125,000	15,000,000	34,125,000
Tax (35% regular/20% AMT)	7,350,000	8,025,000	5,250,000	6,825,000
Tax Liability	$7,350,000	675,000	$5,250,000	1,575,000
Total Tax		$8,025,000		$6,825,000

6.6 Over the three-year applicable period, the reversing deductible temporary differences of $6,000,000 are expected to save P&C income taxes at a rate of 20% or $1,200,000 ($8,025,000 – $6,825,000). The remaining 15% tax benefit represents an additional AMT credit carryover of $900,000 ($1,575,000 – $675,000). Therefore, P&C's admitted adjusted gross DTAs under paragraph 11.b.i., before reduction for any admitted adjusted gross DTAs under paragraph 11.a. would be $1,200,000, which is less than the amount of its adjusted gross DTAs of $2,100,000 ($6,000,000 x 35%) on reversing deductible temporary differences at the enacted rate. However, the $900,000 difference generated by the 15% (35% - 20%) rate differential under paragraph 11.b.i. would be taken into account in the paragraph 11.c. calculation as part of the amount of adjusted gross DTAs, after application of paragraphs 11.a. and 11.b., that can be offset against existing gross DTLs.

6.7 In the above example, if P&C were to be in a regular tax liability during 20X5 (i.e. a year in the applicable period subsequent to the creation of the 20X3 and 20X4 AMT credit carryovers), these credit carryovers may be utilized in determining the 20X5 with and without calculation. This utilization must be within the applicable period and would be limited to the amount allowed under tax law. In Example 1, assuming full utilization of the 20X3 and 20X4 carryovers, in 20X5 the admitted adjusted gross DTAs under paragraph 11.b.i. (before reduction for any admitted adjusted gross DTAs under paragraph 11.a.) would then be equal to the $2,100,000 adjusted gross DTAs on the $6,000,000 of reversing deductible temporary differences because the AMT credit is both generated and fully utilized in the applicable period.

Example 2:

6.8 SL is a small life insurance company with projected assets of less than $500 million at the end of 20X3. SL also estimates that its 20X3 taxable income before the small life insurance company deduction (SLICD) will be $1,300,000. Included in this amount is $400,000 of reversing deductible temporary items

[32] The totals are provided for illustration purposes only. The calculations are required to be performed individually each year.

that were part of SL's deferred inventory at 12/31/X2. The Company's ExDTA ACL RBC percentage is 250% and therefore it is required to use the one-year applicable period under paragraph 11.b.i.

20X3	**Without Reversing Temporary Differences**		**With Reversing Temporary Differences**	
	Regular Tax	AMT	Regular Tax	AMT
Regular Taxable Income before SLICD	$1,700,000	$1,700,000	$1,700,000	$1,700,000
Reversing Temporary Differences			(400,000)	(400,000)
Net	1,700,000	1,700,000	1,300,000	1,300,000
Small Life Insurance Company Deduction (60%)	(1,020,000)	(1,020,000)	(780,000)	(780,000)
AMT/ACE Adjustment (75% of SLICD)		765,000		585,000
Taxable Income	680,000	1,445,000	520,000	1,105,000
Tax (35% regular/20% AMT)	238,000	289,000	182,000	221,000
Tax Liability	$238,000	51,000	$182,000	39,000
Total Tax		$289,000		$221,000

6.9 Since SL is a small life insurance company with less than $3 million of taxable income before the small life insurance company deduction, it is taxed at an effective federal income tax rate of 17%. The $400,000 of reversing deductible temporary differences in 20X3 is expected to save SL $68,000 ($289,000 - $221,000) in federal income taxes at the 17% rate. The tax savings represents a reduction in regular taxes of $56,000 and AMT taxes of $12,000. Under paragraph 11.b.i., SL would admit adjusted gross DTAs of $68,000, before reduction for any adjusted gross DTAs admitted under paragraph 11.a. Any unused amount of adjusted gross DTAs related to the 18% (35% - 17%) rate differential under paragraph 11.b.i. would be taken into account under paragraph 11.c. as part of the amount of adjusted gross DTAs, after reduction for adjusted gross DTAs admitted under paragraphs 11.a. and 11.b., that can be offset against existing gross DTLs. This same approach would be used in 20X4 and 20X5, if the Company instead qualified for the three-year applicable period under paragraph 11.b.i.

Example 3:

6.10 BCBS is a Blue Cross/Blue Shield Organization that expects to fully offset its regular taxable income with available section 833 (b) deductions in 20X2. Prior to considering the section 833 (b) deduction, BCBS projects $8,000,000 of taxable income in 20X3, which includes $3,000,000 of reversing deductible temporary differences that were part of its deferred inventory at 12/31/X2. The Company's ExDTA ACL RBC percentage is 250% and therefore it is required to use the one-year applicable period under paragraph 11.b.i.

20X3	**Without Reversing Temporary Differences**		**With Reversing Temporary Differences**	
	Regular Tax	AMT	Regular Tax	AMT
Regular Taxable Income Before 833(b)	$11,000,000	$11,000,000	$11,000,000	$11,000,000
Reversing Temporary Differences			(3,000,000)	(3,000,000)
Net	11,000,000	11,000,000	8,000,000	8,000,000
Section 833 (b) Deduction	(11,000,000)		(8,000,000)	
Taxable Income	0	11,000,000	0	8,000,000
Tax (35% regular/20% AMT)	0	2,200,000	0	1,600,000
Tax Liability	$0	2,200,000	$0	1,600,000
		$2,200,000		$1,600,000

6.11 BCBS has a 0% effective tax rate on regular taxable income in 20X3 and is taxed at 20% for AMT. Its regular taxable income is $0, both "with and without" the $3,000,000 reversing deductible temporary differences since the section 833 (b) deduction changes by an equal amount. The $600,000 reduction in AMT tax liability related to the $3,000,000 reversing deduction temporary differences is expected to generate a 20% tax savings in 20X3. Therefore, BCBS would admit $600,000 of adjusted gross DTAs under paragraph 11.b.i., before reduction for any adjusted gross DTAs admitted under paragraph 11.a. Any unused amount of adjusted gross DTAs related to the 15% (35% - 20%) rate differential under paragraph 11.b.i. would be taken into account under paragraph 11.c. as part of the amount of adjusted gross DTAs, after reduction for adjusted gross DTAs admitted under paragraphs 11.a. and 11.b., that can be offset against existing gross DTLs. The same approach would be used in 20X4 and 20X5 if the Company instead qualified for the three-year applicable period under paragraph 11.b.i.

Example 4:

6.12 ABC insurance company is projecting an income tax loss in 20X3 of $20,000,000, which includes $5,000,000 of reversing deductible temporary differences that were part of its deferred inventory at 12/31/X2. ABC expects to pay $0 federal income taxes in 20X3 for both regular and AMT tax purposes as a result of its tax loss. The Company's ExDTA ACL RBC percentage is 250% and therefore, it is required to use the one-year applicable period under paragraph 11.b.i.

20X3	**Without Reversing Temporary Differences**		**With Reversing Temporary Differences**	
	Regular Tax	AMT	Regular Tax	AMT
Regular Taxable Income (Loss)	($15,000,000)	($15,000,000)	($15,000,000)	($15,000,000)
Reversing Temporary Differences			(5,000,000)	(5,000,000)
Taxable Income (Loss)	(15,000,000)	(15,000,000)	(20,000,000)	(20,000,000)
Tax (35% regular/20% AMT)	$0	$0	$0	$0

6.13 In 20X3, ABC expects to realize no tax benefit related to the $5,000,000 of reversing deductible temporary differences since they simply increase the amount of an NOL. Its expected income tax rate for 20X3 would be 0% and ABC would have $0 admitted adjusted gross DTAs under paragraph 11.b.i. However, if some or all of the reversing temporary differences could be absorbed in the carryback period, ABC would have an admitted adjusted gross DTA under paragraph 11.a.[33] The adjusted gross DTAs of $1,750,000 ($5,000,000 x 35%), related to ABC's reversing temporary differences, would also be available as part of its total adjusted gross DTAs, after reduction for adjusted gross DTAs admitted under paragraphs 11.a. and 11.b., that can be offset against gross DTLs in the paragraph 11.c. calculation.

6.14 If a company qualified to utilize the three-year applicable period under paragraph 11.b.i. and within that applicable period forecasted a taxable loss in one or more of the years and taxable income in the other years, the loss may be utilized in determining the with and without calculation. This loss utilization must be within the applicable period and would be limited to the amount allowed to be carried back or carried forward under applicable tax law.

7. Q – SSAP No. 101 provides that a reporting entity may admit deferred tax assets in an amount equal to federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years, including any amounts established in

[33] For purposes of determining the amount of admitted adjusted gross DTAs under paragraph 11.a., ABC would look to the amount of existing temporary differences that reverse during a timeframe corresponding with the tax loss carryback provisions allowed by the applicable tax law, not to exceed three years, notwithstanding that it is limited to a one-year applicable period for purposes of paragraph 11.b.i.

accordance with the provisions of SSAP No. 5R as described in paragraph 3.a. of this statement related to those periods. What is the meaning of the term "taxes paid"? [Paragraph 11.a.]

7.1 A – Under paragraph 11.a. of SSAP No. 101, the term "taxes paid" means the total tax (both regular and AMT, but not including interest and penalties), that was or will be reported on the reporting entity's federal income tax returns for the periods included in the carryback period including any amounts established in accordance with the provision of SSAP No. 5R as described in paragraph 3.a. of SSAP No. 101 related to those periods. If a federal income tax return in the carryback period has been amended, or adjusted by the IRS, "taxes paid" would reflect the impact of the amended tax return, or settlement with the IRS.

7.2 In applying the term "taxes paid" to a reporting entity that is party to a consolidated federal income tax return, the term "taxes paid" means the total federal income tax (both regular and AMT) that was paid, or is expected to be paid to the common parent of the reporting entity's affiliated group, in accordance with the intercompany tax sharing agreement, with respect to the income tax years included in the carryback period. "Taxes paid" includes amounts established in accordance with the provision of SSAP No. 5R as described in paragraph 3.a. of SSAP No. 101 related to those periods, including current federal income taxes payable (i.e., accrued in the entity's financial statements) related to the carryback period. The ability of the reporting entity to recover (through loss carrybacks) taxes that were paid to its common parent is generally governed by the terms and provisions of the affiliated group's intercompany tax sharing or tax allocation agreement.

8. Q – How is a company's computation of adjusted gross and admitted adjusted gross deferred tax assets impacted if it joins in the filing of a consolidated federal income tax return? [paragraphs 7, 11, 12 and 16]

8.1 A – For purposes of determining the amount of DTAs and the amount admitted under paragraph 11, the calculation should be made on a separate company, reporting entity basis. Under paragraph 7, a reporting entity's gross deferred tax assets and liabilities are determined by identifying its temporary differences. These temporary differences are measured using a "balance sheet" approach by comparing statutory and tax basis balance sheets for that entity. Once a reporting entity determines its gross DTAs, they are reduced for any statutory valuation allowance adjustment that may be necessary to determine the adjusted gross DTAs. The amount of adjusted gross DTAs that are admitted is determined in accordance with paragraph 11.

8.2 Under paragraph 11.a., an entity shall determine the amount of "federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years." Such amount shall include any amounts established for tax loss contingencies in accordance with paragraph 3.a. Consistent with guidance promulgated in other EAIWG interpretations, a reporting entity that files a consolidated federal income tax return with its parent should look to the amount of taxes it paid (or were allocable to it) as a separate legal entity in determining the admitted adjusted gross DTAs under paragraph 11.a. Furthermore, the admitted adjusted gross DTAs under paragraph 11.a. may not exceed the amount that the entity could reasonably expect to have refunded by its parent (paragraph 12.c.). The taxes paid by the reporting entity represent the maximum DTAs that may be admitted under paragraph 11.a., although the amount could be reduced pursuant to the group's tax allocation agreement.

8.3 The amount of admitted adjusted gross DTAs under paragraph 11.b.i. is limited to the amount that the reporting entity expects to realize within the applicable period (refer to the 11.b.i. column of the applicable Realization Threshold Limitation Table in paragraph 11.b.) following the balance sheet date on a separate company basis. The entity must estimate its separate company taxable income and the tax benefit that it expects to receive from reversing deductible temporary differences in the form of lower tax payments to its parent. If the reporting entity has reversing adjusted gross DTAs during the applicable period for which it does not expect to realize a benefit under paragraph 11.b. on a separate company basis, the reporting entity cannot admit an amount related to such DTAs under paragraph 11,b., even though the reporting entity may be paid a tax benefit for such items pursuant to its tax allocation agreement.

8.4 The following examples reflect this analysis and assume that the surplus limitation of paragraph 11.b.ii. is not applicable:

Example 1:

8.5 Assume Company A, a life insurance company, joins in the filing of a consolidated federal income tax return. Consolidated taxes paid in prior carryback years total $150, of which Company A paid $100. Company A has existing temporary differences that reverse by the end of the third calendar year following the balance sheet date[34] that, on a separate company reporting entity basis and following the applicable carryback provisions of the Internal Revenue Code for each year in which temporary differences reverse, would give rise to a tax recovery of $125.

8.6 Under paragraph 11.a., Company A could record an admitted DTA of $100, equal to the taxes it paid. Additionally, under paragraph 11.b.i., Company A could admit an additional $25, assuming it expects to realize such tax benefit based on its separate company analysis. Due to the consolidated return filing, the $100 admitted under paragraph 11.a. could only be admitted provided this amount could reasonably be expected to be refunded by the parent [paragraph 12.c.] and would be available pursuant to a written income tax allocation agreement [paragraph 16.b.].

Example 2:

8.7 Assume the same facts as in Example 1, except consolidated taxes paid in prior carryback years that could be recovered are $70 and, pursuant to a written income tax allocation agreement, taxes recoverable through loss carrybacks may not exceed consolidated taxes paid in prior carryback years.

8.8 In this situation, Company A would admit a DTA of $70 under paragraph 11.a. (recoverable taxes limited to consolidated taxes paid which could be refunded by the parent). In addition, $55 ($125-$70) of DTA may be admitted under paragraph 11.b.i., if Company A expected to realize this tax benefit on the basis of its separate company estimated taxable income and temporary differences that are expected to be realized within the applicable period following the balance sheet date.

Example 3:

8.9 Parent Company P files a consolidated federal income tax return with its insurance subsidiaries, R, S and T. Assume consolidated taxes that could be recovered through loss carryback total $450. However, in the prior carryback years $200 was paid by each of the subsidiaries, R, S and T. The difference between the amount paid by the subsidiaries ($600) and the amount available through loss carryback ($150) is attributable to interest expense incurred by Company P. Pursuant to the group's written income tax allocation agreement, in the case of loss carrybacks, taxes recoverable are limited to the consolidated taxes paid in the carryback years.

8.10 Because the adjusted gross DTA admitted under paragraph 11.a. for each reporting entity cannot exceed what each entity paid and could reasonably be expected to be refunded by P, no more than $450 in total may be admitted by the subsidiaries (under paragraph 11.a.). If the adjusted gross DTA associated with the subsidiaries' temporary differences that reverse in the 11.a. period exceed the $450 of taxes recoverable through loss carryback on a consolidated basis, the adjusted gross DTA admitted by the insurance subsidiaries under paragraph 11.a. should be allocated among the subsidiaries, consistent with

[34] Corresponds to the timeframe permitted by the Internal Revenue Code for carrybacks of tax losses for a life insurance company. Please note that the applicable carryback period for a non-life insurance company may be different.

the principles of its written income tax allocation agreement. This allocation would, in most instances, be based on each subsidiary's share of reversing temporary differences.

8.11 Under paragraph 11.c., an entity may admit its adjusted gross DTAs, after application of paragraphs 11.a. and 11.b., based upon offset against its own existing gross DTLs and not against gross DTLs of other members of the affiliated or consolidated group.

9a. Q – Current income taxes are defined by paragraph 3.a. to include tax loss contingencies for current and all prior years, computed in accordance with SSAP No. 5R, including the modifications in paragraphs 3.a.i, 3.a.ii. and 3.a.iii. How does the modification provided in paragraph 3.a.iii. impact the calculation of the tax contingencies recorded?

9.1 A – Paragraph 3.a.iii. provides the following rule: If the estimated tax loss contingency is greater than 50% of the tax benefit originally recognized, the tax loss contingency recorded shall be equal to 100% of the original tax benefit recognized.

9.2 For example, assume that a company claimed a deduction in its current year federal income tax return that resulted in a $100 permanent tax benefit[35]. Management must assume that the tax position will be examined by a taxing authority that has full knowledge of all relevant information (paragraph 3.a.ii.). In addition, management has determined that the probability of a liability is more likely than not (a likelihood of more than 50% pursuant to paragraph 3.a.i.) and that the liability can be reasonably estimated. Management's best estimate of the loss of the tax benefit is $40 (an amount not greater than 50% of the tax benefit originally recognized). Under these facts, the company would establish a current tax liability in the amount of $40, increasing its current income tax expense by $40.

DR	Current income tax expense	$40	
CR	Liability for current income tax		$40

9.3 Assume the same facts as 9.2, except that management determines the best estimate of the liability to be $60 (an amount greater than 50% of the tax benefit originally recorded). Under paragraph 3.a.iii., the company would be required to record a tax contingency of $100 offsetting the entire original tax benefit recorded. Under these facts, the company would establish a current tax liability in the amount of $100, increasing its current income tax expense by $100.

DR	Current income tax expense	$100	
CR	Liability for current income tax		$100

9b. Q – What impact, if any, does the inclusion of tax contingencies as a component of current income taxes have on the determination of deferred income taxes? [Paragraph 3.c.]

9.4 A – The purpose of this interpretation is to address when such contingencies should be "grossed-up" and reflected in the calculation of both statutory current and deferred federal income taxes.

9.5 Gross deferred tax assets and liabilities are determined in accordance with paragraph 7 of SSAP No. 101, and reflect the changes in temporary differences taken into account in estimating taxes currently payable and are manifested in the enterprise's tax basis balance sheet. If gross tax loss contingencies associated with temporary differences have been included in taxes currently payable, a corresponding adjustment must be made to the tax basis balance sheet used in the determination of gross deferred tax

[35] The treatment of tax contingencies related to temporary differences is discussed in Question 9b.

assets and liabilities. Deferred tax assets and liabilities are not adjusted for tax contingencies not associated with temporary differences (i.e. permanent differences).

9.6 For example, assume that a company determines, in accordance with SSAP No. 5R, including the modifications in paragraph 3.a. of SSAP No. 101, a tax loss contingency is required to be established for a $100 deduction claimed in a prior year federal income tax return. Assuming a 35% tax rate, the company would establish a current tax liability in the amount of $35, increasing its current income tax expense by $35.

DR	Current income tax expense	$35	
CR	Liability for current income tax		$35

9.7 If the $100 deduction was associated with a temporary difference such as reserves, the company would make a corresponding adjustment to deferred taxes. The company would increase its gross deferred tax asset for reserves by $35 to reflect the future tax benefit associated with that reserve deduction. Any gross deferred tax asset recorded would still be subject to the admissibility requirements of paragraph 11.

DR	Gross deferred tax asset	$35	
CR	Change in net deferred tax (surplus)		$35

9.8 If the $100 deduction was associated with a permanent item such as meals and entertainment expenses, the company would make no corresponding adjustment to the deferred tax assets.

9.9 In determining the timing of when a tax loss contingency for a temporary item should be grossed up, paragraph 3.c. of SSAP No. 101 provides the following guidance:

> 3.c. In determining when tax loss contingencies associated with temporary differences should be included in current income taxes under Paragraph 3.a., and therefore included in deferred taxes under paragraph 7, a reporting entity is not required to "gross-up" its current and deferred taxes until such time as an event has occurred that would cause a re-evaluation of the contingency and its probability of assessment, e.g., the IRS has identified the item as one which may be adjusted upon audit. Such an event could be the reporting entity's (or its affiliate or parent in a consolidated income tax return) receipt of a Form 5701, Proposed Audit Adjustment, or could occur earlier upon receipt of an Information Document Request. At such time, the company must reassess the probability of an adjustment, reasonably re-estimate the amount of tax contingency as determined in accordance with paragraph 3.a., make any necessary adjustment to deferred taxes, and re-determine the admissibility of any adjusted gross deferred tax asset as provided in paragraph 11.

10a. Q – If the reporting entity adjusts the amount of regular taxable income and capital gains reported on a prior year income tax return from the amount originally determined for financial reporting purposes, how is the effect of the change reported in the current year? [Paragraph 19]

10.1 A – Paragraph 19 of SSAP No. 101 indicates that "income taxes incurred or received during the current year attributable to prior years shall be allocated, to the extent not previously provided, to net income in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3) unless attributable, in whole or in part, to realized capital gains or losses, in which case, such amounts shall be apportioned between net income and realized capital gains and losses, as appropriate". Paragraph 19 also indicates that income taxes incurred are to be allocated to ordinary income and realized capital gains consistent with paragraph 38 of FAS 109. Paragraph 38 of FAS 109 provides, in general, that the portion of the total income tax expense remaining after allocation to ordinary income would be allocated to realized capital gains or losses.

10.2 In accordance with paragraph 19, the amount of additional federal income taxes incurred in the current year with respect to the prior year would be allocated between ordinary income and realized capital gain items. The amount of additional federal income tax expense allocated to ordinary income should be determined by comparing the amount of additional tax expense actually incurred to the amount of tax expense that would have been incurred had the adjustment to ordinary income been zero (a "with and without" computation). The remaining amount of additional federal income tax expense would then be allocated to realized capital gains. The amounts of additional federal income tax expense allocated to ordinary income and realized capital gains would be included in the current period's federal income tax expense and not as a direct adjustment to surplus.

10.3 As an example, assume Company X files its 20X1 federal income tax return and reports $1,000,000 of taxable income comprised of $800,000 of ordinary income and $200,000 of capital gain income. Since the company is subject to taxation at a 34 percent tax rate on all its income, it incurred federal income tax expense of $340,000. In preparing its 20X1 statutory income tax provision, the company estimated that its liability for 20X1 federal income tax would be $238,000 based on $600,000 of ordinary income and $100,000 realized capital gains.

10.4 In determining the amount of "income taxes incurred" for its 20X2 financial statement, Company X must include the additional $102,000 of income tax expense incurred on its 20X1 federal income tax return ($340,000 actual tax incurred less $238,000 originally reported) in net income for 20X2 pursuant to paragraph 19 of SSAP No. 101 and not as a surplus adjustment. The $102,000 additional expense would be allocated to federal income taxes on net income and realized capital gains and losses as follows:

Total additional income tax expense	$102,000
Tax expense allocated to operations ($200,000 additional income x 34%)	68,000
Tax expense allocated to realized gains	$ 34,000

The tax expense allocated to operations was determined as follows:

Total recomputed tax expense	$340,000
Tax expense with only capital gain changes	272,000 [36]
Tax expense allocated to operations	$ 68,000

10.5 For all purposes of computing and allocating federal income taxes between operations and capital gains and losses, the character of the income or loss item as determined for statutory accounting purposes should be followed. Thus, if an income item is treated as a capital gain for statutory accounting purposes but as ordinary income for tax purposes, the federal income tax allocable to such income would be considered tax expense attributable to capital gains.

10b. Q – What is meant by the phrase in paragraph 18 "a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL"? [Paragraph 18]

10.6 A – Pursuant to Paragraph 18 of SSAP No. 101, a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL in accordance with paragraph 35 of FAS 109. Paragraph 35 of FAS 109 indicates that income taxes incurred are to be allocated between various items, including gains from operations and items charged or credited directly to shareholders' equity, such as the change in unrealized gains and losses.

[36] This is a company with less than $10 million of taxable income therefore $600,000 of original ordinary income plus $200,000 recomputed capital gains equals $800,000 taxable income times 34 percent applicable tax rate equals $272,000.

10.7 To the extent a reporting entity's admitted DTA or its DTL changes during the year, the portion of such change allocable to changes in unrealized gains and losses during the year should be determined. The portion so allocable would be reported with, and netted against, the related change in unrealized gains and losses reported as a component of changes in surplus. The remaining portion of the change in DTA or DTL allocable to other temporary differences should be reported as a separate component of changes in surplus and/or change in nonadmitted assets.

10.8 For example, assume the reporting entity has DTAs of $1,000 relating to temporary differences other than unrealized losses, and a $100 DTL relating to unrealized gains as of the beginning of the year. Since the entity is subject to tax at 35 percent and all of its DTAs are expected to reverse within one year, the entity recorded a $900 net admitted DTA as of the beginning of the year.

10.9 During the current year, the DTAs relating to temporary differences other than unrealized losses did not change, but the DTL relating to the entity's unrealized gains increased by $100 (unrealized gains increased by $285 during the year). As a result, the amount of the entity's net admitted DTAs decreased by $100.

10.10 Pursuant to paragraph 18 of SSAP No. 101, the $100 decrease in the DTA during the year is to be allocated between changes attributable to temporary differences other than unrealized gains and losses and those attributable to unrealized gains and losses. Since the DTA relating to temporary differences other than unrealized gains and losses did not change during the year, the entire decrease is allocable to the change in unrealized gains. Therefore, the $100 decrease is to be allocated and netted against the $285 change in unrealized gains reported in change in surplus, resulting in a $185 net increase in surplus relating to its unrealized gains. If a portion of the unrealized loss DTA is determined to be nonadmitted, that amount is not recorded separately from the operating differences DTA. The change in the total nonadmitted DTA from period to period is recorded in surplus as a Change in Nonadmitted Assets.

11. Q – How are current and deferred income taxes to be accounted for in interim periods? [Paragraphs 12.d. and 20]

11.1 A – In setting forth the methodology for the computation of current income taxes (income taxes incurred) in interim periods, paragraph 20 states:

> 20. Income taxes incurred in interim periods shall be computed using an estimated annual effective current tax rate for the annual period in accordance with the methodology described in paragraphs 19 and 20 of *Accounting Principles Board Opinion No. 28, Interim Financial Reporting*. Estimates of the annual effective tax rate at the end of interim periods are, of necessity, based on estimates and are subject to subsequent refinement or revision. If a reliable estimate cannot be made, the actual effective tax rate for the year-to-date may be the best estimate of the annual effective tax rate. If an insurer is unable to estimate a part of its "ordinary" income (or loss) or the related tax (or benefit) but is otherwise able to make a reliable estimate, the tax (or benefit) applicable to the item that cannot be estimated shall be reported in the interim period in which the item is reported.

11.2 As a result, to the extent a reliable estimate can be made of an expected annual effective tax rate, reporting entities should apply this rate to net income before federal and foreign income taxes, in the case of property and casualty insurers and health insurers, and net income and realized capital gains before federal and foreign income taxes in the case of life insurers. If a reliable estimate of the expected annual effective tax rate cannot be made, reporting entities should compute current and deferred taxes at interim reporting dates using the most reliable information that is available.

11.3 The following examples illustrate the estimation process for income taxes incurred using the estimated annual effective rate:

Projected statutory net income[37] for current year		$10,000,000
Estimated annual permanent differences		(2,800,000)
Estimated annual temporary differences:		2,000,000
Projected taxable income for current year		$9,200,000
Projected federal tax for current year (at 35%)		$3,220,000
Estimated annual effective tax rate		32.2%

11.4 As a result, assuming that during the calendar year the reporting entity's expectations as to its statutory and taxable income do not change, income tax incurred will be recorded on a quarterly basis as follows:

Quarter	Statutory Income (Loss)	Income Taxes Incurred
1	$(2,000,000)	$(644,000)
2	4,000,000	1,288,000
3	6,000,000	1,932,000
4	2,000,000	644,000
Total	$10,000,000	$3,220,000

11.5 If the reporting entity's expectations as to its statutory and taxable income change in the second quarter so that it expects that its annual effective rate will increase from 32.2% to 34%, it will record income taxes incurred in the second quarter of $1,324,000 (cumulative statutory income at end of the second quarter of $2,000,000 at 34% or $680,000 less $644,000 tax benefit recorded in first quarter).

11.6 As noted above, life insurers must estimate their annual effective tax rate and record income taxes incurred based on net income and realized capital gains before federal and foreign income taxes. With regard to intraperiod tax allocation, paragraph 19 states in relevant part:

> 19. Income taxes incurred shall be allocated to net income and realized capital gains or losses in a manner consistent with paragraph 38 of FAS 109.

11.7 As a result of the above and where the reporting entity expects realized capital gains or losses for the annual period, income taxes incurred must be allocated using a "with and without" methodology to net income before taxes and realized capital gains (see Question 10.4 for further discussion).

11.8 An example of this "with and without" methodology is as follows:

Projected statutory net income for current year		$10,000,000
Realized gains included above		(1,000,000)
		9,000,000
Estimated annual permanent differences:		(2,800,000)
Estimated annual temporary differences:		2,000,000
Projected ordinary taxable income for current year		$8,200,000
Projected ordinary federal tax for current year (at 35%)		$2,870,000
Projected capital gain federal tax for current year (at 35%)		350,000
Projected total federal tax for current year		$3,220,000
Estimated ordinary annual effective tax rate ($2,870,000 / $9,000,000)		31.9%
Estimated capital gain annual effective tax rate ($350,000 / $1,000,000)		35.0%
Estimated total annual effective tax rate ($3,220,000 / $10,000,000)		32.2%

[37] For all examples in Question 11, statutory net income represents operating and capital gain income before federal and foreign income taxes.

11.9 As a result, assuming that during the calendar year the reporting entity's expectations as to its statutory and taxable income (including the amounts of ordinary and capital income) do not change, income tax incurred will be recorded on a quarterly basis as follows:

Quarter	Ordinary Income (Loss)	Capital Income (Loss)	Ordinary Taxes Incurred	Capital Taxes Incurred
1	$(1,000,000)	$(1,000,000)	$(319,000)	$(350,000)
2	3,000,000	1,000,000	956,000	350,000
3	5,000,000	1,000,000	1,595,000	350,000
4	2,000,000	0	638,000	0
Total	$9,000,000	$1,000,000	$2,870,000	$350,000

11.10 With respect to the recording of deferred taxes on an interim basis paragraph 12.d. states:

> 12.d. The phrases "reverse during a timeframe corresponding with IRS tax loss carryback provisions, not to exceed three years," "realized within one year of the balance sheet date" and "realized within three years of the balance sheet date" are intended to accommodate interim reporting dates and reporting entities that file on an other than calendar year basis for federal income tax purposes.

11.11 When considered in the context of paragraph 20, this paragraph requires the use of the annual effective rate when determining deferred taxes at an interim reporting date. As such, a reporting entity's admitted adjusted gross DTAs are determined in accordance with paragraph 11 by reference to the adjusted gross DTAs that will reverse each year in the applicable period. Note however, that due to the inherent unpredictability, and general inability to project changes in capital gains and losses on a quarter by quarter basis, the deferred tax implications of the changes in unrealized gains and losses should be recorded on a discrete period basis (i.e., based on the change in the amounts on a quarter by quarter basis). For example in determining its admitted adjusted gross DTAs at March 31, 20X2, the reversal period referred to above is calendar years 20X3, 20X4 and 20X5 (i.e., expected adjusted gross DTAs at December 31, 20X2 that are expected to reverse in 20X3, 20X4 and 20X5).

11.12 This methodology is illustrated by the following example:

In this example, XYZ Co. is a life insurance company[38] that has a three-year carryback potential and also has an ExDTA ACL RBC percentage of 700%.

Projected statutory net income for 20X3			$10,000,000
Estimated annual permanent differences:			(2,800,000)
Estimated annual temporary differences:			2,000,000
Projected ordinary taxable income for current year			$9,200,000
Temporary differences at December 31, 20X2:			$5,000,000
Estimated temporary differences at December 31, 20X3:			$7,000,000
Taxable income in carryback period (taxes paid at 35%):			
	Year ended December 31, 20X0	$800,000	($280,000)
	Year ended December 31, 20X1	2,000,000	(700,000)

[38] XYZ Co. does not qualify for the small life insurance company deduction. Please note the results in this example may be different due to differences in the applicable carryback periods if XYZ Co. was a P&C insurance company.

	Year ended December 31, 20X2	3,000,000	(1,050,000)
	Year ended December 31, 20X3	$9,200,000	($3,220,000)

Note: Year ended December 31, 20X3 taxable income and taxes paid considered in the calculation of its interim tax accruals are based on the reporting entity's estimate of its annual taxable income and taxes to be paid. This amount may differ from the quarterly federal income tax estimates it expects to make during the year.

	Reversing Period		
	20X3	20X4	20X5
December 31, 20X2 Temporary difference reversals:	$2,000,000	$1,500,000	$1,500,000
	20X4	20X5	20X6
December 31, 20X3 Temporary difference reversals:	$3,000,000	$2,000,000	$2,000,000

Admitted deferred tax assets at December 31, 20X2:				
	Paragraph 11.a.			
		20X0	$800,000	
		20X1	2,000,000	
		20X2	2,200,000	
			5,000,000	
		Taxes paid at 35%		$1,750,000
	Paragraph 11.b.			0
	Paragraph 11.c.			0
	Total admitted			$1,750,000

Note: The recovery of federal income taxes paid in prior years under paragraph 11.a. is calculated in this example by carrying back 20X3's temporary difference reversals to offset 20X0's taxable income of $800,000 and $1,200,000 of 20X1's taxable income; then carrying back 20X4's temporary difference reversals to offset 20X1's remaining taxable income of $800,000 and $700,000 of 20X2's taxable income; finally, carrying back 20X5's temporary difference reversals to offset $1,500,000 of 20X2's taxable income. Since all gross DTAs were admitted under paragraph 11.a., paragraphs 11.b. and 11.c. need not be considered.

Admitted deferred tax assets at December 31, 20X3:				
	Paragraph 11.a.			
		20X1	$2,000,000	
		20X2	3,000,000	
		20X3	2,000,000	
			7,000,000	
		Taxes paid at 35%		$2,450,000
	Paragraph 11.b.			0
	Paragraph 11.c.			0
	Total admitted			$2,450,000

Note: The recovery of federal income taxes paid in prior years under paragraph 11.a. is calculated in this example by carrying back 20X4's temporary difference reversals to offset 20X1's taxable income of $2,000,000 and $1,000,000 of 20X2's taxable income; then carrying back 20X5's temporary difference reversals to offset 20X2's remaining taxable income of $2,000,000; finally, carrying back 20X6's temporary difference reversals to offset $2,000,000 of 20X3's taxable income. Since all gross DTAs were admitted under paragraph 11.a., paragraphs 11.b. and 11.c. need not be considered.	
Total estimated federal taxes for 20X3:	
Income taxes incurred (current tax) ($9,200,000 X 35%)	$3,220,000
Change in deferred tax ($1,750,000 – $2,450,000)	(700,000)
	$2,520,000

11.13 As a result of the above, the annual effective tax rate for current and deferred income taxes is as follows:

Current ($3,220,000/$10,000,000)	32.2%
Deferred (($700,000)/$10,000,000)	(7.0)%
Total annual effective rate	25.2%

Quarter	Statutory Income (Loss)	Income Taxes Incurred	Deferred Taxes
1	$(2,000,000)	$(644,000)	$140,000
2	4,000,000	1,288,000	(280,000)
3	6,000,000	1,932,000	(420,000)
4	2,000,000	644,000	(140,000)
Total	$10,000,000	$3,220,000	$(700,000)

11.14 To the extent that a reporting entity's estimated year end[39] admitted adjusted gross deferred tax assets are limited by its surplus pursuant to paragraph 11.b.ii., the annual effective deferred tax rate must be adjusted to consider the impact of this limitation on a quarterly basis.

12. Q – How do you present deferred taxes in the Annual Statement? [Paragraphs 8, 18, 21-28 and 36]

12.1 A – This answer is divided into four different parts.

Change in Accounting Principle

12.2 As required by paragraph 37 of SSAP No. 101, balances of current and deferred federal and foreign income taxes resulting from the adoption of SSAP No. 101 effective January 1, 2012 shall be presented in the Annual Statement as a Cumulative Effect of Changes in Accounting Principles. SSAP No. 3 provides the following:

> 3. A change in accounting principle results from the adoption of an accepted accounting principle, or method of applying the principle, which differs from the principles or methods previously used for reporting purposes. A change in the method of applying an accounting principle shall be considered a change in accounting principle.
>
> 4. A characteristic of a change in accounting principle is that it concerns a choice from among two or more statutory accounting principles. However, a change in accounting principle is

[39] In the previous example, year end is December 31, 20X3.

> neither (a) the initial adoption of an accounting principle in recognition of events or transactions occurring for the first time or previously immaterial in their effect, nor (b) the adoption or modification of an accounting principle necessitated by transactions or events that are clearly different in substance from those previously occurring.
>
> 5. The cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods.

12.3 In accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3), adjustments to amounts recorded as of January 1, 2012, would be recorded as a modification to the changes in accounting principle account rather than corrections of an error through the period of 2012.

Illustration A Assumptions:

12.4 On January 1, 2012, as a result of applying paragraph 11.b. requirements to use current period statutory capital and surplus rather than prior quarter statutory capital and surplus as required by previous guidance, the AlphaBeta P/C Company computed the following balances related to deferred taxes:

	1/1/12	**12/31/11**
Gross DTA	$200,000	$200,000
Statutory Valuation Allowance Adjustment	0	0
Adjusted Gross DTA	200,000	200,000
Deferred Tax Assets Nonadmitted	25,000	10,000
Admitted Adjusted Gross DTA	175,000	190,000
Gross DTL	100,000	100,000
Net Admitted Adjusted Gross DTA	$75,000	$90,000

There was no change in the amount of the current tax liability recorded by AlphaBeta as a result of the adoption of SSAP No. 101.

12.5 The Cumulative Effect of Changes in Accounting Principles line shown in the surplus section of the Annual Statement would show a decrease of $15,000 ($90,000 – $75,000) on 1/1/2012. In addition, during the second quarter of 2012, the Company determined that it incorrectly computed its Net Admitted Adjusted Gross DTA as of 1/1/2012 under SSAP No. 101 and modified its opening balance as follows (note that modifications were not a result of changes in circumstances or events which occurred during 2012):

	Revised 1/1/12
Gross DTA	$200,000
Statutory Valuation Allowance Adjustment	0
Adjusted Gross DTA	200,000
DTA Nonadmitted	35,000
Admitted Adjusted Gross DTA	165,000
Gross DTL	100,000
Net Admitted Adjusted Gross DTA	$65,000

12.6 The Company would record the following balances in its 3/31/12 financial statements:

	1/1/12	**Revised 1/1/12**	**Increase (Decrease)**

Gross DTA	$200,000	$200,000	$0
Statutory Valuation Allowance Adjustment	0	0	0
Adjusted Gross DTA	200,000	200,000	0
DTA Nonadmitted	25,000	35,000	10,000
Admitted Adjusted Gross DTA	175,000	165,000	(10,000)
Gross DTL	100,000	100,000	0
Net Admitted Adjusted Gross DTA	$75,000	$65,000	($10,000)

12.7 The additional $10,000 decrease in net admitted adjusted gross DTA would also be recorded through the Cumulative Effect of Changes in Accounting Principles line shown in the surplus section of the Annual Statement.

Unrealized Capital Gains and Losses

12.8 SSAP No. 101 paragraph 18 states:

> 14. In accordance with paragraph 35 of FAS 109, a reporting entity's unrealized gains and losses shall be recorded net of any allocated DTA or DTL. The amount allocated shall be computed in a manner consistent with paragraph 38 of FAS 109.

12.9 The following illustrates the presentation of such requirement in the Annual Statement:

Illustration *B Assumptions:*

12.10 Entity grouped its investments in a reasonable and consistent manner and calculated the following gross amounts attributable to appreciation and depreciation in the fair value of its common stocks during 20X2 (see question 2 regarding grouping of assets and liabilities for measurement):

	Gross	**Carrying Value**	**Rate**	**Tax Effected DTA (DTL)**
Common stock carrying value 1/1/X2		$800,000		
Unrealized (loss)	($428,571)		35%	$150,000
Unrealized gain	342,857		35%	(120,000)
Net (loss) gain		(85,714)		$30,000
Common stock carrying value 12/31/X2		$714,286		

12.11 The journal entries need to present unrealized losses and gains net of tax are:

12/31/X2	DR	Change in unrealized capital gains and losses	$85,714
	CR	Common stock	($85,714)
	Recognition of net depreciation in FV of common stock		

12/31/X2	DR	Deferred tax asset	$150,000
	CR	Deferred tax liability	($120,000)
	CR	Change in deferred income taxes	($30,000)
	Recognition of gross deferred tax amounts		

12/31/X2	DR	Change in deferred income taxes	$30,000
	CR	Change in unrealized capital gains and losses	($30,000)
	Reclass tax effect of net unrealized loss per paragraph 18 of SSAP No. 101		

12.12 Condensed 12/31/X2 Balance Sheet:

ASSETS	20X2	20X1		LIABILITIES, SURPLUS AND OTHER FUNDS	20X2	20X1
Common Stock	$714,286	$800,000		Surplus:		
Net deferred tax asset	30,000			Beginning of year	$800,000	
				Change in UNL	(55,714)[40]	
Total Assets	$744,286	$800,000		**Liabilities & Surplus**	$744,286	$800,000

Annual Statement Presentation

12.13 In accordance with SSAP No. 101, DTAs and DTLs shall be offset and presented as a single amount on the statement of financial position. The following illustrates this requirement:

Illustration C Assumptions:

12.14 The entity had the following balances (1/1/X2 balances carried forward from Illustration A):

	1/1/X2	**12/31/X2**	**Change**
Gross DTA	$200,000	$510,000	$310,000
Statutory Valuation Allowance Adjustment	0	10,000	10,000
Adjusted Gross DTA	200,000	500,000	300,000[41]
DTA Nonadmitted	25,000	150,000	125,000
Admitted Adjusted Gross DTA	175,000	350,000	175,000
Gross DTL	100,000	200,000	100,000
Net Admitted Adjusted Gross DTA	$75,000	$150,000	$75,000
Current FIT Recoverable	**$18,000**	**$20,000**	**$2,000**

12.15 Illustrative 12/31/X2 Balance Sheet for Illustration C:

ASSETS	Current Year			Prior Year
	1 Assets	2 Nonadmitted Assets	3 Net Admitted Assets (Cols. 1 - 2)	4 Net Admitted Assets
Current Federal and foreign income tax recoverable and interest thereon	$20,000	$0	$20,000	$18,000
Net deferred tax asset	$300,000	$150,000	$150,000	$75,000

[40] Computed at $85,714 (total change in UNG/UNL) - $30,000 tax effect

[41] Includes $30,000 resulting from net unrealized losses as shown in Illustration B. As such the change in net deferred income taxes at 12/31/X2 is $170,000 ($300,000 (gross change in DTA) – $100,000 (gross change in DTL) – $30,000 reclass to net unrealized capital gains (losses)).

12.16 Illustrative 12/31/X2 Income Statement for Illustration C:

STATEMENT OF INCOME (P/C) SUMMARY OF OPERATIONS (Life & Health) STATEMENT OF REVENUES AND EXPENSES (Health)	1 Current Year	2 Prior Year
Gains and (losses) in surplus		
Change in net unrealized capital gains (losses) less capital gains tax of $	($55,714)	0
Change in net deferred income tax	$170,000	0
Change in nonadmitted assets	($125,000)	0

12.17 Illustrative 12/31/X2 Exhibit of Nonadmitted Assets for Illustration C:

	1 End of Current Year	2 End of Prior Year	3 Changes for Year (Increase) Decrease
Net deferred tax asset	$150,000	$25,000	($125,000)
Total	$150,000	$25,000	($125,000)

Illustration D Assumptions:

12.18 The entity had the following balances (1/1/20X2 balances carried forward from Illustration A):

	1/1/X2	**12/31/X2**	**Change**
Gross DTA	$200,000	$510,000	$310,000
Statutory Valuation Allowance Adjustment	0	10,000	10,000
Adjusted Gross DTA	200,000	500,000	300,000[42]
DTA Nonadmitted	25,000	150,000	125,000
Net Admitted Adjusted Gross DTA	175,000	350,000	175,000
Gross DTL	100,000	200,000	100,000
Net Admitted Adjusted Gross DTA	$75,000	$150,000	$75,000
Current FIT Liability	**$7,000**	**$12,000**	**$5,000**

12.19 Illustrative 12/31/X2 Balance Sheet for Illustration D:

ASSETS	Current Year			Prior Year
	1 Assets	2 Nonadmitted Assets	3 Net Admitted Assets (Cols. 1 - 2)	4 Net Admitted Assets
Net deferred tax asset	$300,000	$150,000	$150,000	75,000

[42] Includes $30,000 resulting from net unrealized losses as shown in Illustration B. As such the change in net deferred income taxes at 12/31/X2 is $170,000 ($300,000 (gross change in DTA) – $100,000 (gross change in DTL) – $30,000 reclass to net unrealized capital gains (losses)).

LIABILITIES, SURPLUS AND OTHER FUNDS	1 Current Year	2 Prior Year
Current Federal and foreign income taxes (including $0 on realized capital gains (Losses))	$12,000	$7,000

12.20 Illustrative 12/31/X2 Income Statement for Illustration D:

STATEMENT OF INCOME (P/C) **SUMMARY OF OPERATIONS (Life & Health)** **STATEMENT OF REVENUES AND EXPENSES (Health)**	1 Current Year	2 Prior Year
Gains and (losses) in surplus		
Change in net unrealized capital gains (losses) less capital gains tax of $	($55,714)	0
Change in net deferred income tax	$170,000	0
Change in nonadmitted assets	($125,000)	0

12.21 Illustrative 12/31/X2 Exhibit of Nonadmitted Assets for Illustration D:

	1 End of Current Year	2 End of Prior Year	3 Changes for Year (Increase) Decrease
Net deferred tax asset	$150,000	$25,000	($125,000)
Total	$150,000	$25,000	($125,000)

Notes to the Financial Statements Disclosures:

12.22 SSAP No. 101 paragraphs 21-28 include extensive disclosure requirements. Although some of these amounts are presented on the face of the financial statements or in schedules or exhibits to the Annual Statement, they will be included in the Notes to the Financial Statements both in the Annual Statement and in the Annual Audited Financial Statements.

12.23 This section provides specific examples that illustrate the disclosures required in SSAP No. 101. The formats in the illustrations are not requirements. Some of the disclosure paragraphs of SSAP No. 101 are not specific as to whether the entity should disclose the nature of certain items or whether the entity should disclose specific amounts. The illustrations included herein use a combination of each method. The NAIC encourages a format that provides the information in the most understandable manner in the specific circumstances. The following illustrations are for a single hypothetical insurance enterprise, referred to as AlphaBeta Property & Casualty Insurance Company.[43]

12.24 All of the disclosures would be completed in the year-end Annual Statement and audited statutory financial statements. The disclosures of paragraphs 22-24 and 25 (on a prospective basis) and 26-28 should be presented in accordance with paragraph 61 of the Preamble on the initial adoption of SSAP No. 10, a predecessor of SSAP No. 101, therefore these notes would only be presented in the first, second and third Quarterly Statements if the underlying data changed significantly.

12.25 Selected AlphaBeta P/C Company Financial Data at December 31, 20X2 (Balance Sheet information carried forward from Illustration C):

[43] In applying the illustrative examples to the 2012 calendar year, prior year balances would include any adjustments required from the cumulative change in accounting principle required as a result of the adoption of SSAP No. 101.

ASSETS	Current Year			Prior Year
	1 Assets	2 Nonadmitted Assets	3 Net Admitted Assets (Cols. 1 - 2)	4 Net Admitted Assets
Current federal and foreign income tax recoverable and interest thereon	$20,000	$0	$20,000	$18,000
Net deferred tax asset	$300,000	$150,000	$150,000	$75,000

CAPITAL AND SURPLUS ACCOUNT	1 Current Year	2 Prior Year
Change in net unrealized capital gains (losses)less capital gains tax of $30,000	($55,714)	0
Change in net deferred income tax	$170,000	0
Change in nonadmitted assets	($125,000)	0

EXHIBIT OF NONADMITTED ASSETS	1 End of Current Year	2 End of Prior Year	3 Changes for Year (Increase) Decrease
Net deferred tax asset	$150,000	$25,000	($125,000)

STATEMENT OF INCOME	20X2
UNDERWRITING INCOME	
Premiums earned	$5,250,000
DEDUCTIONS:	
Losses incurred	3,550,000
Loss adjustment expenses incurred	1,750,000
Other underwriting expenses incurred	525,000
Net underwriting gain (loss)	(575,000)
INVESTMENT INCOME	
Net investment gain (loss)	1,350,000
OTHER INCOME	
Total other income	125,000
Net income before dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes	900,000
Dividends to policyholders	200,000
Net income, after dividends to policyholders, after capital gains tax and before all other federal and foreign income taxes	700,000
Federal and foreign income taxes incurred	220,000
Net income	$480,000

Paragraph 22 Illustration:

12.26 The components of the net DTA recognized in the Company’s Assets, Liabilities, Surplus and Other Funds are as follows:

	12/31/20X2			12/31/20X1			Change		
	Ordinary	Capital	Total	Ordinary	Capital	Total	Ordinary	Capital	Total
Gross Deferred Tax Assets	$375,000	$135,000	$510,000	$93,000	$107,000	$200,000	$282,000	$28,000	$310,000
Statutory Valuation Allowance Adjustments	0	10,000	10,000	0	0	0	0	10,000	10,000
Adjusted Gross Deferred Tax Assets	375,000	125,000	500,000	93,000	107,000	200,000	282,000	18,000	300,000
Deferred Tax Assets Nonadmitted	150,000	0	150,000	20,000	5,000	25,000	130,000	(5,000)	125,000
Subtotal Net Admitted Deferred Tax Asset	225,000	125,000	350,000	73,000	102,000	175,000	152,000	23,000	175,000
Deferred Tax Liabilities	21,000	179,000	200,000	15,000	85,000	100,000	6,000	94,000	100,000
Net Admitted Deferred Tax Asset/(Net Deferred Tax Liability)	$204,000	($54,000)	$150,000	$58,000	$17,000	$75,000	$146,000	($71,000)	$75,000
Admission Calculation Components SSAP No. 101 (Paragraph 11)									
a. Federal Income Taxes Paid In Prior Years Recoverable Through Loss Carrybacks.	$85,000	$5,000	$90,000	$45,000	$5,000	$50,000	$40,000	0	$40,000
b. Adjusted Gross Deferred Tax Assets Expected To Be Realized (Excluding The Amount Of Deferred Tax Assets From a, above) After Application of the Threshold Limitation. (The Lesser of b.i. and b.ii. Below)	50,000	10,000	60,000	13,000	12,000	25,000	37,000	(2,000)	35,000
i. Adjusted Gross Deferred Tax Assets Expected to be Realized Following the Balance Sheet Date.	**NA**	**NA**	**60,000**	**NA**	**NA**	**25,000**	**NA**	**NA**	**35,000**
ii. Adjusted Gross Deferred Tax Assets Allowed per Limitation Threshold.	**NA**	**NA**	**900,000**	**NA**	**NA**	**750,000**	**NA**	**NA**	**150,000**
c. Adjusted Gross Deferred Tax Assets (Excluding The Amount Of Deferred Tax Assets From a. and b. above) Offset by Gross Deferred Tax Liabilities.	90,000	110,000	200,000	15,000	85,000	100,000	75,000	25,000	100,000
Deferred Tax Assets Admitted as the result of application of SSAP No. 101.Total (a. + b. + c.)	$225,000	$125,000	$350,000	$73,000	$102,000	$175,000	$152,000	$23,000	$175,000
	20X2 Percentage	20X1 Percentage							
Ratio Percentage Used To Determine Recovery Period And Threshold Limitation Amount[44]	600%	500%							
Amount Of Adjusted Capital And Surplus Used To Determine Recovery Period And Threshold Limitation[45]	$6,000,000	$5,000,000							
The Company's tax-planning strategies include the use of reinsurance-related tax-planning strategies.									

[44] Disclose the ratio used by the reporting entity from the applicable Realization Threshold Limitation Table in paragraph 11.b. of SSAP No. 101 to determine the appropriate limitations of paragraph 11.b. In the event that late immaterial modifications to a reporting entity's statutory financial statements occur subsequent to initial completion of the statutory financial statements but prior to filing or similar deadline, these immaterial changes do not need to be reflected in this ratio if such modifications do not cause the reporting entity to change the threshold limitation from the applicable Realization Threshold Limitation Table.

[45] Provide the amount of adjusted capital and surplus used to calculate the limitation under paragraph 11.b.ii.

	12/31/20X2			12/31/20X1			Change		
	Ordinary	Capital	Total	Ordinary	Capital	Total	Ordinary	Capital	Total

Paragraph 23 Illustration:

12.27 The Company has not recognized a deferred tax liability of approximately $30,000 for the undistributed earnings of its 100 percent owned foreign subsidiaries that arose in 20X2 and prior years because the Company does not expect those unremitted earnings to reverse and become taxable to the Company in the foreseeable future. A deferred tax liability will be recognized when the Company expects that it will recover those undistributed earnings in a taxable manner, such as through receipt of dividends or sale of the investments. As of December 31, 20X2, the undistributed earnings of these subsidiaries were approximately $88,000.

Paragraph 24 Illustration:

12.28 The provisions for incurred taxes on earnings for the years ended December 31 are:

	20X2	**20X1**
Federal	$180,000	$135,000
Foreign	40,000	15,000
	220,000	150,000
Federal income tax on net capital gains	52,000	36,000
Utilization of capital loss carry-forwards	(52,000)	(36,000)
Federal and foreign income taxes incurred	$220,000	$150,000

12.29 The tax effects of temporary differences that give rise to significant[47] portions of the deferred tax assets and deferred tax liabilities are as follows:

Deferred Tax Assets:	12/31/20X2	12/31/20X1	Change
Ordinary			
Discounting of unpaid losses	30,000	10,000	20,000
Unearned premium reserve	235,000	50,000	185,000
Investments	25,000	15,000	10,000
Pension accrual	65,000	15,000	50,000
Other (including items <5% of total ordinary tax assets)	20,000	3,000	17,000
Subtotal	375,000	93,000	282,000
Statutory valuation allowance adjustment	0	0	0
Nonadmitted	150,000	20,000	130,000
Admitted ordinary deferred tax assets	225,000	73,000	152,000
Capital			

[46] The total percentage should be separately calculated and is not intended to be a summation of the percentages by tax character.

[47] Significant is defined as any amount in excess of 5% of the total applicable DTAs or DTLs.

Investments	125,000	45,000	80,000
Net capital loss carry-forward	10,000	62,000	(52,000)
Other (including items <5% of total capital tax assets)	0	0	0
Subtotal	135,000	107,000	28,000
Statutory valuation allowance adjustment	10,000	0	10,000
Nonadmitted	0	5,000	(5,000)
Admitted capital deferred tax assets	125,000	102,000	23,000
Admitted deferred tax assets	350,000	175,000	175,000
Deferred Tax Liabilities:			
Ordinary			
Investments	10,000	5,000	5,000
Fixed assets	6,000	5,000	1,000
Other (including items <5% of total ordinary tax liabilities)	5,000	5,000	0
Subtotal	21,000	15,000	6,000
Capital:			
Investments	110,000	55,000	55,000
Real estate	64,000	25,000	39,000
Other (including items <5% of total capital tax liabilities)	5,000	5,000	
Subtotal	179,000	85,000	94,000
Deferred tax liabilities	200,000	100,000	100,000
Net deferred tax assets/liabilities	150,000	75,000	75,000

12.30 The change in net deferred income taxes is comprised of the following (this analysis is exclusive of nonadmitted assets as the Change in Nonadmitted Assets is reported separately from the Change in Net Deferred Income Taxes in the surplus section of the Annual Statement):

	Dec. 31, 20X2	**Dec. 31, 20X1**	**Change**
Adjusted gross deferred tax assets	$500,000	$200,000	$300,000
Total deferred tax liabilities	200,000	100,000	100,000
Net deferred tax assets (liabilities)	$300,000	$100,000	200,000
Tax effect of unrealized gains (losses)			(30,000)
Change in net deferred income tax			$170,000

Paragraph 25 Illustration[48]:

12.31 The provision for federal and foreign income taxes incurred is different from that which would be obtained by applying the statutory Federal income tax rate to income before income taxes. The significant items causing this difference are as follows:

	Dec. 31, 20X2	**Effective Tax Rate**
Provision computed at statutory rate	$245,000	35.0%
Tax exempt income deduction	(102,000)	(14.6)
Dividends received deduction	(84,000)	(12.0)

[48] This illustration includes both the rate reconciliation and the tax effected amounts although only one of these is required to be disclosed under SSAP No. 101.

Tax differentials on foreign earnings	(34,000)	(4.8)
Change in statutory valuation allowance adjustment	10,000	1.4
Nondeductible goodwill	8,000	1.1
Other	7,000	1.0
Total	$50,000	7.1%
Federal and foreign income taxes incurred	$220,000	31.4%
Change in net deferred income taxes[49]	(170,000)	(24.3)
Total statutory income taxes	$50,000	7.1%

Paragraph 26 Illustration:

12.32 The Company has net capital loss carryforwards which expire as follows: 20X5, $9,000; 20X6; $1,000.

Paragraph 27 Illustration:

12.33 The Company believes it is reasonably possible that the liability related to any federal or foreign tax loss contingencies may significantly increase within the next 12 months. However, an estimate of the reasonably possible increase cannot be made at this time.

Paragraph 28 Illustration:

12.34 The Company is included in a consolidated federal income tax return with its parent company, Alpha Corporation. The Company has a written agreement, approved by the Company's Board of Directors, which sets forth the manner in which the total combined federal income tax is allocated to each entity which is a party to the consolidation. Pursuant to this agreement, the Company has the enforceable right to recoup federal income taxes paid in prior years in the event of future net losses, which it may incur, or to recoup its net losses carried forward as an offset to future net income subject to federal income taxes.

13. Q – How are tax-planning strategies to be considered in determining adjusted gross DTAs [Paragraph 7.e.] and admitted adjusted gross DTAs [Paragraphs 11.a., 11.b.i., 14 and 15]?

Overview:

13.1 A – Paragraph 14 of SSAP No. 101 states:

> In some circumstances, there are tax-planning strategies (including elections for tax purposes) that (a) are prudent and feasible, (b) a reporting entity ordinarily might not take, but would take to prevent an operating loss or tax credit carryforward from expiring unused, and (c) would result in realization of deferred tax assets. A reporting entity shall consider tax-planning strategies in (1) determining the amount of the statutory valuation allowance adjustment necessary under paragraph 7.e. and (2) the realization of deferred tax assets when determining admission under paragraph 11…

13.2 Paragraph 248 of FAS 109 additionally states that:

> Tax-planning strategies also may shift the estimated pattern and timing of future reversals of temporary differences…. A tax-planning strategy to accelerate the reversal of deductible

[49] As reported in the surplus section of the Annual Statement. The change in net deferred income taxes is before nonadmission of any DTA. The change in nonadmitted DTA is reported together with the total change in nonadmitted assets and presented as a separate component of surplus.

> temporary differences in time to offset taxable income that is expected in an early future year might be the only means to realize a tax benefit for those deductible temporary differences if they otherwise would reverse and provide no tax benefit in some later future year(s).

13.3 As also provided in paragraph 14 of SSAP No. 101, if a tax-planning strategy is used to accelerate the reversal or realization of an item, any significant net-of-tax potential costs or losses associated with the implementation of the strategy should reduce the adjusted gross or admitted DTA.

13.4 When considering a prudent and feasible tax-planning strategy that is more likely than not to enable realization of all or part of an adjusted gross DTA or admitted DTA, paragraph 15 of SSAP No. 101 states that "paragraph 3 of this statement related to tax loss contingencies shall be applied in determining admissibility of deferred tax assets under paragraph 11 of this statement." Accordingly, a reporting entity must evaluate the likelihood, if a tax-planning strategy were implemented, of whether a tax loss contingency would be required to be recorded under paragraph 3.a. If so, the admitted tax benefit of a tax-planning strategy must be reduced by the amount of tax loss contingency so required. For example, if a tax-planning strategy provided a $100 admitted DTA, but the reporting entity estimated that a tax loss contingency reserve of $40 would be required if the strategy was implemented, the admitted DTA resulting from the tax-planning strategy would be reduced by $40. Since the admitted DTA would be net of any applicable tax loss contingencies, no separate tax loss contingencies would actually be recorded for these items.

Statutory Valuation Allowance Adjustment:

13.5 As discussed in Question 2.5, future realization of gross DTAs ultimately depends on the existence of sufficient taxable income of the appropriate character within the carryback or carryforward period available under the tax law. In determining adjusted gross DTAs, a reporting entity shall consider the four sources of taxable income that may be available under the tax law, one of which is tax-planning strategies[50]. As noted in paragraph 13 of SSAP No. 101, a reporting entity is not required to consider all four sources of taxable income if one or more sources are alone sufficient to support the conclusion that the entity will realize the tax benefits of its adjusted gross DTAs (i.e., a conclusion that no statutory valuation allowance is necessary). Accordingly, tax-planning strategies need not be considered if the other sources of taxable income are sufficient to realize the benefits of reversing existing DTAs. However, the reporting entity is required to consider the impact of tax planning strategies to determine the amount of the adjustment if a conclusion is reached that a statutory valuation allowance adjustment is necessary.

Tax-Planning Strategies for Admission of DTAs:

13.6 In order for a tax-planning strategy to support admission of adjusted gross DTAs under paragraph 11, the reporting entity must demonstrate that (1) the admitted DTAs would be realized either within a period that would give rise to a carryback of tax losses under the Internal Revenue Code, not to exceed three years (for admission under paragraph 11.a.), or within the applicable period (refer to the 11.b.i. column of the applicable Realization Threshold Limitation Table in paragraph 11) and (2) it would have the ability to implement the strategy. In such circumstances an entity may recognize, as admitted assets, the related DTAs that are realizable as a result of the available tax-planning strategy in accordance with paragraphs 11.a., 11.b.i. and 11.c. of SSAP No. 101. Using tax-planning strategies in determining the admissible DTA is analogous to the use of tax-planning strategies in determining the amount of the statutory valuation allowance adjustment required under paragraph 7.e. of SSAP No. 101 and paragraph

[50] See paragraph 13 of SSAP No. 101 and paragraph 21 of FAS 109. Examples of tax-planning strategies as provided in paragraph 13.d. are (1) accelerate taxable amounts to utilize expiring carryforward, (2) change the character of taxable or deductible amounts from ordinary income or loss to capital gain or loss, and (3) switch from tax-exempt to taxable investments.

22 of FAS 109. Although a reporting entity may use tax-planning strategies in determining the portion of its adjusted gross DTAs that are admissible, it is not required to do so.

13.7 The requirement in paragraph 11.a. and 11.b.i. of SSAP No. 101 to consider only those DTAs that reverse or are realized within a period that would give rise to a carryback of losses under the Internal Revenue Code not to exceed three years (paragraph 11.a.) or within the applicable period following the balance sheet date (paragraph 11.b.i.) causes those DTAs which would otherwise reverse beyond such period to potentially provide no tax benefit (unless admitted under paragraph 11.c.). The potential reversal beyond the appropriate period is comparable to an expiring net operating loss, in that the deduction would not provide a tax benefit under SSAP No. 101. Thus, to the extent prudent and feasible tax-planning strategies exist to accelerate the reversal or realization of these DTAs, these strategies are comparable to those contemplated in paragraph 248 of FAS 109 above.

13.8 An example of a prudent and feasible tax-planning strategy is as follows:

13.9 Company A, a property/casualty insurance company for federal income tax purposes, has paid federal income taxes of $500,000 in each of calendar years 20X1 and 20X2. The company has an ExDTA ACL RBC percentage of 250% and therefore is required to use the one-year applicable period under paragraph 11.b.i. of SSAP No. 101. It has capital and surplus for purposes of paragraph 11.b.ii. of SSAP No. 101 of $20,000,000. Company A has an obligation to provide post-retirement health benefits to its employees. At December 31, 20X2, Company A has included a liability for $1,000,000 on its statutory-basis financial statements for post-retirement health benefits. This liability is not currently deductible for federal income tax purposes, and only $25,000 reverses within each of the next two calendar years. This is Company A's only DTA under SSAP No. 101, and there are no DTLs. Company A, absent any tax-planning strategies, would compute a DTA of $350,000 ($1,000,000 X 35%), and would admit $17,500 ($50,000 X 35%) under paragraph 11.a., and has no additional admitted DTA under paragraph 11.b.

13.10 Company A could implement a welfare benefit fund for tax purposes, and contribute assets to the fund to cover qualifying welfare benefits. The contribution, subject to limitations, would be deductible for federal income tax purposes, and would have the effect of accelerating the deduction for Company A's post-retirement health benefits. Company A has computed that $300,000 could be contributed during 20X3 to the welfare benefit fund, and to implement this strategy, it would cost $15,000 on an after-tax basis. Company A management believe that this strategy is prudent and feasible, and the Company would be able to implement this strategy if necessary. Company A would be able to admit an additional $90,000 of DTAs ($300,000 X 35%, or $105,000, less $15,000 in costs) under paragraph 11.a., with no additional admitted DTA under paragraph 11.b.

13.11 A tax-planning strategy would not be considered prudent or feasible if use of the strategy would be inconsistent with assumptions inherent in statutory or other accounting basis financial statements. For instance, a tax-planning strategy to sell securities identified as "held to maturity" for GAAP-basis financial statements at a loss would not be prudent or feasible. Additionally, if a potential tax planning strategy were to involve selling debt securities at a loss, it would not be prudent or feasible if the securities had not been identified as impaired and the loss recognized for statutory-basis financial statements. Additionally, a tax-planning strategy that could not be implemented to realize a tax benefit within the requisite period following the balance sheet date or is inconsistent with management's business plan objectives would not be prudent and/or feasible.

Accounting for Pensions, A Replacement of SSAP No. 89

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles and related reporting for employers' pension obligations.

2. This statement establishes financial accounting and reporting standards for an insurer that offers pension benefits to its employees. Ordinarily, such benefits are periodic pension payments to retired employees or their survivors, but they may also include benefits payable as a single lump sum and other types of benefits, such as death benefits provided through a pension plan. (This statement does not apply to life insurance benefits provided outside a pension plan or postretirement health and welfare benefits.) Arrangements to provide pension benefits may take a variety of forms and may be financed in different ways. This statement applies to any arrangement that is similar in substance to a pension plan regardless of form or financing. This statement applies to a written plan and to a plan whose existence may be implied from a well-defined, although perhaps unwritten, practice of paying postretirement benefits. This statement supersedes the guidance in *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8* (SSAP No. 89), nullifies and incorporates the guidance in *INT 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26)*,* and *INT 04-12: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* (INT 04-12), and nullifies *INT 01-16: Measurement Date for SSAP No. 8 Actuarial Valuations* (INT 01-16), *INT 03-18: Accounting for a Change in the Additional Minimum Liability in SSAP No. 8—Pensions (SSAP No. 8)* (INT 03-18) and *INT 04-03: Clarification for Calculating the Additional Minimum Pension Liability under SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8, paragraph 16.f.* (INT 04-03). This statement also modifies *INT 04-17: Impact of Medicare Modernization on Postretirement Benefits* (INT 04-17) to remove reference to pensions as this interpretation only addresses postretirement benefits other than pensions.

SUMMARY CONCLUSION

Defined Benefit Plans

Single-Employer Defined Benefit Pension Plans

3. A defined benefit pension plan is one that defines an amount of pension benefit to be provided, usually as a function of one or more factors such as age, years of service, or compensation. (Hybrid pension plans that refer to an account balance, rather than a monthly annuity at retirement (also known as cash balance plans) are considered defined benefit plans for purposes of applying this statement.) For defined benefit plans, reporting entities shall adopt *FAS 158: Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106, and 132(R)* (FAS 158) and *FASB Staff Position FAS 136(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 136(R)-1) with modifications as discussed within paragraph ~~81~~82.

4. A pension benefit is part of the compensation paid to an employee for services. In a defined benefit pension plan, the employer promises to provide, in addition to current wages, retirement income payments in future years after the employee retires or terminates service. Generally, the amount of benefit to be paid depends on a number of future events that are incorporated in the plan's benefit formula, often including how long the employee and any survivors live, how many years of service the employee renders, and the employee's compensation in the years immediately before retirement or termination. In most cases, services are rendered over a number of years before an employee retires and begins collecting the pension. Even though the services rendered by an employee are complete and the employee has retired, the total amount of benefit that the employer has promised and the cost to the employer of the services rendered are not precisely determinable but can only be estimated using the benefit formula and estimates of the relevant future events, many of which the employer cannot control.

Elements of Pension Accounting

5. Net periodic pension cost is made up of several components that reflect different aspects of the employer's financial arrangements as well as the cost of benefits earned by employees. The cost of a benefit can be determined without regard to how the employer decides to finance the plan. The service cost component of net periodic pension cost is the actuarial present value of benefits attributed by the plan's benefit formula to services rendered by employees during the period. The service cost component is conceptually the same for an unfunded plan, a plan with minimal funding, and a well-funded plan. The other components of net periodic pension cost are interest cost (interest on the projected benefit obligation, which is a discounted amount), actual[1] return on plan assets, amortization of any prior service cost or credit included in unassigned funds (surplus), and gain or loss, which includes, to the extent recognized, amortization of the net gain or loss included in unassigned funds (surplus) (refer to paragraph 24).

6. The projected benefit obligation is the actuarial present value of all benefits attributed by the plan's benefit formula to employee service rendered prior to that date. The projected benefit obligation is measured using an assumption as to future compensation levels if the pension benefit formula is based on those future compensation levels. The projected benefit obligation is a measure of benefits attributed to service to date assuming that the plan continues in effect and that estimated future events (including compensation increases, turnover, and mortality) occur.

7. The accumulated benefit obligation is the actuarial present value of benefits attributed by the pension benefit formula to employee service rendered prior to that date and based on current and past compensation levels. The accumulated benefit obligation differs from the projected benefit obligation in that it includes no assumption about future compensation levels. For plans with flat-benefit or non-pay-related pension benefit formulas, the accumulated benefit obligation and the projected benefit obligation are the same.

8. Plan assets are assets that have been segregated and restricted to provide for pension benefits. The amount of plan assets includes amounts contributed by the employer and amounts earned from investing the contributions, less benefits paid. Assets not segregated in a trust or otherwise effectively restricted so that they cannot be used by the employer for other purposes are not considered plan assets even though it may be intended that such assets be used to provide for pension benefits. Amounts accrued by the employer but not yet paid to the plan are also not considered plan assets. Securities of the employer held by the plan are includable in plan assets provided they are transferable.

Recognition of Net Periodic Pension Cost

9. The following components shall be included in the net pension cost for a period by an employer sponsoring a defined benefit pension plan: a) Service cost; b) Interest cost; c) Actual return on plan assets; d) Amortization of any prior service cost or credit included in unassigned funds (surplus); e) Gain or loss (including the effects of changes in assumptions) to the extent recognized; and f) Amortization of any net transition asset or obligation existing at the date of initial application of this statement and remaining in unassigned funds (surplus).

[1] To address a question on how the expected return on plan assets affects the determination of net periodic pension cost if the actual return on plan assets for a period is a component of net periodic pension cost, it is noted that the expected return on plan assets generally will be different from the actual return on plan assets for the year. This statement provides for recognition of that difference (a net gain or loss) in unassigned funds in the period it arises. The amount recognized in unassigned funds is also a component of net periodic pension cost for the current period. Thus, the amount recognized in unassigned funds and the actual return on plan assets, when aggregated, equal the expected return on plan assets. The amount recognized in unassigned funds affects future net periodic pension cost through subsequent amortization, if any, of the net gain or loss. (This footnote reflects guidance included in E12 of FSP FAS 158-1.)

Service Cost

10. The service cost component recognized in a period shall be determined as the actuarial present value of benefits attributed by the pension benefit formula to employee service (including both vested and nonvested employees) during that period.

11. The prior service cost for nonvested employees not previously recognized[2] is not required to be included in net periodic pension cost entirely in the year this standard is adopted. Unrecognized prior service cost for nonvested employees shall be amortized as a component of net periodic pension cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized (refer to paragraphs ~~83-85~~84-86 for transition guidance related to the recognition of the prior service cost for nonvested employees though unassigned surplus).

Interest Cost

12. The interest cost component recognized in a period shall be determined as the increase in the projected benefit obligation due to the passage of time. Measuring the projected benefit obligation as a present value requires accrual of an interest cost at rates equal to the assumed discount rates.

Actual Return on Plan Assets

13. For a funded plan, the actual return on plan assets shall be determined based on the fair value of plan assets at the beginning and the end of the period, adjusted for contributions and benefit payments.

Prior Service Cost

14. Plan amendments (including initiation of a plan) often include provisions that grant increased benefits based on services rendered in prior periods. Because plan amendments are granted with the expectation that the employer will realize economic benefits in future periods, the cost of providing such retroactive benefits (prior service cost) is not required to be included in net periodic pension cost entirely in the year of the amendment but provides for recognition during the future service periods of those employees active at the date of the amendment who are expected to receive benefits under the plan.

15. A plan amendment that retroactively increases benefits (including benefits that are granted to retirees) increases the projected benefit obligation. The cost of the benefit improvement shall be recognized as a charge to unassigned funds (surplus) at the date of the amendment. Except as specified in paragraphs 16-17, that prior service cost shall be amortized as a component of net periodic pension cost by assigning an equal amount to each future period of service of each employee active at the date of the amendment who is expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the cost of retroactive plan amendments affecting benefits of inactive participants shall be amortized based on the remaining life expectancy of those participants instead of based on the remaining service period. Unassigned funds (surplus) is adjusted each period as prior service cost is amortized.

16. Consistent use of an alternative approach that more rapidly amortizes the cost of retroactive amendments is acceptable. For example, a straight-line amortization of the cost over the average remaining service period of employees expected to receive benefits under the plan is acceptable. The alternative method used shall be disclosed.

[2] The previous statutory accounting guidance in *SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8* excluded nonvested employees from the service cost calculation. This exclusion has been eliminated with the issuance of this SSAP.

17. In some situations a history of regular plan amendments and other evidence may indicate that the period during which the employer expects to realize economic benefits from an amendment granting retroactive benefits is shorter than the entire remaining service period of the active employees. Identification of such situations requires an assessment of the individual circumstances and the substance of the particular plan situation. In those circumstances, the amortization of prior service cost shall be accelerated to reflect the more rapid expiration of the employer's economic benefits and to recognize the cost in the periods benefited.

18. A plan amendment that retroactively reduces, rather than increases, benefits decreases the projected benefit obligation. The reduction in benefits shall be recognized as a credit (prior service credit) to unassigned funds (surplus) that shall be used first to reduce any remaining prior service cost included in unassigned funds (surplus). Any remaining prior service credit shall be amortized as a component of net periodic pension cost on the same basis as the cost of a benefit increase.

Gains and Losses

19. Gains and losses are changes in the amount of either the projected benefit obligation or plan assets resulting from experience different from that assumed and from changes in assumptions. This statement does not distinguish between those sources of gains and losses. Gains and losses include amounts that have been realized, as well as amounts that are unrealized. Because gains and losses may reflect refinements in estimates as well as real changes in economic values and because some gains in one period may be offset by losses in another or vice versa, recognition of gains and losses as components of net pension cost of the period in which they arise is not required. Gains and losses that are not recognized immediately as a component of net periodic pension cost shall be recognized as increases or decreases in unassigned funds (surplus) as they arise.

20. The expected return on plan assets shall be determined based on the expected long-term rate of return on plan assets and the fair value of plan assets.

21. Asset gains and losses are differences between the actual return on assets during a period and the expected return on assets for that period. Asset gains and losses include changes reflected in the fair value of assets.

22. As a minimum, amortization of a net gain or loss included in unassigned funds (surplus) shall be included as a component of net pension cost for a year if, as of the beginning of the year, that net gain or loss exceeds 10 percent of the greater of the projected benefit obligation or the fair value of plan assets. If amortization is required, the minimum amortization shall be that excess divided by the average remaining service period of active employees expected to receive benefits under the plan. If all or almost all of a plan's participants are inactive, the average remaining life expectancy of the inactive participants shall be used instead of average remaining service.

23. Any systematic method of amortizing gains or losses may be used in lieu of the minimum specified in the previous paragraph provided that (a) the minimum is used in any period in which the minimum amortization is greater (reduces the net balance included in unassigned funds (surplus) by more), (b) the method is applied consistently, (c) the method is applied similarly to both gains and losses, and (d) the method used is disclosed.

24. The gain or loss component of net periodic pension cost shall consist of (a) the difference between the actual return on plan assets and the expected return on plan assets and (b) amortization of the net gain or loss included in unassigned funds (surplus).

Recognition of Liabilities and Assets

25. If the projected benefit obligation (considering both vested and nonvested participants) exceeds the fair value of plan assets, the employer shall recognize in its statement of financial position a liability that equals the unfunded projected benefit obligation. If the fair value of plan assets exceeds the projected benefit obligation, the employer shall recognize in its statement of financial position an asset that equals the overfunded projected benefit obligation. This prepaid asset resulting from the excess of the fair value of plan assets over the projected benefit obligation shall be nonadmitted.

26. If multiple single-employer plans exist, the employer shall aggregate the statuses of all overfunded plans and recognize that amount as an asset in its statement of financial position. It also shall aggregate the statuses of all underfunded plans and recognize that amount as a liability in its statement of financial position. It is not acceptable statutory accounting practice to offset pension or postretirement benefits other than pensions liability generated by one plan against the prepaid assets of another plan.

27. The asset or liability that is recognized pursuant to paragraph 25 may result in a temporary difference, as defined in *SSAP No. 101—Income Taxes—A Replacement of SSAP No. 10R and SSAP No. 10* (SSAP No. 101). The deferred tax effects of any temporary differences shall be recognized in income tax expense or benefit for the year and shall be allocated pursuant to SSAP No. 101.

28. If a new determination of the funded status of a plan to be recognized as an asset or a liability in the employer's statement of financial position is made, or when net gains or losses, prior service costs or credits, or the net transition asset or obligation existing at the date of initial application of this statement are amortized as components of net periodic pension cost, the related balances for those net gains or losses, prior service costs or credits, and transition asset or obligation in unassigned funds (surplus) shall be adjusted as necessary and reported in unassigned funds (surplus).

Measurement of Cost and Obligations

29. The service component of net periodic pension cost, the projected benefit obligation, and the accumulated benefit obligation are based on an attribution of pension benefits to periods of employee service and on the use of actuarial assumptions to calculate the actuarial present value of those benefits. Actuarial assumptions reflect the time value of money (discount rate) and the probability of payment (assumptions as to mortality, turnover, early retirement, and so forth).

Attribution

30. Pension benefits ordinarily shall be attributed to periods of employee service based on the plan's benefit formula to the extent that the formula states or implies an attribution. In some situations a history of regular increases and other evidence may indicate that an employer has a present commitment to make future amendments and that the substance of the plan is to provide benefits attributable to prior service that are greater than the benefits defined by the written terms of the plan. In those situations, the substantive commitment shall be the basis for the accounting, and the existence and nature of the commitment to make future amendments shall be disclosed.

31. In some situations a history of regular increases in non-pay-related benefits or benefits under a career-average-pay plan and other evidence may indicate that an employer has a present commitment to make future amendments and that the substance of the plan is to provide benefits attributable to prior service that are greater than the benefits defined by the written terms of the plan. In those situations, the substantive commitment shall be the basis for the accounting, and the existence and nature of the commitment to make future amendments shall be disclosed.

32. Some plans may have benefit formulas that attribute all or a disproportionate share of the total benefits provided to later years of service, thereby achieving in substance a delayed vesting of benefits. For such plans the total projected benefit shall be considered to accumulate in proportion to the ratio of the number of completed years of service to the number that will have been completed when the benefit is first fully vested. If a plan's benefit formula does not specify how a particular benefit relates to services rendered, the benefit shall be considered to accumulate as follows:

a. For benefits of a type includable in vested benefits, in proportion to the ratio of the number of completed years of service to the number that will have been completed when the benefit is first fully vested.

b. For benefits of a type not includable in vested benefits, in proportion to the ratio of completed years of service to total projected years of service.

Assumptions

33. Each significant actuarial assumption used shall reflect the best estimate solely with respect to that individual assumption. All assumptions shall presume that the plan will continue in effect in the absence of evidence that it will not continue.

34. Assumed discount rates shall reflect the rates at which the pension benefits could be effectively settled. It is appropriate in estimating those rates to look to available information about rates implicit in current prices of annuity contracts that could be used to effect settlement of the obligation. In making those estimates, employers may also look to rates of return on high-quality fixed-income investments currently available and expected to be available during the period to maturity of the pension benefits. Assumed discount rates are used in measurements of the projected, accumulated, and vested benefit obligations and the service and interest cost components of net periodic pension cost.

35. The objective of selecting assumed discount rates using the method noted in paragraph 34 is to measure the single amount that, if invested at the measurement date in a portfolio of high-quality debt instruments, would provide the necessary future cash flows to pay the pension benefits when due. Notionally, that single amount, the projected benefit obligation, would equal the fair value of a portfolio of high-quality zero coupon bonds whose maturity dates and amounts would be the same as the timing and amount of the expected future benefit payments. Because cash inflows would equal cash outflows in timing and amount, there would be no reinvestment risk in the yields to maturity of the portfolio. However, in other than a zero coupon portfolio, such as a portfolio of long-term debt instruments that pay semiannual interest payments or whose maturities do not extend far enough into the future to meet expected benefit payments, the assumed discount rates (the yield to maturity) need to incorporate expected reinvestment rates available in the future. Those rates shall be extrapolated from the existing yield curve at the measurement date. The determination of the assumed discount rate is separate from the determination of the expected rate of return on plan assets whenever the actual portfolio differs from the hypothetical portfolio above. Assumed discount rates shall be reevaluated at each measurement date. If the general level of interest rates rises or declines, the assumed discount rates shall change in a similar manner.

36. The expected long-term rate of return on plan assets shall reflect the average rate of earnings expected on the funds invested or to be invested to provide for the benefits included in the projected benefit obligation. In estimating that rate, appropriate consideration should be given to the returns being earned by the plan assets in the fund and the rates of return expected to be available for reinvestment. The expected long-term rate of return on plan assets is used to compute the expected return on assets.

37. The service cost component of net periodic pension cost and the projected benefit obligation shall reflect future compensation levels to the extent that the pension benefit formula defines pension benefits

wholly or partially as a function of future compensation levels. Future increases for which a present commitment exists shall be similarly considered. Assumed compensation levels shall reflect an estimate of the actual future compensation levels of the individual employees involved, including future changes attributed to general price levels, productivity, seniority, promotion, and other factors. All assumptions shall be consistent to the extent that each reflects expectations of the same future economic conditions, such as future rates of inflation. Measuring service cost and the projected benefit obligation based on estimated future compensation levels entails considering indirect effects, such as changes under existing law in social security benefits or benefit limitations that would affect benefits provided by the plan.

38. The accumulated benefit obligation shall be measured based on employees' history of service and compensation without an estimate of future compensation levels. Excluding estimated future compensation levels also means excluding indirect effects of future changes such as increases in the social security wage base. In measuring the accumulated benefit obligation, projected years of service shall be a factor only in determining employees' expected eligibility for particular benefits, such as:

a. Increased benefits that are granted provided a specified number of years of service are rendered

b. Early retirement benefits

c. Death benefits

d. Disability benefits

39. Automatic benefit increases specified by the plan (for example, automatic cost-of-living increases) that are expected to occur shall be included in measurements of the projected, accumulated, and vested benefit obligations, and the service cost component. Also, retroactive plan amendments shall be included in the computation of the projected and accumulated benefit obligations once they have been contractually agreed to, even if some provisions take effect only in future periods.

Measurement of Plan Assets

40. Plan investments, whether equity or debt securities, real estate, or other, shall be measured at their fair value as of the measurement date. The fair value of an investment shall be reduced by brokerage commissions and other costs normally incurred in a sale, if those costs are significant (similar to fair value less costs to sell).

41. Plan assets used in plan operations (for example, buildings, equipment, furniture and fixtures, and leasehold improvements) shall be measured at cost less accumulated depreciation or amortization for all purposes.

42. The measurements of plan assets and benefit obligations shall be as of the date of the employer’s fiscal year-end statement of financial position. Requiring that the pension measurements be as of a particular date is not intended to require that all procedures be performed after that date. As with other financial statement items requiring estimates, much of the information can be prepared as of an earlier date and projected forward to account for subsequent events (for example, employee service). Unless a business entity remeasures both its plan assets and benefit obligations during the fiscal year, the funded status it reports in its interim-period statement of financial position shall be the same asset or liability recognized in the previous year-end statement of financial position adjusted for (1) subsequent accruals of net periodic pension cost that exclude the amortization of amounts previously recognized in other unassigned funds (surplus) (for example, subsequent accruals of service cost, interest cost, and return on plan assets) and (2) contributions to a funded plan, or benefit payments. Sometimes, a business entity remeasures both plan assets and benefit obligations during the fiscal year. That is the case, for example,

when a significant event such as a plan amendment, settlement, or curtailment occurs that calls for a remeasurement. Upon remeasurement, a business entity shall adjust its statement of financial position in a subsequent interim period to reflect the overfunded or underfunded status of the plan consistent with that measurement date.

43. Measurements of net periodic pension cost for both interim and annual financial statements shall be based on the assumptions used for the previous year-end measurements unless more recent measurements of both plan assets and obligations are available or a significant event occurs, such as a plan amendment, that would ordinarily call for such measurements.

Employers with Two or More Plans

44. An employer that sponsors two or more separate defined benefit pension plans shall determine net periodic pension cost, liabilities, and assets by separately applying the provisions of this statement to each plan. In particular, unless an employer clearly has a right to use the assets of one plan to pay benefits of another, a liability required to be recognized for one plan shall not be reduced or eliminated because the employer has recognized an asset for another plan that has assets in excess of its projected benefit obligation. (As noted within paragraph 26, overfunded plans shall be aggregated for asset reporting (nonadmitted) and underfunded plans shall be aggregated for liability reporting.)

Annuity Contracts

45. An annuity contract is a contract in which an insurance company unconditionally undertakes a legal obligation to provide specified benefits to specific individuals in return for a fixed consideration or premium. An annuity contract is irrevocable and involves the transfer of significant risk from the employer to the insurance company. Some annuity contracts (participating annuity contracts) provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser. If the substance of a participating contract is such that the employer remains subject to all or most of the risks and rewards associated with the benefit obligation covered and the assets transferred to the insurance company, that contract is not an annuity contract for purposes of this statement.

46. To the extent that benefits currently earned are covered by annuity contracts, the cost of those benefits shall be the cost of purchasing the contracts, except as provided in paragraph 49. That is, if all the benefits attributed by the plan's benefit formula to service in the current period are covered by nonparticipating annuity contracts, the cost of the contracts determines the service cost component of net pension cost for that period.

47. Benefits provided by the pension benefit formula beyond benefits provided by annuity contracts (for example, benefits related to future compensation levels) shall be accounted for according to the provisions of this statement applicable to plans not involving insurance contracts.

48. Benefits covered by annuity contracts shall be excluded from the projected benefit obligation and the accumulated benefit obligation. Except as provided in paragraph 49, annuity contracts shall be excluded from plan assets.

49. Some annuity contracts provide that the purchaser (either the plan or the employer) may participate in the experience of the insurance company. Under those contracts, the insurance company ordinarily pays dividends to the purchaser, the effect of which is to reduce the cost of the plan. The purchase price of a participating annuity contract ordinarily is higher than the price of an equivalent contract without participation rights. The difference is the cost of the participation right. The cost of the participation right shall be recognized at the date of purchase as a nonadmitted asset. In subsequent periods, the participation right shall be nonadmitted and measured at its fair value if the contract is such

that fair value is reasonably estimable. Otherwise, the participation right shall be measured at its amortized cost (not in excess of its net realizable value), and the cost shall be amortized systematically over the expected dividend period under the contract.

Other Contracts with Insurance Companies

50. Insurance contracts that are in substance equivalent to the purchase of annuities shall be accounted for as such. Other contracts with insurance companies shall be accounted for as investments and measured at fair value. For some contracts, the best available evidence of fair value may be contract value. If a contract has a determinable cash surrender value or conversion value, that is presumed to be its fair value.

Defined Benefit Plans – Settlements and Curtailments

51. A settlement is defined as a transaction that (a) is an irrevocable action, (b) relieves the employer (or the plan) of primary responsibility for a pension benefit obligation, and (c) eliminates significant risks related to the obligation and the assets used to effect the settlement. Examples of transactions that constitute a settlement include (a) making lump-sum cash payments to plan participants in exchange for their rights to receive specified pension benefits and (b) purchasing nonparticipating annuity contracts to cover vested benefits.

52. A transaction that does not meet all of the above three criteria does not constitute a settlement for purposes of this statement. For example, investing in a portfolio of high-quality fixed-income securities with principal and interest payment dates similar to the estimated payment dates of benefits may avoid or minimize certain risks. However, that does not constitute a settlement because the investment decision can be reversed and such a strategy does not relieve the employer (or the plan) of primary responsibility for a pension obligation nor does it eliminate significant risks related to the obligation.

Annuity Contracts

53. The definition of an annuity contract is included in paragraph 45. If the substance of a participating annuity contract is such that the employer remains subject to all or most of the risks and rewards associated with the benefit obligation covered or the assets transferred to the insurance company, the purchase of the contract does not constitute a settlement.

Curtailment

54. A curtailment is an event that significantly reduces the expected years of future service of present employees or eliminates for a significant number of employees the accrual of defined benefits for some or all of their future services. Curtailments include:

a. Termination of employees' services earlier than expected, which may or may not involve closing a facility or discontinuing a component of an entity.

b. Termination or suspension of a plan so that employees do not earn additional defined benefits for future services. In the latter situation, future service may be counted toward vesting of benefits accumulated based on past service.

Relationship of Settlements and Curtailments to Other Events

55. A settlement and a curtailment may occur separately or together. If benefits to be accumulated in future periods are reduced but the plan remains in existence and continues to pay benefits, to invest assets, and to receive contributions, a curtailment has occurred but not a settlement. If an employer purchases nonparticipating annuity contracts for vested benefits and continues to provide defined benefits for future

service, either in the same plan or in a successor plan, a settlement has occurred but not a curtailment. If a plan is terminated (that is, the obligation is settled and the plan ceases to exist) and not replaced by a successor defined benefit plan, both a settlement and a curtailment have occurred (whether or not the employees continue to work for the employer).

Accounting for Settlement of the Pension Obligation

56. The maximum gain or loss subject to recognition in earnings when a pension obligation is settled is the net gain or loss remaining in unassigned funds (surplus) plus any transition asset remaining in unassigned funds (surplus) from initial application of SSAP No. 89. That maximum amount includes any gain or loss first measured at the time of settlement. The maximum amount shall be recognized in earnings if the entire projected benefit obligation is settled. If only part of the projected benefit obligation is settled, the employer shall recognize in earnings a pro rata portion of the maximum amount equal to the percentage reduction in the projected benefit obligation.

57. If the purchase of a participating annuity contract constitutes a settlement, the maximum gain (but not the maximum loss) shall be reduced by the cost of the participation right before determining the amount to be recognized in earnings.

58. If the cost of all settlements in a year is less than or equal to the sum of the service cost and interest cost components of net periodic pension cost for the plan for the year, gain or loss recognition is permitted but not required for those settlements. However, the accounting policy adopted shall be applied consistently from year to year.

Accounting for a Plan Curtailment

59. The prior service cost included in unassigned funds (surplus) associated with years of service no longer expected to be rendered as the result of a curtailment is a loss. For example, if a curtailment eliminates half of the estimated remaining future years of service of those who were employed at the date of a prior plan amendment and were expected to receive benefits under the plan, then the loss associated with the curtailment is half of the prior service cost included in unassigned funds (surplus) related to that amendment that has not been amortized as a component of net periodic pension cost. For purposes of applying the provisions of this paragraph, prior service cost includes the cost of retroactive plan amendments and any transition obligation remaining in unassigned funds (surplus) from initial application of SSAP No. 89.

60. The projected benefit obligation may be decreased (a gain) or increased (a loss) by a curtailment.

a. To the extent that such a gain exceeds any net loss included in unassigned funds (surplus) (or the entire gain, if a net gain exists), it is a curtailment gain.

b. To the extent that such a loss exceeds any net gain included in unassigned funds (surplus) (or the entire loss, if a net loss exists), it is a curtailment loss.

For purposes of applying the provisions of this paragraph, any transition asset remaining in unassigned funds (surplus) from initial application of SSAP No. 89 shall be treated as a net gain and shall be combined with the net gain or loss arising subsequent to transition to SSAP No. 89.

61. If the sum of the effects identified in paragraphs 59 and 60 is a net loss, it shall be recognized in earnings when it is probable that a curtailment will occur and the effects described are reasonably estimable. If the sum of those effects is a net gain, it shall be recognized in earnings when the related employees terminate or the plan suspension or amendment is adopted.

Termination Benefits

62. An employer may provide benefits to employees in connection with their termination of employment. They may be either special termination benefits offered only for a short period of time or contractual termination benefits required by the terms of a plan only if a specified event, such as a plant closing, occurs. An employer that offers special termination benefits to employees shall recognize a liability and a loss when the employees accept the offer and the amount can be reasonably estimated. An employer that provides contractual termination benefits shall recognize a liability and a loss when it is probable that employees will be entitled to benefits and the amount can be reasonably estimated. Termination benefits may take various forms including lump-sum payments, periodic future payments, or both. They may be paid directly from an employer's assets, an existing pension plan, a new employee benefit plan, or a combination of those means. The cost of termination benefits recognized as a liability and a loss shall include the amount of any lump-sum payments and the present value of any expected future payments. A situation involving termination benefits may also involve a curtailment to be accounted for under paragraphs 59-61.

Disclosures – Single-Employer Defined Benefit Plans

63. An employer that sponsors one or more defined benefit pension plans or one or more other defined benefit postretirement plans shall provide the following information, separately for pension plans and other postretirement benefit plans. Amounts related to the employer’s results of operations shall be disclosed for each period for which a statement of income is presented. Amounts related to the employer’s statement of financial position, shall be disclosed as of the date of each statement of financial position presented.

a. A reconciliation of beginning and ending balances of the benefit obligation showing separately, if applicable, the effects during the period attributable to each of the following: service cost, interest cost, contributions by plan participants, actuarial gains and losses, foreign currency exchange rate changes, benefits paid, plan amendments, business combinations, divestitures, curtailments, settlements, and special termination benefits.

b. A reconciliation of beginning and ending balances of the fair value of plan assets showing separately, if applicable, the effects during the period attributable to each of the following: actual return on plan assets, foreign currency exchange rate changes, contributions by the employer, contributions by plan participants, benefits paid, business combinations, divestitures, and settlements.

c. The funded status of the plans and the amounts recognized in the statement of financial position, showing separately the assets and liabilities recognized.

d. The objectives of the disclosures about postretirement benefit plan assets are to provide users of financial statements with an understanding of:

   i. How investment allocation decisions are made, including the factors that are pertinent to an understanding of investment policies and strategies

   ii. The classes of plan assets

   iii. The inputs and valuation techniques used to measure the fair value of plan assets

   iv. The effect of fair value measurements using significant unobservable inputs (Level 3) on changes in plan assets for the period

v. Significant concentrations of risk within plan assets.

An employer shall consider those overall objectives in providing the following information about plan assets:

(a) A narrative description of investment policies and strategies, including target allocation percentages or range of percentages considering the classes of plan assets disclosed pursuant to (b) below, as of the latest statement of financial position presented (on a weighted-average basis for employers with more than one plan), and other factors that are pertinent to an understanding of those policies and strategies such as investment goals, risk management practices, permitted and prohibited investments including the use of derivatives, diversification, and the relationship between plan assets and benefit obligations. For investment funds disclosed as classes as described in (b) below, a description of the significant investment strategies of those funds shall be provided.

(b) The fair value of each class of plan assets as of each date for which a statement of financial position is presented. Asset classes shall be based on the nature and risks of assets in an employer's plan(s). Examples of classes of assets could include, but are not limited to, the following: cash and cash equivalents; equity securities, (segregated by industry type, company size, or investment objective); debt securities, issued by national, state, and local governments; corporate debt securities; asset-backed securities; structured debt; derivatives on a gross basis (segregated by type of underlying risk in the contract, for example, interest rate contracts, foreign exchange contracts, equity contracts, commodity contracts, credit contracts, and other contracts); investment funds (segregated by type of fund); and real estate. Those examples are not meant to be all inclusive. An employer should consider the overall objectives in paragraph 63.d. in determining whether additional classes of plan assets or further disaggregation of classes should be disclosed.

(c) A narrative description of the basis used to determine the overall expected long-term rate-of-return-on-assets assumption, such as the general approach used, the extent to which the overall rate-of-return-on-assets assumption was based on historical returns, the extent to which adjustments were made to those historical returns in order to reflect expectations of future returns, and how those adjustments were determined. The description should consider the classes of assets described in (b) above, as appropriate.

(d) Information that enables users of financial statements to assess the inputs and valuation techniques used to develop fair value measurements of plan assets at the reporting date. For fair value measurements using significant unobservable inputs, an employer shall disclose the effect of the measurements on changes in plan assets for the period. To meet those objectives, the employer shall disclose the following information for each class of plan assets disclosed pursuant to (b) above for each annual period:

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall,[3] segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

(2) For fair value measurements of plan assets using significant unobservable inputs (Level 3), a reconciliation of the beginning and ending balances, separately presenting changes during the period attributable to the following:

(i) Actual return on plan assets, separately identifying the amount related to assets still held at the reporting date and the amount related to assets sold during the period

(ii) Purchases, sales, and settlements, net

(iii) Transfers in and/or out of Level 3 (for example, transfers due to changes in the observability of significant inputs)

(3) Information about the valuation technique(s) and inputs used to measure fair value and a discussion of changes in valuation techniques and inputs, if any, during the period.

e. For defined benefit pension plans, the accumulated benefit obligation.

f. The benefits (as of the date of the latest statement of financial position presented) expected to be paid in each of the next five fiscal years, and in the aggregate for the five fiscal years thereafter. The expected benefits should be estimated based on the same assumptions used to measure the company's benefit obligation at the end of the year and should include benefits attributable to estimated future employee service.

g. The employer's best estimate, as soon as it can reasonably be determined, of contributions expected to be paid to the plan during the next fiscal year beginning after the date of the latest statement of financial position presented. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

h. The amount of net benefit cost recognized, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to settlements or curtailments.

i. Separately the net gain or loss and net prior service cost or credit recognized in unassigned funds (surplus) for the period pursuant to paragraphs 15 and 19 and reclassification adjustments of unassigned funds (surplus) for the period, as those

[3] In some cases, the inputs used to measure fair value might fall in different levels of the fair value hierarchy. The level in the fair value hierarchy within which the fair value measurement in its entirety falls shall be determined based on the lowest level input that is significant to the fair value measurement in its entirety. Assessing the significance of a particular input to the fair value measurement in its entirety requires judgment, considering factors specific to the asset or liability.

amounts, including amortization of the net transition asset or obligation, are recognized as components of net periodic benefit cost.

j. The amounts in unassigned funds (surplus) that have not yet been recognized as components of net periodic benefit cost, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

k. On a weighted-average basis, the following assumptions used in the accounting for the plans: assumed discount rates, rates of compensation increase (for pay-related plans), and expected long-term rates of return on plan assets specifying, in a tabular format, the assumptions used to determine the benefit obligation and the assumptions used to determine net benefit cost.

l. If applicable, the amounts and types of securities of the employer and related parties included in plan assets, the approximate amount of future annual benefits of plan participants covered by insurance contracts issued by the employer or related parties, and any significant transactions between the employer or related parties and the plan during the period.

m. If applicable, any alternative method used to amortize prior service amounts or net gains and losses pursuant to paragraphs 16 and 23.

n. If applicable, any substantive commitment, such as past practice or a history of regular benefit increases, used as the basis for accounting for the benefit obligation.

o. If applicable, the cost of providing special or contractual termination benefits recognized during the period and a description of the nature of the event.

p. An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this statement.

q. The amounts in unassigned funds (surplus) expected to be recognized as components of net periodic benefit cost over the fiscal year that follows the most recent annual statement of financial position presented, showing separately the net gain or loss, net prior service cost or credit, and net transition asset or obligation.

r. The amount and timing of any plan assets expected to be returned to the employer during the 12-month period, or operating cycle if longer, that follows the most recent annual statement of financial position presented.

Disclosures – Employers with Two or More Defined Benefit Plans

64. The disclosures required by this statement shall be aggregated for all of an employer’s defined benefit pension plans and for all of an employer’s other defined benefit postretirement plans unless disaggregating in groups is considered to provide useful information or is otherwise required by this paragraph and paragraph 65. Disclosures shall be as of the date of each statement of financial position presented. Disclosures about pension plans with assets in excess of the accumulated benefit obligation generally may be aggregated with disclosures about pension plans with accumulated benefit obligations in excess of assets. The same aggregation is permitted for other postretirement benefit plans. If aggregate disclosures are presented, an employer shall disclose:

a. The aggregate benefit obligation and aggregate fair value of plan assets for plans with benefit obligations in excess of plan assets as of the measurement date of each statement of financial position presented.

b. The aggregate pension accumulated benefit obligation and aggregate fair value of plan assets for pension plans with accumulated benefit obligations in excess of plan assets.

65. A U.S. reporting entity may combine disclosures about pension plans or other postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions.

Interim Financial Disclosures –Defined Benefit Plans

66. The following shall be disclosed within interim financial statements that include a statement of income:

a. The amount of net periodic benefit cost recognized, for each period for which a statement of income is presented, showing separately the service cost component, the interest cost component, the expected return on plan assets for the period, the gain or loss component, the amount of prior service cost or credit component, the transition asset or obligation component, and the gain or loss recognized due to a settlement or curtailment.

b. The total amount of the employer’s contributions paid, and expected to be paid, during the current fiscal year, if significantly different from amounts previously disclosed pursuant to paragraph 63.g. Estimated contributions may be presented in the aggregate combining (1) contributions required by funding regulations or laws, (2) discretionary contributions, and (3) noncash contributions.

Defined Contribution Plans

67. A defined contribution pension plan is a plan that provides pension benefits in return for services rendered, provides an individual account for each participant, and has terms that specify how contributions to the individual's account are to be determined rather than the amount of pension benefits the individual is to receive. Under a defined contribution plan, the pension benefits a participant will receive depend only on the amount contributed to the participant's account, the returns earned on investments of those contributions, and forfeitures of other participants' benefits that may be allocated to the participant's account.

68. To the extent that a plan's defined contributions to an individual's account are to be made for periods in which that individual renders services, the net pension cost for a period shall be the contribution called for in that period. If a plan calls for contributions for periods after an individual retires or terminates, the estimated cost shall be accrued during the employee's service period.

69. A pension plan having characteristics of both a defined benefit plan and a defined contribution plan requires careful analysis. If the substance of the plan is to provide a defined benefit, as may be the case with some "target benefit" plans, the accounting requirements shall be determined in accordance with the provisions applicable to a defined benefit plan and the disclosure requirements within paragraph 63 shall be followed.

Disclosures - Defined Contribution Plans

70. An employer shall disclose the amount of cost recognized for defined contribution pension plans and for other defined contribution postretirement benefit plans for all periods presented separately from the amount of cost recognized for defined benefit plans. The disclosures shall include a description of the nature and effect of any significant changes during the period affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture.

Multiemployer Plans

71. A multiemployer plan is a pension plan to which two or more unrelated employers contribute, usually pursuant to one or more collective-bargaining agreements. A characteristic of multiemployer plans is that assets contributed by one participating employer may be used to provide benefits to employees of other participating employers since assets contributed by an employer are not segregated in a separate account or restricted to provide benefits only to employees of that employer.

72. A reporting entity participating in a multiemployer plan shall recognize as net pension cost the required contribution for the period and shall recognize as a liability any contributions due and unpaid.

73. In some situations, withdrawal from a multiemployer plan may result in a reporting entity having an obligation to the plan for a portion of its unfunded benefit obligations. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets* (SSAP No. 5R) shall apply.

Disclosures - Multiemployer Plans

74. A reporting entity shall disclose the amount of contributions to multiemployer plans for each annual period for which a statement of income is presented. A reporting entity may disclose total contributions to multiemployer plans without disaggregating the amounts attributable to pension plans and other postretirement benefit plans. The disclosures shall include a description of the nature and effect of any changes affecting comparability, such as a change in the rate of employer contributions, a business combination, or a divestiture. This disclosure shall identify whether the contributions represent more than 5 percent of total contributions to the plan as indicated in the plan's most recently available annual report.

75. In addition to the requirements of paragraph 74, the following information shall be disclosed:

a. Whether a funding improvement plan or rehabilitation plan had been implemented or is pending.

b. Whether the reporting entity paid a surcharge to the plan.

c. A description of minimum contributions required for future periods, if applicable.

d. A qualitative description of the extent to which the employer could be responsible for the obligations of the plan, including benefits earned by employees during employment with another employer.

~~75.~~76. In some situations, withdrawal from a multiemployer plan may result in a reporting entity having an obligation to the plan for a portion of the unfunded benefit obligation of the pension plans and other postretirement benefit plans. If withdrawal under circumstances that would give rise to an obligation is either probable or reasonably possible, the provisions of SSAP No. 5R shall apply. If it is either probable or reasonably possible that (a) an employer would withdraw from the plan under circumstances that would give rise to an obligation or (b) an employer's contribution to the fund would be increased during the remainder of the contract period to make up a shortfall in the funds necessary to maintain the negotiated level of benefit coverage (a "maintenance of benefits" clause), the employer shall apply the provisions and disclosures of SSAP No. 5R.

Multiple-Employer Plans

~~76.~~77. Some pension plans to which two or more unrelated employers contribute are not multiemployer plans. Rather, they are in substance aggregations of single-employer plans combined to allow participating employers to pool their assets for investment purposes and to reduce the costs of plan administration. Those plans ordinarily do not involve collective-bargaining agreements. They may also have features that allow participating employers to have different benefit formulas, with the employer's contributions to the plan based on the benefit formula selected by the employer. Such plans shall be considered single-employer plans rather than multiemployer plans, and each reporting entity's accounting shall be based on its respective interest in the plan.

Non-U.S. Pension Plans

~~77.~~78. Except for its effective date, this statement includes no special provisions applicable to pension arrangements outside the United States. To the extent that those arrangements are in substance similar to pension plans in the United States, they are subject to the provisions of this statement. The substance of an arrangement is determined by the nature of the obligation and by the terms or conditions that define the amount of benefits to be paid, not by whether (or how) a plan is funded, whether benefits are payable at intervals or as a single amount, or whether the benefits are required by law or custom or are provided under a plan the employer has elected to sponsor.

~~78.~~79. It is customary or required in some countries to provide benefits in the event of a voluntary or involuntary severance of employment (also called termination indemnities). If such an arrangement is in substance a pension plan (for example, if the benefits are paid for virtually all terminations), it is subject to the provisions of this statement.

Business Combinations

~~79.~~80. When an employer is acquired in a business combination and that employer sponsors a single-employer defined benefit pension plan, the assignment of the purchase price to individual assets acquired and liabilities assumed shall include a liability for the projected benefit obligation in excess of plan assets or an asset for plan assets in excess of the projected benefit obligation, thereby eliminating any previously existing net gain or loss, prior service cost or credit, or transition asset or obligation recognized in unassigned funds (surplus). If it is expected that the plan will be terminated or curtailed, the effects of those actions shall be considered in measuring the projected benefit obligation.

Consolidated/Holding Company Plans

~~80.~~81. The employees of many reporting entities are members of a plan sponsored by a parent company or holding company. A reporting entity who participates in these plans and is not directly liable for obligations under the plan shall recognize pension expense equal to its allocation from the holding company or parent company of the required contribution to the plan for the period. A liability shall be established for any such contributions due and unpaid. Furthermore, the reporting entity shall disclose in the notes to the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed. If the reporting entity is directly liable for obligations under the plan, then the requirements outlined above in paragraphs 1-80~~79~~ and ~~82-90~~83-91 of this statement shall be applied.

Relevant Literature

~~81.~~82. This statement adopts with modification paragraphs 1-7 and 16-17 as well as Appendix C – Amendments to Statements 87 and 88 and Appendix E – Amendments to Statement 132(R) of *FASB Statement No. 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans, an amendment of FASB Statements No. 87, 88, 106 and 132(R)* (FAS 158). Paragraphs 8-10 providing specific guidance for not-for-profit organizations is rejected. Paragraphs 11-15 regarding the effective dates for FAS 158 is rejected and paragraph 19 providing an alternative method for remeasuring plan assets and benefits obligations as of the fiscal year the measurement date provisions are applied is also rejected. Appendix D – Amendments to Statement 106 has not been incorporated within this statutory statement as it will be considered in accordance with revisions to *SSAP No. 14—Postretirement Benefits Other Than Pensions* (SSAP No. 14). Disclosures included within FAS 132(R), as amended by FAS 158, pertaining to health care (paragraphs 5.l. and 5.m.) have been rejected for inclusion within this standard, but will also be considered in accordance with revisions to SSAP No. 14. This statement adopts the revisions to paragraph 5.d. of FAS 132(R) as amended by *FASB Staff Position FAS 132(R)-1, Employers' Disclosures about Postretirement Benefit Plan Assets* (FSP FAS 132(R)-1) and *ASU 2010-06, Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements* (ASU 2010-06). Other revisions to disclosures requirements as amended by FSP FAS 132(R)-1 relate to nonpublic entities and are rejected. This statement adopts by reference revisions to ASC 715-80 as detailed in *ASU 2011-09, Compensation – Retirement Benefits – Multiemployer Plans* with limited additional disclosures required within statutory financial statements. This statement adopts by reference *FSP FASB 158-1, Conforming Amendments to the Illustrations in FASB Statements No. 87, No. 88, and No. 106 and to the Related Staff Implementation Guides* (FSP FAS 158-1) to the extent that the examples and related implementation guides comply with the adopted GAAP guidance previously identified within this statement, as modified for statutory accounting. The following modifications from the adopted paragraphs of FAS 158 have been incorporated within this standard:

a. All references to 'other comprehensive income' or 'accumulated other comprehensive income' within FAS 158 have been revised to reflect unassigned funds (surplus).

b. Any prepaid asset resulting from the excess of the fair value of plan assets over the projected benefit obligation shall be nonadmitted. Furthermore, any asset recognized from the cost of a 'participation right' of an annuity contract per paragraph 49 shall also be nonadmitted.

c. Provisions within paragraph 30 of FAS 87, as amended by FAS 158, permitting a market-related value of plan assets have been eliminated with only the fair value measurement method for plan assets being retained.

d. The reduced disclosure requirements for nonpublic entities described in paragraph 8 of FAS 132(R), as amended by FAS 158, are rejected. All reporting entities shall follow the disclosure requirements included in paragraph 5 of FAS 132(R) as amended by FAS 158.

e. Clarification has been included within this standard to ensure both vested and nonvested employees are included within the recognition of net periodic pension cost and in the pension benefit obligation. Although this is consistent with GAAP, this is a change from previous statutory accounting. As nonvested employees were excluded from statutory accounting under SSAP No. 89, guidance has been included to indicate that the unrecognized prior service cost attributed to nonvested individuals is not required to be included in net periodic pension cost entirely in the year this standard is adopted. The unrecognized prior service cost for nonvested employees shall be amortized as a component of net periodic pension cost by assigning an equal amount to each expected future period of service before vesting occurs for nonvested employees active at the date of the amendment. Unassigned funds (surplus) is then adjusted each period as prior service cost is amortized. (Guidance is included within the transition related to the recognition of the prior service cost for nonvested employees through unassigned funds (surplus).)

f. Conclusion of *Interpretation 04-12: EITF 03-4: Determining the Classification and Benefit Attribution Method for a "Cash Balance" Pension Plan* (INT 04-12) indicating that 'cash balance' plans are considered defined benefit plans has been incorporated within paragraph 3 of this statement.

g. Conclusion of *Interpretation 99-26: Offsetting Pension Assets and Liabilities* (INT 99-26) prohibiting the offset of defined benefit liabilities of one plan with prepaid assets of another plan has been incorporated within paragraph 26 of this statement.

h. Provisions within paragraph 36 of FAS 87, as amended by FAS 158, regarding the classification of underfunded liabilities as current or noncurrent liabilities and the classification of assets from overfunded plans as noncurrent assets has been rejected as inconsistent with statutory accounting.

i. Provisions within paragraph 49 of FAS 87, as amended by FAS 158, defining the fair value of investments have been rejected. Fair value definitions and measurement for investments shall be determined in accordance with statutory accounting guidance.

j. Provisions within paragraph 52 of FAS 87, as amended by FAS 158, regarding the plan assets measurement date for consolidating subsidiaries or entities utilizing the equity method under APB Opinion No. 18 has been rejected. For statutory accounting, all entities shall follow the measurement date guidance within paragraph 42 of this statement.

k. Transition under FAS 158 is different from this statement. FAS 158 requires entities with publicly traded equity securities to initially apply the requirement to recognize the funded status of a benefit plan; the gains/losses, prior service costs/credits and transition obligations/assets that have not yet been included in net periodic benefit cost; and the disclosure requirements as of the end of the fiscal year ending after December 15, 2006. Transition guidelines for statutory accounting are defined in paragraphs ~~82-90~~83-91.

l. FAS 158 provided two approaches for an employer to transition to a fiscal year-end measurement date. For purposes of statutory accounting, the second approach permitting reporting entities to use earlier measurements determined for year-end reporting as of the fiscal year immediately preceding the year that the measurement date provisions is rejected. For consistency purposes, all reporting entities shall follow the first approach and remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied.

Effective Date and Transition

~~82.~~83. Reporting entities are required to disclose the projected benefit obligation, the accumulated benefit obligation and the fair value of plan assets for defined benefit pension plans in the first reporting period after the effective date of this standard and in each subsequent reporting period. This disclosure shall specifically note the funded/underfunded status of the pension plan based on the projected benefit obligation. Reporting entities shall also specifically note the surplus impact necessary, at each reporting date, to reflect the full projected benefit obligation within the financial statements.

~~83.~~84. This statement is effective for quarterly and annual reporting periods beginning on or after January 1, 2013 (transition date) with early adoption permitted. Any unfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, is a liability under SSAP No. 5R and shall be reported in the first quarter statutory financial statements after the transition date with a corresponding entry to unassigned funds (surplus). If the fair value of plan assets exceeds the projected benefit obligation, the asset shall be considered a nonadmitted asset. Net periodic pension cost shall include a component for unrecognized prior service cost for nonvested employees beginning in 2013.

~~84.~~85. Gains or losses, prior service costs or credits (including prior service costs for non-vested participants pursuant to paragraph 11), and remaining transition assets or obligations from prior application of SSAP No. 89 (collectively referred to as "unrecognized items") that have not yet been included in net periodic benefit cost as of December 31, 2012[4] shall be recognized as components of the balance of unassigned funds (surplus), net of tax, as of January 1, 2013 (provided that alternative transition is not elected per paragraph ~~85~~86.b.). The offset to unassigned funds is reported separately as an "Aggregate Write-In for Other-Than-Invested Assets" or as an "Aggregate Write-In for Other Liabilities." After recognition, the full unfunded or overfunded status of the plan shall be reflected within the financial statements.[5] Any prepaid asset resulting from an overfunded plan shall be nonadmitted.

~~85.~~86. Due to the potential impact to surplus as a result of immediately applying the accounting guidance in paragraph ~~84~~85, reporting entities may elect one of the following two methods, on an individual plan basis, to recognize the transition surplus impact:

a. Reporting entities may elect to recognize the entire transition surplus impact calculated from applying paragraph ~~84~~85, on an individual plan basis, as of January 1, 2013.

b. Alternatively, reporting entities may elect to recognize the entire surplus impact from applying paragraph ~~84~~85, on an individual plan basis, over a period not to exceed ten (10) years. The surplus impact initially recognized as of January 1, 2013, under this transition option, and subsequently over the transition period, shall be the greater of:

i. Ten percent of the calculated surplus impact as of the transition date;

ii. Amortization[6] of the "unrecognized items" (defined in paragraph ~~84~~85) into net periodic pension cost, including any accelerated amortization of these items from curtailments or settlements that occur after the transition date. (If the amortization cannot be determined at transition, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for this component of the calculation. If the amount recognized for transition (greater of

[4] The intent of the guidance is to recognize the unrecognized amounts as of December 31, 2012, annual statements, even if new actuarial projections (accumulated benefit obligation/projected benefit obligation amounts) are calculated as of January 1, 2013. (These projections would be considered in the recognition of the 2013 pension cost.)

[5] Upon the effective date of this statement, reporting entities are required to reflect the full unfunded or overfunded status of their defined benefit pension plans. As such, the concept of an "additional minimum liability" previously reflected in *SSAP No. 89—Pensions* is not incorporated within this statement. If an additional minimum liability (and a corresponding intangible asset) had been recognized under SSAP No. 89, such items shall be eliminated with the implementation of this statement, and the guidance in paragraph ~~85~~86 shall be followed. The elimination of any additional minimum liability and corresponding intangible asset shall also occur if the entity elects the transition option reflected in paragraph ~~85~~86.b.

[6] Unless otherwise impacted from the provisions within this statement or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date.

all three components in paragraph ~~85~~86.b.) is subsequently determined to be less than what is amortized for the year (~~85~~86.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds (surplus);

iii. Amount necessary to establish a total liability that is equal to any unfunded accumulated benefit obligation (the accumulated benefit obligation less the fair value of plan assets).[7]

If the surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact (collectively referred to as the "transition liability"[8]) on a systematic basis over a period not to exceed nine years. The minimum amount recognized each subsequent year shall be an amount that reflects the conditions within paragraph ~~85~~86.b. Additionally, reporting entities must recognize any remaining transition liability to the extent that the plan reflects a prepaid benefit cost. (For example, if changes in circumstances have resulted with the plan reflecting an overfunded status, the remaining transition liability must be recognized to the extent that the plan is overfunded.) Furthermore, if circumstances result with a subsequent gain attributed to the plan that will be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain.[INT 13-03] Reporting entities are permitted to recognize the remaining transition liability, or an amount in excess of the minimum requirement, at any time after the transition date. This transition guidance is specific to the transition surplus impact from initially applying this statement on January 1, 2013. Thus, this transition guidance does not apply to additional liability calculated from subsequent comparison of the fair value of plan assets to the projected benefit obligation, or the impact of subsequent plan amendments.

~~86.~~87. Reporting entities electing to apply the transition guidance in paragraph ~~85~~86.b. must disclose the full transition surplus impact calculated from applying paragraph ~~84~~85 in the first quarter statutory financial statements after the transition date and each reporting period thereafter. This disclosure shall include the initial "transition liability" calculated under paragraph ~~84~~85, the annual amortization amount of the "unrecognized items" into net periodic pension cost, the amount of the unfunded accumulated benefit obligation, and the remaining unrecognized transition impact. This disclosure shall include a schedule of the entity's anticipated recognition of the remaining surplus impact over the transition period.

~~87.~~88. The requirement to measure plan assets and benefit obligations as of the date of the reporting entity's financial statement year-end is effective for financial statement years beginning January 1, 2014. (The measurement date change will be initially reflected in the December 31, 2014 financial statements.)

~~88.~~89. In order to transition to a fiscal year-end measurement date, the reporting entity shall remeasure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date

[7] The intent of this standard is to ensure that under the deferral option the liability initially recognized for an unfunded plan reflects the minimum liability previously recognized under SSAP No. 89. For any instances in which an additional minimum liability recognized under SSAP No. 89 is greater than the unfunded ABO at transition, an amount equal to the previously recognized additional minimum liability shall be used in determining this component of ~~85~~86.b.iii. The deferral option under this standard is not intended to allow a surplus benefit to be recognized at initial transition for an unfunded plan.

[8] If the surplus deferral from paragraph ~~85~~86.b. is elected, the deferred liability, although comprised of the previous "unrecognized items" shall be collectively referred to as the "transition liability." Although reporting entities will need to continue to track the unrecognized items for amortization into net periodic cost (offset through unassigned funds), reporting entities shall not allocate the recognized surplus impact from transition to these categories. As noted in paragraph ~~85~~86.b.ii., the minimum amount of liability recognized under the deferral option must cover the annual amortization of the "unrecognized items" into net periodic pension cost to prevent a surplus benefit.

provisions are applied. The reporting entity shall use those new measurements to determine the effects of the measurement date change as of the beginning of the fiscal year that the measurement date provisions are applied.

~~89.~~90. The reporting entity shall measure plan assets and benefit obligations as of the beginning of the fiscal year that the measurement date provisions are applied. This would result with the following:

a. Net periodic benefit cost for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied, exclusive of any curtailment or settlement gain or loss, shall be recognized, net of tax, as a separate adjustment of the opening balance unassigned funds (surplus). That is, the pretax amount recognized as an adjustment to unassigned funds (surplus) is the net periodic benefit cost that without a change in measurement date otherwise would have been recognized on a delayed basis during the first interim period for the fiscal year that the measurement date provisions are applied.

b. Any gain or loss arising from a curtailment or settlement between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized in earnings in that period and not as an adjustment to unassigned funds (surplus). This provision prohibits a reporting entity from early application of the measurement date provisions when the reporting entity has issued financial statements for the prior year without recognition of such a settlement or curtailment.

c. Other changes in the fair value of plan assets and the benefit obligations (for example, gains or losses) for the period between the measurement date that is used for the immediately preceding fiscal year-end and the beginning of the fiscal year that the measurement date provisions are applied shall be recognized, net of tax, as a separate adjustment of the opening balance of unassigned funds (surplus) for the fiscal year that the measurement date provisions are applied.

~~90.~~91. Earlier application of the recognition or measurement date provisions is encouraged, however, early applications must be for all of the reporting entity's benefit plans. If early application is elected, the transition date shall reflect the January 1st of the year in which this standard is initially applied. Retrospective application is not permitted.

EXHIBIT A - IMPLEMENTATION GUIDE

Note: After transition, new "unrecognized" amounts will be reflected in the year-end funded status, but not yet reflected in unassigned funds. Therefore additional entries will be needed at the end of each year to recognize these new "unrecognized" amounts in unassigned funds. (An example includes gains and losses that will be included in unassigned funds (surplus), but not recognized in net periodic pension cost if they do not exceed 10% of the greater of the projected benefit obligation or the fair value of plan assets.) The entries in the implementation guide focus on the transition impact, and subsequent entries for "unrecognized" items have not been included within the illustrations.

Transition Implementation

1. Overfunded Plan with Prepaid Benefit Cost

Consideration of contributions or tax effects are not reflected in this example.

Example 1	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(6,240)	$(6,240)
Plus: Non-Vested Liability	(100)*	(100)
Total Accumulated Benefit Obligation	$(6,340)	$(6,340)
Projected Benefit Obligation	$(6,437)	$(6,437)
Plus: Non-Vested Liability	(100)	(100)
Total PBO	$(6,537)	$(6,537)
Plan Assets at Fair Value	$9,268	$9,268
Funded Status	$2,731	$2,731
Transition Obligation / (Asset)	$36	
Prior Service Cost	214	
Prior Service Cost (Non-Vested)	100	
Unrecognized Losses / (Gains)	2,465	
Total Unrecognized Items	$2,815	-
Net Overfunded Plan Asset / (Liability for Benefits)	$5,546	$2,731

*The amount shown for December 31, 2012 reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and unfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.

1a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"

1.	Unassigned Funds – Transition Obligation	36
	Unassigned Funds – Prior Service Cost	214
	Unassigned Funds – Prior Service Cost (Nonvested)	100

Unassigned Funds – Unrecognized Losses 2,465
Overfunded Plan Asset 2,815
(Aggregate Write-Ins for Other-Than-Invested Assets)

For this plan, which is overfunded by more than the unrecognized liabilities, the entry at transition will be netted against the existing prepaid with an offset to unassigned funds.

2. Change in Nonadmitted - Overfunded Plan Asset 2,815
(Aggregate Write-Ins for Other-Than-Invested Assets)
Unassigned Funds 2,815

This entry illustrates the impact to the "change in nonadmitted" as a result of the decline in overfunded plan assets. For this particular example, with the transition entry to unassigned funds and the impact to nonadmitted assets, there is no surplus impact at transition.

1b. December 31, 2013 – Recognition of Periodic Pension Cost

After transition, recognition of net periodic pension cost includes 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses and f) amortization of any transition asset or obligation remaining in unassigned funds.

(Per paragraph ~~85~~86, if surplus deferral is elected at transition, beginning with 2014 annual financials, the entity shall recognize the remaining surplus impact on a systematic basis over a period not to exceed the remaining nine years. As, this illustration is in an overfunded status, there is no surplus deferral. Recognition of net periodic cost, including amortization of the "unrecognized items" will occur each year regardless if surplus deferral is elected.)

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	550
Interest Cost	150
Expected Return on Plan Assets	(250)
Total	*450*
Amortization of:	
o Transition Obligation	7.2
o Prior Service Cost	42.8
o Prior Service Cost (nonvested)	20
o Unrecognized Losses	493
Total	*563*
Total Net Periodic Pension Cost	**1,013**

1. Net Periodic Pension Cost 1,013
Prepaid Benefit Cost 1,013
(Aggregate Write-Ins for Other-Than-Invested Assets)

This entry recognizes the periodic pension cost with an offset to the prepaid pension asset. (A prepaid benefit cost is created when cumulative contributions to a pension plan exceed cumulative net periodic pension costs. Thus, a prepaid benefit cost can only be reduced through the recognition of pension cost.)

2. Overfunded Plan Asset	563	
(Aggregate Write-Ins for Other-Than-Invested Assets)		
Unassigned Funds – Transition Obligation		7.2
Unassigned Funds – Prior Service Cost		42.8
Unassigned Funds – Prior Service Cost (Nonvested)		20
Unassigned Funds – Unrecognized Losses		493

This entry recognizes the transition amounts amortized through net periodic pension cost. The offset is to unassigned funds (as unassigned funds was used for the initial recognition of the unrecognized items). As this plan continues to be overfunded, these amounts are offset to overfunded plan assets.

3. Change in Nonadmitted - Prepaid Benefit Cost	1,013	
(Aggregate Write-Ins for Other-Than-Invested Assets)		
Unassigned Funds		1,013

This entry illustrates the impact of the change in nonadmitted prepaid benefit cost to unassigned funds.

4. Unassigned Funds	563	
Change in Nonadmitted – Overfunded Plan Asset		563
(Aggregate Write-Ins for Othe- Than-Invested Assets)		

This entry illustrates the impact of the change in nonadmitted overfunded plan asset to unassigned funds.

1c. December 31, 2014 – Recognition of Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	2500
Interest Cost	1000
Expected Return on Plan Assets	(500)
Total	*3000*
Amortization of:	
o Transition Obligation	7.2
o Prior Service Cost	42.8
o Prior Service Cost (nonvested)	20
o Unrecognized Losses	493
Total	*563*
Total Net Periodic Pension Cost	**3,563**

Note – This example was purposely completed to show a significant amount of periodic pension cost to create an underfunded plan status. This was done strictly for illustration purposes and is not intended to indicate that such significant changes would be expected, although they could occur.

1. Net Periodic Pension Cost	3,563	
Prepaid Benefit Cost		3,563
(*Aggregate Write-In for Othe- Than-Invested Assets)*		

2. Overfunded Plan Asset	1,282	
Unassigned Funds – Transition Obligation		7.2
Unassigned Funds – Prior Service Cost		42.8
Unassigned Funds – Prior Service Cost (Nonvested)		20

Unassigned Funds – Unrecognized Losses		493
Liability for Pension Benefits		719
(Aggregate Write-In for Other Liabilities)		

This entry recognizes the transition amounts that have been recognized through net periodic pension cost, with an offset to unassigned funds. The overfunded plan asset is initially offset, until the plan reaches an unfunded status, which is then reflected through a liability for pension benefits (aggregate write-in for other liabilities).

3. Change in Nonadmitted - Prepaid Benefit Cost	3,563	
Unassigned Funds		3,563
4. Unassigned Funds	1,282	
Change in Nonadmitted - Overfunded Plan Asset		1,282

These entries illustrate the impact of the change in nonadmitted to unassigned funds.

Illustration 1 – Example Paragraph ~~85~~86 Note Disclosure:

SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. The adoption of SSAP No. 102 did not have a surplus impact on ABC entity as the pension plan was overfunded by more than the transition liabilities. At transition, ABC entity recognized $2,815 in unrecognized transition obligations, prior service costs, and unrecognized losses as components of the ending balance of unassigned funds as of January 1, 2013. This recognition resulted in a financial presentation which reflects the actual $2,731 overfunded status of the plan (fair value of plan assets exceeds the projected benefit obligation) as of January 1, 2013. As required under SSAP No. 102, overfunded plan assets are nonadmitted.

***For purposes of this example, tax effects are not reflected. However, the amount recognized at transition as components of the unassigned funds shall be net of tax.*

The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):

Example 1	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(6,240)	$(6,240)
Plus: Non-Vested Liability	(100)	(100)
Total Accumulated Benefit Obligation	$(6,340)	$(6,340)
Projected Benefit Obligation	$(6,437)	$(6,437)
Plus: Non-Vested liability	(100)	(100)
Total PBO	$(6,537)	$(6,537)
Plan Assets at Fair Value	$9,268	$9,268
Funded Status	$2,731	$2,731
Transition Obligation / (Asset)	$36	
Prior Service Cost	214	
Prior Service Cost (Non-Vested)	100	
Unrecognized Losses / (Gains)	2,465	
Total Unrecognized Items	$2,815	-
Net Overfunded Plan Asset / (Liability for Benefits)	$5,546	$2,731

In the March 31, 2013, financial statements, the $2,731 overfunded plan assets was reflected as follows:

• Prepaid Benefit Cost	$5,546 (nonadmitted)
• Overfunded Plan Asset	$(2,815) (nonadmitted)

These amounts are reported net in Aggregate Write-Ins for Other-Than-Invested Assets: $2,731

Illustration of Example 1 – Overfunded Plan with Prepaid Benefit Cost

	Aggregate Write-In for Other-Than-Invested Assets		**Nonadmitted Assets**	**Unassigned Funds**	**Periodic Pension Cost**	**Aggregate Write-In for Other Liabilities**
	Prepaid Benefit Cost	**Overfunded Plan Asset**				
Existing Balances 12/31/2012	5,546DR		5,546CR			
Transition Entries – 1/1/2013						
A		2,815CR		2,815DR		
B			2,815DR	2,815CR		
After Transition	**5,546DR**	**2,815CR**	**2,731CR**	-		
After Transition-Net	**2,731DR**		**2,731CR**	-		
A – Recognize "unrecognized items" existing at 1/1/13 transition date (gains or losses, prior service costs or credits, and transition assets or obligations). For this plan, which is overfunded by more than the unrecognized liabilities, the entry at transition will be netted against the existing overfunded plan asset with an offset to unassigned funds. B – Illustrates the impact to the "change in nonadmitted" as a result of the decline in overfunded plan assets. For this particular example, with the transition entry to unassigned funds and the impact to nonadmitted assets, there is no surplus impact at transition. At transition, the net balance in aggregate write-ins reflects the overfunded state of the plan.						
Recognition of Net Periodic Pension Cost – 12/31/2013						
C	1,013CR				1,013DR	
D		563DR		563CR		
E			1,013DR	1,013CR		
F			563CR	563DR		
Net Impact	450CR		450DR	1,013CR	1,013DR	
Ending Balances	**4,533 DR**	**2,252CR**	**2,281CR**	**1,013CR**	**1,013DR**	
Ending Balances-Net	**2,281DR**		**2,281CR**	**–**		
C – Reflects the periodic pension cost with an offset to the prepaid pension asset. D – Recognizes the transition amounts amortized through net periodic pension cost. The offset it to unassigned funds (as that was how the "unrecognized items" were recognized at transition). E/F – Reflects the change in nonadmitted assets to unassigned funds.						
Recognition of Net Periodic Pension Cost – 12/31/2014						
G	3,563CR				3,563DR	
H		1,282DR		563CR		719CR
I			3,563DR	3,563CR		
J			1,282CR	1,282DR		
Net Impact	2,281CR		2,281DR	2,844CR	3,563DR	719CR
Ending Balances	**970 DR**	**970 CR**	-	**2,844CR**	**3,563DR**	
Ending Balances - Net	-		-	**719DR**		**719CR**
G/H – Reflects the periodic pension cost with an offset to the prepaid pension asset. As no contributions have been made, the 2014 pension cost moves the plan from an overfunded to underfunded state. The overfunded plan asset credit is reduced to equally offset the remaining prepaid benefit cost of $970. The underfunded status is then reflected through a liability for pension benefits (aggregate write-in for other liabilities). I/J – Reflects the change in nonadmitted assets to unassigned funds.						

2. Underfunded Plan with Accrued Benefit Cost

Consideration of contributions or tax effects are not reflected in this example.

Example 2	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(2,015)	$(2,015)
Plus: Non-Vested Liability	(60)*	(60)
Total Accumulated Benefit Obligation	$(2,075)	$(2,075)
Projected Benefit Obligation	$(2,268)	$(2,268)
Plus: Non-Vested Liability	(60)	(60)
Total PBO	$(2,328)	$(2,328)
Plan Assets at Fair Value	$1,992	$1,992
Funded Status	$(336)	$(336)
Transition Obligation / (Asset)	$(544)	
Prior Service Cost / (Credit)	(494)	
Prior Service Cost (Non-Vested)	60	
Unrecognized Losses / (Gains)	926	
Total Unrecognized Items	$(52)	-
Net Overfunded Plan Asset / (Liability for Benefits)	$(388)	$(336)

*The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and underfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reported within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reported within Aggregate Write-Ins for Liabilities.

2a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"

1.	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	52	
	Unassigned Funds – Prior Service Cost (Nonvested)	60	
	Unassigned Funds – Unrecognized Losses	926	
	Unassigned Funds – Transition Asset		544
	Unassigned Funds – Prior Service Credit		494

For this plan, which is underfunded but has a net unrecognized asset, at transition the entity will improve their surplus presentation by $52 through a contra-liability. Use of the contra-liability is necessary, as if the item were recorded as an asset, it would be nonadmitted and result in a surplus reduction. Although there is a net unrecognized asset, this plan is in an underfunded state.

2b. December 31, 2013 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2012**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	*300*
Amortization of:	
o Transition Obligation (Asset)	(272)
o Prior Service Cost / (Credit)	(247)
o Prior Service Cost (nonvested)	30
o Unrecognized Losses	463
Total	*(26)*
Total Net Periodic Pension Cost	**274**

1. Unassigned Funds – Transition Asset	272	
Unassigned Funds – Prior Service Credit	247	
Unassigned Funds – Prior Service Cost (Nonvested)		30
Unassigned Funds – Unrecognized Losses		463
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		26

This entry occurs to amortize the transition items. Due to the nature of the unrecognized items (net asset – recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost	274	
Accrued Benefit Cost		274

This entry recognizes the net periodic pension cost for the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.

Note: All references to "accrued benefit cost" represent an unpaid expense liability, these amounts wills be reflected within general expenses due and accrued (life) or LAE/Other Underwriting expenses (p/c).

Note: This example uses a 2-year amortization period of the "unrecognized items." In actuality, amortization periods of each item will vary. Disclosures shall continue to separately present these items.

2c. December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	2500
Interest Cost	1000
Expected Return on Plan Assets	(500)
Total	*3,000*
Amortization of:	
o Transition Obligation / (Asset)	(272)
o Prior Service Cost / (Credit)	(247)
o Prior Service Cost (nonvested)	30
o Unrecognized Losses	463
Total	*(26)*
Total Net Periodic Pension Cost	**2,974**

1. Unassigned Funds – Transition Asset	272	
Unassigned Funds – Prior Service Credit	247	
Unassigned Funds – Prior Service Cost (Nonvested)		30
Unassigned Funds – Unrecognized Losses		463
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		26

This entry occurs to amortize the transition items. Due to the nature of the unrecognized items (net asset – recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost	2,974	
Accrued Benefit Cost		2,974

This entry recognizes the net periodic pension cost for the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.

Illustration 2 – Paragraph ~~85~~86 Example Note Disclosure:

SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. At transition, ABC entity recognized a net $52 asset from unrecognized transition obligations/assets, prior service costs/credits, and unrecognized gains/losses as a component of the ending balance of unassigned funds as of January 1, 2013. This net impact was reflected as a contra-liability as the plan is in an underfunded state.

***For purposes of this example, tax effects are not reflected. However, the amount recognized at transition as components of the unassigned funds shall be net of tax.*

The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):

Example 2	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(2,015)	$(2,015)
Plus: Non-Vested Liability	(60)	(60)
Total Accumulated Benefit Obligation	$(2,075)	$(2,075)
Projected Benefit Obligation	$(2,268)	$(2,268)
Plus: Non-Vested Liability	(60)	(60)
Total PBO	$(2,328)	$(2,328)
Plan Assets at Fair Value	$1,992	$1,992
Funded Status	$(336)	$(336)
Transition Obligation / (Asset)	$(544)	
Prior Service Cost / (Credit)	(494)	
Prior Service Cost (Non-Vested)	60	
Unrecognized Losses / (Gains)	926	
Total Unrecognized Items	$(52)	-
Net Overfunded Plan Asset / (Liability for Benefits)	$(388)	$(336)

In the March 31, 2013, financial statements, underfunded pension obligations were reflected as follows:

- Accrued Benefit Cost - $388
- Liability for Pension Benefits (Aggregate Write-In for Liabilities) - ($52)

Illustration of Example 2 – Underfunded Plan with Accrued Benefit Cost

	Net Periodic Cost (Expense Recognition)	**Unassigned Funds**	**Aggregate Write-In for Liabilities**	**Accrued Benefit Cost**
Existing Balance – 12/31/2012		388DR		388CR
Transition Entries – 1/1/2013				
A		52CR	52DR	
After Transition		**336DR**	**52DR**	**388CR**
A. Recognize "unrecognized" items at transition. The above entry reflects the "net" impact, resulting with an unrecognized net asset (contra-liability) and an increase to the surplus presentation. (This unrecognized net asset is reflected as a contra-liability as it does not reflect a prepaid for the overfunding of plan assets. If this was reflected as an asset, it would be nonadmitted.)				
Recognition of Net Periodic Pension Cost – 12/31/2013				
B		26 DR	26 CR	
C	274 DR			274 CR
B. Entry amortizes the transition items (entry is shown net.) Due to the nature of the unrecognized items, (net asset, recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into net periodic pension cost for the current period. C. Entry recognizes the net periodic pension cost, interest cost, expected return on plan assets, and the amortization of the unrecognized items.				
Recognition of Net Periodic Pension Cost – 12/31/2014				
D		26 DR	26 CR	
E	2,974 DR			2,974 CR
D. Entry occurs to amortize the transition items (entry is shown net). Due to the nature of the unrecognized items, (net asset, recorded as a contra-liability), this entry reverses the original entry to remove the portion that will be amortized into net periodic pension cost for the current period. E. Entry recognizes net periodic pension cost the service cost, interest cost, expected return on plan assets and the amortization of the unrecognized items.				

3. Underfunded Plan with Accrued Benefit Cost with Surplus Deferral Elected

Consideration of contributions or tax effects are not reflected in this example.

Example 3	Dec. 31, 2012	Jan. 1, 2013
Accumulated Benefit Obligation	$(1,819)	$(1,819)
Plus: Non-Vested Liability	(103)*	(103)
Total Accumulated Benefit Obligation	$(1,922)	$(1,922)
Projected Benefit Obligation	$(2,099)	$(2,099)
Plus: Non-Vested Liability	(103)	(103)
Total PBO as of January 1, 2012	$(2,202)	$(2,202)
Plan Assets at Fair Value	$0	$0
Funded Status	$(2,202)	$(2,202)
Transition Obligation / (Asset)	$0	
Prior Service Cost	0	
Prior Service Cost (Non-Vested)	103	
Unrecognized Losses / (Gains)	440	
Total Unrecognized Items	543	-
Net Overfunded Plan Asset / (Liability for Benefits)	$(1,659)	$(1,922)

* The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and underfunded status of the plan. For the amounts shown as of December 31, 2012, immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.

As illustrated above, the liability for pension benefits as of January 1, 2013, does not equal the underfunded plan status as the entity elected the transition deferral. Rather, the liability for pension benefits equals, at a minimum, the accumulated benefit obligation (ABO) less the plan asset at fair value. (Minimum transition liability that equals the ABO is required in accordance with paragraph ~~85~~86.) After the transition period, the net overfunded plan asset / (liability for benefits) should equal the funded status of the plan.

3a. January 1, 2013 – Transition Date - Recognize "Unrecognized Items"

In accordance with paragraph ~~85~~86, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the greater of:

	Minimum Transition Liability	
~~85~~86.b.i.	10% of Calculated Surplus Impact	54.3
~~85~~86.b.ii.	Anticipated Annual Amortization of "Unrecognized Items" (Assumes 5-year Uniform Amortization)	108.6
~~85~~86.b.iii.	Difference Between ABO and Accrued Benefit Cost	263
	Transition Liability	**263**

Note: Amortization of the unrecognized items (paragraph ~~85~~86.b.ii.) may not be determinable at transition. If the amortization amount that will be recognized year-end 2013 is unknown at the transition date, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for component ~~85~~86.b.ii. of the minimum transition liability. If the amount recognized for transition (greater of all three components in paragraph ~~85~~86.b.) is subsequently determined to be less than what is amortized for the year (~~85~~86.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.)

January 1, 2013 – Transition Date:

Reversal of Additional Minimum Liabilities/Intangible Plan Assets: As this plan has an unfunded ABO, following the guidance under SSAP No. 89, the entity had recognized an additional minimum liability and corresponding admitted intangible asset. As the concept of an additional minimum liability has been eliminated from SSAP No. 102, at transition these amounts are eliminated, with the determination of the overfunded/unfunded projected benefit obligation calculated subsequent to the elimination.

Balances as of 12/31/2012 under SSAP No. 89:

Accumulated Benefit Obligation:	$1,819
Accrued Liability:	$1,659
SSAP No. 89 Additional Minimum Liability:	$160
SSAP No. 89 Admitted Intangible Asset:	$160

Unassigned Funds	160	
Intangible Asset		160
Additional Minimum Liability	160	
Unassigned Funds		160

Application of SSAP No. 102 – Recognition of Unfunded Status with Surplus Deferral:

1. Unassigned Funds – Transition Liability	263	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		263

This entry represents the minimum transition liability required to be recognized at the transition date. As noted within the transition guidance, an entity may elect to transition the surplus impact over a period not to exceed 10 years. Paragraph ~~85~~86 provides the specifications on the minimum liability recognized at transition. As this transition liability amount has yet to be recognized through expense (periodic cost), the liability is reflected through "aggregate write-ins for liabilities."

3b. December 31, 2013 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	*300*
Amortization of:	
o Prior Service Cost (nonvested)	20.6
o Unrecognized Losses	88
Total	*108.6*
Total Net Periodic Pension Cost	**408.6**

1. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	108.6	
Unassigned Funds – Prior Service Cost (Nonvested)		20.6
Unassigned Funds – Unrecognized Losses		88

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

2. Net Periodic Pension Cost	408.6	
Accrued Benefit Cost		408.6

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items.

Note: Although the entity elected the transition option for surplus deferral, and the guidance allows up to 10 years for deferral, an entity must continue to recognize a minimum amount of the transition liability as determined in accordance with paragraph ~~85~~86.b. This requires the entity to recognize an amount that is at the greater of either 10% of the initial surplus impact or the amortization of the unrecognized items in effect at transition.

In this example, the entity will only receive a 3-year deferral – This illustration assumes 5-year uniform amortization of the transition amounts into expense for illustration purposes only. In practice, the minimum transition liability amounts may not be determinable until the expense is calculated in each future year:

Surplus Impact at Transition		**Prior Service Cost**	**Unrealized Losses**	
Transition Liability:	543	103	440	
Amount Recognized Jan. 1, 2013	(263)			
Remaining Transition Liability	**280**			
				Remaining Transition Liability
Minimum Transition Liability:		Anticipated Amortization:		
2014	**108.6**	20.6	88	171.4
2015	**108.6**	20.6	88	62.8
2016	**62.8**	12	50.8	-

3c. December 31, 2014 – Recognition of Transition Liability:

1.	Unassigned Funds – Transition Liability	108.6	
	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		108.6

This entry represents the minimum transition liability required to be recognized at the subsequent date.

3d. December 31, 2014 – Recognition of Net Periodic Benefit Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	50
Interest Cost	30
Expected Return on Plan Assets	(35)
Total	*45*
Amortization of:	
o Prior Service Cost (nonvested)	20.6
o Unrecognized Losses	88
Total	*108.6*
Total Net Periodic Pension Cost	**153.6**

1.	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	108.6	
	Unassigned Funds – Prior Service Cost (Nonvested)		20.6
	Unassigned Funds – Unrecognized Losses		88
2.	Net Periodic Pension Cost	153.6	
	Accrued Benefit Cost		153.6

This entry illustrates the December 2014 entries. The first removes the liability recognized for transition so that it could be recycled through expense, with the second recognizing net periodic cost (including the amortization of the unrecognized items.)

3e. December 31, 2015 – Activity within the pension plan has resulted with an overfunded plan.

As required under paragraph ~~85~~86, if the fair value of plan assets had changed so that the plan was in an overfunded status, the transition liability would also be impacted with accelerated recognition to the extent the plan is in an overfunded status:

Components of Net Periodic Cost	**Dec. 31, 2015**
Service Cost	100
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	*125*
Amortization of:	
o Prior Service Cost (nonvested)	20.6
o Unrecognized Losses	88
Total	*108.6*
Total Net Periodic Pension Cost	**233.6**

Recognition of Remaining Transition Liability and Net Periodic Pension Cost:

1. Unassigned Funds – Transition Liability	171.40	
Liability for Pension Benefits		171.40
(Aggregate Write-In for Liabilities)		

This entry illustrates the immediate recognition of the remaining transition liability

2. Liability for Pension Benefits	108.6	
(Aggregate Write-In for Liabilities)		
Unassigned Funds – Prior Service Cost (Nonvested)		20.6
Unassigned Funds – Unrecognized Losses		88

This entry reflects the amortization into net periodic pension cost of the "unrecognized items" within unassigned funds. Amortization has not changed with the recognition of the remaining transition liability.

3. Net Periodic Pension Cost	233.60	
Accrued Benefit Cost		233.60

Recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets, and the amortization of unrecognized items.

4. Accrued Benefit Cost	2,456	
Prepaid Benefit Cost	844	
(Aggregate Write-In – Assets)		
Cash – Contribution		3,300

This entry recognizes the cash contribution, the elimination of the accrued benefit cost and the establishment of the prepaid benefit cost from the contribution.

5. Liability for Pension Benefits	217	
Overfunded Plan Asset		217

Since the plan is now in a net overfunded status, the liability for pension benefits is reduced to zero, and offset to the overfunded pension asset (contra-asset).

6. Unassigned Funds (Change in Nonadmitted)	844	
Prepaid Benefit Cost (Nonadmitted)		844

This entry recognizes the prepaid benefit cost that is nonadmitted and the underlying impact on unassigned funds.

7. Overfunded Plan Asset (Nonadmitted)	217	
Unassigned Funds (Change in Nonadmitted)		217

This entry illustrates the impact of the change in nonadmitted overfunded plan asset to unassigned funds.

Example 3 - Comprehensive Illustration

Consideration of contributions or tax effects are not reflected in the example.

Underfunded Plan With Accrued Benefit Cost - Surplus Deferral Elected

		12/31/2012	1/1/2013	12/31/2013	12/31/2014	12/31/2015

Underfunded Plan with Accrued Benefit Cost - Surplus Deferral Elected

Jan. 1, 2013 - Transition

Entry A *- Recognize Minimum Transition Liability*

Unassigned Funds	263	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		263

Dec. 31, 2013 - Recognize Periodic Pension Cost

Entry A *- Reverses portion of transition entry for the amount that will be amortized into periodic cost for the period.*

Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	109	
Unassigned Funds		109

Entry B *- Recognize net periodic cost*

Net Periodic Cost	409	
Accrued Benefit Cost		409

Dec. 31, 2014 - Recognize Transition and Periodic Pension Cost

Entry A *- Recognize transition liability*

Unassigned Funds	109	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		109

Entry B *- Reverses portion of transition entry for the amount that will be amortized into periodic cost for the period.*

Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	109	
Unassigned Funds		109

Entry C *- Recognize net periodic cost*

Net Periodic Cost	154	
Accrued Benefit Cost		154

Dec. 31, 2015 - Recognize Transition and Periodic Pension Cost

Entry A *- Recognize transition liability*

Unassigned Funds	171	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		171

Entry B *- Reverses portion of transition entry for the amount that will be amortized into periodic cost for the period.*

Liability for Pension Benefits	109	
(Aggregate Write-In for Liabilities)		
Unassigned Funds		109

Entry C *- Recognize net periodic cost*

Net Periodic Cost	234	
Accrued Benefit Cost		234

Entry D *- Recognize Cash Contribution*

Accrued Benefit Cost	2,456	
Prepaid Benefit Cost	844	
(Aggregate Write-In Assets)		
Cash Contribution		3,300

Entry E *– Reduce Liability to Zero and Record Overfunded Plan Asset*

Liability for Pension Benefits	217	
Overfunded Plan Asset		217

Entry F ***–*** *Recognize Nonadmitted Asset – Prepaid Benefit Cost*

Unassigned Funds	844	
(Change in Nonadmitted)		
Prepaid Benefit Cost (Nonadmitted)		844

Entry G ***–*** *Recognize Nonadmitted Asset – Overfunded Plan Asset*

Overfunded Plan Asset (Nonadmitted)	217	
Unassigned Funds (Change in Nonadmitted)		217

Illustration 3 – Paragraph ~~85~~86 Example Note Disclosure – March 31, 2013:

SSAP No. 102 became effective January 1, 2013. This SSAP requires that any underfunded defined benefit pension amounts, as determined when the projected benefit obligation exceeds the fair value of plan assets, to be recognized as a liability under SSAP No. 5R. Such liability is required to be reported in the first quarter statutory financial statement after the transition date with a corresponding entry to unassigned funds. ABC entity elected to utilize the minimum transition option reflected in paragraph ~~85~~86 of SSAP No. 102. The SSAP requires initial transition liability to be the greater of paragraphs ~~85~~86.b.i, ~~85~~86.b.ii., and ~~85~~86.b.iii.:

	Minimum Transition Liability	
~~85~~86.b.i.	10% of Calculated Surplus Impact	54.3
~~85~~86.b.ii.	Annual Amortization of "Unrecognized Items" (Assumes 5-year Uniform Amortization)	108.6
~~85~~86.b.iii.	Difference Between ABO and Accrued Benefit Cost	263
	Minimum Transition Liability	**263**

Note - Amortization of the unrecognized items (paragraph ~~85~~86.b.ii.) may not be determinable at transition. If the amortization amount that will be recognized year-end 2013 is unknown at the transition date, at a minimum, the amount amortized for "unrecognized items" during the prior year shall be utilized for component ~~85~~86.b.ii. of the minimum transition liability. If the amount recognized for transition (greater of all three components in paragraph ~~85~~86.b.) is subsequently determined to be less than what is amortized for the year (~~85~~86.b.ii.), the difference between what was recognized for transition, and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.

Although the entity elected the transition option for surplus deferral, and SSAP No. 102 allows up to 10 years for deferral, an entity must continue to recognize a minimum amount of the transition liability as determined in accordance with paragraph ~~85~~86.b. This requires the entity to recognize each year an amount that is at least equal to the amortization of the unrecognized items in effect at transition. Although the amortization of the transition items into future expenses (paragraph ~~85~~86.b.ii.) may not be fully determinable at the time of transition (as they are dependent on the future expense calculations), the reporting entity anticipates that the remaining $280 surplus impact from the election of the transition deferral in SSAP No. 102 will be recognized over a 3-year* period.

* This is a reporting entity projection and may be revised based on future expenses and activity.

Recognized Surplus Impact at Transition & Remaining Transition Liability		**Prior Service Cost**	**Unrealized Losses**
Transition Liability:	543	103	440
Amount Recognized Jan. 1, 2013	(263)		
Remaining Transition Liability	**280**		

The following provides the status of the pension plan as of December 31, 2012, and the transition date (January 1, 2013):

Example 3	**Dec. 31, 2012**	**Jan. 1, 2013**
Accumulated Benefit Obligation	$(1,922)	$(1,922)
Projected Benefit Obligation	$(2,099)	$(2,099)
Plus: Non-Vested Liability	(103)	(103)
Total PBO	$(2,202)	$(2,202)
Plan Assets at Fair Value	0	0
Funded Status	($2,202)	($2,202)

Transition Obligation / (Asset)	0	
Prior Service Cost	0	
Prior Service Cost (Non-Vested)	103	
Unrecognized Losses / (Gains)	440	
Total Unrecognized Items	543	-
Overfunded Plan Asset / (Liability for Benefits)	(1,659)	(1,922)

In the March 31, 2013, financial statements, the $1,922 liability for pension benefits was reflected in the financial statements as follows:

- Aggregate Write-Ins for Liabilities: $263
- Accrued Benefit Cost: $1,659
- Surplus Deferral - Unrecognized Transition Liability - $280

(Note – This disclosure shall be completed on a quarterly and annual basis, with updated financial information reflecting the current and prior reporting periods, until the plan is fully funded without any transition liability remaining.)

Illustration 3 – Paragraph ~~85~~86 Example Note Disclosure – December 31, 2015 – After Overfunded Contribution:

At December 31, 2015, ABC entity contributed $3,300 towards the pension plan. This contribution resulted in the plan being in an overfunded status. Pursuant to the requirements of SSAP No. 102, ABC immediately recognized the remaining transition liability ($171.40). Although the transition liability has been fully-recognized to unassigned funds, the amortization of the liability into net periodic pension cost has not changed.

Although the entity elected the transition option for surplus deferral, and SSAP No. 102 allows up to 10 years for deferral, with the contribution resulting in an overfunded-plan status, ABC entity was restricted to a 3-year transition schedule as follows:

January 1, 2013 (Transition):	$263.00
December 31, 2014:	$108.60
December 31, 2015	$171.40
Total Transition Liability	$543.00

In the December 31, 2015, annual financial statements, pension obligations were reflected as follows:

- Prepaid Benefit Cost - $844 (Nonadmitted)
- Overfunded Plan Asset - $(217) (Nonadmitted)

These amounts are both reported as Aggregate Write-Ins for Other-Than-Invested Assets resulting in a net $628.

4. Underfunded Plan with Prepaid Benefit Cost – No Surplus Deferral Elected

Consideration of contributions or tax effects are not reflected in this example.

Example 4	**Dec. 31, 2012**[9]	**Jan. 1, 2013**	**Dec. 31, 2013**	**Jan. 1, 2014**	**Dec. 31, 2014**
Accumulated Benefit Obligation	(1,532)	(1,532)	(1,732)	(1,732)	(1,957)
Plus: Non-Vested Liability	(100)	(100)	(100)	(100)	(100)
Total Accumulated Benefit Obligation	$ (1,632)	$ (1,632)	(1,832)	(1,832)	(2,057)
Projected Benefit Obligation	$(1,752)	$(1,752)	(2,052)	(2,052)	(2,277)
Plus: Non-Vested liability	(100)	(100)	(100)	(100)	(100)
Total PBO	$(1,852)	$(1,852)	(2,152)	(2,152)	(2,377)
Plan Assets at Fair Value	1,600	1,600	1,600	2,500	2,500
Funded Status	($252)	($252)	(552)	348	123
Transition Obligation / (Asset)	0	**0**	**0**	**0**	**0**
Prior Service Cost	48	**0**	**0**	**0**	**0**
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**
Unrecognized Losses / (Gains)	600	**0**	**0**	**0**	**0**
Total Unrecognized Items	748	**0**	**0**	**0**	**0**
Net Overfunded Plan Asset / (Liability for Benefits)	**496**	**(252)**	**(552)**	**348**	**123**

Overfunded Plan Asset and Liability for Benefits are terms to reflect the overfunded and unfunded status of the plan. For the amounts shown as of December 31, 2012 immediately prior to the effective date of the new standard, these terms reflect the balance sheet position. As overfunded plan assets are not admitted, these prepaids shall be reflected within Aggregate Write-Ins for Other-Than-Invested Assets. Transition liabilities recognized that have not been reflected through expense shall be reflected within Aggregate Write-Ins for Liabilities.

January 1, 2013 – Transition Date, Recognize "Unrecognized Items"

A.	Unassigned Funds – Prior Service Cost	48	
	Unassigned Funds – Prior Service Cost (Non-vested)	100	
	Unassigned Funds – Unrecognized Losses	600	
	Liability for Plan Benefits *(Aggregate Write-In for Liabilities)*		252
	Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*		496
B.	Change in Nonadmitted – Overfunded Plan Asset	496	
	Unassigned Funds		496

[9] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan and establishes the appropriate liability to reflect the unfunded status. (Reporting entities will need to continue to track these categories separately.)

December 31, 2013 – Recognition of Net Periodic Pension Cost
After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses and 6) amortization of any transition asset or obligation remaining in unassigned funds.

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	300
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**318.70**

C. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	18.70	
Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the items recognized at transition. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

D. Net Periodic Pension Cost	318.70	
Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*		318.70

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, the prepaid benefit cost will be reduced with the recognition of periodic cost.

E. Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*	318.70	
Unassigned Funds		318.70

Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.

F. Change in Nonadmitted – Prepaid Benefit Cost	318.70	
Unassigned Funds		318.70

G. Unassigned Funds	318.70	
Change in Nonadmitted – Overfunded Plan Asset		318.70

Entries to reflect the change in nonadmitted assets for both entries "D" and "E." These entries offset.

H. Unassigned Funds	318.70	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		318.70

Entry recognizes the unfunded liability from the 2013 net periodic costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is actual return on plan assets different from expected return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "H" at year-end.

January 1, 2014 – Contribution

	Jan. 1, 2014
Contribution	$900

I. Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*	900	
Cash		900

J. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	552	
Overfunded Plan Asset		552

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $348.

K. Unassigned Funds	900	
Change in Nonadmitted - Prepaid Benefit Cost		900

L. Change in Nonadmitted- Overfunded Plan Asset	552	
Unassigned Funds		552

Entries recognize the impact as a result of the nonadmitted overfunded plan asset from entry "I" and "J."

December 31, 2014 – Recognition of Net Periodic Pension Cost

After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses and 6) amortization of any transition asset or obligation remaining in unassigned funds.

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	200
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	225
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**243.70**

This example assumes no changes in the amortization timeframe. As noted in footnote 6 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date.

Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

M. Overfunded Plan Assets	18.70	
(Aggregate Write-In for Other-Than-Invested Assets)		
Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry made to unassigned funds for the amount that will be amortized into periodic pension cost for the current period. Since the plan is currently overfunded, this is offset by overfunded plan asset.

N. Unassigned Funds	18.70	
Change in Nonadmitted - Overfunded Plan Asset		18.70

This entry reflects the change in nonadmitted from entry "M."

O. Net Periodic Pension Cost	243.70	
Prepaid Benefit Cost		243.70
(Aggregate Write-In for Other-Than-Invested Assets)		

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost. Once that amount is exhausted, an accrued liability would be recorded.

P. Change in Nonadmitted - Prepaid Benefit Cost	243.70	
Unassigned Funds		243.70

Entries to reflect the change in nonadmitted assets for entry "O."

Example 4 - Underfunded Plan with Prepaid Benefit Cost – No Surplus Deferral Elected:

	Aggregate Write-In For Other-Than-Invested Assets		Change in Nonadmitted Assets	Net Periodic Cost	Unassigned Funds	Liability for Pension Benefits	Cash
	Overfunded Plan Asset	Prepaid Benefit Cost					
Existing Balance 12/31/2012		496 DR	496 CR[10]	-	496 CR 496 DR	-

Dec. 31, 2014	**710.60 CR**	**833.60 DR**	**123 CR**		**900 DR**	**-**	**900 CR**
Dec. 31, 2014 - Net	**123 DR**		**123 CR**		**900 DR**		**900 CR**

[10] This reflects the change reported in prior years.

[11] Since Net Periodic Cost closes to unassigned funds at the end of each year, the balance does not carry forward.

5. Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Funded ABO

Consideration of contributions or tax effects are not reflected in this example.

Example 5	**Dec. 31, 2012**[12]	**Jan. 1, 2013**	**Dec. 31, 2013**	**Dec. 31, 2014**	**Jan, 1, 2015**	**Dec. 31, 2015**
Accumulated Benefit Obligation	$ (1,032)	$(1,032)	$ (1,232)	$ (1,457)	$ (1,457)	$ (1,657)
Plus: Non-Vested Liability	(100)	(100)	(100)	(100)	(100)	(100)
Total Accumulated Benefit Obligation	$((1,132)	$ (1,132)	(1,332)	(1,557)	(1,557)	(1,757)
Projected Benefit Obligation	$(1,752)	$(1,752)	(2,052)	(2,177)	(2,177)	(2,377)
Plus: Non-Vested liability	(100)	(100)	(100)	(100)	(100)	100
Total PBO	$(1,852)	$(1,852)	(2,152)	(2,277)	(2,277)	(2,477)
Plan Assets at Fair Value	1,600	1,600	1,600	1,600	2,500	2,500
Funded Status	($252)	($252)	(552)	(677)	223	23
Transition Obligation/(Asset)	0	**0**	**0**	**0**	**0**	
Prior Service Cost	48	**0**	**0**	**0**	**0**	
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**	
Unrecognized Losses/(Gains)	600	**0**	**0**	**0**	**0**	
Total Unrecognized Items	748	**0**	**0**	**0**	**0**	
Net Overfunded Plan Asset/ (Liability for Benefits)	**496**	**(25.20)**	**(325.20)**	**(475.40)**	**223**	**23**
Surplus Impact Deferred		**(226.80)**	**(226.80)**	**(201.60)**	**-**	**-**

Surplus Impact – The transition guidance in SSAP No. 92 and SSAP No. 102 requires a minimum of 10% of the surplus impact on the transition date. If a systematic 10-year allocation was applied to the total "unrecognized items" rather than the surplus impact, there would be a number of years in which a prepaid asset would still be reflected without any impact to surplus even though the plan is underfunded. This is because a reduction in overfunded plan assets alone has a corresponding change to nonadmitted assets, resulting in a net zero surplus impact.

Determine the initial transition surplus impact under the deferral election:

In accordance with paragraph ~~85~~86.b. of SSAP No. 102, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the **greater of**:

[12] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

	Minimum Transition Liability	
~~85~~86.b.i.	10% of Calculated Surplus Impact	25.20
~~85~~86.b.ii.	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
~~85~~86.b.iii.	Difference Between unfunded ABO and Accrued Benefit Cost. (In this example, ABO is fully funded.)	-
	Transition Liability	**25.20**

~~85~~86.b.ii. Note: If the amortization cannot be determined at transition, at a minimum, the amount amortized for unrecognized items during the prior year shall be utilized for this calculation. If the amount recognized for transition (greater of all three components) is subsequently determined to be less than what was amortized for the year, the difference between what was recognized for transition and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.

January 1, 2013 – Transition Date

2.	Unassigned Funds	496	
	Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*		496
3.	Change in Nonadmitted – Overfunded Plan Asset	496	
	Unassigned Funds		496
4.	Unassigned Funds – Transition Liability	25.20	
	Liability for Plan Benefits *(Aggregate for Write-In Liability)*		25.20

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan. (Reporting entities will need to continue to track these categories separately.) The first two entries (Entry A & B) have a **ZERO surplus impact** and the third entry recognizes a liability for 10% of the surplus impact calculated at transition as that is the greatest element from paragraph ~~85~~86.b.

December 31, 2013 – Recognition of Net Periodic Pension Cost
After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses and 6) amortization of any transition asset or obligation remaining in unassigned funds.

As noted in paragraph ~~85~~86.b., if surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact. As such, unless the entity elects to recognize the remaining surplus impact early (which is permitted under SSAP No. 102), there is no additional surplus impact from transition recognized as of December 31, 2013.

Components of Net Periodic Cost	Dec. 31, 2013
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	300
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**318.70**

Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP No. 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

D. Liability for Pension Benefits 18.70
(Aggregate Write-In for Liabilities)
Unassigned Funds – Transition Liability 18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

E. Net Periodic Pension Cost 318.70
Prepaid Benefit Cost 318.70
(Aggregate Write-In for Other-Than-Invested Assets)

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

F. Overfunded Plan Asset 318.70
(Aggregate Write-In for Other-Than-Invested Assets)
Unassigned Funds 318.70

Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.

G. Change in Nonadmitted – Prepaid Benefit Cost	318.70	
Unassigned Funds		318.70

H. Unassigned Funds	318.70	
Change in Nonadmitted – Overfunded Plan Asset		318.70

Entries to reflect the change in nonadmitted assets for both entries "E" and "F." These entries offset.

I. Unassigned Funds	318.70	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		318.70

Entry reflects the unfunded liability from the 2013 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "I" at year-end.

December 31, 2014 – Recognition of Deferred Transition Impact

J. Unassigned Funds – Transition Liability	25.20	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		25.20

Per paragraph ~~85~~86, if surplus deferral is elected at transition, beginning with 2014 annual financials, the entity shall recognize the remaining surplus impact on a systematic basis over a period not to exceed the remaining nine years. This entry represents the minimum transition liability to be recognized subsequent to transition. Since it is assumed that there is no change in the amortization expectations, and ABO is still funded, this entry reflects 10% of the transition surplus impact.

December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	100
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	125
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**143.70**

Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP No. 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

K.	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	18.70	
	Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

L.	Net Periodic Pension Cost	143.70	
	Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*		143.70

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

M.	Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*	143.70	
	Unassigned Funds		143.70

Entry reflects the change in overfunded plan assets as a reduction in the contra-asset from initial transition.

N.	Change in Nonadmitted – Prepaid Benefit Cost	143.70	
	Unassigned Funds		143.70

O.	Unassigned Funds	143.70	
	Change in Nonadmitted – Overfunded Plan Asset		143.70

Entries reflect the change in nonadmitted assets for both entries "L" and "M." These entries offset.

P.	Unassigned Funds	143.70	
	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		143.70

Entry reflects the unfunded liability from the 2014 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "P" at year-end.

January 1, 2015 – Recognition of Cash Contribution

	Jan. 1, 2015
Contribution	$900

Q.	Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*	900.00	
	Cash		900.00

R.	Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	475.40	
	Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*		475.40

S.	Unassigned Funds	900.00	
	Change in Nonadmitted – Prepaid Benefit Cost		900.00

T.	Change in Nonadmitted – Overfunded Plan Asset	475.40	
	Unassigned Funds		475.40

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $223.

U.	Unassigned Funds	201.60	
	Overfunded Plan Asset		201.60

Since the plan is in an overfunded status, per paragraph ~~85~~86.b. of SSAP No. 102, the entity is required to recognize the deferred surplus impact from initial transition to the extent that the plan is overfunded. As the plan is overfunded by more than the remaining transition surplus impact, this entry recognizes the full remaining surplus impact deferred at transition.

V.	Change in Nonadmitted – Overfunded Plan Assets	201.60	
	Unassigned Funds		201.60

Entry reflects the change in nonadmitted assets from entry "U."

December 31, 2015 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2015**
Service Cost	100
Interest Cost	175
Expected Return on Plan Assets	(75)
Total	200

Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**218.70**

(Previous notes on amortization continue to apply.)

W.	Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*	18.70	
	Unassigned Funds		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the unrecognized items recognized to unassigned funds as part of the transition guidance (even if recognized subsequent to initial recognition under the deferral option) for the amount that will be amortized into periodic pension cost for the current period.

X.	Unassigned Funds	18.70	
	Change in Nonadmitted – Overfunded Plan Asset		18.70

Entry reflects the change in nonadmitted assets from entry "W."

Y.	Net Periodic Pension Cost	218.70	
	Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*		218.70

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the noted items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.

Z.	Change in Nonadmitted – Prepaid Benefit Cost	218.70	
	Unassigned Funds		218.70

Entry reflects the change in nonadmitted assets from entry "Y." This example assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded at year-end in an **additional entry** impacting the Overfunded Plan Asset. If the plan became underfunded due to these changes, then the amount of the underfunding would then be recorded as a Liability for Pension Benefits.

Example: Assume the PBO increased by $100 at year-end due to discount rate changes, etc. This would cause the plan to be underfunded by $77.00.

1.	*Unassigned Funds*	*100.00*	
	Overfunded Plan Asset		*23.00*
	Liability for Pension Benefits		*77.00*

2.	*Change in Nonadmitted – Overfunded Plan Asset*	*23.00*	
	Unassigned Funds		*23.00*

Example 5 - Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Funded ABO:

	Aggregate Write-In For Other-Than-Invested Assets		Change in Nonadmitted Assets	Net Periodic Cost	Unassigned Funds	Liability for Pension Benefits	Cash
	Overfunded Plan Asset	Prepaid Benefit Cost					
Existing Balance 12/31/2012 (This reflects pre-2012 Entries)		**496 DR**	**496 CR**[13]	**-**	**496 CR** **496 DR**	**-**

6. Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Unfunded ABO

Consideration of contributions or tax effects are not reflected in this example.

Example 6	**Dec. 31, 2012**[15]	**Jan. 1, 2013**	**Dec. 31, 2013**	**Dec. 31, 2014**	**Jan, 1, 2015**	**Dec. 31, 2015**
Accumulated Benefit Obligation	$ (1,632)	$ (1,632)	$ (1,932)	$ (2,057)	$ (2,457)	$ (2,457)
Plus: Non-Vested Liability	(100)	(100)	(100)	(100)	(100)	(100)
Total Accumulated Benefit Obligation	$(1,732)	$(1,732)	(2,032)	(2,157)	(2,557)	(2,557)
Projected Benefit Obligation	$(1,752)	$(1,752)	(2,052)	(2,177)	(2,177)	(2,377)
Plus: Non-Vested liability	(100)	(100)	(100)	(100)	(100)	100
Total PBO	$(1,852)	$(1,852)	(2,152)	(2,277)	(2,277)	(2,477)
Plan Assets at Fair Value	1,600	1,600	1,600	1,600	2,500	2,500
Funded Status	($252)	($252)	(552)	(677)	223	23
Transition Obligation / (Asset)	0	**0**	**0**	**0**	**0**	
Prior Service Cost	48	**0**	**0**	**0**	**0**	
Prior Service Cost (Non-Vested)	100	**0**	**0**	**0**	**0**	
Unrecognized Losses / (Gains)	600	**0**	**0**	**0**	**0**	
Total Unrecognized Items	748	**0**	**0**	**0**	**0**	
Net Overfunded Plan Asset / (Liability for Benefits)	**496**	**(132)**	**(432)**	**(582.20)**	**223**	**23**
Additional Minimum Liability (Unfunded ABO)	(32)	0	The concept of an additional minimum liability and related intangible asset for plans with an unfunded ABO is eliminated in SSAP No. 102.			
Intangible Asset	32	0				
Surplus Impact Deferred		**(120)**	**(120)**	**(94.80)**	**-**	**-**

Surplus Impact – The transition guidance in SSAP No. 92 and SSAP No. 102 requires a minimum of 10% of the surplus impact on the transition date. If a systematic 10-year allocation was applied to the total "unrecognized items" rather than the surplus impact, there would be a number of years in which a prepaid asset would still be reflected, without any impact to surplus, even though the plan is underfunded. This is because a reduced in overfunded plan assets alone has a corresponding change to nonadmitted assets, resulting in a net zero surplus impact.

[15] The amount shown for December 31, 2012, reflects the non-vested liability, which must be considered at transition under SSAP No. 102. However, the non-vested liability is not a factor in the December 31, 2012, financial statements under SSAP No. 89.

Determine the initial transition surplus impact under the deferral election:

In accordance with paragraph ~~85~~86.b. of SSAP No. 102, the surplus impact initially recognized as of January 1, 2013 under the transition option, and subsequently over the transition period, shall be the **greater of**:

	Minimum Transition Liability	
~~85~~86.b.i	10% of Calculated Surplus Impact at Transition	25.20
~~85~~86.b.ii	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
~~85~~86.b.iii	Difference Between unfunded ABO and Accrued Benefit Cost.	132.00
	Transition Liability	**132.00**

~~85~~86*.b.ii. Note: If the amortization cannot be determined at transition, at a minimum, the amount amortized for unrecognized items during the prior year shall be utilized for this calculation. If the amount recognized for transition (greater of all three components) is subsequently determined to be less than what was amortized for the year, the difference between what was recognized for transition and what is amortized must immediately be recognized as an adjustment to the transition impact to unassigned funds – surplus.*

January 1, 2013 – Transition Date

Reversal of Additional Minimum Liabilities/Intangible Plan Assets: As this plan has an unfunded ABO, following the guidance under SSAP No. 89, the entity had recognized an additional minimum liability and corresponding admitted intangible asset. As the concept of an additional minimum liability has been eliminated from SSAP No. 102, at transition these amounts are eliminated, with the determination of the overfunded/unfunded projected benefit obligation calculated subsequent to the elimination.

Unassigned Funds	32	
Intangible Asset		32
Additional Minimum Liability	32	
Unassigned Funds		32

Application of SSAP No. 102 – Recognition of Unfunded Status with Surplus Deferral:

A. Unassigned Funds	496	
Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*		496
B. Change in Nonadmitted – Overfunded Plan Asset	496	
Unassigned Funds		496
C. Unassigned Funds – Transition Liability	132	
Liability for Pension Benefits		132

Prepaid Benefit Cost and Overfunded Plan Assets are both reflected as Aggregate Write-Ins for Other-Than-Invested Assets. However, Prepaid Benefit Cost can only be reduced with a corresponding income statement impact. Entry A, which uses a contra-asset, effectively results with a net elimination of the assets reported for the plan. (Reporting entities will need to continue to track these categories separately.)

Entries A & B have a **ZERO surplus impact** and the third entry recognizes a liability for the unfunded ABO per the requirements of paragraph ~~85~~86.b.

December 31, 2013 – Recognition of Net Periodic Pension Cost

After transition, recognition of net periodic pension cost includes: 1) service cost, 2) interest cost, 3) expected return on plan assets, 4) amortization of prior service cost included in unassigned funds, 5) amortization of gains and losses and 6) amortization of any transition asset or obligation remaining in unassigned funds.

As noted in paragraph ~~85~~86.b., if surplus deferral is elected at the transition date, subsequently, starting with the 2014 year-end financial statement, the reporting entity shall annually recognize the remaining surplus impact. As such, unless the entity elects to recognize the remaining surplus impact early (which is permitted under SSAP No. 102), there is no additional surplus impact from transition recognized as of December 31, 2013.

Components of Net Periodic Cost	**Dec. 31, 2013**
Service Cost	250
Interest Cost	100
Expected Return on Plan Assets	(50)
Total	300
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**318.70**

Note – This example assumes no changes in the amortization timeframe. As noted in footnote 5 of SSAP No. 102, unless otherwise impacted from SSAP No. 102, or in accordance with changes to the pension plan, the amortization of the unrecognized items into net periodic pension cost shall continue to follow the existing amortization schedules in effect on the transition date. Although the amortization of Prior Service Cost (assuming no additional changes) and non-vested Prior Service Cost will typically follow a straight-line amortization into Net Periodic Pension Cost, this is not the case for the Unrecognized Gains/Losses. The total amount of unrecognized gains/losses subject to amortization will continuously change due to changes in the discount rates, actuarial assumptions, differences between expected and actual return on assets, etc. In addition, unrecognized gains/losses are amortized into expense only to the extent that they exceed the 10% corridor (SSAP 102, paragraph 22). The 10% corridor is based on the greater of the PBO or the Fair Value of Plan assets, and these amounts are also continuously changing. Therefore, the amortization of the gain/loss will never occur on a straight-line basis using the corridor method described in paragraph 22. There is no "amortization schedule" in effect at transition date for the unrecognized gains/losses.

D. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	18.70	
Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

E. Net Periodic Pension Cost	318.70	
Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*		318.70

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

F. Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*	318.70	
Unassigned Funds		318.70

Entry reflects a reduction in the contra-asset recognized at transition at an amount equal to the reduction of prepaid benefit cost.

G. Change in Nonadmitted – Prepaid Benefit Cost	318.70	
Unassigned Funds		318.70

H. Unassigned Funds	318.70	
Change in Nonadmitted – Overfunded Plan Asset		318.70

Entries to reflect the change in nonadmitted assets for both entries "E" and "F." These entries offset.

I. Unassigned Funds	318.70	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		318.70

Entry reflects the unfunded liability from the 2013 plan-related costs. This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "I" at year-end.

December 31, 2014 – Recognition of Deferred Transition Impact

In accordance with paragraph ~~85~~86 of SSAP No. 102, the minimum amount recognized each subsequent year shall be an amount that reflects the conditions of paragraph ~~85~~86.b. As such, the surplus recognized shall be the **greater of:**

	Minimum Transition Liability	
~~85~~86.b.i.	10% of Calculated Surplus Impact at Transition	25.20
~~85~~86.b.ii.	Anticipated Annual Amortization of "Unrecognized Items" (Assume 40-year Uniform Amortization)	18.70
~~85~~86.b.iii.	Difference Between unfunded ABO and Accrued Benefit Cost/Fair Value of Plan Assets. (Dec. 31, 2014 - Fair value of plan assets together with the Liability for Pension Benefits exceed the ABO.)	-
	Transition Liability	**25.20**

(Previous note on amortization continues to apply.)

J. Unassigned Funds – Transition Liability	25.20	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		25.20

Entry represents the minimum transition liability to be recognized subsequent to transition. (10% of the transition surplus impact is the greatest component of paragraph ~~85~~86.b. as of Dec. 31, 2014.)

December 31, 2014 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	**Dec. 31, 2014**
Service Cost	100
Interest Cost	75
Expected Return on Plan Assets	(50)
Total	125
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**143.70**

(Previous note on amortization continues to apply.)

K. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	18.70	
Unassigned Funds – Transition Liability		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the unrecognized items recognized to unassigned funds as part of the transition guidance (even if recognized subsequent to initial recognition under the deferral option) for the amount that will be amortized into periodic pension cost for the current period.

L. Net Periodic Pension Cost	143.70	
Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*		143.70

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. (As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.)

M. Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*	143.70	
Unassigned Funds		143.70

Entry reflects the change in overfunded plan assets as a reduction in the contra-asset to correspond with the change in net periodic pension cost. With this entry, the Prepaid Benefit Cost and Overfunded Plan Assets net to zero. This is appropriate as the plan is underfunded and a liability is reflected.

N. Change in Nonadmitted – Prepaid Benefit Cost	143.70	
Unassigned Funds		143.70

O. Unassigned Funds	143.70	
Change in Nonadmitted – Overfunded Plan Asset		143.70

Entries to reflect the change in nonadmitted assets for both entries "L" and "M." These entries offset.

P. Unassigned Funds	143.70	
Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*		143.70

Entry reflects the full unfunded liability, including impact from the 2014 plan-related costs.

Note - This entry assumes no additional changes in the PBO or Fair Value of Plan Assets at year-end. In practice, there will always be changes in the year-end PBO due to changes in the discount rate used to calculate the PBO, actuarial demographics different than expected, etc. An additional variation is **actual** return on plan assets different from **expected** return on plan assets. All of these factors will impact the year-end funded status, and will also need to be recorded as part of entry "P" at year-end.

January 1, 2015 – Recognition of Cash Contribution

	Jan. 1, 2015
Contribution	$900

Q. Prepaid Benefit Costs *(Aggregate Write-In for Other-Than-Invested Assets)*	900.00	
Cash		900.00

R. Liability for Pension Benefits *(Aggregate Write-In for Liabilities)*	582.20	
Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*		582.20

S. Unassigned Funds	900.00	
Change in Nonadmitted – Prepaid Benefit Cost		900.00

T. Change in Nonadmitted – Overfunded Plan Asset	582.20	
Unassigned Funds		582.20

With the cash contribution, the plan becomes overfunded with a prepaid benefit cost. The contribution directly increases the Prepaid Benefit Cost. The liability for pension benefits is eliminated, with an offset to the Overfunded Plan asset. The plan now has a NET overfunded plan asset of $223.

U. Unassigned Funds	94.80	
Overfunded Plan Assets		94.80

As the surplus deferral was elected, with the overfunded status, per paragraph ~~85~~86.b. of SSAP No. 102, the entity is required to recognize the deferred surplus impact from initial transition to the extent that the plan is overfunded. As the plan is overfunded by more than the remaining transition surplus impact, this entry recognizes the full remaining surplus impact deferred at transition.

V. Change in Nonadmitted – Overfunded Plan Assets	94.80	
Unassigned Funds		94.80

Entry reflects the change in nonadmitted assets from entry U.

December 31, 2015 – Recognition of Net Periodic Pension Cost

Components of Net Periodic Cost	Dec. 31, 2015
Service Cost	100
Interest Cost	175
Expected Return on Plan Assets	(75)
Total	200
Amortization of:	
o Prior Service Cost	1.20
o Prior Service Cost (nonvested)	2.50
o Unrecognized Losses	15.00
Total	18.70
Total Net Periodic Pension Cost	**218.70**

(Prior amortization note continues to apply.)

W. Overfunded Plan Asset *(Aggregate Write-In for Other-Than-Invested Assets)*	18.70	
Unassigned Funds		18.70

This entry occurs prior to amortization of the transition items. This entry reverses a portion of the original transition entry for the amount that will be amortized into periodic pension cost for the current period.

X. Unassigned Funds	18.70	
Change in Nonadmitted – Overfunded Plan Asset		18.70

Entry reflects the change in nonadmitted assets from entry “W.”

Y. Net Periodic Pension Cost	218.70	
Prepaid Benefit Cost *(Aggregate Write-In for Other-Than-Invested Assets)*		218.70

This entry recognizes net periodic pension cost for the service cost, interest cost, expected return on plan assets and amortization of the unrecognized items. As the plan has a prepaid benefit cost, this will be reduced with the recognition of periodic cost.

Z. Change in Nonadmitted – Prepaid Benefit Cost	218.70	
Unassigned Funds		218.70

Entry reflects the change in nonadmitted assets from entry “Y.”

Example 6 - Underfunded Plan with Prepaid Benefit Cost – Surplus Deferral, Unfunded ABO:

	Aggregate Write-In For Other-Than-Invested Assets		Change in Nonadmitted Assets	Net Periodic Cost	Unassigned Funds	Liability for Pension Benefits	Cash
	Overfunded Plan Asset	Prepaid Benefit Cost

EXHIBIT B - CHANGES IN THE MEASUREMENT DATE AND PLAN SETTLEMENT

Note: Footnote references in this section link numbers together for ease of reference.

The reporting entity adopted this SSAP as of the transition date (January 1, 2013.) In accordance with this SSAP, Company B is changing the measurement date for its defined benefit pension plan from September 30 to December 31 for its December 31, 2014, financial statements. In accordance with this SSAP, statutory accounting principles require that change to be implemented by remeasuring plan assets and obligations as of December 31, 2013. Company B has a plan settlement on November 30, 2013, and remeasures its plan assets and benefit obligations as of November 30, 2013, resulting in a settlement loss before taxes of $60,000[6], which is a portion of the net loss in unassigned funds (surplus). However, the effects of remeasuring plan assets and obligations as of November 30, 2013, on the funded status reported in Company B's statement of financial position are not recognized until the following fiscal year because the change in measurement date has not been adopted at November 30, 2013. In recognizing the effects of the plan settlement and change in measurement date:

a. Recognize the settlement loss in net income in the fourth quarter of 2013 and a corresponding decrease in the cumulative net loss in unassigned funds (surplus).

b. Recognize the net periodic pension cost incurred from October 1, 2013, to December 31, 2013, net of tax, as an adjustment to beginning unassigned funds (surplus) for 2014.

c. Recognize any gains or losses arising during the period from October 1, 2013, to December 31, 2013, net of tax, as an adjustment to unassigned funds (surplus) for 2014.

d. Recognize corresponding changes in pension liability and deferred tax amounts for the above items.

The funded status of Company B's Plan assets as of September 30, 2013, November 30, 2013, December 31, 2013 and December 31, 2014, and amounts included in unassigned funds (surplus) to be recognized as a component of net periodic pension cost are shown below. Company B has no remaining transition asset or obligation. Company B is not required to amortize the cumulative net loss because it is less than 10% of the greater of the fair value of plan assets or the projected benefit obligation for all years presented. The applicable tax rate for 2013 and 2014 is 40%.

	9/30/13	**11/30/13**	**12/31/13**	**12/31/14**
Projected Benefit Obligation	(3,660)	(3,200)	(3,210)	(3,700)
Plan Asset – Fair Value	2,600	2,200	2,225	2,200
Funded Status	**(1,060)**	**(1,000)**	**(985)**	**(1,500)**
Items not yet recognized as a component of net periodic cost:	380	360	350	230
Prior Service Cost	265[5]	220	315[4]	365
Net Loss	**645**	**580**	**665**	**595**

Based on actuarial valuations performed as of September 30, 2013, and November 30, 2013, the reporting entity determines its net periodic pension cost for the two-month period from October 1, 2013, to November 30, 2013, and for the one-month period from December 1, 2013, to December 31, 2013, as follows:

Net Periodic Pension Cost	**2 Months**	**1 Month**	**Total**
Service Cost	25	15	40
Interest Cost	30	15	45
Expected Return on Plan Assets	(30)	(15)	(45)
Total service cost, interest cost, and expected return on plan assets	**25**	**15**	**40**[2]
Amortization of prior service cost	20	10	30[3]
Amortization of net loss	0	0	0
Total Amortization	20	10	30
Net Periodic Benefit Cost	**45**	**25**	**70**[1]

a. In the fourth quarter of 2013, the reporting entity makes the following journal entry to recognize the $60,000[6] settlement loss: (40% tax rate - $24,000)

Net Periodic Pension Cost (settlement loss)	60	
Deferred Tax Asset	24	
Unassigned Funds (Surplus)		84

b. In 2014, the reporting entity makes the following net journal entry to apply the measurement date provisions and adjust the beginning balances of unassigned funds (surplus), pension liability and deferred tax accounts for the amortization of prior service cost and the service cost, interest cost, and expected return on plan assets.

Unassigned Funds (Surplus)	24	
Deferred Tax Asset	16	
Accrued Benefit Cost		40

This journal entry reflects the following considerations:

- Debit to unassigned funds (surplus) for the $70[1] net periodic benefit cost
- Debit to deferred tax asset for $16 calculated as 40% of the $40[2] total service cost, interest cost, and expected return on plan assets
- Debit to unassigned funds (surplus) for $12 for the tax impact calculated as 40% of the $30[3] amortization of the prior service cost
- Credit to Unassigned funds (surplus) for $28 for the tax impact calculated as 40% of the $70[1] net periodic benefit cost
- Credit to Unassigned funds (surplus) for $30[3] for the amortization of the prior service cost.
- Credit to liability for pension benefits for the $40[2] total service cost, interest cost, and expected return on plan assets

c. The following entry adjusts the beginning balances of unassigned funds (surplus), pension liability and deferred tax accounts for the net loss arising during the period. (Net loss is calculated as follows: Net loss at December 31, 2013 of $315[4], less net loss at November 30, 2013 of $265[5], plus settlement loss of $60[6] to equal $110.)

Unassigned Funds (Surplus)	66	
Deferred Tax Asset	44	
Accrued Benefit Cost		110

Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities

SCOPE OF STATEMENT

1. Transfers of financial assets take many forms. Accounting for transfers in which the transferor has no continuing involvement with the transferred financial assets or with the transferee are generally straightforward. However, transfers of financial assets often occur in which the transferor has some continuing involvement either with the assets transferred or with the transferee. Examples of continuing involvement include, but are not limited to, servicing arrangements, recourse or guarantee arrangements, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into contemporaneously with, or in contemplation of the transfer, arrangements to provide financial support, pledges of collateral, and the transferor's beneficial interests in the transferred financial assets. Transfers of financial assets with continuing involvement raise issues about the circumstances under which the transfers should be considered as sales of all or part of the assets or as secured borrowings. An objective in accounting for transfers of financial assets is for each reporting entity that is a party to the transaction to recognize only assets it controls and liabilities it has incurred, to derecognize assets only when control has been surrendered, and to derecognize liabilities only when they have been extinguished. Sales and other transfers may frequently result in a disaggregation of financial assets and liabilities into components, which become separate assets and liabilities.

2. This statement focuses on the issues of accounting for transfers[1] and servicing of financial assets and extinguishments of liabilities. This statement establishes statutory accounting principles for transfers and servicing of financial assets, including asset securitizations and securitizations of policy acquisition costs, extinguishments of liabilities, repurchase agreements, repurchase financing and reverse repurchase agreements, including dollar repurchase and dollar reverse repurchase agreements that are consistent with the Statutory Accounting Principles Statement of Concepts and Statutory Hierarchy (Statement of Concepts). This statement discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. Securitizations of nonfinancial assets are outside the scope of this statement. Transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments*. Additionally, retained beneficial interests from the sale of loan-backed or structured securities are to be accounted for in accordance with SSAP No. 43R—Loan-Backed and Structured Securities, Revised.

3. *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25) shall be followed for accounting and disclosure requirements for all related party transactions.

4. *SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 91R) has been superseded by this statement.

5. This statement does not address the securitization of mortality or morbidity risk. The National Association of Insurance Commissioners' (NAIC's) Insurance Securitization Working Group of the Financial Condition (E) Committee is charged with the development of model laws, model regulations and proposed accounting guidance for the securitization of mortality and morbidity risk. When such proposed accounting guidance is finalized the development of a statement will be considered.

[1] Terms defined in the glossary to this statement (Exhibit A) are set in boldface type.

SUMMARY CONCLUSION

Accounting for Transfers and Servicing of Financial Assets

6. The objective of paragraph 8 and related implementation guidance is to determine whether a transferor has surrendered control over transferred financial assets. This determination must consider the transferor's continuing involvement in the transferred financial assets and requires the use of judgment that must consider all arrangements or agreements made contemporaneously with, or in contemplation of, the transfer, even if they were not entered into at the time of the transfer.

7. The requirements of paragraph 8 apply to transfers of an entire financial asset, transfers of a group of entire financial assets, and transfers of a participating interest in an entire financial asset (all of which are referred to collectively in this statement as transferred financial assets). A participating interest has all of the following characteristics:

a. From the date of the transfer, it represents a proportionate (pro rata) ownership interest in an entire financial asset. The percentage of ownership interests held by the transferor in the entire financial asset may vary over time, while the entire financial asset remains outstanding as long as the resulting portions held by the transferor (including any participating interest retained by the transferor or its agents) and the transferee(s) meet the other characteristics of a participating interest. For example, if the transferor's interest in an entire financial asset changes because it subsequently sells another interest in the entire financial asset, the interest held initially and subsequently by the transferor must meet the definition of a participating interest.

b. From the date of the transfer, all cash flows received from the entire financial asset are divided proportionately among the participating interest holders in an amount equal to their share of ownership. Cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, which includes the profit that would be demanded in the marketplace. In addition, any cash flows received by the transferor as proceeds of the transfer of the participating interest shall be excluded from the determination of proportionate cash flows provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows.

c. The rights of each participating interest holder (including the transferor in its role as a participating interest holder) have the same priority, and no participating interest holder's interest is subordinated to the interest of another participating interest holder. That priority does not change in the event of bankruptcy or other receivership of the transferor, the original debtor, or any other participating interest holder. Participating interest holders have no recourse to the transferor, its agents or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits received by any participating interest holder. That is, no participating interest holder is entitled to receive cash before any other participating interest holder under its contractual rights as a participating interest holder. For example, if a participating interest holder also is the servicer of the entire financial asset and receives cash in its role as servicer, that arrangement would not violate this requirement.

d. No party has the right to pledge or exchange the entire financial asset unless all participating interest holders agree to pledge or exchange the entire financial asset.

If a transfer of a portion of an entire financial asset meets the definition of a participating interest, the transferor shall apply the guidance in paragraph 8. If a transfer of a portion of a financial asset does not meet the definition of a participating interest, the transferor and transferee shall account for the transfer in accordance with the guidance in paragraph 14 as a secured borrowing. However, if the transferor transfers an entire financial asset in portions that do not individually meet the participating interest definition, paragraph 8 shall be applied to the entire financial asset once all portions have been transferred.

8. A transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset in which the transferor surrenders control over those financial assets shall be accounted for as a sale if, and only if, all of the following conditions are met:

a. The transferred financial assets have been isolated from the transferor—put presumptively beyond the reach of the transferor and its creditors, even in bankruptcy or other receivership. Transferred financial assets are isolated in bankruptcy or other receivership only if the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor.

b. Each transferee (or, if the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities and that entity is constrained from pledging or exchanging the assets it receives, each third-party holder of its beneficial interests) has the right to pledge or exchange the assets (or beneficial interests) it received, and no condition both constrains the transferee (or third-party holder of its beneficial interests) from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor (paragraphs 43-46).

c. The transferor or its agents do not maintain effective control over the transferred financial assets or third-party beneficial interests related to those transferred assets (paragraph 50). Examples of a transferor’s effective control over the transferred financial assets include, but are not limited to (1) an agreement that both entitles and obligates the transferor to repurchase or redeem them before their maturity (paragraphs 51-52), (2) an agreement that provides the transferor with both the unilateral ability to cause the holder to return specific financial assets and a more-than-trivial benefit attributable to that ability, other than through a cleanup call (paragraphs 53-57), or (3) an agreement that permits the transferee to require the transferor to repurchase the transferred financial assets at a price that is so favorable to the transferee that it is probable that the transferee will require the transferor to repurchase them (paragraph 58).

Accounting for Transfers of Participating Interests

9. Upon completion of a transfer of a participating interest that satisfies the conditions to be accounted for as a sale (paragraph 8), the transferor (seller) shall:

a. Allocate the previous carrying amount of the entire financial asset between the participating interests sold and the participating interest that continues to be held by the transferor on the basis of their relative fair values at the date of the transfer (paragraph 61).

b. Derecognize the participating interest(s) sold.

c. Recognize and initially measure at fair value servicing assets, servicing liabilities, and any other assets obtained and liabilities incurred in the sale (such as cash) (paragraphs 62-66).

d. Recognize in earnings any gain or loss on the sale.

e. Report any participating interest or interests that continue to be held by the transferor as the difference between the previous carrying amount of the entire financial asset and the amount derecognized.

The transferee shall recognize the participating interest(s) obtained, other assets obtained, and any liabilities incurred and initially measure them at fair value.

10. Upon completion of a transfer of participating interests that does not satisfy the conditions to be accounted for as a sale, the guidance in paragraph 14 shall be applied.

Accounting for Transfers of an Entire Financial Asset or Group of Entire Financial Assets

11. Upon completion of a transfer of an entire financial assets or a group of entire financial assets that satisfies the conditions to be accounted for as a sale (see paragraph 8), the transferor (seller) shall:

a. Derecognize the transferred financial assets;

b. Recognize and initially measure at fair value servicing assets, servicing liabilities, and any other assets obtained (including a transferor's beneficial interest in the transferred financial assets) and liabilities incurred[2] in the sale (paragraphs 60 and 62-66).

c. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized and unrealized capital gains and losses shall be determined per the guidance in the SSAP for the specific type of investment (e.g., SSAP No. 43R for loan-backed and structured securities), or if not specifically stated in the related SSAP, in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an IMR, realized capital gains and losses shall be reported as net realized capital gains or losses in the statement of income, and unrealized capital gains and losses shall be reported as net unrealized gains and losses in unassigned funds (surplus).

The transferee shall recognize all assets obtained and any liabilities incurred, and initially measure them at fair value.

12. Repurchase agreements, reverse repurchase agreements, repurchase financing, collateral requirements and dollar repurchase agreements are described in paragraphs 93-109. When an asset is sold and the proceeds are reinvested within 30 days in the same or substantially the same security, such transfers shall be considered to be wash sales and shall be accounted for as sales as discussed in paragraphs 87-92 and disclosed as required by paragraph 28. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred financial assets.

13. Upon completion of a transfer of an entire financial asset or a group of entire financial assets that does not satisfy the conditions to be accounted for as a sale in its entirety, the guidance in paragraph 14 shall be applied.

[2] Some assets that might be obtained and liabilities that might be incurred include cash, put or call options that are held or written (for example, guarantee or recourse obligations), forward commitments (for example, commitments to deliver additional receivables during the revolving periods of some securitizations) and swaps (for example, provisions that convert interest rates from fixed to variable).

Secured Borrowing

14. If a transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset does not meet the conditions for a sale in paragraph 8, or if a transfer of a portion of an entire financial asset does not meet the definition of a participating interest (paragraph 7), the transferor and transferee shall account for the transfer as a secured borrowing with pledge of collateral (paragraph 19). The transferor shall continue to report the transferred financial assets in its statement of financial position with no change in their measurement (that is, basis of accounting).

Recognition and Measurement of Servicing Assets and Liabilities

15. An entity shall recognize and initially measure at fair value, a servicing asset or servicing liability each time it undertakes an obligation to service a financial asset by entering into a servicing contract in either of the following situations:

a. A servicer's transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset that meets the requirements for sale accounting; or

b. An acquisition or assumption of a servicing obligation that does not relate to financial assets of the servicer.

An entity that transfers its financial assets to an entity in a transfer that qualifies as a sale in which the transferor obtains the resulting securities and classifies them as debt securities shall separately recognize its servicing assets or servicing liabilities.

16. A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying assets remaining on the transferor's balance sheet shall not be recognized as a servicing asset or servicing liability.

17. If distinct servicing rights exist in accordance with the above guidelines, the reporting entity shall recognize a servicing asset or liability. When the servicing fees to be received exceed the cost of servicing the transferred assets, a servicing asset is recognized and nonadmitted. When the cost of servicing the transferred assets is greater than the servicing fees to be received, a liability shall be recorded for the excess to recognize this obligation. A corresponding loss shall be recorded through the Summary of Operations in other income. Servicing assets or liabilities shall be measured subsequently at fair value at each reporting date with fluctuations in fair value reported as unrealized gains and losses. Declines in fair value which are determined to be other than temporary shall be recorded as realized losses.

Financial Assets Subject to Prepayment

18. Financial assets, except for instruments that are within the scope of SSAP No. 86, that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment shall be subsequently measured like investments in debt securities and loan-backed and structured securities in accordance with SSAP No. 43R. Examples of such financial assets include, but are not limited to, **interest-only strips**, other beneficial interests, loans, or other receivables.

Secured Borrowings and Collateral

19. A debtor may grant a **security interest** in certain assets to a lender (the secured party) to serve as collateral for its obligation under a borrowing, with or without recourse to other assets of the debtor. An obligor under other kinds of current or potential obligations, for example, interest rate swaps, also may grant a security interest in certain assets to a secured party. If collateral is transferred to the secured party, the custodial arrangement is commonly referred to as a pledge. Secured parties sometimes are permitted

to sell or repledge (or otherwise transfer) collateral held under a pledge. The same relationships occur, under different names, in transfers documented as sales that are accounted for as secured borrowings (paragraph 14). The accounting for noncash[3] collateral by the debtor (or obligor) and the secured party depends on whether the secured party or its agent has the right to sell or repledge the collateral and on whether the debtor has defaulted.

a. If the secured party (transferee) or its agent has the right by contract or custom to sell or repledge the collateral, then the debtor (transferor) shall report that asset in its balance sheet.

b. If the secured party (transferee) sells collateral pledged to it, it shall recognize the proceeds from the sale and its obligation to return the collateral. The sale of the collateral is a transfer subject to the provisions of this statement.

c. If the debtor (transferor) defaults under the terms of the secured contract and is no longer entitled to redeem the pledged asset, it shall derecognize the pledged asset, and the secured party (transferee) shall recognize the collateral as its asset initially measured at fair value or, if it has already sold the collateral, derecognize its obligation to return the collateral.

d. Except as provided in paragraph 19.c., the debtor (transferor) shall continue to carry the collateral as its asset, and the secured party (transferee) shall not recognize the pledged asset.

20. Reporting entities may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral[(INT 09-08)] for their performance under a contract. If the assets pledged are recorded as admitted assets under *SSAP No. 4—Assets and Nonadmitted Assets* (SSAP No. 4) and *INT 01-31: Assets Pledged as Collateral* (INT 01-31) and are not impaired under the provisions of *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R), the pledging entity records the collateral as an admitted asset until committing a contract default that has not been cured in accordance with the contract provisions. At the time of an uncured default, the provisions of paragraph 19 shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging entity as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset shall be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer shall only record an admitted asset for the amount of collateral that it can redeem.

Extinguishments of Liabilities

21. A debtor shall derecognize a liability if and only if it has been extinguished (see *SSAP No. 15—Debt and Holding Company Obligations* (SSAP No. 15)). A liability has been extinguished if either of the following conditions is met:

a. The debtor pays the creditor and is relieved of its obligation for the liability. Paying the creditor includes delivery of cash, other financial assets, goods, or services or reacquisition by the debtor of its outstanding debt securities whether the securities are canceled or held as so-called treasury bonds; or

[3] Cash "collateral," sometimes used, for example, in securities lending transactions, shall be derecognized by the payer and recognized by the recipient, not as collateral, but rather as proceeds of either a sale or a borrowing.

b. The debtor is legally released[4] from being the primary obligor under the liability, either judicially or by the creditor.

22. An exchange of debt instruments with substantially different terms is also considered a debt extinguishment and shall be accounted for in accordance with paragraph 21. A debtor's exchange of debt instruments (in a nontroubled debt situation) is accomplished with debt instruments that are substantially different if the present value of the cash flows under the terms of the new debt instrument is at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument. If the difference between the present value of the cash flows under the terms of the new debt instrument and the present value of the remaining cash flows under the terms of the original debt instrument is less than 10 percent, a creditor should evaluate whether the modification is more than minor based on the specific facts and circumstances (and other relevant considerations) surrounding the modification.

Disclosures

23. The principal objectives of the disclosures required by this statement are to provide users of the financial statements with an understanding of all of the following:

a. A transferor's continuing involvement (as defined in the glossary of this statement), if any, with transferred financial assets.

b. The nature of any restrictions on assets reported by an entity in its statement of financial position that relate to a transferred financial asset, including the carrying amounts of those assets.

c. How servicing assets and servicing liabilities are reported under this statement.

d. For transfers accounted for as sales when a transferor has continuing involvement with the transferred financial assets and for transfers of financial assets accounted for as secured borrowings, how the transfer of financial assets affects a transferor's financial position, financial performance, and cash flows.

Those objectives apply regardless of whether this statement requires specific disclosures. The specific disclosures required by this statement are minimum requirements and an entity may need to supplement the required disclosures specified in paragraph 28 depending on the facts and circumstances of a transfer, the nature of an entity's continuing involvement with the transferred financial assets, and the effect of an entity's continuing involvement on the transferor's financial position, financial performance, and cash flows. Disclosures required by other Statement of Statutory Accounting Principles (SSAPs) for a particular form of continuing involvement shall be considered when determining whether the disclosure objectives of this statement have been met.

24. Disclosures required by this statement may be reported in the aggregate for similar transfers if separate reporting of each transfer would not provide more useful information to financial statement users. A transferor shall disclose how similar transfers are aggregated. A transferor shall distinguish transfers that are accounted for as sales from transfers that are accounted for as secured borrowings. In determining whether to aggregate the disclosures for multiple transfers, the reporting entity shall consider quantitative and qualitative information about the characteristics of the transferred financial assets. For example, consideration should be given, but not limited, to the following:

[4] If nonrecourse debt (such as certain mortgage loans) is assumed by a third party in conjunction with the sale of an asset that serves as sole collateral for that debt, the sale and related assumption effectively accomplish a legal release of the seller-debtor for purposes of applying this Statement.

a. The nature of the transferor's continuing involvement.

b. The types of financial assets transferred.

c. Risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the change in the transferor's risk profile as a result of the transfer.

25. The disclosures shall be presented in a manner that clearly and fully explains to financial statement users the transferor's risk exposure related to the transferred financial assets and any restrictions on the assets of the entity. An entity shall determine, in light of the facts and circumstances, how much detail it must provide to satisfy the disclosure requirements of this statement and how it aggregates information for assets with different risk characteristics. The entity must strike a balance between obscuring important information as a result of too much aggregation and excessive detail that may not assist financial statement users to understand the entity's financial position. For example, an entity shall not obscure important information by including it with a large amount of insignificant detail. Similarly, an entity shall not disclose information that is so aggregated that it obscures important differences between the different types of involvement or associated risks.

26. The disclosures in paragraph 28.f. of this statement apply to transfers accounted for as sales when the transferor has continuing involvement with transferred financial assets as a result of a securitization, asset-backed financing arrangement, or a similar transfer. If specific disclosures are required for a particular form of the transferor's continuing involvement by other SSAPs, the transferor shall provide the information required in paragraphs 28.f.i.(a) and 28.f.ii.(a) of this statement with a cross-reference to the separate notes to financial statements so a financial statement user can understand the risks retained in the transfer. The entity need not provide each specific disclosure required in paragraphs 28.f.i.(b), 28.f.ii.(a)(1)–(4), and 28.f.ii.(b)–(e) if the disclosure is not required by other SSAPs and the objectives of paragraph 23 are met. For example, if the transferor's only form of continuing involvement is a derivative, the entity shall provide the disclosures required in paragraphs 28.f.i.(a) and 28.f.ii.(a) of this statement and the disclosures about derivatives required by applicable SSAPs. In addition, the entity would evaluate whether the other disclosures in paragraph 28.f. are necessary for the entity to meet the objectives in paragraph 23.

27. To apply the disclosures in paragraph 28, an entity shall consider all involvements by the transferor or its agents to be involvements by the transferor.

28. A reporting entity shall disclose the following:

a. For collateral:

i. If the entity has entered into repurchase agreements or securities lending transactions, its policy for requiring collateral or other security and the fair value of the loaned security;

ii. If the entity has pledged any of its assets as collateral that are not reclassified and separately reported in the statement of financial position pursuant to paragraph 19.a., the carrying amounts and classifications of both those assets and associated liabilities as of the date of the latest statement of financial position presented, including qualitative information about the relationship(s) between those assets and associated liabilities. For example, if assets are restricted solely to satisfy a specific obligation, the carrying amounts of those assets and associated liabilities, including a description of the nature of restrictions placed on the assets, shall be disclosed.

iii. If the entity or its agent has accepted collateral that it is permitted by contract or custom to sell or repledge, the fair value as of the date of each statement of financial position presented of that collateral and of the portion of that collateral that it has sold or repledged, and information about the sources and uses of that collateral. Additionally, the reporting entity shall disclose the aggregate amount of contractually obligated open collateral positions (aggregate amount of securities at current fair value or cash received for which the borrower may request the return of on demand) and the aggregate amount of contractually obligated collateral positions under 30-day, 60-day, 90-day, and greater than 90-day terms.

iv. If the entity has accepted collateral that it is not permitted by contract or custom to sell or repledge, provide detail on these transactions, including the terms of the contract, and the current fair value of the collateral.

v. For all securities lending transactions, disclose collateral for transactions that extend beyond one year from the reporting date; and

vi. For securities lending transactions administered by an affiliated agent in which "one-line" reporting (paragraph 83.a.) of the reinvested collateral per paragraph 83.c. is optional, at the discretion of the reporting entity, disclose the aggregate value of the reinvested collateral which is "one line" reported and the aggregate value of items which are reported in the investment schedules (paragraph 83.b.). Identify the rationale between the items which are one line reported and those that are investment schedule reported and if the treatment has changed from the prior period and

vii. For securities lending transactions, include separately, the amount of any loaned securities within the separate account and if the policy and procedures for the separate account differ from the general account.

b. The reporting entity shall provide the following information by type of program (repurchase agreement, securities lending or dollar repurchase agreement) with respect to the reinvestment of the cash collateral and any securities which it or its agent receives as collateral that can be sold or repledged.

i. The aggregate amount of the reinvested cash collateral (amortized cost and fair value). Reinvested cash collateral shall be broken down by the maturity date of the invested asset – under 30-day, 60-day, 90-day, 120-day, 180-day, less than 1 year, 1-2 years, 2-3 years and greater than 3 years.

ii. To the extent that the maturity dates of the liability (collateral to be returned) does not match the invested assets, the reporting entity shall explain the additional sources of liquidity to manage those mismatches.

c. For in-substance defeasance of debt

i. If debt was considered to be extinguished by in-substance defeasance, a general description of the transaction and the amount of debt that is considered extinguished at the end of each the period so long as that debt remains outstanding.

d. For all servicing assets and servicing liabilities:

i. A description of the risks inherent in servicing assets and servicing liabilities and, if applicable, the instruments used to mitigate the income statement effect of changes in fair value to the servicing assets and servicing liabilities. (Disclosure of quantitative information about the instruments used to manage the risks inherent in servicing assets and servicing liabilities is encouraged but not required.)

ii. The amount of contractually specified servicing fees, late fees and ancillary fees earned for each period for which results of operations are presented, including a description of where each amount is reported in the statement of income.

iii. Quantitative and qualitative information about the assumptions used to estimate the fair value (for example, discount rates, anticipated credit losses, and prepayment speeds). (An entity that provides quantitative information about the instruments used to manage the risks inherent in the servicing assets and servicing liabilities, as encouraged by paragraph 28.d.i., also is encouraged, but not required to disclose the quantitative and qualitative information about the assumptions used to estimate the fair value of those instruments.

e. When servicing assets and servicing liabilities are subsequently measured at fair value:

i. For each class of servicing assets and servicing liabilities, the activity in the balance of servicing assets and the activity in the balance of servicing liabilities (including a description of where changes in fair value are reported in the statement of income for each period for which results of operations are presented), including, but not limited to, the following:

(a) The beginning and ending balances

(b) Additions (through purchases of servicing assets, assumptions of servicing obligations, and recognition of servicing obligations that result from transfers of financial assets)

(c) Disposals

(d) Changes in fair value during the period resulting from (i) changes in valuation inputs or assumptions used in the valuation model and (ii) other changes in fair value and a description of those changes

(e) Other changes that affect the balance and a description of those changes.

f. For securitizations, asset-backed financing arrangements, and similar transfers accounted for as sales when the transferor has continuing involvement (as defined in the glossary) with the transferred financial assets:

i. For each income statement presented:

(a) The characteristics of the transfer (including a description of the transferor's continuing involvement with the transferred financial assets, the nature and initial fair value of the assets obtained as proceeds and the liabilities incurred in the transfer, and the gain or loss from sale of transferred financial assets. For initial fair value measurements of assets obtained and liabilities incurred in the transfer, the following information:

(1) The level within the fair value hierarchy in which the fair value measurements in their entirety fall, segregating fair value measurements using quoted prices in active markets for identical assets or liabilities (Level 1), significant other observable inputs (Level 2), and significant unobservable inputs (Level 3)

(2) The key inputs and assumptions[5] used in measuring the fair value of assets obtained and liabilities incurred as a result of the sale that relate to the transferor's continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable[6] financial assets, and anticipated credit losses, including expected static pool losses[7])[8]

(b) Cash flows between a transferor and transferee, including proceeds from new transfers, proceeds from collections reinvested in revolving-period transfers, purchases of previously transferred financial assets, servicing fees, and cash flows received from a transferor's beneficial interests.

ii. For each statement of financial position presented, regardless of when the transfer occurred:

(a) Qualitative and quantitative information about the transferor's continuing involvement with transferred financial assets that provides financial statement users with sufficient information to assess the reasons for the continuing involvement and the risks related to the transferred financial assets to which the transferor continues to be exposed after the transfer and the extent that the transferor's risk profile has changed as a result of the transfer (including, but not limited to, credit risk, interest rate risk, and other risks), including:

(1) The total principal amount outstanding, the amount that has been derecognized, and the amount that continues to be recognized in the statement of financial position.

(2) The terms of any arrangements that could require the transferor to provide financial support (for example, liquidity arrangements

[5] If an entity has aggregated multiple transfers during a period in accordance with paragraphs 24 and 25, it may disclose the range of assumptions.

[6] The weighted-average life of prepayable assets in periods (for example, months or years) can be calculated by multiplying the principal collections expected in each future period by the number of periods until that future period, summing those products, and dividing the sum by the initial principal balance.

[7] Expected static pool losses can be calculated by summing the actual and projected future credit losses and dividing the sum by the original balance of the pool of assets.

[8] The timing and amount of future cash flows for transferor's interests in transferred financial assets are commonly uncertain, especially if those interests are subordinate to more senior beneficial interests. Thus, estimates of future cash flows used for a fair value measurement depend heavily on assumptions about default and prepayment of all the financial assets transferred, because of the implicit credit or prepayment risk enhancement arising from the subordination.

and obligations to purchase assets) to the transferee or its beneficial interest holders, including a description of any events or circumstances that could expose the transferor to loss and the amount of the maximum exposure to loss.

(3) Whether the transferor has provided financial or other support during the periods presented that it was not previously contractually required to provide to the transferee or its beneficial interest holders, including when the transferor assisted the transferee or its beneficial interest holders in obtaining support, including:

(i.) The type and amount of support

(ii.) The primary reasons for providing the support

(4) Information is encouraged about any liquidity arrangements, guarantees, and/or other commitments provided by third parties related to the transferred financial assets that may affect the transferor's exposure to loss or risk of the related transferor's interest.

(b) The entity's accounting policies for subsequently measuring assets and liabilities that relate to the continuing involvement with the transferred financial assets;

(c) The key inputs and assumptions used in measuring the fair value of assets or liabilities that relate to the transferor's continuing involvement (including, at a minimum, but not limited to, and if applicable, quantitative information about discount rates, expected prepayments including the expected weighted-average life of prepayable financial assets, and anticipated credit losses, including expected static pool losses);

(d) For the transferor's interests in the transferred financial assets, a sensitivity analysis or stress test showing the hypothetical effect on the fair value of those interests (including any servicing assets or servicing liabilities) of two or more unfavorable variations from the expected levels for each key assumption that is reported under paragraph 28.f.ii.(c) independently from any change in another key assumption, and a description of the objectives, methodology, and limitations of the sensitivity analysis or stress test

(e) Information about the asset quality of transferred financial assets and any other assets that it manages together with them. This information shall be separated between assets that have been derecognized and assets that continue to be recognized in the statement of financial position. This information is intended to provide financial statement users with an understanding of the risks inherent in the transferred financial assets as well as in other assets and liabilities that it manages together with transferred financial assets. For example, information for receivables shall include, but is not limited to:

(i.) Delinquencies at the end of the period; and (ii.) Credit losses, net of recoveries, during the period.

g. Disclosure requirements for transfers of financial assets accounted for as secured borrowing:

i. The carrying amounts and classifications of both assets and associated liabilities recognized in the transferor's statement of financial position at the end of each period presented, including qualitative information about the relationship(s) between those assets and associated liabilities. For example, if assets are restricted solely to satisfy a specific obligation, the carrying amounts of those assets and associated liabilities, including a description of the nature of restrictions placed on the assets.

h. Description of any loaned securities, including the amount, a description of, and the policy for, requiring collateral, and whether or not the collateral is restricted;

i. A description of the securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements, including book values and fair values, and maturities for the following categories: (i) securities subject to reverse repurchase agreements; (ii) securities subject to repurchase agreements; (iii) securities subject to dollar repurchase agreements; and (iv) securities subject to dollar reverse repurchase agreements; and

j. A description of the terms of reverse repurchase agreements whose amounts are included in borrowed money.

k. Disclose any transfers of receivables with recourse.

l. A reporting entity shall disclose the following information for wash sales, as defined in paragraph 12, involving transactions for securities with a NAIC designation of 3 or below, or that do not have an NAIC designation:

i. A description of the reporting entity's objectives regarding these transactions;

ii. An aggregation of transactions by NAIC designation 3 or below, or that do not have an NAIC designation;

iii. The number of transactions involved during the reporting period;

iv. The book value of securities sold;

v. The cost of securities repurchased; and

vi. The realized gains/losses associated with the securities involved.

m. All repurchase and reverse repurchase transactions and securities borrowing and securities lending transactions shall be shown gross when detailed on the respective investment schedules. However, repurchase and reverse repurchase transactions and securities borrowing and securities lending transactions may be reported net in the financial statements (pages 2 and 3 of the statutory financial statements) in accordance with *SSAP No. 64—Offsetting and Netting of Assets and Liabilities* (SSAP No. 64) when a valid right to offset exists. When these transactions are offset in accordance with SSAP No. 64 and reported net in the financial statements, the disclosure requirements in SSAP No. 64, paragraph 6, shall be followed.

29. Refer to the preamble for further discussion regarding disclosure requirements. The disclosures required by paragraph 28 shall be made for the current quarter in the quarterly statement and for the year in the annual statement.

Application Guidance

30. This application guidance describes certain provisions of this statement in more detail and describes how they apply to certain types of transactions. It also discusses generalized situations. Facts and circumstances and specific contracts need to be considered carefully in applying this statement. This application guidance is an integral part of the standards provided in this statement.

31. Paragraph 6 of this statement states that the objective of paragraph 8 and related implementation guidance is to determine whether a transferor has surrendered control over transferred financial assets.

Unit of Account

32. Paragraph 7 establishes the unit of account to which the sale accounting conditions in paragraph 8 shall be applied. Paragraph 7 states that paragraph 8 shall be applied to transfers of an entire financial asset, transfers of a group of entire financial assets, and transfers of a participating interest in an entire financial asset. Inherent in that principle is that to be eligible for sale accounting an entire financial asset cannot be divided into components before a transfer unless all of the components meet the definition of a participating interest.

33. The legal form of the asset and what the asset conveys to its holders shall be considered in determining what constitutes an entire financial asset. The following examples illustrate the application of what constitutes an entire financial asset:

a. A loan to one borrower in accordance with a single contract that is transferred to a securitization entity before securitization shall be considered an entire financial asset. Similarly, a beneficial interest in securitized financial assets after the securitization process has been completed shall be considered an entire financial asset. In contrast, a transferred interest in an individual loan shall not be considered an entire financial asset; however, if the transferred interest meets the definition of a participating interest, the participating interest would be eligible for sale accounting.

b. In a transaction in which the transferor creates an interest-only strip from a loan and transfers the interest-only strip, the interest-only strip does not meet the definition of an entire financial asset (and an interest-only strip does not meet the definition of a participating interest; therefore, sale accounting would be precluded). In contrast, if an entire financial asset is transferred to a securitization entity and the transfer meets the conditions for sale accounting, the transferor may obtain an interest-only strip as proceeds from the sale. An interest-only strip received as proceeds of a sale is an entire financial asset for purposes of evaluating any future transfers that could then be eligible for sale accounting.

c. If multiple advances are made to one borrower in accordance with a single contract (such as a line of credit, credit card loan, or a construction loan), an advance on that contract would be a separate unit of account if the advance retains its identity, does not become part of a larger loan balance, and is transferred in its entirety. However, if the transferor transfers an advance in its entirety and the advance loses its identity and becomes part of a larger loan balance, the transfer would be eligible for sale accounting only if the transfer of the advance does not result in the transferor retaining any interest in the larger balance or if the transfer results in the transferor's interest in the larger balance meeting the definition of a participating interest. Similarly, if the transferor transfers an interest in an advance that has lost its identity, the interest must be a participating interest in the larger balance to be eligible for sale accounting.

Participating Interests in an Entire Financial Asset

34. Paragraph 7.b. requires that all cash flows received from the entire financial asset be divided among the participating interest holders (including any interest retained by the transferor or its agents) in proportion to their share of ownership. That is, the participating interest definition does not allow for the allocation of specified cash flows unless each cash flow is proportionately allocated to the participating interest holders. For example, in the case of an individual loan in which the borrower is required to make a contractual payment that consists of a principal amount and interest amount on the loan, the transferor and transferee shall share in the principal and interest payments on the basis of their proportionate ownership interest in the loan. In contrast, if the transferor is entitled to receive an amount that represents the principal payments and the transferee is entitled to receive an amount that represents the interest payments on the loan, that arrangement would not be consistent with the participating interest definition because the transferor and transferee do not share proportionately in the cash flows received from the loan. In other cases, a transferor may transfer a portion of an individual loan that represents either a senior interest or a junior interest in an individual loan. In both of those cases, the transferor would account for the transfer as a secured borrowing because the senior interest or junior interest in the loan does not meet the requirements to be participating interests (see paragraph 38).

35. Paragraph 7.b. states that cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided that those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, including any profit that would be demanded in the marketplace. Cash flows allocated as compensation for services performed that are significantly above an amount that would fairly compensate a substitute service provider would result in a disproportionate division of cash flows of the entire financial asset among the participating interest holders and, therefore, would preclude the portion of a transferred financial asset from meeting the definition of a participating interest. Examples of cash flows that are compensation for services performed include loan origination fees paid by the borrower to the transferor, fees necessary to arrange and complete the transfer paid by the transferee to the transferor, and fees for servicing the financial asset.

36. The transfer of a portion of an entire financial asset may result in a gain or loss on the transfer when the contractual interest rate on the entire financial asset differs from the market rate at the time of transfer. Paragraph 7.b. states that any cash flows received by the transferor as proceeds of a transfer of a participating interest shall be excluded from the determination of whether the cash flows of the participating interest are proportionate provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows. For example, if the transferor transfers an interest in an entire financial asset and the transferee agrees to incorporate the excess interest (between the contractual interest rate on the financial asset and the market interest rate at the date of transfer) into the contractually specified servicing fee, the excess interest would likely result in the conveyance of an interest-only strip to the transferor from the transferee. An interest-only strip would result in a disproportionate division of cash flows of the financial asset among the participating interest holders and would preclude the portion from meeting the definition of a participating interest.

37. Paragraph 7.c. requires that the rights of each participating interest holder (including the transferor in its role as participating interest holder) have the same priority and that no participating interest holder's interest is subordinated to the interest of another participating interest holder. In certain transfers, recourse is provided to the transferee that requires the transferor to reimburse any premium paid by the transferee if the underlying financial asset is prepaid within a defined timeframe of the transfer date. Such recourse would preclude the transferred portion from meeting the definition of a participating

interest. However, once the recourse provision expires, the transferred portion shall be reevaluated to determine if it meets the participating interest definition.

38. Paragraph 7.c. also requires that participating interest holders have no recourse to the transferor (or its agents) or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits. Recourse in the form of an independent third-party guarantee shall be excluded from the evaluation of whether the participating interest definition is met. Similarly, cash flows allocated to a third-party guarantor for the guarantee fee shall be excluded from the determination of whether the cash flows are divided proportionately among the participating interest holders.

Isolation Beyond the Reach of the Transferor and Its Creditors

39. The nature and extent of supporting evidence required for an assertion in financial statements that an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset (which are referred to collectively in this statement as transferred financial assets) have been isolated—put presumptively beyond the reach of the transferor and its creditors, either by a single transaction or a series of transactions taken as a whole—depend on the facts and circumstances. All available evidence that either supports or questions an assertion shall be considered, including whether the contract or circumstances permit the transferor to revoke the transfer. It also may include consideration of the legal consequences of the transfer in the jurisdiction in which bankruptcy or other receivership would take place, whether a transfer of financial assets would likely be deemed a true sale at law (as described in paragraph 40.a.) or otherwise isolated (as described in paragraph 40.b.), whether the transferor is affiliated with the transferee, and other factors pertinent under applicable law. Derecognition of transferred financial assets is appropriate only if the available evidence provides reasonable assurance that the transferred financial assets would be beyond the reach of the powers of a bankruptcy trustee or other receiver for the transferor and its creditors (paragraph 74.c.). Transactions between related parties or affiliates are accounted for in accordance with SSAP No. 25.

40. In the context of U.S. bankruptcy laws, a true sale opinion from an attorney is often required to support a conclusion that transferred financial assets are isolated from the transferor, and its creditors. In addition, a nonconsolidation opinion is often required if the transfer is to an affiliated entity. In the context of U.S. bankruptcy laws:

a. A true sale opinion is an attorney's conclusion that the transferred financial assets have been sold and are beyond the reach of the transferor's creditors and that a court would conclude that the transferred financial assets would not be included in the transferor's bankruptcy estate.

b. A nonconsolidation opinion is an attorney's conclusion that a court would recognize that an entity holding the transferred financial assets exists separately from the transferor. Additionally, a nonconsolidation opinion is an attorney's conclusion that a court would not order the substantive consolidation of the assets and liabilities of the entity holding the transferred financial assets and the assets and liabilities of the transferor in the event of the transferor's bankruptcy or receivership.

A legal opinion may not be required if a transferor has a reasonable basis to conclude that the appropriate legal opinion(s) would be given if requested. For example, the transferor might reach a conclusion without consulting an attorney if (1) the transfer is a routine transfer of financial assets that does not result in any continuing involvement by the transferor or (2) the transferor had experience with other transfers with similar facts and circumstances under the same applicable laws and regulations.

41. For insurers that are subject to conservatorship, or other receivership procedures, judgments about whether transferred financial assets have been isolated need to be made in relation to the powers of conservators or receivers in those jurisdictions.

42. Whether securitizations isolate transferred financial assets may depend on such factors as whether the securitization is accomplished in one step or multiple step transfers (paragraphs 71-76). Some common financial transactions, for example, typical repurchase agreements and securities lending transactions, may isolate transferred financial assets from the transferor, although they may not meet the other conditions for surrender of control (paragraph 8).

Conditions That Constrain a Transferee

43. Sale accounting is allowed under paragraph 8.b. only if each transferee (or, if the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing arrangements and that entity is constrained from pledging or exchanging the assets it receives, each third-party holder of its beneficial interests) has the right to pledge or exchange the assets or beneficial interests it received, and no condition both constrains the transferee (or third-party holder of its beneficial interests) from taking advantage of its right to pledge or exchange and provides more than a trivial benefit to the transferor. Many transferor-imposed or other conditions on a transferee's right to pledge or exchange both constrain a transferee from pledging or exchanging and, through that constraint, provide more than a trivial benefit to the transferor. Judgment is required to assess whether a particular condition results in a constraint. Judgment also is required to assess whether a constraint provides a more-than-trivial benefit to the transferor. If the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities, that entity may be constrained from pledging or exchanging the transferred financial assets to protect the rights of beneficial interest holders in the financial assets of the entity. Paragraph 8.b. requires that the transferor look through the constrained entity to determine whether each third-party holder of its beneficial interests has the right to pledge or exchange the beneficial interests that it holds. The considerations in paragraphs 47-49 apply to the transferee or the third-party holders of its beneficial interests in an entity that is constrained from pledging or exchanging the assets it receives and whose sole purpose is to engage in securitization or asset-backed financing activities

44. Some conditions may constrain a transferee from pledging or exchanging the financial asset and may provide the transferor with more than a trivial benefit. For example, a provision that prohibits selling or pledging a transferred loan receivable not only constrains the transferee but also provides the transferor with the more-than-trivial benefit of knowing who holds the financial asset (a prerequisite to repurchasing the financial asset) and of being able to block the financial asset from being transferred to a competitor for the loan customer's business. Transferor-imposed contractual constraints that narrowly limit timing or terms, for example, allowing a transferee to pledge only on the day assets are obtained or only on terms agreed to with the transferor, also constrain the transferee and presumptively provide the transferor with more-than-trivial benefits. In some circumstances in which the transferor has no continuing involvement with the transferred financial assets, some conditions may constrain a transferee from pledging or exchanging the financial assets. If the transferor and its agents have no continuing involvement with the transferred financial assets, the condition under paragraph 8.b. is met. For example, if a transferor receives only cash in return for the transferred financial assets and the transferor and its agents have no continuing involvement with the transferred financial assets, sale accounting is allowed under paragraph 8.b. even if the transferee entity is significantly limited in its ability to pledge or exchange the transferred assets.

45. However, some conditions may not constrain a transferee from pledging or exchanging the transferred financial asset. For example, a transferor's right of first refusal on the occurrence of a bona fide offer to the transferee from a third party presumptively would not constrain a transferee. This is because the right in itself does not enable the transferor to compel the transferee to sell the financial asset and the transferee would be in a position to receive the sum offered by exchanging the financial asset, albeit possibly from the transferor rather than the third party. Further examples of conditions that

presumptively would not constrain a transferee for purposes of this statement include (a) a requirement to obtain the transferor's permission to sell or pledge that is not to be unreasonably withheld, (b) a prohibition on sale to the transferor's competitor if other potential willing buyers exist, (c) a regulatory limitation such as on the number or nature of eligible transferees (as in the case of securities issued under Securities Act Rule 144A or debt placed privately), and (d) illiquidity, for example, the absence of an active market. However, judgment is required to assess the significance of some conditions. For example, a prohibition on sale to the transferor's competitor would be a constraint if that competitor were the only potential willing buyer other than the transferor.

46. A condition imposed by a transferor that constrains the transferee presumptively provides more than a trivial benefit to the transferor. A condition not imposed by the transferor that constrains the transferee may or may not provide more than a trivial benefit to the transferor. For example, if the transferor refrains from imposing its usual contractual constraint on a specific transfer because it knows an equivalent constraint is already imposed on the transferee by a third party, it presumptively benefits more than trivially from that constraint. However, the transferor cannot benefit from a constraint if it is unaware at the time of the transfer that the transferee is constrained.

Transferor's Rights or Obligations to Reacquire Transferred Assets or Beneficial Interests

47. Some rights or obligations to reacquire transferred financial assets or beneficial interests both constrain the transferee and provide more than a trivial benefit to the transferor, thus precluding sale accounting under paragraph 8.b. A freestanding call option written by a transferee to the transferor may benefit the transferor and, if the transferred financial assets are not readily obtainable in the marketplace, is likely to constrain a transferee because the transferee might have to default if the call was exercised and the transferee had pledged or exchanged the financial assets. For example, if a transferor in a securitization transaction has a call option to repurchase third-party beneficial interests at the price paid plus a stated return, that arrangement conveys more than a trivial benefit to the transferor (paragraphs 53 and 54). If the third-party holders of its beneficial interests are constrained from pledging or exchanging their beneficial interests due to that call option, the transferor would be precluded from accounting for the transfer of financial assets to the securitization entity as a sale. Similarly, a freestanding forward purchase-sale contract between the transferor and the transferee on transferred financial assets not readily obtainable in the marketplace would benefit the transferor and is likely to constrain a transferee in much the same manner. Alternatively, freestanding rights to reacquire transferred assets that are readily obtainable presumptively do not constrain the transferee from pledging or exchanging them and thus do not preclude sale accounting under paragraph 8.b.

48. Other rights or obligations to reacquire transferred financial assets, regardless of whether they constrain the transferee, may result in the transferor's maintaining effective control over the transferred financial assets, as discussed in paragraphs 50-58, thus precluding sale accounting under paragraph 8.c. For example, an attached call in itself would not constrain a transferee who is able, by exchanging or pledging the asset subject to that call, to obtain substantially all of its economic benefits. However, an attached call could result in the transferor's maintaining effective control over the transferred asset(s) because the attached call gives the transferor the unilateral ability to cause whoever holds that specific asset to return it.

49. The concept of qualified special-purpose entities (QSPEs) was previously included within SSAP No. 91R. With the issuance of this Statement, this concept is no longer included within statutory accounting guidance. Although this concept has been eliminated and is no longer a factor in determining whether a transfer of assets qualifies for sale accounting, reporting entities may continue to form, conduct transfers between, or have investments in trusts or other such legal vehicles that may have previously met the conditions to be considered a QSPE. Accounting for transfers of assets between the insurer and such trusts or other legal vehicles, including whether such transfers qualify for sale accounting, are subject to the provisions of this Statement. As noted within paragraph 3, SSAP No. 25 shall be followed for accounting and disclosure requirements for all related party transactions.

Effective Control Over Transferred Financial Assets or Beneficial Interests

50. Judgment is required to assess whether the transferor maintains effective control over transferred financial assets or third-party beneficial interests. The transferor must evaluate whether a combination of multiple arrangements maintains effective control of transferred financial assets. When the transferee issues beneficial interests in the transferred financial assets, the evaluation of whether the transferor maintains effective control over the transferred financial assets also shall consider whether the transferor maintains effective control over the transferred financial assets through its control over the third-party beneficial interests. To assess whether the transferor maintains effective control over the transferred financial assets, all continuing involvement by the transferor or its agents shall be considered continuing involvement by the transferor. When assessing effective control, the transferor only considers the involvements of an agent when the agent acts for and on behalf of the transferor. In other words, if the transferor and transferee have the same agent, the agent's activities on behalf of the transferee would not be considered in the transferor's evaluation of whether it has effective control over a transferred financial asset. For example, an investment manager may act as a fiduciary (agent) for both the transferor and the transferee; therefore, the transferor need only consider the involvements of the investment manager when it is acting on its behalf.

Agreement to Repurchase or Redeem Transferred Financial Assets

51. An agreement that both entitles and obligates the transferor to repurchase or redeem transferred financial assets from the transferee maintains the transferor's effective control over those assets as described in paragraph 8.c.(1) when all of the following conditions are met:

a. The financial assets to be repurchased or redeemed are the same or substantially the same as those transferred (paragraph 52).

b. The agreement is to repurchase or redeem them before maturity, at a fixed or determinable price.

c. The agreement is entered into contemporaneously with, or in contemplation of, the transfer.

52. To be substantially the same, the financial asset that was transferred and the financial asset that is to be repurchased or redeemed need to have all of the following characteristics:

a. The same primary obligor (except for debt guaranteed by a sovereign government, central bank, government-sponsored enterprise or agency thereof, in which case the guarantor and the terms of the guarantee must be the same);

b. Identical form and type so as to provide the same risks and rights;

c. The same maturity (or in the case of mortgage-backed pass-through and pay-through securities similar remaining weighted-average maturities that result in approximately the same market yield);

d. Identical contractual interest rates;

e. Similar assets as collateral; and

f. The same aggregate unpaid principal amount or principal amounts within accepted "good delivery" standards for the type of security involved.

Unilateral Ability to Cause the Return of Specific Transferred Financial Assets

53. A transferor maintains effective control over transferred financial assets when the transferor has the unilateral ability to cause the holder to return specific financial assets and that ability provides more than a trivial benefit to the transferor. A cleanup call, however, is permitted as an exception to that general principle. A call on a transferred financial asset provides the transferor with effective control over that financial asset if, under its price and other terms, the call provides the transferor with the unilateral ability to reclaim the transferred financial asset and conveys more than a trivial benefit to the transferor. A call or other right conveys more than a trivial benefit if the price to be paid is fixed, determinable, or otherwise potentially advantageous, unless because that price is so far out of the money or for other reasons it is probable when the option is written that the transferor will not exercise it. A transferor's unilateral ability to cause a securitization entity to return to the transferor or otherwise dispose of specific transferred financial assets, for example, in response to its decision to exit a market or a particular activity, would provide the transferor with effective control over the transferred financial assets if it provides more than a trivial benefit to the transferor. However, a call on readily obtainable assets at fair value may not provide the transferor with more than a trivial benefit. (Paragraph 56 provides an example in which, due to the combination of arrangements, the transferor would maintain effective control.).

54. Effective control over transferred financial assets can be present even if the right to reclaim is indirect. For example, if a call allows a transferor to buy back the beneficial interests at a fixed price, the transferor may maintain effective control of the financial assets underlying those beneficial interests. If the transferee is an entity whose sole purpose is to engage in securitization or asset-backed financing activities, that entity may be constrained from choosing to pledge or exchange the transferred financial assets. In that circumstance, any call held by the transferor on third-party beneficial interests is effectively an attached call on the transferred financial assets. Depending on the price and other terms of the call, the transferor may maintain effective control over the transferred financial assets.

55. An embedded call would not result in the transferor's maintaining effective control because it is the issuer rather than the transferor who holds the call and the call does not provide more than a trivial benefit to the transferor. For example, a call embedded by the issuer of a callable bond or the borrower of a prepayable mortgage loan would not provide the transferor with effective control over the transferred financial asset.

56. A right to reclaim specific transferred financial assets by paying their fair value when reclaimed generally does not maintain effective control when it does not convey a more than trivial benefit to the transferor. However, a transferor has maintained effective control if it has such a right and also holds the residual interest in the transferred financial assets. For example, if a transferor holds the residual interest in securitized financial assets and can reclaim the transferred financial assets at termination of the securitization entity by purchasing them in an auction, and thus at what might appear to be fair value, then sale accounting for the transfer of those financial assets it can reclaim would be precluded. Such circumstances provide the transferor with a more than trivial benefit and effective control over the financial assets, because it can pay any price it chooses in the auction and recover any excess paid over fair value through its residual interest in the transferred financial assets.

57. Removal-of-account provisions do not result in the transferor's maintaining effective control, and are thus precluded from being accounted for as sales under statutory accounting as discussed in paragraph 78.

Arrangements to Reacquire Transferred Financial Assets

58. A transferor maintains effective control over the transferred financial asset as described in paragraph 8.c.(3) through an agreement that permits the transferee to require the transferor to repurchase the transferred financial asset at a price that is so favorable to the transferee at the date of the transfer that it is probable that the transferee will require the transferor to repurchase the transferred financial asset.

For example, a put option written to the transferee generally does not provide the transferor with effective control over the transferred financial asset. However, a put option that is sufficiently deep in the money when it is written would provide the transferor effective control over the transferred financial asset because it is probable that the transferee will exercise the option and the transferor will be required to repurchase the transferred financial asset. In contrast, a sufficiently out-of-the-money put option held by the transferee would not provide the transferor with effective control over the transferred financial asset if it is probable when the option is written that the option will not be exercised. Likewise, a put option held by the transferee at fair value would not provide the transferor with effective control over the transferred financial asset.

Changes That Result in the Transferor's Regaining Control of Financial Assets Sold

59. A change in law or other circumstance may result in a transferred portion of an entire financial asset no longer meeting the conditions of a participating interest (paragraph 7) or the transferor's regaining control of transferred financial assets after a transfer that was previously accounted for as a sale, because one or more of the conditions in paragraph 8 are no longer met. Such changes, unless they arise solely from the initial application of this statement or from a change in market prices (for example, an increase in price that moves into-the-money a freestanding call on a non-readily-obtainable transferred financial asset that was originally sufficiently out-of-the-money that it was judged not to constrain the transferee), are accounted for in the same manner as a purchase of the transferred financial assets from the former transferee(s) in exchange for liabilities assumed (paragraph 9 or 11). (This "re-purchase" premise is consistent with *INT 04-21: EITF 02-09: Accounting for Changes that Result in a Transferor Regaining Control of Financial Assets Sold*.) After that change, the transferor recognizes in its financial statements those transferred financial assets together with liabilities to the former transferee(s) or beneficial interest holders of the former transferee(s). The transferor initially measures those transferred financial assets and liabilities at fair value on the date of the change, as if the transferor purchased the transferred financial assets and assumed the liabilities on that date. The former transferee would derecognize the transferred financial assets on that date, as if it had sold the transferred financial assets in exchange for a receivable from the transferor.

Measurement of Interests Held after a Transfer of Financial Assets

Assets Obtained and Liabilities Incurred as Proceeds

60. The proceeds from a sale of financial assets consist of the cash and any other assets obtained, including beneficial interests and separately recognized servicing assets, in the transfer less any liabilities incurred, including separately recognized servicing liabilities. Any asset obtained is part of the proceeds from the sale. Any liability incurred, even if it is related to the transferred financial assets, is a reduction of the proceeds. Any derivative financial instrument entered into concurrently with a transfer of financial assets is either an asset obtained or a liability incurred and part of the proceeds received in the transfer. All proceeds and reductions of proceeds from a sale shall be initially measured at fair value.

Participating Interests in Financial Assets That Continue to be Held by a Transferor

61. Participating interests in financial assets that continue to be held by a transferor are not part of the proceeds of the transfer, and the carrying amount of those participating interests shall be measured at the date of the transfer by allocating the previous carrying amount between the participating interests transferred and sold, and the participating interests that are not transferred and continue to be held by a transferor, based on their relative fair values.

Servicing Assets and Liabilities

62. Servicing of mortgage loans, credit card receivables, or other financial assets commonly includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and

insurance from escrowed funds; monitoring delinquencies; executing foreclosure if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interests or participating interests in the financial assets. Servicing is inherent in all financial assets; it becomes a distinct asset or liability for accounting purposes only in the circumstances described in paragraph 63. If a transferor sells a participating interest in an entire financial asset, it would recognize a servicing asset or a servicing liability only related to the participating interest sold.

63. An entity that undertakes a contract to service financial assets shall recognize either a servicing asset or a servicing liability, each time it undertakes an obligation to service a financial asset that (a) results from a servicer's transfer of an entire financial asset, a group of entire financial assets, or a participating interest in an entire financial asset that meets the requirements for sale accounting, or (b) is acquired or assumed and the servicing obligation does not relate to financial assets of the servicer. However, if the transferor transfers the assets to an entity in a transfer that qualifies as a sale in which the transferor obtains the resulting securities, and classifies them as debt securities, the servicing asset or servicing liability may be reported together with the asset being serviced and not recognized separately. A servicer of financial assets commonly receives the benefits of servicing—revenues from contractually specified servicing fees, a portion of the interest from the financial assets, late charges, and other ancillary sources, including "float," all of which it is entitled to receive only if it performs the servicing—and incurs the costs of servicing the financial assets. Typically, the benefits of servicing are expected to be more than adequate compensation to a servicer for performing the servicing, and the contract results in a servicing asset. However, if the benefits of servicing are not expected to adequately compensate a servicer for performing the servicing, the contract results in a servicing liability. (A servicing asset may become a servicing liability, or vice versa, if circumstances change, and the initial measure for servicing may be zero if the benefits of servicing are just adequate to compensate the servicer for its servicing responsibilities.) A servicer would account for its servicing contract that qualifies for separate recognition as a servicing asset or a servicing liability initially measured at its fair value regardless of whether explicit consideration was exchanged.

64. A servicer that transfers or securitizes financial assets in a transaction that does not meet the requirements for sale accounting and is accounted for as a secured borrowing with the underlying financial assets remaining on the transferor's balance sheet shall not recognize a servicing asset or a servicing liability.

65. A servicer that recognizes a servicing asset or servicing liability shall account for the contract to service financial assets separately from those financial assets, as follows:

a. Report servicing assets separately from servicing liabilities as a nonadmitted asset in the statement of financial position.

b. Initially measure servicing assets and servicing liabilities at fair value, (paragraph 15).

c. Account separately for rights to future interest income from the serviced assets that exceed contractually specified servicing fees. Those rights are not servicing assets; they are financial assets, effectively interest-only strips to be accounted for in accordance with paragraph 18 of this statement. (Interest-only strips preclude a portion of a financial asset from meeting the definition of a participating interest; see paragraph 36.)

d. Identify classes of servicing assets and servicing liabilities based on (1) the availability of market inputs used in determining the fair value of servicing assets and servicing liabilities, (2) an entity's method for managing the risks of its servicing assets and servicing liabilities, or (3) both.

e. Subsequently measure each class of separately recognized servicing assets and servicing liabilities at fair value. Changes in fair value should be reported as unrealized gains and losses (paragraph 17). Declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

66. As indicated above, transferors sometimes agree to take on servicing responsibilities when the future benefits of servicing are not expected to adequately compensate them for performing that servicing. In that circumstance, the result is a servicing liability rather than a servicing asset. For example, if in the transaction illustrated in Exhibit B – Illustration 3 the transferor had agreed to service the loans without explicit compensation and it estimated the fair value of that servicing obligation at $50, net proceeds would be reduced to $980, gain on sale would become a loss on sale of $20, and the transferor would report a servicing liability of $50.

Securitizations

67. Financial assets, such as mortgage loans, are commonly transferred in securitizations. Securitizations of mortgage loans may include pools of single-family residential mortgages or other types of real estate mortgage loans, for example, multifamily residential mortgages and commercial property mortgages. Both financial and nonfinancial assets can be securitized; life insurance policy loans, patent and copyright royalties, and even taxi medallions also have been securitized. But securitizations of nonfinancial assets are outside the scope of this statement.

68. An originator of a typical securitization (the transferor) transfers a portfolio of financial assets to a securitization entity, commonly a trust. In “pass-through” and “pay-through” securitizations, receivables are transferred to the entity at the inception of the securitization, and no further transfers are made; all cash collections are paid to the holders of beneficial interests in the entity.

69. Beneficial interests in the securitization entity are sold to investors and the proceeds are used to pay the transferor for the assets transferred financial assets. Those beneficial interests may comprise either a single class having equity characteristics or multiple classes of interests, some having debt characteristics and others having equity characteristics. The cash collected from the portfolio is distributed to the investors and others as specified by the legal documents that established the entity.

70. Pass-through and pay-through securitizations that meet the conditions in paragraph 8 qualify for sale accounting under this statement. All financial assets obtained and liabilities incurred by the transferor of a securitization that qualifies as a sale shall be recognized and measured as provided in paragraphs 9 and 11; that includes the implicit forward contract to sell additional financial assets during a revolving period, which may become valuable or onerous to the transferor as interest rates and other market conditions change.

Isolation of Transferred Financial Assets in Securitizations

71. A securitization carried out in one transfer or a series of transfers may or may not isolate the transferred financial assets beyond the reach of the transferor and its creditors. Whether it does depends on the structure of the securitization transaction taken as a whole, considering such factors as the type and extent of further involvement in arrangements to protect investors from credit, and interest rate, and other risks, the availability of other financial assets, and the powers of bankruptcy courts or other receivers. The discussion in paragraphs 72-74 relates only to the isolation condition in paragraph 8.a. The conditions in paragraphs 8.b. and 8.c. also must be considered to determine whether a transferor has surrendered control over the transferred financial assets.

72. In certain securitizations, a corporation that, if it failed, would be subject to the U.S. Bankruptcy Code transfers financial assets to a securitization entity exchange for cash. The entity raises that cash by issuing to investors beneficial interests that pass through all cash received from the financial assets, and

the transferor has no further involvement with the trust or the transferred financial assets. The Board understands that those securitizations generally would be judged as having isolated the assets, because, in the absence of any continuing involvement, there would be reasonable assurance that the transfer would be found to be a true sale at law that places the assets beyond the reach of the transferor, and its creditors, even in bankruptcy or other receivership.

73. In other securitizations, a similar corporation transfers financial assets to a securitization entity in exchange for cash and beneficial interests in the transferred financial assets. That entity raises the cash by issuing to investors commercial paper that gives them a senior beneficial interest in cash received from the financial assets. The beneficial interests obtained by the transferring corporation represent a junior interest to be reduced by any credit losses on the financial assets in the entity. The senior beneficial interests (commercial paper) are highly rated by credit rating agencies only if both (a) the credit enhancement from the junior interest is sufficient and (b) the transferor is highly rated. Depending on facts and circumstances, the Board understands that those "single-step" securitizations often would be judged in the United States as not having isolated the financial assets, because the nature of the continuing involvement may make it difficult to obtain reasonable assurance that the transfer would be found to be a true sale at law that places the financial assets beyond the reach of the transferor and its creditors in U.S. bankruptcy (paragraph 39). If the transferor fell into bankruptcy and the transfer was found not to be a true sale at law, investors in the transferred financial assets might be subjected to an automatic stay that would delay payments due them, and they might have to share in bankruptcy expenses and suffer further losses if the transfer was recharacterized as a secured loan.

74. Still other securitizations use multiple transfers intended to isolate transferred financial assets beyond the reach of the transferor and its creditors, even in bankruptcy. For example, in "two-step" structures:

a. First, the corporation transfers a group of financial assets to a special-purpose corporation that, although wholly owned, is so designed that the possibility is remote that the transferor or its creditors could reclaim the financial assets. This first transfer is designed to be judged to be a true sale at law, in part because the transferor does not provide "excessive" credit or yield protection to the special-purpose corporation, and the Board understands that transferred financial assets are likely to be judged beyond the reach of the transferor or the transferor's creditors even in bankruptcy or other receivership.

b. Second, the special-purpose corporation transfers a group of financial assets to a trust or other legal vehicle with a sufficient increase in the credit or yield protection on the second transfer (provided by a transferor's junior beneficial interest or other means) to merit the high credit rating sought by third-party investors who buy senior beneficial interests in the trust. Because of that aspect of its design, that second transfer might not be judged to be a true sale at law and, thus, the transferred financial assets could at least in theory be reached by a bankruptcy trustee for the special-purpose corporation.

c. However, the special-purpose corporation is designed to make remote the possibility that it would enter bankruptcy. For example, its charter forbids it from undertaking any other business or incurring any liabilities, so that there can be no creditors to petition to place it in bankruptcy. Furthermore, its dedication to a single purpose is intended to make it extremely unlikely, even if it somehow entered bankruptcy, that a receiver under the U.S. Bankruptcy Code could reclaim the transferred financial assets because it has no other assets to substitute for the transferred financial assets.

75. The Board understands that the "two-step" securitizations described above, taken as a whole, generally would be judged under present U.S. law as having isolated the financial assets beyond the reach of the transferorand its creditors, even in bankruptcy or other receivership. However, each entity involved in a transfer must be evaluated under the applicable accounting guidance.

76. The powers of receivers vary considerably by state of domicile, and therefore some receivers may be able to reach financial assets transferred under a particular arrangement and others may not. A securitization may isolate transferred financial assets from a transferor subject to such a receiver and its creditors even though it is accomplished by only one transfer directly to a securitization entity that issues beneficial interests to investors and the transferor provides credit or yield protection.

Sales of Future Revenues

77. In addition to securitization of assets, some reporting entities have entered into transactions characterized as a sale of future revenues. These transactions are sometimes referred to as securitizations and are sometimes characterized as selling deferred acquisition costs. A sale of future revenues by a reporting entity shall not result in the immediate recognition of income or surplus. The proceeds of any such sale shall be established as a liability and shall be reduced as the proceeds are repaid.

Removal-of-Accounts Provisions

78. Many transfers of financial assets that involve transfers of a group of entire financial assets to an entity whose sole purpose is to engage in securitization or asset-backed financing activities empower the transferor to reclaim assets subject to certain restrictions. Such a power is sometimes called a removal-of-accounts provision (ROAP). Transfers of assets that include ROAP provisions are precluded from being accounted for as sales under statutory accounting and shall follow the guidance in paragraph 14 for secured borrowing.

Securities Lending Transactions

79. Securities lending transactions are generally initiated by broker-dealers and other financial institutions that need specific securities to cover a short sale or a customer's failure to deliver securities sold. Securities lending transactions typically extend less than one year. Transferees (borrowers) of securities generally are required to provide collateral to the transferor (lender) of securities, commonly cash but sometimes other securities or standby letters of credit, with a value slightly higher than that of the securities borrowed. If the collateral is cash, the transferor typically earns a return by investing that cash at rates higher than the rate paid or rebated to the transferee. If the collateral is other than cash, the transferor typically receives a fee. Securities custodians or other agents commonly carry out securities lending activities on behalf of clients. Because of the protection of collateral (typically valued daily and adjusted frequently for changes in the market price of the securities transferred) and the short terms of the transactions, most securities lending transactions in themselves do not impose significant credit risks on either party. Other risks arise from what the parties to the transaction do with the assets they receive. For example, investments made with cash collateral impose market and credit risks on the transferor.

80. If the criteria conditions in paragraph 8 (sales criteria) are met, securities lending transactions shall be accounted for:

a. By the transferor as a sale of the "loaned" securities for proceeds consisting of the cash collateral"[9] and a forward repurchase commitment.

b. By the transferee as a purchase of the "borrowed" securities in exchange for the collateral and a forward resale commitment. During the term of that agreement, the transferor has surrendered control over the securities transferred and the transferee has obtained control

[9] If the "collateral" in a transaction that meets the criteria in paragraph 8 is a financial asset that the holder or its agent is permitted by contract or custom to sell or repledge, that financial asset is proceeds of the sale of the "loaned" securities. To the extent that the "collateral" consists of letters of credit or other financial instruments that the holder or its agent is not permitted by contract or custom to sell or repledge, a securities lending transaction does not satisfy the sale criteria and is accounted for as a loan of securities by the transferor to the transferee.

over those securities with the ability to sell or transfer them at will. In that case, creditors of the transferor have a claim only to the "collateral" and the forward repurchase commitment.

81. Many securities lending transactions are accompanied by an agreement that entitles and obligates the transferor to repurchase or redeem the transferred financial assets before their maturity under which the transferor maintains effective control over those financial assets (paragraphs 51-52). Those transactions shall be accounted for as secured borrowings, in which cash (or securities that the holder or its agent is permitted by contract or custom to sell or repledge) received as collateral is considered the amount borrowed, the securities loaned are considered pledged as collateral against the cash or securities borrowed and reclassified as set forth in paragraph 19.a., and any rebate paid to the transferee of securities is interest on the cash or securities the transferor is considered to have borrowed.

82. The transferor of securities being "loaned" accounts for cash received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The cash received shall be recognized as the transferor's asset – as shall investments made with that cash, even if made by agents or in pools with other securities lenders – along with the obligation to return the cash. If securities that may be sold or repledged are received, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for cash received.

83. The transferor of securities being "loaned" accounts for collateral received in the same way whether the transfer is accounted for as a sale or a secured borrowing. The collateral received shall be recognized as the transferor's asset – as shall investments made with that collateral, even if made by agents or in pools with other securities lenders – along with the obligation to return the collateral. If securities that may be sold or repledged are received by the transferor or its agent, the transferor of the securities being "loaned" accounts for those securities in the same way as it would account for collateral received. Collateral which may be sold or repledged by the transferor or its agent is reflected on balance sheet, along with the obligation to return the asset[10]. Collateral received which may not be sold or repledged by the transferor or its agent is off balance sheet[11]. For collateral on the balance sheet, the reporting is determined by the administration of the program.

a. Securities lending programs where the collateral received by the reporting entity's unaffiliated agent that can be sold or repledged is reported on the balance sheet. The collateral received and reinvestment of that collateral by the reporting entity's unaffiliated agent shall be reflected as a one-line entry on the balance sheet (Securities Lending Collateral) and a detailed schedule will be required each quarter and at year-end to list the description of the collateral asset. This description shall include the NAIC designation, fair value; book adjusted carrying value and maturity date. A separate liability shall also be established to record the obligation to return the collateral (Collateral from Securities Lending Activities)

b. Securities lending programs where the collateral received by the reporting entity that can be sold or repledged is reported on the balance sheet. If the reporting entity is the administrator of the program, then, the collateral received and any reinvestment of that collateral is reported with the invested assets of the reporting entity based on the type of investment (i.e. bond, common stock, etc). A separate liability shall also be established to

[10] If cash is received by the transferor or its agent and reinvested or repledged it is reported on balance sheet. It is explicitly intended that when the lender bears reinvestment risk, that collateral is on balance sheet.

[11] An example of collateral which is off balance sheet is when securities are received by the transferor or its agent in which the collateral must be held and returned, without the ability to transfer or repledge the collateral. This would involve limited situations in which the transferor or agent is prohibited from reinvesting the collateral.

record the obligation to return the collateral (Collateral from Securities Lending Activities)

c. Securities lending programs where the collateral received by the reporting entity's affiliated agent can report using either one line reporting (paragraph 83.a.) or investment schedule reporting (paragraph 83.b.).

84. Reinvestment of the collateral by the reporting entity or its agent shall follow the same impairment guidance as other similar invested assets reported on the balance sheet. Any fees received by the transferor for loaning the securities shall be recorded as miscellaneous investment income.

Securities Lending Transactions – Collateral Requirements[12]

85. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 102 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 100 percent of the fair value of the loaned securities, the counterparty shall be obligated to deliver additional collateral by the end of the next business day, the fair value of which, together with the fair value of all collateral then held in connection with the transaction at least equals 102 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

86. In the event that foreign securities are loaned and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign securities, the amount of collateral shall be at least equal to 105 percent of the fair value of the loaned securities at that date. If at any time the fair value of the collateral received from the counterparty is less than 102 percent of the fair value of the loaned securities, the reporting entity must obtain additional collateral by the end of the next business day, the fair value of which together with the fair value of all collateral then held in connection with the transaction at least equals 105 percent of the fair value of the loaned securities. If the collateral received from the counterparty is less than 100 percent at the reporting date, the difference between the actual collateral and 100 percent will be nonadmitted. Collateral value is measured and compared to the loaned securities in aggregate by counterparty.

Repurchase Agreements and "Wash Sales"

87. Government securities dealers, banks, other financial institutions, and corporate investors commonly use repurchase agreements to obtain or use short-term funds. Under those agreements, the transferor ("repo party") transfers a security to a transferee ("repo counterparty" or "reverse party") in exchange for cash[13] and concurrently agrees to reacquire that security at a future date for an amount equal to the cash exchanged plus a stipulated "interest" factor. Repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement.

88. Repurchase agreements can be effected in a variety of ways. Some repurchase agreements are similar to securities lending transactions in that the transferee or its agent has the right to sell or repledge

[12] The collateral requirements are required for determining admitted assets under statutory accounting, but the receipt of collateral is not a factor in determining whether the transferor has effective control over the loaned assets in accordance with paragraph 51.

[13] Instead of cash, other securities or letters of credit sometimes are exchanged. Those transactions are accounted for in the same manner as securities lending transactions (paragraphs 79-86).

the securities to a third party during the term of the repurchase agreement. In other repurchase agreements, the transferee does not have the right to sell or repledge the securities during the term of the repurchase agreement. For example, in a tri-party repurchase agreement, the transferor transfers securities to an independent third-party custodian that holds the securities during the term of the repurchase agreement. Also, many repurchase agreements are for short terms, often overnight, or have indefinite terms that allow either party to terminate the arrangement on short notice. However, other repurchase agreements are for longer terms, sometimes until the maturity of the transferred financial asset. Some repurchase agreements call for repurchase of securities that need not be identical to the securities transferred.

89. If the conditions in paragraph 8 are met, the transferor shall account for the repurchase agreement as a sale of financial assets and a forward repurchase commitment, and the transferee shall account for the agreement as a purchase of financial assets and a forward resale commitment. Other transfers that are accompanied by an agreement to repurchase the transferred financial assets that may be accounted for as sales include transfers with agreements to repurchase at maturity. (Repurchase financing is addressed in paragraphs 96-101.)

90. Furthermore, "wash sales" that previously were not recognized if the same financial asset was purchased within 30 days before or after the sale shall be accounted for as sales under this statement. Unless there is a concurrent contract to repurchase or redeem the transferred financial assets from the transferee, the transferor does not maintain effective control over the transferred financial assets.

91. As with securities lending transactions, under many agreements to repurchase transferred financial assets before their maturity the transferor maintains effective control over those financial assets. Repurchase agreements that do not meet all the conditions in paragraph 8 shall be treated as secured borrowings. Fixed-coupon and dollar-roll repurchase agreements, and other contracts under which the securities to be repurchased need not be the same as the securities sold, qualify as borrowings if the return of substantially the same (paragraph 52) securities as those concurrently transferred is assured. Therefore, those transactions shall be accounted for as secured borrowings by both parties to the transfer.

92. If a transferor has transferred securities to an independent third-party custodian, or to a transferee, under conditions that preclude the transferee from selling or repledging the assets during the term of the repurchase agreement (as in most tri-party repurchase agreements), the transferor has not surrendered control over those assets.

Repurchase Agreements

93. Repurchase agreements are defined as agreements under which a reporting entity sells securities and simultaneously agrees to repurchase the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 52 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

94. For repurchase agreements that are accounted for as collateralized borrowings in accordance with paragraph 91 of this statement, the underlying securities shall continue to be accounted for as an investment owned by the reporting entity. The proceeds from the sale of the securities shall be recorded as a liability, and the difference between the proceeds and the amount at which the securities will be subsequently reacquired shall be reported as interest expense, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

95. Reporting entities generally take possession of the underlying collateral under repurchase agreements and in many cases may obtain additional collateral when the estimated fair value of such securities falls below their current contract value. However, to the extent that the current fair value of the

collateral is less than the recorded amount, the shortfall shall reduce the admitted asset value of the repurchase agreement.

Repurchase Financing

96. Repurchase financing is a repurchase agreement that relates to a previously transferred financial asset between the same counterparties (or affiliates of either counterparty) that is entered into contemporaneously with, or in contemplation of, the initial transfer.

97. A repurchase financing involves the transfer of a previously transferred financial asset back to the initial transferor as collateral for a financing between the initial transferee (the borrower) and the initial transferor (the lender). A repurchase financing also typically involves the initial transferor returning the transferred financial asset (or substantially the same asset) to the initial transferee when the financing is repaid on a stated date. A repurchase financing is entered into in contemplation of the initial transfer if both transactions are considered together at the execution of the initial transfer.

98. When the transferor transfers a financial asset and also enters into a repurchase financing with the transferee, there are typically three transfers of the financial assets:

a. Initial transfer – An initial transferor transfers a financial asset to an initial transferee.

b. Repurchase financing – The initial transferee (the borrower) transfer the previously transferred financial asset back to the initial transferor (the lender) as collateral for a financing between the initial transferor and initial transferee.

c. Settlement – The initial transferor (the lender) returns the financial asset (or substantially the same asset) to the initial transferee (the borrower) upon receipt of payment from the initial transferee.

99. Repurchase financing that is entered into contemporaneously with, or in contemplation of, an initial transfer of financial asset between the same counterparties (or affiliates of either counterparty) shall not be separately accounted for as a transfer of a financial asset and a related repurchase financing unless (a) the two transactions have a valid and distinct business or economic purpose for being entered into separately and (b) the repurchase financing does not result in the initial transferor regaining control over the financial asset. Unless the provisions in paragraph 100 are met, the initial transfer and repurchase financing shall be evaluated as a linked transaction. The linked transaction shall be evaluated to determine whether it meets the requirements for sale accounting per paragraph 8. If the linked transaction does not meet the requirements for sale accounting, the linked transaction shall be accounted for based on the economies of the combined transactions, which generally represent a forward contract. *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions* shall be used to evaluate whether the linked transaction shall be accounted for as a derivative.

100. An initial transfer of a financial asset and repurchase financing that are entered into contemporaneously with, or in contemplation of, one another shall be considered linked unless all of the following criteria are met at the inception of the transaction:

a. The initial transfer and the repurchase financing are not contractually contingent on one another. Even if no contractual relationship exists, the pricing and performance of either the initial transfer or the repurchase financing must not be dependent on the terms and execution of the other transaction.

b. The repurchase financing provides the initial transferor with recourse to the initial transferee upon default. That recourse must expose the initial transferor to the credit risk of the initial transferee, or its affiliates, and not solely to the market risk of the transferred financial asset. The initial transferee's agreement to repurchase the previously transferred financial asset (or substantially the same asset) for a fixed price and not fair value.

c. The financial asset subject to the initial transfer and repurchase financing is readily obtainable in the marketplace. In addition, the initial transfer of a financial asset and the repurchase financing are executed at market rates. This criterion may not be circumvented by embedding off-market terms in a separate transaction contemplated with the initial transfer or the repurchase financing.

d. The financial asset and repurchase agreement are not coterminous (the maturity of the repurchase financing must be before the maturity of the financial asset.)

101. In accordance with paragraph 99, an initial transfer of assets and a repurchase financing shall not be considered separate transactions unless the provisions of paragraph 100 are met. If the provisions of paragraph 100 are met, the initial transfer shall be evaluated to determine whether it meets the requirements for sale accounting without taking into consideration the repurchase financing. In such situations, the repurchase financing shall then be separately analyzed as a repurchase agreement.

Reverse Repurchase Agreements

102. Reverse repurchase agreements are defined as agreements under which a reporting entity purchases securities and simultaneously agrees to resell the same or substantially the same securities at a stated price on a specified date. For securities to be substantially the same, the criteria defined in paragraph 52 must be met, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

103. For reverse repurchase agreements that are accounted for as collateralized lendings in accordance with paragraph 91 of this statement, the underlying securities shall not be accounted for as investments owned by the reporting entity. The amount paid for the securities shall be reported as a short-term investment, and the difference between the amount paid and the amount at which the securities will be subsequently resold shall be reported as interest income, calculated on the straight-line method or the scientific interest (constant yield) method, over the term of the agreement.

Collateral Requirements – Repurchase and Reverse Repurchase Agreements[14]

104. The collateral requirements for repurchase and reverse repurchase agreements are as follows:

Repurchase Transaction

a. The reporting entity shall receive collateral having a fair value as of the transaction date at least equal to 95 percent of the fair value of the securities transferred by the reporting entity in the transaction as of that date. If at any time the fair value of the collateral received from the counterparty is less than 95 percent of the fair value of the securities so transferred, the counterparty shall be obligated to deliver additional collateral by the end of the next business day the fair value of which, together with the fair value of all collateral then held in connection with the transaction, at least equals 95 percent of the fair value of the transferred securities. If the collateral is less than 95 percent at the reporting date, the difference between the actual collateral and 95 percent will be nonadmitted.

[14] The collateral requirements are required for determining admitted assets under statutory accounting, but the receipt of collateral is not a factor in determining whether the transferor has effective control over the loaned assets in accordance with paragraph 50.

Reverse Repurchase Transaction

b. The reporting entity shall receive as collateral transferred securities having a fair value at least equal to 102 percent of the purchase price paid by the reporting entity for the securities. If at any time the fair value of the collateral is less than 100 percent of the purchase price paid by the reporting entity, the counterparty shall be obligated to provide additional collateral, the fair value of which, together with fair value of all collateral then held in connection with the transaction, at least equals 102 percent of the purchase price.

Dollar Repurchase Agreements

105. Dollar repurchase and dollar reverse repurchase agreements are defined as repurchase and reverse repurchase agreements involving debt instruments that are pay-through securities collateralized with Government National Mortgage Association (GNMA), Federal Home Loan Mortgage Corporation (FHLMC) and Federal National Mortgage Association (FNMA) collateral, and pass-through certificates sponsored by GNMA, mortgage participation certificates issued by the FHLMC or similar securities issued by the FNMA. Dollar repurchase agreements are also commonly referred to as dollar roll transactions. To meet the definition of dollar repurchase and dollar reverse repurchase agreements, the securities underlying the agreements must meet the criteria defined in paragraph 52, and for mortgage-backed securities excluding mortgage pass-through securities, the projected cash flows of the securities must be substantially the same under multiple scenario prepayment assumptions.

106. For the seller in a dollar repurchase agreement accounted for as collateralized borrowing in accordance with paragraph 91 of this statement, a liability is recorded for the amount of proceeds of the sale and the sold mortgage-backed securities are not removed from the accounting records. During the period of the agreement, interest income is recorded as if the mortgage-backed security had been held during the term of the agreement. This is offset by an equal amount of interest expense related to the proceeds received from the sale. Additional interest expense is recorded representing the difference between the sales price and the repurchase price of the mortgage-backed securities sold.

107. When the mortgage-backed securities are repurchased under the agreement, the original mortgage-backed securities sold are removed from the accounting records and the purchased mortgage-backed securities are recorded. The principal amount of the mortgage-backed securities repurchased must be in good delivery form consistent with paragraph 52.

108. If the principal amount repurchased is greater than the amount sold, the cash paid is recorded as an additional investment in the newly acquired certificates. If the principal amount repurchased is less than the amount sold, a gain or loss relating to the original certificates held is recorded.

109. For the purchaser in a dollar reverse repurchase agreement accounted for as collateralized lending in accordance with paragraph 91 of this statement, an asset is recorded for the amount of the purchase. Upon completion of the reverse repurchase agreement, cash is received in exchange for a “substantially the same” security. The difference between the purchase and reselling price represents interest income for the lending of short-term funds.

Separate Transactions

110. Agreements to repurchase and resell securities that do not meet the definitions in paragraphs 79-92 of this statement shall be accounted for as two separate transactions, that is, as a sale and purchase or as a purchase and sale, in accordance with the relevant statutory accounting guidance. For example, sales of bonds would result in recognition of realized gains or losses.

Offsetting

111. Reporting entities may operate on both sides of the repurchase agreement market resulting in recording of liabilities and assets representing repurchase and reverse repurchase agreements, respectively.

112. Reporting entities shall offset such liabilities and assets only to the extent that a legal right to offset exists as defined in SSAP No. 64, paragraph 2. Otherwise, separate assets and liabilities shall be recognized.

Loan Syndications

113. Borrowers often borrow amounts greater than any one lender is willing to lend. Therefore, it is common for groups of lenders to jointly fund those loans. That may be accomplished by a syndication under which several lenders share in lending to a single borrower, but each lender loans a specific amount to the borrower and has the right to repayment from the borrower.

114. A loan syndication is not a transfer of financial assets. Each lender in the syndication shall account for the amounts it is owed by the borrower. Repayments by the borrower may be made to a lead lender who then distributes the collections to the other lenders of the syndicate. In those circumstances, the lead lender is also functioning as a servicer and, therefore, shall only recognize its portion of the loan as a financial asset.

Loan Participations

115. Groups of banks or other entities also may jointly fund large borrowings through loan participations in which a single lender makes a large loan to a borrower and subsequently transfers interests in the loan to other entities.

116. Transfers by the originating lender may take the legal form of either assignments or participations. The transfers are usually on a nonrecourse basis, and the transferor (originating lender) continues to service the loan. The transferee (participating entity) may or may not have the right to sell or transfer its participation during the term of the loan, depending upon the terms of the participation agreement.

117. If the loan participation agreement transfers a participating interest in an entire financial asset (as described in paragraph 7 of this statement) and the conditions in paragraph 8 are met, the transfer shall be accounted for by the transferor as a sale of a participating interest. A transferor's right of first refusal on a bona fide offer from a third party, a requirement to obtain the transferor's permission that shall not be unreasonably withheld, or a prohibition on sale to the transferor's competitor is a limitation on the transferee's rights but presumptively does not constrain a transferee from exercising its right to pledge or exchange. However, if the loan participation agreement constrains the transferees from pledging or exchanging its participating interest and that constraint provides a more-than-trivial benefit to the transferor, the transferor has not relinquished control and shall account for the transfer as a secured borrowing.

Factoring Arrangements

118. Factoring arrangements are a means of discounting accounts receivable on a nonrecourse, notification basis. Accounts receivable in their entireties are sold outright, usually to a transferee (the factor) that assumes the full risk of collection, without recourse to the transferor in the event of a loss. Debtors are directed to send payments to the transferee. Factoring arrangements that meet the conditions in paragraph 8 shall be accounted for as sales of financial assets because the transferor surrenders control over the receivables to the factor.

Transfers of Receivables with Recourse

119. In a transfer of an entire receivable, a group of entire receivables, or a portion of an entire receivable with recourse, the transferor provides the transferee with full or limited recourse. The transferor is obligated under the terms of the recourse provision to make payments to the transferee or to repurchase receivables sold under certain circumstances, typically for defaults up to a specified percentage. A transfer of receivables with recourse shall not be recognized as a sale, but rather as secured borrowing. (This provision is applied regardless if the transfer was comprised of the entire receivable, a group of the entire receivable, or a portion of the entire receivable.) A transfer of receivables without recourse shall only be recognized if the transferor receives cash for the receivables. The sale shall be recognized when cash is received. Sales of premium receivables are addressed in *SSAP No. 42—Sale of Premium Receivables*.

Extinguishments of Liabilities

120. If a creditor releases a debtor from primary obligation on the condition that a third party assumes the obligation and that the original debtor becomes secondarily liable, that release extinguishes the original debtor's liability. However, in those circumstances, whether or not explicit consideration was paid for that guarantee, the original debtor becomes a guarantor. As a guarantor, it shall recognize a guarantee obligation in the same manner as would a guarantor that had never been primarily liable to that creditor, with due regard for the likelihood that the third party will carry out its obligations. The guarantee obligation shall be initially measured at fair value, and that amount reduces the gain or increases the loss recognized on extinguishment.

121. Exchanges of debt instruments or debt instrument modifications are considered extinguishments if the exchange or modification results with substantially different terms or is considered more than minor. If the cash flows under the terms of the new debt instrument are at least 10 percent different from the present value of the remaining cash flows under the terms of the original instrument, then the exchange of, or modification to, debt instruments is consider substantially different and/or more than minor.

Relevant Literature

122. The accounting guidance in this statement adopts with modification *FAS 166, Accounting for the Transfers of Financial Assets, an Amendment to FAS 140* (FAS 166), *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140), as amended by FAS 166, and FAS 156, *Accounting for Servicing of Financial Assets, an amendment of FASB Statement No. 140*, as amended by FAS 166. Statutory modifications from these adoptions include:

a. Rejects the GAAP consideration for "consolidated affiliates" as the concept of consolidation has not been adopted for statutory accounting.

b. Rejects reference to GAAP standards and GAAP methods not adopted for statutory as well as concepts that are not pertinent for insurers. For example, references to investments "held-to-maturity", "available for sale" or "trading" and reference to FASB standards are replaced with statutory terms and references to statutory standards.

c. Rejects GAAP reference and guidance regarding "Revolving-Period Securitizations" as this GAAP guidance is not applicable to statutory accounting. This concept was also deemed not applicable to statutory accounting under SSAP No. 91R.

d. Rejects GAAP guidance for "Sale-Type and Direct-Financing Lease Receivables" as leases shall be accounted for in accordance with *SSAP No. 22—Leases* (SSAP No. 22). This conclusion is consistent with SSAP No. 91R.

e. Rejects GAAP guidance for “Banker’s Acceptances and Risk Participations in Them,” as not applicable for statutory accounting. This GAAP guidance was also deemed not applicable to statutory accounting under SSAP No. 91R.

f. Rejects GAAP guidance for “Removal of Account Provisions” that allows recognition of sale accounting. For statutory, transfers that would empower the transferor to reclaim assets under certain conditions (considered “removal-of-accounts provisions”) are precluded from being accounted for as sales. This conclusion is consistent with SSAP No. 91R.

g. Rejects GAAP guidance for “Transfers of Receivables with Recourse” that allows transfers of receivables in their entirety with recourse to be accounted for as sales. For statutory, a transfer of receivables with recourse shall be accounted for as a secured borrowing. This conclusion is consistent with SSAP No. 91R.

h. Rejects illustrations for transactions involving transfers of lease financing receivables with residual values and banker’s acceptances with a risk participation as the GAAP guidance in FAS 166 related to these topics has been rejected for statutory accounting.

i. Rejects the optionality provided within FAS 156 for subsequent measurement of servicing assets and servicing liabilities using either fair value or an amortization method. This statement requires application of a fair value method for subsequent measurement.

j. Incorporates guidance previously included in SSAP No. 91R specific to insurance entities, and guidance that was adopted from GAAP guidance not revised through the issuance of FAS 166. Items incorporated include:

   i. Clarification that transfers of financial assets that are in substance real estate shall be accounted for in accordance with *SSAP No. 40R—Real Estate Investments* (paragraph 2).

   ii. Clarification that transactions between related parties or affiliates are accounted for in accordance with *SSAP No. 25—Accounting For and Disclosures About Transactions with Affiliates and Other Related Parties* (paragraph 3).

   iii. Clarification that the guidance does not address the securitization of mortality or morbidity risk (paragraph 5).

   iv. Guidance on the accounting of sale transactions for entities required to maintain an interest maintenance reserve (IMR). This guidance requires such entities to account for realized and unrealized capital gains and losses per the guidance in the SSAP for the specific type of investment, or if not specifically stated in the related SSAP, in accordance with SSAP No. 7 (paragraph 11.c.).

   v. Clarification of when servicing assets and servicing liabilities shall be recognized as well as measurement of these items. Continues prior statutory decision that servicing rights assets shall be nonadmitted (paragraphs 15-17).

   vi. Guidance on the accounting for transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract (paragraph 20).

   vii. Disclosures on security lending transactions, loaned securities; securities underlying repurchase and reverse repurchase agreements, dollar repurchase and dollar reverse repurchase agreements; receivables with recourse; and wash sales (paragraphs 28.a., 28.b., and 28.h.-28.l.).

viii. Guidance on the sales of future revenues (paragraph 77).

ix. Guidance on collateral requirements for securities lending transactions (paragraph 85).

x. Clarification that repurchase agreements, reverse repurchase agreements and dollar repurchase agreements meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this guidance (paragraph 87).

xi. Guidance on Repurchase Agreements (paragraphs 93-101).

xii. Guidance on Reverse Repurchase Agreements (paragraphs 102-103).

xiii. Guidance on Collateral for Reverse and Repurchase Agreements (paragraph 104).

xiv. Guidance on Dollar Repurchase Agreements (paragraph 105-109).

xv. Guidance for Separate Transactions (paragraph 110).

xvi. Guidance for Offsetting (paragraph 112). (This guidance was revised in November 2012 to only allow offsetting when a valid right to offset exists in accordance with SSAP No. 64. This is different from previous guidance reflected in SSAP No. 91R.)

xvii. Guidance for Transfers of Receivables with Recourse (paragraph 120).

123. This statement also adopts *FASB Staff Position 140-3, Accounting for Transfers of Financial Assets and Repurchase Financing Transactions* (FSP FAS 140-3), *ASU 2011-03, Transfers and Servicing (Topic 860), Reconsideration of Effective Control for Repurchase Agreements* and *AICPA Statement of Position 90-3, Definition of the Term Substantially the Same for Holders of Debt Instruments, as used In Certain Audit Guides and a Statement of Position.* This statement adopts *FASB Emerging Issues Task Force (EITF) No. 87-34, Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 88-11, Allocation of Recorded Investment When a Loan as Part of a Loan is Sold, FASB EITF No. 88-18, Sales of Future Revenues, FASB EITF No. 88-22, Securitization of Credit Card and Other Receivable Portfolios, FASB EITF No. 90-21, Balance Sheet Treatment of a Sale of Mortgage Servicing Rights with a Subservicing Agreement, FASB EITF No. 95-5, Determination of What Risks and Rewards, If Any, Can Be Retained and Whether Any Unresolved Contingencies May Exist in a Sale of Mortgage Loan Servicing Rights, FASB EITF No. 96-19, Debtor's Accounting for a Modification or Exchange of Debt Instruments*, as amended by FAS 166, and *FASB EITF No. 01-7, Creditor's Accounting for a Modification or Exchange of Debt Instruments*.

124. This statement rejects FASB *EITF No. 84-5, Sale of Marketable Securities with a Put Option*, and FASB *EITF No. 92-2, Measuring Loss Accruals by Transferors of Receivables with Recourse* and *FTB 01-1: Effective Date for Certain Financial Institutions of Certain Provisions of Statement 140 related to Isolation of Transferred Financial Assets*. This statement rejects *FIN 41, Offsetting Amounts Related to Certain Repurchase and Reverse Repurchase Agreements*. This rejection, as it is a reversal of the prior adoption of this guidance in SSAP No. 45, and the revisions to paragraphs 112-113 adopted November 2012, are effective January 1, 2013. This guidance has been rejected as it permits optionality as to whether offsetting and net reporting occurs for repurchase and reverse purchase agreements under master

netting agreements. The provisions of SSAP No. 64 shall be used in determining whether assets and liabilities shall be offset and reported net.

Effective Date and Transition

125. This standard shall be effective for years beginning on and after January 1, 2013 (effective date) and shall be applied prospectively. This statement must be applied as of the beginning of the reporting entity's first annual reporting period after the effective date, for interim periods within that first annual reporting period, and for interim and annual reporting periods thereafter. Earlier application is prohibited. This statement must be applied to transfers occurring on or after the effective date. On and after the effective date, the concept of a qualifying special purpose entity is no longer relevant for statutory accounting purposes. The disclosure provisions of this statement shall be applied to transfers that occurred both before and after the effective date of this statement. Guidance reflected in paragraph 22 added from *INT 03-05, EITF 01-7: Creditor's Accounting for a Modification or Exchange of Debt Instruments* has been in effect since June 22, 2003.

EXHIBIT A – GLOSSARY

Adequate Compensation

The amount of benefits of servicing that would fairly compensate a substitute servicer should one be required, which includes the profit that would be demanded in the marketplace.

Agent

A party that acts for and on behalf of another party. For example, a third-party intermediary is an agent of the transferor if it acts on behalf of the transferor.

Attached Call

A call option held by the transferor of a financial asset that becomes part of and is traded with the underlying instrument. Rather than being an obligation of the transferee, an attached call is traded with and diminishes the value of the underlying instrument transferred subject to that call.

Beneficial Interests

Rights to receive all or portions of specified cash inflows received by a trust or other entity, including, but not limited to, senior and subordinated shares of interest, principal, or other cash inflows to be "passed-through" or "paid-through," premiums due to guarantors, commercial paper obligations, and residual interests, whether in the form of debt or equity.

Benefits of Servicing

Revenues from contractually specified servicing fees, late charges, and other ancillary sources, including "float."

Cleanup Call

An option held by the servicer or its affiliate, which may be the transferor, to purchase the remaining transferred financial assets, or the remaining beneficial interests not held by the transferor, its affiliates, or its agents in an entity (or in a series of beneficial interests in transferred financial assets within an entity), if the amount of outstanding financial assets or beneficial interests falls to a level at which the cost of servicing those assets or beneficial interests becomes burdensome in relation to the benefits of servicing.

Collateral

Personal or real property in which a security interest has been given.

Continuing Involvement

Any involvement with the transferred financial assets that permits the transferor to receive cash flows or other benefits that arise from the transferred financial assets or that obligates the transferor to provide additional cash flows or other assets to any party related to the transfer. All available evidence shall be considered, including, but not limited to, explicit written arrangements, communications between the transferor and the transferee or its beneficial interest holders, and unwritten arrangements customary to similar transfers. Examples of continuing involvement with the transferred financial assets include, but are not limited to, servicing arrangements, recourse or guarantee arrangements, agreements to purchase or redeem transferred financial assets, options written or held, derivative financial instruments that are entered into contemporaneously with, or in contemplation of, the transfer, arrangements to provide financial support, pledges of collateral, and the transferor's beneficial interests in the transferred financial assets.

Contractually Specified Servicing Fees

All amounts that, per contract, are due to the servicer in exchange for servicing the financial asset and would no longer be received by a servicer if the beneficial owners of the serviced assets (or their trustees or agents) were to exercise their actual or potential authority under the contract to shift the servicing to another servicer. Depending on the servicing contract, those fees may include some or all of the difference between the interest rate collectible on the financial asset being serviced and the rate to be paid to the beneficial owners of those financial assets.

Derecognize

Remove previously recognized assets or liabilities from the statement of financial position.

Derivative Financial Instrument

A derivative instrument (as defined in *SSAP No. 86—Accounting for Derivative Instruments and Hedging, Income Generation, and Replication (Synthetic Asset) Transactions*) that is a financial instrument (refer to *SSAP No. 27—Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments*, paragraph 2).

Embedded Call

A call option held by the issuer of a financial instrument that is part of and trades with the underlying instrument. For example, a bond may allow the issuer to call it by posting a public notice well before its stated maturity that asks the current holder to submit it for early redemption and provides that interest ceases to accrue on the bond after the early redemption date. Rather than being an obligation of the initial purchaser of the bond, an embedded call trades with and diminishes the value of the underlying bond.

Financial Asset

Cash, evidence of an ownership interest in an entity, or a contract that conveys to a one entity a right (a) to receive cash or another financial instrument from a second entity or (b) to exchange other financial instruments on potentially favorable terms with the second entity.

Financial Liability

A contract that imposes on one entity an obligation (a) to deliver cash or another financial instrument to a second entity or (b) to exchange other financial instruments on potentially unfavorable terms with the second entity.

Freestanding Call

A call that is neither embedded in nor attached to an asset subject to that call.

Interest-Only Strip

A contractual right to receive some or all of the interest due on a bond, mortgage loan, collateralized mortgage obligation, or other interest-bearing financial asset.

Participating Interest

A participating interest has the following characteristics:

a. From the date of the transfer, it represents a proportionate (pro rata) ownership interest in an entire financial asset. The percentage of ownership interests held by the transferor in the entire financial asset may vary over time, while the entire financial asset remains outstanding as long as the resulting portions held by the transferor or its agents) and the transferee(s) meet the other characteristics of a participating interest. For example, if the transferor's interest in an entire financial asset changes because it subsequently sells another interest in the entire financial asset, the interest held initially and subsequently by the transferor must meet the definition of a participating interest.

b. From the date of the transfer, all cash flows received from the entire financial asset are divided proportionately among the participating interest holders in an amount equal to their share of ownership. Cash flows allocated as compensation for services performed, if any, shall not be included in that determination provided those cash flows are not subordinate to the proportionate cash flows of the participating interest and are not significantly above an amount that would fairly compensate a substitute service provider, should one be required, which includes the profit that would be demanded in the marketplace. In addition, any cash flows received by the transferor as proceeds of the transfer of the participating interest shall be excluded from the determination of proportionate cash flows provided that the transfer does not result in the transferor receiving an ownership interest in the financial asset that permits it to receive disproportionate cash flows.

c. The rights of each participating interest holder (including the transferor in its role as a participating interest holder) have the same priority, and no participating interest holder's interest is subordinated to the interest of another participating interest holder. That priority does not change in the event of bankruptcy or other receivership of the transferor, the original debtor, or any other participating interest holder. Participating interest holders have no recourse to the transferor, its agents or to each other, other than standard representations and warranties, ongoing contractual obligations to service the entire financial asset and administer the transfer contract, and contractual obligations to share in any set-off benefits received by any participating interest holder. That is, no participating interest holder is entitled to receive cash before any other participating interest holder under its contractual rights as a participating interest holder. For example, if a participating interest holder also is the servicer of the entire financial asset and receives cash in its role as servicer, that arrangement would not violate this requirement.

d. No party has the right to pledge or exchange the entire financial asset unless all participating interest holders agree to pledge or exchange the entire financial asset.

Proceeds

Cash, beneficial interests, servicing assets, derivatives, or other assets that are obtained in a transfer of financial assets, less any liabilities incurred.

Recourse

The right of a transferee of receivables to receive payment from the transferor of those receivables for (a) failure of debtors to pay when due, (b) the effects of prepayments, or (c) adjustments resulting from defects in the eligibility of the transferred receivables.

Securitization

The process by which financial assets are transformed into securities.

Security Interest

A form of interest in property that provides that upon default of the obligation for which the security interest is given, the property may be sold in order to satisfy that obligation.

Seller

A transferor that relinquishes control over financial assets by transferring them to a transferee in exchange for consideration.

Servicing Asset

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are expected to more than adequately compensate the servicer for performing the servicing. A servicing contract is either (a) undertaken in conjunction with selling or securitizing the financial assets being serviced or (b) purchased or assumed separately.

Servicing Liability

A contract to service financial assets under which the estimated future revenues from contractually specified servicing fees, late charges, and other ancillary revenues are not expected to adequately compensate the servicer for performing the servicing.

Standard Representations and Warranties

Representations and warranties that assert the financial asset being transferred is what it is purported to be at the transfer date. Examples include representations and warranties about (a) the characteristics, nature, and quality of the underlying financial asset, including characteristics of the underlying borrower and the type and nature of the collateral securing the underlying financial asset, (b) the quality, accuracy, and delivery of documentation relating to the transfer and the underlying financial asset, and (c) the accuracy of the transferor's representations in relation to the underlying financial asset.

Transfer

The conveyance of a noncash financial asset by and to someone other than the issuer of that financial asset. Thus, a transfer includes selling a receivable, putting it into a securitization trust, or posting it as collateral but excludes the origination of that receivable, the settlement of that receivable, or the restructuring of that receivable into a security in a troubled debt restructuring.

Transferee

An entity that receives a financial asset, an interest in a financial asset, or a group of financial assets from a transferor.

Transferor

An entity that transfers a financial asset, an interest in a financial asset, or a group of financial assets that it controls to another entity.

Unilateral Ability (See paragraphs 53 and 54)

A capacity for action not dependent on the actions (or failure to act) of any other party.

EXHIBIT B – ILLUSTRATIONS

Illustration—Recording Transfers with Proceeds of Cash, Derivatives, and Other Liabilities

1. Company A transfers entire loans with a carrying amount of $1,000 to a subsidiary and receives proceeds with a fair value of $1,030 and the transfer is accounted for as a sale. Company A undertakes no servicing responsibilities and assumes a limited recourse obligation to repurchase delinquent loans.

Company A agrees to provide the transferee a return at a floating rate of interest even though the contractual terms of the loan are fixed rate in nature (that provision is effectively an interest rate swap).

Fair Values	
Cash proceeds	$1,050
Interest rate swap asset	40
Recourse obligation	60

Net Proceeds	
Cash received	$1,050
Plus: Interest rate swap asset	40
Less: Recourse obligation	(60)
Net proceeds	$1,030

Gain on Sale	$1,030
Net proceeds	1,000
Carrying amount of loans sold	$ 30
Gain on sale	

Journal Entry		
Cash	1,050	
Interest rate swap asset	40	
Loans		1,000
Recourse obligation		60
Gain on sale		30
To record transfer		

Illustration—Recording Transfers of Participating Interests

2. Company B transfers a nine-tenths participating interest in a loan with a fair value of $1,100 and a carrying amount of $1,000, and the transfer is accounted for as a sale. The servicing contract has a fair value of zero because Company B estimates that the benefits of servicing are just adequate to compensate it for its servicing responsibilities.

Fair values	
Cash proceeds for nine-tenths sold ($1,100 x 9/10)	$990
One-tenth interest continued to be held by the transferor ($1,100 x 1/10)	110

Allocated Carrying Amount Based on Relative Fair Values

	Fair Value	Percentage Of Total Fair Value	Allocated Carrying Amount
Nine-tenths participating interest sold ($1,100 x 9/10)	$990	90	$900
One-tenth participating interest continued to be held by the transferor ($1,100 x 1/10)	110	10	100
Total	$ 1,100	100	$1,000

Gain on Sale	
Net proceeds	$ 990
Less: Carrying amount of loans sold	(900)
Gain on sale	$90

Journal Entry		
Cash	990	
Loans		900
Gain on sale		90
To record transfer		

Illustration—Sale of Receivables with Servicing Obtained

3. Company C originates $1,000 of loans that yield 10 percent interest income for their estimated lives of 9 years. Company C transfers the entire loans to an entity and the transfer is accounted for as a sale. Company C receives as proceeds $1,000 cash, a beneficial interest to receive 1 percent on the contractual interest on the loans (an interest-only strip receivable), and an additional 1 percent of the contractual interest as compensation for servicing the loans. The fair values of the servicing asset and the interest-only strip receivable are $40 and $60, respectively.

Fair Values	
Cash proceeds	$1,000
Servicing asset	40
Interest-only strip receivable	60

Net Proceeds		
Cash proceeds		$1,000
Servicing Asset		40
Interest-only strip receivable		60
	Net Proceeds	$1,100

Gain on Sale	
Net proceeds	$1,100
Less: Carrying amount of loans sold	(1,000)
Gain on sale	$ 100

Journal Entries		
Cash	1,000	
Interest-only strip receivable	60	
Servicing Asset	40

Gain on sale		100
To record transfer and to recognize interest-only strip receivable and servicing asset		

Illustration—Securities Lending Transaction Treated as a Secured Borrowing

4. The following example illustrates the accounting for a securities lending transaction treated as a secured borrowing, in which the securities borrower sells the securities upon receipt and later buys similar securities to return to the securities lender:

Facts

Transferor's carrying amount and fair value of security loaned	$1,000
Cash "collateral"	1,020
Transferor's return from investing cash collateral at a 5 percent annual rate	5
Transferor's rebate to the securities borrower at a 4 percent annual rate	4

For simplicity, the fair value of the security is assumed not to change during the 35-day term of the transaction.

Journal Entries for the Transferor

At inception:		
Cash	1,020	
Payable under securities loan agreements		1,020
To record the receipt of cash collateral		
Securities pledged to creditors	1,000	
Securities		1,000
To reclassify loaned securities that the secured party has the right to sell or repledge		
Money market instrument	1,020	
Cash		1,020
To record investment of cash collateral		
At conclusion:		
Cash	1,025	
Interest		5
Money market instrument		1,020
To record results of investment		
Securities	1,000	
Securities pledged to creditors		1,000
To record return of security		
Payable under securities loan agreements	1,020	
Interest ("rebate")	4	
Cash		1,024
To record repayment of cash collateral plus interest		

Journal Entries for the Transferee

At inception:		
Receivable under securities loan agreements	1,020	
Cash		1,020
To record transfer of cash collateral		

Cash	1,000	
Obligation to return borrowed securities		1,000

To record sale of borrowed securities to a third party and the resulting obligation to return securities that it no longer holds

At conclusion:

Obligation to return borrowed securities	1,000	
Cash		1,000

To record the repurchase of securities borrowed

Cash	1,024	
Receivable under securities loan agreements		1,020
Interest revenue ("rebate")		4

To record the receipt of cash collateral and rebate interest

APPENDIX A – CLASSIFICATION CRITERIA: LIABILITY OR EQUITY 31

Classification Criteria 31
Distinguishing Liability from Equity – Scope and Scope Exclusions 33

APPENDIX B – DISCLOSURE INFORMATION 34

This page intentionally left blank.

SCOPE OF STATEMENT

1. This statement provides statutory accounting principles for transactions in which an entity exchanges its equity instruments to employees and non-employees in share-based payment transactions. This statement does not provide statutory accounting principles for employee share ownership plans; those transactions are addressed in *SSAP No. 12—Employee Stock Ownership Plans*.

SUMMARY OF ISSUE

2. The objective of accounting for transactions under share-based payment arrangements with employees is to recognize in the financial statements the employee services received in exchange for equity instruments issued or liabilities incurred and the related cost to the entity as those services are consumed. The objective of accounting for share-based payment transactions with non-employees is to recognize in the financial statements the most reliably measurable fair values of such transactions. This statement uses the terms compensation and payment in their broadest senses to refer to the consideration paid for employee services and goods and services regardless of whether the supplier is an employee.

3. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. This statement requires that the cost resulting from all share-based payment transactions be recognized in the financial statements. This statement establishes fair value as the measurement objective in accounting for share-based payment arrangements and requires all entities to apply a fair-value-based measurement method[1] in accounting for share-based payment transactions with employees except for equity instruments held by employee stock ownership plans.

Scope and Scope Exceptions

4. Employees - This statement applies to all share-based payment transactions in which an entity acquires employee services by issuing (or offering to issue) its shares, share options, or other equity instruments or by incurring liabilities to an employee that meet either of the following conditions:

a. The amounts are based, at least in part[2], on the price of the entity's shares or other equity instruments.

b. The awards require or may require settlement by issuing the entity's equity shares or other equity instruments.

5. Share-based payments awarded to an employee of the reporting entity by a related party or other holder of an economic interest in the entity as compensation for services provided to the entity are share-based payment transactions to be accounted for under this statement unless the transfer is clearly for a purpose other than compensation for services to the reporting entity. The substance of such a transaction

[1] Accounting pronouncements that require fair value measurements but that are excluded from *SSAP No. 100—Fair Value Measurements* is limited to this statement addressing share-based payment transactions. The fair value measurement objective in this statement is generally consistent with the fair value measurement objective in SSAP No. 100. However, for certain share-based payment transactions with employees, the measurements at the grant date are fair-value-based measurements, not fair value measurements. Although some measurements in this statement are fair value measurements, for practical reasons this statement is excluded in its entirety from SSAP No. 100. To be consistent with GAAP guidance on share-based payment transactions, the definition of fair value for use in this statement is: "the amount at which the asset (or liability) could be bought (or incurred) or sold (settled) in a current transaction between willing parties, that is, other than in a forced or liquidation sale." Observable market prices of identical or similar equity or liability instruments in active markets are the best estimate of fair value and, if available, should be used as the basis for the measurement of equity and liability instruments awarded in a share-based payment transaction with employees.

[2] The phrase "at least in part" is used because an award of share-based compensation may be indexed to both the price of an entity's shares and something else that is neither the price of the entity's shares nor a market, performance, or service condition.

is that the economic interest holder makes a capital contribution to the reporting entity, and that entity makes a share-based payment to its employee in exchange for services rendered. An example of a situation in which such a transfer is not compensation is a transfer to settle an obligation of the economic interest holder to the employee that is unrelated to employment by the entity.

6. Non-Employees - This statement applies to all share-based payment transactions in which an entity acquires goods or services by issuing (or offering to issue) its shares, share-options, or other equity instruments or by incurring liabilities to a goods or service provider that is not an employee in amounts based, at least in part[3], on the price of the entity's shares or other equity instruments or that require or may require settlement by issuing the entity's equity shares or other equity instrument.

7. The guidance in this statement does not apply to equity instruments held by an employee stock ownership plan. Such equity instruments shall follow the guidance in *SSAP No. 12—Employee Stock Ownership Plans* (SSAP No. 12). The guidance in this statement does not apply to transactions involving equity instruments either issued to a lender or investor that provides financing to the issuer or issued in a business combination.

8. The guidance for share-based payments to employees is contained in paragraphs 9-1154, and the guidance for share-based payments to non-employees is contained in paragraphs 116-143~~115-142~~. The guidance for employees is further divided as follows:

a. Compensatory Share-Based Payment Plans: Paragraphs 9-1054.

b. Noncompensatory Share-Based Payment Plans: Paragraphs 106-112~~105-111~~.

c. Consolidated/Holding Company Share-Based Payment Plans: Paragraphs 113-115~~112-114~~.

Employee Share-Based Payments - Compensatory

Recognition Principle for Share-Based Payment Transactions

9. Stock purchase and stock option plans that do not meet the criteria of a non-compensatory plan (paragraphs 106-112~~105-111~~) and are not otherwise excluded from the scope of this statement shall be classified as compensatory and follow the recognition, measurement and disclosure guidance in paragraphs 10-1054.

10. An entity shall recognize the services received in a share-based payment transaction with an employee as services are received. Employee services themselves are not recognized before they are received. The entity shall recognize either a corresponding increase in equity or a liability, depending on whether the instruments granted satisfy the equity or liability classification criteria (see paragraphs 14-27). As the services are consumed, the entity shall recognize the related cost.

11. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. For example, the rights and obligations embodied in a transfer of equity shares to an employee for a note that provides no recourse to other assets of the employee (that is, other than the shares) are substantially the same as those embodied in a grant of equity share options. Thus, that transaction shall be accounted for as a substantive grant of equity share options.

[3] See Footnote 2

12. Assessment of both the rights and obligations in a share-based payment award and any related arrangement and how those rights and obligations affect the fair value of an award requires the exercise of judgment in considering the relevant facts and circumstances.

Determining the Grant Date

13. As a practical accommodation, in determining the grant date of an award subject to this statement, assuming all other criteria in the grant date definition have been met, a mutual understanding of the key terms and conditions of an award to an individual employee shall be presumed to exist at the date the award is approved in accordance with the relevant corporate governance requirements (that is, by the Board or management with the relevant authority) if both of the following conditions are met:

a. The award is a unilateral grant and, therefore, the recipient does not have the ability to negotiate the key terms and conditions of the award with the employer.

b. The key terms and conditions of the award are expected to be communicated to an individual recipient within a relatively short time period from the date of approval. A relatively short time period is that period in which an entity could reasonably complete all actions necessary to communicate the awards to the recipients in accordance with the entity's customary human resource practices.

Determining Whether to Classify a Financial Instrument as a Liability or As Equity

14. Paragraphs 14-27, provide guidance for determining whether certain financial instruments awarded in share-based payment transactions are liabilities. In determining whether an instrument not specifically discussed in those paragraphs shall be classified as a liability or as equity, an entity shall apply statutory accounting principles applicable to financial instruments issued in transactions not involving share-based payment.

15. Unless paragraphs 16-27 require otherwise, an entity shall apply the classification criteria in Appendix A, as they are effective at the reporting date, in determining whether to classify as a liability a freestanding financial instrument given to an employee in a share-based payment transaction. Paragraphs 65-69~~64-68~~ provide criteria for determining when instruments subject to this statement subsequently become subject to other applicable statutory accounting principles.

16. In determining the classification of an instrument, an entity shall take into account the classification requirements that are effective for that specific entity at the reporting date as established by Appendix A. In addition, a call option written on an instrument that is not classified as a liability under those classification requirements also shall be classified as equity so long as those equity classification requirements for the entity continue to be met, unless liability classification is required under the provisions of paragraphs 19 and 20.

17. Appendix A does not apply to outstanding shares embodying a conditional obligation to transfer assets, for example, shares that give the employee the right to require the employer to repurchase them for cash equal to their fair value (puttable shares). A put right may be granted to the employee in a transaction that is related to a share-based compensation arrangement. If exercise of such a put right would require the entity to repurchase shares issued under the share-based compensation arrangement, the shares shall be accounted for as puttable shares. A puttable (or callable) share awarded to an employee as compensation shall be classified as a liability if either of the following conditions is met:

a. The repurchase feature permits the employee to avoid bearing the risks and rewards normally associated with equity share ownership for a reasonable period of time from the date the requisite service is rendered and the share is issued. An employee begins to bear the risks and rewards normally associated with equity share ownership when all the requisite service has been rendered. A repurchase feature that can be exercised only upon the occurrence of a contingent event that is outside the employee's control (such as an initial public offering) would not meet this condition until it becomes probable that the event will occur within the reasonable period of time.

b. It is probable that the employer would prevent the employee from bearing those risks and rewards for a reasonable period of time from the date the share is issued.

For this purpose, a period of six months or more is a reasonable period of time.

18. A puttable (or callable) share that does not meet either of those conditions shall be classified as equity.

19. Options or similar instruments on shares shall be classified as liabilities if either of the following conditions is met:

a. The underlying shares are classified as liabilities.

b. The entity can be required under any circumstances to settle the option or similar instrument by transferring cash or other assets. A cash settlement feature that can be exercised only upon the occurrence of a contingent event that is outside the employee's control (such as an initial public offering) would not meet this condition until it becomes probable that event will occur.

20. For example, a reporting entity that is a Securities and Exchange Commission (SEC) registrant may grant an option to an employee that, upon exercise, would be settled by issuing a mandatorily redeemable share. Because the mandatorily redeemable share would be classified as a liability under Appendix A (as well as under *SSAP No. 72—Surplus and Quasi-Reorganizations*), the option also would be classified as a liability.

21. An award may be indexed to a factor in addition to the entity's share price. If that additional factor is not a market, performance, or service condition, the award shall be classified as a liability for purposes of this statement, and the additional factor shall be reflected in estimating the fair value of the award.

22. For this purpose, an award of equity share options granted to an employee of an entity's foreign operation that provides for a fixed exercise price denominated either in the foreign operation's functional currency or in the currency in which the employee's pay is denominated shall not be considered to contain a condition that is not a market, performance, or service condition. Therefore, such an award is not required to be classified as a liability if it otherwise qualifies as equity. For example, equity share options with an exercise price denominated in euros granted to employees of a U.S. entity's foreign operation whose functional currency is the euro are not required to be classified as liabilities if those options otherwise qualify as equity. In addition, such options are not required to be classified as liabilities even if the functional currency of the foreign operation is the U.S. dollar, provided that the employees to whom the options are granted are paid in euros.

23. The accounting for an award of a share-based payment shall reflect the substantive terms of the award and any related arrangement. Generally, the written terms provide the best evidence of the substantive terms of an award. However, an entity's past practice may indicate that the substantive terms of an award differ from its written terms. For example, an entity that grants a tandem award under which an employee receives either a stock option or a cash-settled stock appreciation right is obligated to pay cash on demand if the choice is the employee's, and the entity thus incurs a liability to the employee. In contrast, if the choice is the entities, it can avoid transferring its assets by choosing to settle in stock, and the award qualifies as an equity instrument. However, if an entity that nominally has the choice of settling

awards by issuing stock predominately settles in cash or if the entity usually settles in cash whenever an employee asks for cash settlement, the entity is settling a substantive liability rather than repurchasing an equity instrument. In determining whether an entity that has the choice of settling an award by issuing equity shares has a substantive liability, the entity also shall consider whether:

a. It has the ability to deliver the shares. (Federal securities law generally requires that transactions involving offerings of shares under employee share option arrangements be registered, unless there is an available exemption. For purposes of this statement, such requirements do not, by themselves, imply that an entity does not have the ability to deliver shares and thus do not require an award that otherwise qualifies as equity to be classified as a liability.)

b. It is required to pay cash if a contingent event occurs (see paragraphs 19-20).

24. A provision that permits employees to effect a broker-assisted cashless exercise of part or all of an award of share options through a broker does not result in liability classification for instruments that otherwise would be classified as equity if both of the following criteria are satisfied:

a. The cashless exercise requires a valid exercise of the share options.

b. The employee is the legal owner of the shares subject to the option (even though the employee has not paid the exercise price before the sale of the shares subject to the option).

25. A broker that is a related party of the entity must sell the shares in the open market within a normal settlement period, which generally is three days, for the award to qualify as equity.

26. Similarly, a provision for either direct or indirect (through a net-settlement feature) repurchase of shares issued upon exercise of options (or the vesting of nonvested shares), with any payment due employees withheld to meet the employer's minimum statutory withholding requirements resulting from the exercise, does not, by itself, result in liability classification of instruments that otherwise would be classified as equity. However, if an amount in excess of the minimum statutory requirement is withheld, or may be withheld at the employee's discretion, the entire award shall be classified and accounted for as a liability.

27. Minimum statutory withholding requirements are to be based on the applicable minimum statutory withholding rates required by the relevant tax authority (or authorities, for example, federal, state, and local), including the employee's share of payroll taxes that are applicable to such supplemental taxable income.

Market, Performance, and Service Conditions

28. Accruals of compensation cost for an award with a performance condition shall be based on the probable outcome of that performance condition—compensation cost shall be accrued if it is probable that the performance condition will be achieved and shall not be accrued if it is not probable that the performance condition will be achieved. If an award has multiple performance conditions (for example, if the number of options or shares an employee earns varies depending on which, if any, of two or more performance conditions is satisfied), compensation cost shall be accrued if it is probable that a performance condition will be satisfied. In making that assessment, it may be necessary to take into account the interrelationship of those performance conditions.

29. If an award requires satisfaction of one or more market, performance, or service conditions (or any combination thereof), compensation cost shall be recognized if the requisite service is rendered, and no compensation cost shall be recognized if the requisite service is not rendered.

Payroll Taxes

30. A liability for employee payroll taxes on employee stock compensation shall be recognized on the date of the event triggering the measurement and payment of the tax to the taxing authority (for a nonqualified option in the United States, generally the exercise date). Payroll taxes, even though directly related to the appreciation on stock options, are operating expenses and shall be reflected as such in the statement of operations.

Initial Measurement

31. While some of the material in paragraphs 31-34 was written in terms of awards classified as equity, it applies equally to awards classified as liabilities. The subparagraphs of paragraph 36 provide specific guidance for awards classified as liabilities.

32. A share-based payment transaction with employees shall be measured based on the fair value (or in certain situations specified in this statement, a calculated value or intrinsic value) of the equity instruments issued.

33. An entity shall account for the compensation cost from share-based payment transactions with employees in accordance with the fair-value-based method set forth in this statement. That is, the cost of services received from employees in exchange for awards of share-based compensation generally shall be measured based on the grant-date fair value of the equity instruments issued or on the fair value of the liabilities incurred. The cost of services received by an entity as consideration for equity instruments issued or liabilities incurred in share-based compensation transactions with employees shall be measured based on the fair value of the equity instruments issued or the liabilities settled. The portion of the fair value of an instrument attributed to employee service is net of any amount that an employee pays (or becomes obligated to pay) for that instrument when it is granted. For example, if an employee pays $5 at the grant date for an option with a grant-date fair value of $50, the amount attributed to employee service is $45.

34. However, this statement provides certain exceptions (paragraph 49) to that measurement method if it is not possible to reasonably estimate the fair value of an award at the grant date. A reporting entity that is not able to reasonably estimate the fair value of its equity options and similar instruments may measure its liabilities under share-based payment arrangements at intrinsic value (see paragraphs 36.b. and 48).

Terms of the Award Affect Fair Value

35. The terms of a share-based payment award and any related arrangement affect its value and, except for certain explicitly excluded features, such as a reload feature, shall be reflected in determining the fair value of the equity or liability instruments granted. For example, the fair value of a substantive option structured as the exchange of equity shares for a nonrecourse note will differ depending on whether the employee is required to pay nonrefundable interest on the note.

Measurement Objective – Fair Value at Grant Date

36. The measurement objective for equity instruments awarded to employees is to estimate the fair value at the grant date of the equity instruments that the entity is obligated to issue when employees have rendered the requisite service and satisfied any other conditions necessary to earn the right to benefit from the instruments (for example, to exercise share options). That estimate is based on the share price and other pertinent factors, such as expected volatility, at the grant date. The following subparagraphs provide guidance regarding the measurement objective and measurement date for liability instruments:

a. Measurement Objective and Measurement Date for Liabilities: At the grant date, the measurement objective for liabilities incurred under share-based compensation arrangements is the same as the measurement objective for equity instruments awarded to employees as described in paragraph 36. However, the measurement date for liability instruments is the date of settlement.

b. Measurement Objective and Measurement Date for Liabilities of Entities Subject to Paragraph 48: An entity subject to paragraph 48 shall make a policy decision of whether to measure all of its liabilities incurred under share-based payment arrangements at fair value or to measure all such liabilities at intrinsic value. Consistent with the guidance in paragraph 48, an entity that is not able to reasonably estimate the fair value of its equity share options and similar instruments because it is not practicable for it to estimate the expected volatility of its share price shall make a policy choice of whether to measure its liabilities under share-based payment arrangements at calculated value or at intrinsic value.

37. The fair value of an equity share option or similar instrument shall be measured based on the observable market price of an option with the same or similar terms and conditions.

38. Such market prices for equity share options and similar instruments granted to employees are frequently not available; however, they may become so in the future. As such, the fair value of an equity share option or similar instrument shall be estimated using a valuation technique such as an option-pricing model. For this purpose, a similar instrument is one whose fair value differs from its intrinsic value, that is, an instrument that has time value. For example, a share appreciation right that requires net settlement in equity shares has time value; an equity share does not.

Factors or Restrictions that Impact the Determination of Fair Value at Grant Date

Vesting Versus Nontransferability

39. To satisfy the measurement objective in paragraph 36, the restrictions and conditions inherent in equity instruments awarded to employees are treated differently depending on whether they continue in effect after the requisite service period. A restriction that continues in effect after an entity has issued instruments to employees, such as the inability to transfer vested equity share options to third parties or the inability to sell vested shares for a period of time, is considered in estimating the fair value of the instruments at the grant date. For equity share options and similar instruments, the effect of nontransferability (and nonhedgeability, which has a similar effect) is taken into account by reflecting the effects of employees' expected exercise and postvesting employment termination behavior in estimating fair value (referred to as an option's expected term).

Forfeitability

40. A restriction that stems from the forfeitability of instruments to which employees have not yet earned the right, such as the inability either to exercise a nonvested equity share option or to sell nonvested shares, is not reflected in estimating the fair value of the related instruments at the grant date. Instead, those restrictions are taken into account by recognizing compensation cost only for awards for which employees render the requisite service.

Performance of Service Conditions

41. Awards of share-based employee compensation ordinarily specify a performance condition or a service condition (or both) that must be satisfied for an employee to earn the right to benefit from the award. No compensation cost is recognized for instruments that employees forfeit because a service condition or a performance condition is not satisfied (that is, instruments for which the requisite service is not rendered).

42. The fair-value-based method described in paragraphs 36 and 39-43 uses fair value measurement techniques, and the grant-date share price and other pertinent factors are used in applying those techniques. However, the effects on the grant-date fair value of service and performance conditions that apply only during the requisite service period are reflected based on the outcomes of those conditions. This statement refers to the required measure as fair value.

Market Conditions

43. Some awards contain a market condition. The effect of a market condition is reflected in the grant-date fair value of an award. (Valuation techniques have been developed to value path-dependent options as well as other options with complex terms. Awards with market conditions, as defined in this statement, are path-dependent options.) Compensation cost thus is recognized for an award with a market condition provided that the requisite service is rendered, regardless of when, if ever, the market condition is satisfied.

Market, Performance, and Service Conditions That Affect Conditions Other than Vesting or Exercisability

44. Market, performance, and service conditions (or any combination thereof) may affect an award's exercise price, contractual term, quantity, conversion ratio, or other factors that are considered in measuring an award's grant-date fair value. A grant-date fair value shall be estimated for each possible outcome of such a performance or service condition, and the final measure of compensation cost shall be based on the amount estimated at the grant date for the condition or outcome that is actually satisfied.

Nonvested or Restricted Shares

45. A nonvested equity share or nonvested equity share unit awarded to an employee shall be measured at its fair value as if it were vested and issued on the grant date.

46. Nonvested shares granted to employees usually are referred to as restricted shares, but this statement reserves that term for fully vested and outstanding shares whose sale is contractually or governmentally prohibited for a specified period of time.

47. A restricted share awarded to an employee, that is, a share that will be restricted after the employee has a vested right to it, shall be measured at its fair value, which is the same amount for which a similarly restricted share would be issued to third parties.

Calculated Value for Entities Not Reasonably Able to Estimate Fair Value

48. An entity may not be able to reasonably estimate the fair value of its equity share options and similar instruments because it is not practicable for it to estimate the expected volatility of its share price. In that situation, the entity shall account for its equity share options and similar instruments based on a value calculated using the historical volatility of an appropriate industry sector index instead of the expected volatility of the entity's share price (the calculated value). Throughout the remainder of this statement, provisions that apply to accounting for share options and similar instruments at fair value also apply to calculated value.

Difficulty of Estimation

49. It should be possible to reasonably estimate the fair value of most equity share options and other equity instruments at the date they are granted. However, in rare circumstances, it may not be possible to reasonably estimate the fair value of an equity share option or other equity instrument at the grant date because of the complexity of its terms.

50. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be accounted for based on its intrinsic value (paragraph 71~~70~~) for measurement after issue date.

Reload and Contingent Features

51. The fair value of each award of equity instruments, including an award of options with a reload feature (reload options), shall be measured separately based on its terms and the share price and other pertinent factors at the grant date. The effect of a reload feature in the terms of an award shall not be included in estimating the grant-date fair value of the award. Rather, a subsequent grant of reload options pursuant to that provision shall be accounted for as a separate award when the reload options are granted.

52. A contingent feature of an award that might cause an employee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature shall not be reflected in estimating the grant-date fair value of an equity instrument.

Requisite Service Period

53. An entity shall make its initial best estimate of the requisite service period at the grant date (or at the service inception date, if that date precedes the grant date) and shall base accruals of compensation cost on that period.

54. The initial best estimate and any subsequent adjustment to that estimate of the requisite service period for an award with a combination of market, performance, or service conditions shall be based on an analysis of all of the following:

a. All vesting and exercisability conditions

b. All explicit, implicit, and derived service periods

c. The probability that performance or service conditions will be satisfied.

Market, Performance, and Service Conditions

55. Performance or service conditions that affect vesting are not reflected in estimating the fair value of an award at the grant date because those conditions are restrictions that stem from the forfeitability of instruments to which employees have not yet earned the right. However, the effect of a market condition is reflected in estimating the fair value of an award at the grant date (paragraph 43). For purposes of this statement, a market condition is not considered to be a vesting condition, and an award is not deemed to be forfeited solely because a market condition is not satisfied.

56. In some cases, the terms of an award may provide that a performance target that affects vesting could be achieved after an employee completes the requisite service period. That is, the employee would be eligible to vest in the award regardless of whether the employee is rendering service on the date the performance target is achieved. A performance target that affects vesting and that could be achieved after an employee's requisite service period shall be accounted for as a performance condition. As such, the performance target shall not be reflected in estimating the fair value of the award at the grant date. Compensation cost shall be recognized in the period in which it becomes probable that the performance target will be achieved and should represent the compensation cost attributable to the period(s) for which the requisite service already has been rendered. If the performance target becomes probable of being achieved before the end of the requisite service period, the remaining unrecognized compensation cost for which requisite service has not yet been rendered shall be recognized prospectively over the remaining requisite service period. The total amount of compensation cost recognized during and after the requisite service period shall reflect the number of awards that are expected to vest and shall be adjusted to reflect those awards that ultimately vest. The requisite service period ends when the employee can cease

rendering service and still be eligible to vest in the award if the performance target is achieved. The stated vesting period (which includes the period in which the performance target could be achieved) may differ from the requisite service period.

Subsequent Measurement

~~56.~~57. Guidance that equally applies to both liabilities and equity is generally found in paragraphs 58-70~~57-69~~. Paragraphs 71-79~~70-78~~ provide additional subsequent measurement guidance for awards classified as equity and paragraphs 80-83~~79-82~~ provide additional subsequent measurement guidance for awards classified as liabilities.

Recognition of Compensation Costs Over the Requisite Service

~~57.~~58. The compensation cost for an award of share-based employee compensation classified as equity shall be recognized over the requisite service period, with a corresponding credit to equity (generally, paid-in capital). The requisite service period is the period during which an employee is required to provide service in exchange for an award, which often is the vesting period. The requisite service period is estimated based on an analysis of the terms of the share-based payment award.

~~58.~~59. The total amount of compensation cost recognized at the end of the requisite service period for an award of share-based compensation shall be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed). An entity shall base initial accruals of compensation cost on the estimated number of instruments for which the requisite service is expected to be rendered. That estimate shall be revised if subsequent information indicates that the actual number of instruments is likely to differ from previous estimates. The cumulative effect on current and prior periods of a change in the estimated number of instruments for which the requisite service is expected to be or has been rendered shall be recognized in compensation cost in the period of the change. Previously recognized compensation cost shall not be reversed if an employee share option (or share unit) for which the requisite service has been rendered expires unexercised (or unconverted).

~~59.~~60. An entity shall reverse previously recognized compensation cost for an award with a market condition only if the requisite service is not rendered.

Estimating the Requisite Service Period

~~60.~~61. The requisite service period may be explicit or it may be implicit, being inferred from an analysis of other terms in the award, including other explicit service or performance conditions. The requisite service period for an award that contains a market condition can be derived from certain valuation techniques that may be used to estimate grant-date fair value. An award may have one or more explicit, implicit, or derived service periods; however, an award may have only one requisite service period for accounting purposes unless it is accounted for as in-substance multiple awards. An award with a graded vesting schedule that is accounted for as in-substance multiple awards is an example of an award that has more than one requisite service period (paragraph 64~~63~~).

~~61.~~62. The service inception date is the beginning of the requisite service period. If the service inception date precedes the grant date, accrual of compensation cost for periods before the grant date shall be based on the fair value of the award at the reporting date. In the period in which the grant date occurs, cumulative compensation cost shall be adjusted to reflect the cumulative effect of measuring compensation cost based on fair value at the grant date rather than the fair value previously used at the service inception date (or any subsequent reporting date).

~~62.~~63. An entity shall adjust that initial best estimate in light of changes in facts and circumstances. Whether and how the initial best estimate of the requisite service period is adjusted depends on both the nature of the conditions identified in paragraph 54 and the manner in which they are combined, for example, whether an award vests or becomes exercisable when either a market or a performance condition is satisfied or whether both conditions must be satisfied.

Graded Vesting Awards

~~63.~~64. An entity shall make a policy decision about whether to recognize compensation cost for an award with only service conditions that has a graded vesting schedule in either of the following ways:

a. On a straight-line basis over the requisite service period for each separately vesting portion of the award as if the award was, in-substance, multiple awards.

b. On a straight-line basis over the requisite service period for the entire award (that is, over the requisite service period of the last separately vesting portion of the award).

However, the amount of compensation cost recognized at any date must at least equal the portion of the grant-date value of the award that is vested at that date.

Awards May Become Subject to Other Guidance

~~64.~~65. Paragraphs 66-69~~65-68~~ are intended to apply to those instruments issued in share-based payment transactions with employees accounted for under this statement, and to instruments exchanged in a business combination for share-based payment awards of the acquired business that were originally granted to employees of the acquired business and are outstanding as of the date of the business combination. Instruments issued, in whole or in part, as consideration for goods or services other than employee service shall not be considered to have been issued in exchange for employee service when applying the guidance in those paragraphs, irrespective of the employment status of the recipient of the award on the grant date.

~~65.~~66. A freestanding financial instrument issued to an employee in exchange for past or future employee services that is subject to initial recognition and measurement guidance within this statement shall continue to be subject to the recognition and measurement provisions of this statement throughout the life of the instrument, unless its terms are modified when the holder is no longer an employee. Only for purposes of this paragraph, a modification does not include a change to the terms of an award if that change is made solely to reflect an equity restructuring provided that both of the following conditions are met:

a. There is no increase in fair value of the award (or the ratio of intrinsic value to the exercise price of the award is preserved, that is, the holder is made whole) or the antidilution provision is not added to the terms of the award in contemplation of an equity restructuring.

b. All holders of the same class of equity instruments (for example, stock options) are treated in the same manner.

~~66.~~67. Other modifications of that instrument that take place when the holder is no longer an employee shall be subject to the modification guidance in paragraph 69~~68~~. Following modification, recognition and measurement of the instrument should be determined through reference to other applicable statutory accounting principles.

~~67.~~68. Once the classification of an instrument is determined, the recognition and measurement provisions of this statement shall be applied until the instrument ceases to be subject to the requirements discussed in paragraph 66~~65~~. Other applicable statutory accounting principles apply to a freestanding financial instrument that was issued under a share-based payment arrangement but that is no longer subject to this statement.

~~68.~~69. An entity may modify (including cancel and replace) or settle a fully vested, freestanding financial instrument after it becomes subject to other applicable statutory accounting principles. Such a modification or settlement shall be accounted for under the provisions of this statement unless it applies equally to all financial instruments of the same class regardless of whether the holder is (or was) an employee (or an employee's beneficiary). Following the modification, the instrument continues to be accounted for under other applicable statutory accounting principles. A modification or settlement of a class of financial instrument that is designed exclusively for and held only by current or former employees (or their beneficiaries) may stem from the employment relationship depending on the terms of the modification or settlement. Thus, such a modification or settlement may be subject to the requirements of this statement. See paragraph 66~~65~~ for a discussion of changes to awards made solely to reflect an equity restructuring.

Change in Classification Due to Change in Probable Settlement Outcome

~~69.~~70. An option or similar instrument that is classified as equity, but subsequently becomes a liability because the contingent cash settlement event is probable of occurring, shall be accounted for similar to a modification from an equity to liability award. That is, on the date the contingent event becomes probable of occurring (and therefore the award must be recognized as a liability), the entity recognizes a share-based liability equal to the portion of the award attributed to past service (which reflects any provision for acceleration of vesting) multiplied by the award's fair value on that date. To the extent the liability equals or is less than the amount previously recognized in equity, the offsetting debit is a charge to equity. To the extent that the liability exceeds the amount previously recognized in equity, the excess is recognized as compensation cost. The total recognized compensation cost for an award with a contingent cash settlement feature shall at least equal the fair value of the award at the grant date. The guidance in this paragraph is applicable only for options or similar instruments issued as part of employee compensation arrangements. That is, the guidance included in this paragraph is not applicable, by analogy or otherwise, to instruments outside employee share-based payment arrangements.

Subsequent Measurement - Awards Classified as Equity

Fair Value Not Reasonably Estimable

~~70.~~71. An equity instrument for which it is not possible to reasonably estimate fair value at the grant date shall be remeasured at each reporting date through the date of exercise or other settlement. The final measure of compensation cost shall be the intrinsic value of the instrument at the date it is settled. Compensation cost for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered at the reporting date) in the intrinsic value of the instrument in each reporting period. The entity shall continue to use the intrinsic value method for those instruments even if it subsequently concludes that it is possible to reasonably estimate their fair value.

Contingent Features

~~71.~~72. A contingent feature of an award that might cause an employee to return to the entity either equity instruments earned or realized gains from the sale of equity instruments earned for consideration that is less than fair value on the date of transfer (including no consideration), such as a clawback feature, shall be accounted for if and when the contingent event occurs.

Modification of An Award

~~72.~~73. A modification of the terms or conditions of an equity award shall be treated as an exchange of the original award for a new award. In substance, the entity repurchases the original instrument by issuing a new instrument of equal or greater value, incurring additional compensation cost for any incremental value. The effects of a modification shall be measured as follows:

a. Incremental compensation cost shall be measured as the excess, if any, of the fair value of the modified award determined in accordance with the provisions of this statement over the fair value of the original award immediately before its terms are modified, measured based on the share price and other pertinent factors at that date. As indicated in paragraph 48, references to fair value throughout this statement shall be read also to encompass calculated value. The effect of the modification on the number of instruments expected to vest also shall be reflected in determining incremental compensation cost. The estimate at the modification date of the portion of the award expected to vest shall be subsequently adjusted, if necessary, in accordance with paragraph 59~~58~~.

b. Total recognized compensation cost for an equity award shall at least equal the fair value of the award at the grant date unless at the date of the modification the performance or service conditions of the original award are not expected to be satisfied. Thus, the total compensation cost measured at the date of a modification shall be the sum of the following:

   i. The portion of the grant-date fair value of the original award for which the requisite service is expected to be rendered (or has already been rendered) at that date, and

   ii. The incremental cost resulting from the modification.

   Compensation cost shall be subsequently adjusted, if necessary, in accordance with paragraph 59~~58~~.

c. A change in compensation cost for an equity award measured at intrinsic value in accordance with paragraph 71~~70~~ shall be measured by comparing the intrinsic value of the modified award, if any, with the intrinsic value of the original award, if any, immediately before the modification.

~~73.~~74. Paragraphs 65-69~~64-68~~ provide additional guidance on accounting for modifications of certain freestanding financial instruments that initially were subject to this statement but subsequently became subject to other applicable statutory accounting principles.

Short-Term Inducements

~~74.~~75. A short-term inducement shall be accounted for as a modification of the terms of only the awards of employees who accept the inducement. Other inducements are modifications of the terms of all awards subject to them and shall be accounted for as such.

Equity Restructuring or Business Combination

~~75.~~76. Exchanges of share options or other equity instruments or changes to their terms in conjunction with an equity restructuring or a business combination are modifications for purposes of this statement. Except for a modification to add an antidilution provision that is not made in contemplation of an equity restructuring, accounting for a modification in conjunction with an equity restructuring requires a comparison of the fair value of the modified award with the fair value of the original award immediately before the modification in accordance with paragraph 73~~72~~. If those amounts are the same, for instance, because the modification is designed to equalize the fair value of an award before and after an equity restructuring, no incremental compensation cost is recognized. See paragraph 66~~65~~ for an additional exception.

Repurchase or Cancellation

~~76.~~77. The amount of cash or other assets transferred (or liabilities incurred) to repurchase an equity award shall be charged to equity, to the extent that the amount paid does not exceed the fair value of the equity instruments repurchased at the repurchase date. Any excess of the repurchase price over the fair value of the instruments repurchased shall be recognized as additional compensation cost. An entity that repurchases an award for which the requisite service has not been rendered has, in effect, modified the requisite service period to the period for which service already has been rendered, and thus the amount of compensation cost measured at the grant date but not yet recognized shall be recognized at the repurchase date.

Cancellation and Replacement

~~77.~~78. Cancellation of an award accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a modification of the terms of the cancelled award. (The phrase *offer to grant* is intended to cover situations in which the service inception date precedes the grant date.) Therefore, incremental compensation cost shall be measured as the excess of the fair value of the replacement award or other valuable consideration over the fair value of the cancelled award at the cancellation date in accordance with paragraph 73~~72~~. Thus, the total compensation cost measured at the date of a cancellation and replacement shall be the portion of the grant-date fair value of the original award for which the requisite service is expected to be rendered (or has already been rendered) at that date plus the incremental cost resulting from the cancellation and replacement.

~~78.~~79. A cancellation of an award that is not accompanied by the concurrent grant of (or offer to grant) a replacement award or other valuable consideration shall be accounted for as a repurchase for no consideration. Accordingly, any previously unrecognized compensation cost shall be recognized at the cancellation date.

Subsequent Measurement - Awards Classified as Liabilities

Measurement

~~79.~~80. The fair value of liabilities incurred in share-based payment transactions with employees shall be remeasured at the end of each reporting period through settlement.

~~80.~~81. Changes in the fair value (or intrinsic value for an entity that elects that method) of a liability incurred under a share-based payment arrangement that occur during the requisite service period shall be recognized as compensation cost over that period. The percentage of the fair value (or intrinsic value) that is accrued as compensation cost at the end of each period shall equal the percentage of the requisite service that has been rendered at that date. Changes in the fair value (or intrinsic value) of a liability that occur after the end of the requisite service period are compensation costs of the period in which the changes occur. Any difference between the amount for which a liability award is settled and its fair value at the settlement date as estimated in accordance with the provisions of this statement is an adjustment of compensation cost in the period of settlement.

~~81.~~82. Reporting entities shall measure a liability award under a share-based payment arrangement based on the award's fair value (or calculated value in accordance with paragraph 48) remeasured at each reporting date until the date of settlement. Compensation costs for each period until settlement shall be based on the change (or a portion of the change, depending on the percentage of the requisite service that has been rendered at the reporting date) in the fair value of the instrument for each reporting period.

Modification of an Award

~~82.~~83. A modification of a liability award is accounted for as the exchange of the original award for a new award. However, because liability awards are remeasured at their fair value (or calculated value for an entity subject to paragraph 48) at each reporting date, no special guidance is necessary in accounting for a modification of a liability award that remains a liability after the modification.

Look-Back Plans

~~83.~~84. The accounting guidance in this section addresses the accounting for certain employee stock purchase plans with a look-back option. An example of a look-back option is a provision that establishes the purchase price as an amount based on the lesser of the stock's market price at the grant date or its market price at the exercise date (or purchase date).

~~84.~~85. As with all employee share purchase plans, the objective of the measurement process for employee share purchase plans with a look-back option is to reasonably measure fair value of the award at the grant date. Paragraph 71~~70~~ provides guidance on the measurement requirements if it is not possible to reasonably estimate fair value at the grant date.

Accounting for Tax Effects of Share-Based Compensation Awards

~~85.~~86. Income tax regulations specify allowable tax deductions for instruments issued under share-based payment arrangements in determining an entity's income tax liability. For example, under tax law, allowable tax deductions may be measured as the intrinsic value of an instrument on a specified date. The time value component, if any, of the fair value of an instrument generally may not be tax deductible. Therefore, tax deductions may arise in different amounts and in different periods from compensation costs recognized in financial statements. Similarly, the amount of expense reported for an employee stock ownership plan during a period may differ from the amount of the related income tax deduction prescribed by income tax rules and regulations.

~~86.~~87. This guidance addresses how temporary differences are recognized for share-based payment arrangement awards that are classified either as equity or as liabilities under the requirements of paragraphs 14-27. Incremental guidance is also provided for issues related to employee stock ownership plans.

Tax Effects for Instruments Classified as Equity

~~87.~~88. The cumulative amount of compensation cost recognized for instruments classified as equity that ordinarily would result in a future tax deduction under existing tax law shall be considered to be a deductible temporary difference in applying the requirements of *SSAP No. 101—Income Taxes, a Replacement of SSAP No. 10R and SSAP No. 10* (SSAP No. 101). The deductible temporary difference shall be based on the compensation cost recognized for financial reporting purposes. Compensation cost that is capitalized as part of the cost of an asset, such as inventory, shall be considered to be part of the tax basis of that asset for financial reporting purposes.

~~88.~~89. Recognition of compensation cost for instruments that ordinarily do not result in tax deductions under existing tax law shall not be considered to result in a deductible temporary difference. A future event can give rise to a tax deduction for instruments that ordinarily do not result in a tax deduction. The tax effects of such an event shall be recognized only when it occurs. An example of a future event that would be recognized only when it occurs is an employee's sale of shares obtained from an award before meeting a tax law's holding period requirement, sometimes referred to as a disqualifying disposition, which results in a tax deduction not ordinarily available for such an award.

Tax Effects for Instruments Classified as Liability

~~89.~~90. The cumulative amount of compensation cost recognized for instruments classified as liabilities that ordinarily would result in a future tax deduction under existing tax law also shall be considered to be a deductible temporary difference. The deductible temporary difference shall be based on the compensation costs recognized for financial reporting purposes.

Accounting for Tax Effects – Initial Measurement

~~90.~~91. SSAP No. 101 requires a deferred tax asset to be evaluated for future realization and to be reduced by a statutory valuation allowance to the amount that is more likely than not to be realized. Differences between the deductible temporary difference computed pursuant to paragraphs 88-89~~87-88~~ and the tax deduction that would result based on the current fair value of the entity's shares shall not be considered in measuring the gross deferred tax asset or determining the need for a valuation allowance for a deferred tax asset recognized under these requirements.

Accounting for Tax Effects – Subsequent Measurement

~~91.~~92. If a deduction reported on a tax return for an award of equity instruments exceeds the cumulative compensation cost for those instruments recognized for financial reporting, any resulting realized tax benefit that exceeds the previously recognized deferred tax asset for those instruments is the excess tax benefit. If only a portion of an award is exercised, determination of the excess tax benefits shall be based on the portion of the award that is exercised.

~~92.~~93. The amount deductible for an award of equity instruments on the employer's tax return may be less than the cumulative compensation costs recognized for financial reporting purposes. The write-off of a deferred tax asset related to that deficiency, net of the related statutory valuation allowance, if any, shall first be offset to the extent of any remaining gross paid-in and contributed surplus from excess tax benefits arising from previous awards granted, modified, or settled in cash and measured in accordance with a fair value based method of accounting. An entity shall exclude from that amount excess tax benefits from share-based payment arrangements that are outside the scope of this statement, excess tax benefits from employee stock ownership plans, and excess tax benefits that have not been realized pursuant to the requirements established in SSAP No. 101.

~~93.~~94. An excess tax benefit determined pursuant to paragraph 92~~91~~ shall be recognized as gross paid-in and contributed surplus, except that an excess of a realized tax benefit for an award over the deferred tax asset for that award shall be recognized in the income statement to the extent that the excess stems from a reason other than changes in the fair value of an entity's shares between the measurement date for accounting purposes and a later measurement date for tax purposes.

~~94.~~95. Paragraph 93~~92~~ contains measurement guidance on how much, if any, of the write-off of a deferred tax asset from a tax deficiency shall be offset against additional paid-in capital. The remaining balance, if any, of the write-off of a deferred tax asset related to a tax deficiency shall be recognized in the income statement.

Tax Benefits of Dividends on Share-Based Payment Awards to Employees

~~95.~~96. A realized income tax benefit from dividends or dividend equivalents that are charged to unassigned-funds (surplus) and are paid to employees for any of the following equity classified awards shall be recognized as an increase to gross paid-in and contributed surplus:

a. Nonvested equity shares

b. Nonvested equity share units

c. Outstanding equity share options.

~~96.~~97. The amount recognized in gross paid-in and contributed surplus for the realized income tax benefit from dividends on the awards identified in the preceding paragraph shall be included in the pool of excess tax benefits available to absorb tax deficiencies on share-based payment awards.

~~97.~~98. Dividends or dividend equivalents paid to employees for the awards identified in paragraph 96~~95~~ may result in a tax deduction prior to the actual realization of the related tax benefit because the employer, for example, has a net operating loss carryforward. The income tax benefit of those dividends shall not be recognized until the deduction reduces income taxes payable. Unrealized income tax benefits from dividends on equity-classified employee share-based payment awards shall be excluded from the pool of excess tax benefits available to absorb potential future tax deficiencies on share-based payment awards.

~~98.~~99. Dividends or dividend equivalents paid to employees on the portion of an award of equity shares or other equity instruments that vests shall be charged to unassigned funds (surplus). If the related award is not expected to vest, dividends or dividend equivalents shall be recognized as compensation costs. Dividends and dividend equivalents shall be reclassified between unassigned funds (surplus) and compensation costs in a subsequent period if the entity changes its forfeiture estimates (or actual forfeitures differ from previous estimates).

~~99.~~100. Adjustments to gross paid-in and contributed surplus for reclassifications of the tax benefits from dividends on the awards discussed in the preceding paragraph in subsequent periods increase or decrease the entity's pool of excess tax benefits available to absorb tax deficiencies by a corresponding amount. Additionally, the tax benefits from dividends that are reclassified from gross paid-in and contributed surplus to the income statement (that is, as a reduction of income tax expense or an increase of income tax benefit) if an entity's estimate of forfeitures increases (or actual forfeitures exceed the entity's estimates) shall be limited to the entity's pool of excess tax benefits available to absorb tax deficiencies on the date of the reclassification.

Accounting for Rabbi Trusts

~~100.~~101. Rabbi trusts are grantor trusts generally set up to fund compensation for a select group of management or highly paid executives. To qualify as a rabbi trust for income tax purposes, the terms of the trust agreement must explicitly state that the assets of the trust are available to satisfy the claims of general creditors in the event of bankruptcy of the employer.

~~101.~~102. There are four potential scenarios for deferred compensation arrangements where amounts earned by an employee are invested in the stock of the employer and placed in a “rabbi trust.”

Plan A: The plan does not permit diversification and must be settled by the delivery of a fixed number of shares of employer stock.

Plan B: The plan does not permit diversification and may be settled by the delivery of cash or shares of employer stock.

Plan C: The plan permits diversification; however, the employee has not diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

Plan D: The plan permits diversification and the employee has diversified (the plan may be settled in cash, shares of employer stock, or diversified assets).

~~102.~~103. The accounts of the rabbi trust should be consolidated with the accounts of the employer in the financial statements of the employer.

a. For Plan A, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as an equity instrument and changes in the fair value of the amount owed to the employee should not be recognized.

b. For Plans B and C, employer stock held by the rabbi trust should be classified in equity in a manner similar to the manner in which treasury stock is accounted for. Subsequent changes in the fair value of the employer's stock should not be recognized. The deferred compensation obligation should be classified as a liability and adjusted with a corresponding charge (or credit) to compensation cost, to reflect the changes in the fair value of the amount owed to the employee.

c. For Plan D, assets held by the rabbi trust should be accounted for in accordance with statutory accounting principles for the particular asset (for example, if the diversified asset is a marketable equity security, that security would be accounted for in accordance with SSAP No. 30). The deferred compensation obligation should be classified as a liability and adjusted, with a corresponding charge (or credit) to compensation cost, to reflect changes in the fair value of the amount owed to the employee. Changes in the fair value of the deferred compensation obligation should not be recorded in unrealized gains or losses, even if changes in the fair value of the assets held by the rabbi trust are recorded in surplus pursuant to *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled or affiliated entities)*..

Disclosures – Employee Share-Based Payments

~~103.~~104. An entity with one or more share-based payment arrangements shall disclose information that enables users of the financial statements to understand all of the following:

a. The nature and terms of such arrangements that existed during the period and the potential effects of those arrangements on shareholders;

b. The effect of compensation costs arising from share-based payment arrangements on the income statement;

c. The method of estimating the fair value of the goods or services received, or the fair value of the equity instruments granted (or offered to grant), during the period; and

d. The cash flow effects resulting from share-based payment arrangements.

~~104.~~105. The disclosures in paragraph 104~~103~~ are for annual audited statutory financial statements only. Appendix B illustrates the information needed to achieve the objectives in this paragraph.

Employee Share-Based Payments - Noncompensatory Plans

Overview and Background

~~105.~~106. This section provides guidance to all entities that use employee share purchase plans. The entity must first determine whether the plan is compensatory or noncompensatory. This is determined by the terms of the plan (paragraphs 107-108~~106-107~~). A plan with an option feature, for example a look-back feature, is considered compensatory.

Recognition

~~106.~~107. An employee share purchase plan that satisfies all of the following criteria does not give rise to recognizable compensation costs (that is, the plan is noncompensatory):

a. The plan satisfies either of the following conditions:

i. The terms of the plan are no more favorable than those available to all holders of the same class of shares. Note that a transaction subject to an employee share purchase plan that involves a class of equity shares designed exclusively for and held only by current or former employees or their beneficiaries may be compensatory depending on the terms of the arrangement.

ii. Any purchase discount from the market price does not exceed the per-share amount of share issuance costs that would have been incurred to raise a significant amount of capital by a public offering. A purchase discount of 5 percent or less from the market price shall be considered to comply with this condition without further justification. A purchase discount greater than 5 percent that cannot be justified under this condition results in compensation cost for the entire amount of the discount. Note that an entity that justifies a purchase discount in excess of 5 percent shall reassess at least annually, and no later than the first share purchase offer during the fiscal year, whether it can continue to justify that discount pursuant to this paragraph.

b. Substantially all employees that meet limited employment qualifications may participate on an equitable basis.

c. The plan incorporates no option features, other than the following:

i. Employees are permitted a short period of time—not exceeding 31 days—after the purchase price has been fixed to enroll in the plan.

ii. The purchase price is based solely on the market price of the shares at the date of purchase, and employees are permitted to cancel participation before the purchase date and obtain a refund of amounts previously paid (such as those paid by payroll withholdings).

~~107.~~108. A plan provision that establishes the purchase price as an amount based on the lesser of the equity share's market price at date of grant or its market price at date of purchase, commonly called a look-back plan, is an example of an option feature that causes the plan to be compensatory. Similarly, a plan in which the purchase price is based on the share's market price at date of grant and that permits a participating employee to cancel participation before the purchase date and obtain a refund of amounts previously paid contains an option feature that causes the plan to be compensatory.

~~108.~~109. The requisite service period for any compensation cost resulting from an employee share purchase plan is the period over which the employee participates in the plan and pays for the shares.

Initial Measurement

~~109.~~110. The objective in paragraph 36 also applies to the fair value measurements associated with grants under a compensatory employee share purchase plan. The objective in this paragraph states that the fair value measurement method is to estimate the fair value of the equity instruments, based on the share price and other measurement assumptions at the grant date, that are issued in exchange for employee services.

Subsequent Measurement

~~110.~~111. Changes in total employee withholdings during a purchase period that occur solely as a result of salary increases, commissions, or bonus payments are not plan modifications if they do not represent changes to the terms of the award that was offered by the employer and initially agreed to by the employee at the grant (or measurement) date. Under those circumstances, the only incremental compensation cost is that which results from the additional shares that may be purchased with the additional amounts withheld (using the fair value calculated at the grant date). For example, an employee may elect to participate in the plan on the grant date by requesting that 5 percent of the employee's annual salary be withheld for future purchases of stock. If the employee receives an increase in salary during the term of the award, the base salary on which the 5 percent withholding amount is applied will increase, thus increasing the total amount withheld for future share purchases. That increase in withholdings as a result of the salary increase is not considered a plan modification and thus only increases the total compensation cost associated with the award by the grant date fair value associated with the incremental number of shares that may be purchased with the additional withholdings during the period. The incremental number of shares that may be purchased is calculated by dividing the incremental amount withheld by the exercise price as of the grant date (for example, 85 percent of the grant date stock price).

~~111.~~112. Any decreases in the withholding amounts (or percentages) shall be disregarded for purposes of recognizing compensation cost unless the employee services that were valued at the grant date will no longer be provided to the employer due to a termination. However, no compensation cost shall be recognized for awards that an employee forfeits because of failure to satisfy a service requirement for vesting. The accounting for decreases in withholdings is consistent with the requirement in paragraph 58 that the total amount of compensation cost that must be recognized for an award be based on the number of instruments for which the requisite service has been rendered (that is, for which the requisite service period has been completed).

Employee Share-Based Payments - Consolidated / Holding Company Plans

~~112.~~113. Except for the disclosure requirement in paragraph 114~~113~~, the provisions of this statement do not apply to a reporting entity, as long as:

a. The reporting entity is not directly liable for obligations under the share-based payment plan.

b. Compensation costs associated with share-based payments provided by a related party or holder of an economic interest in the reporting entity, equal to the required contribution to the plan for the period, are included in allocated expenses to the reporting entity. A liability shall be established for any such contributions due and unpaid.

~~113.~~114. The reporting entity shall disclose in the financial statements that its employees participate in a plan sponsored by the holding company for which the reporting entity has no legal obligation. The amount of the expense incurred and the allocation methodology utilized by the provider of such benefits shall also be disclosed.

~~114.~~115. If the reporting entity is directly liable for the share-based payment plan, then the other provisions of this statement apply.

Non-Employee Share-Based Payments

~~115.~~116. Reporting entities that grant share-based payments to non-employees shall recognize the goods acquired or services received as part of the transaction when it obtains the goods or as services are received. A grantor may need to recognize a nonadmitted prepaid asset before it actually receives goods or services if it first exchanges share-based payment for an enforceable right to receive those goods or services. Nonetheless, the goods or services shall not be recognized before they are received. (The nonadmitted asset recognized prior to the goods and services would be eliminated upon receipt of the goods and services that are recognized.)

~~116.~~117. If fully vested, nonforfeitable equity instruments are issued at the date the grantor and grantee enter into an agreement for goods or services (no specific performance is required by the grantee to retain those equity instruments), then, because of the elimination of any obligation on the part of the counterparty to earn the equity instruments, a measurement date has been reached. A grantor shall recognize the equity instruments when they are issued (in most cases, when the agreement is entered into). Whether the corresponding cost is an immediate expense or a nonadmitted prepaid asset depends on the specific facts and circumstances. A grantor may conclude that an asset (other than a note or a receivable) has been received in return for fully-vested, nonforfeitable equity instruments that are issued at the date the grantor and grantee enter into an agreement for goods or services (and no specific performance is required by the grantee in order to retain those equity instruments). Such an asset shall not be displayed as contra-equity by the grantor of the equity instrument. The transferability (or lack thereof) of the equity instruments shall not affect the balance sheet display of this nonadmitted prepaid asset. This guidance is limited to transactions in which equity instruments are transferred to other than employees in exchange for goods or services.

~~117.~~118. An entity may grant fully vested, nonforfeitable equity instruments that are exercisable by the grantee only after a specified period of time if the terms of the agreement provide for earlier exercisability if the grantee achieves specified performance conditions. Any measured cost of the transaction shall be recognized in the same period(s) and in the same manner as if the entity had paid cash for the goods or services or used cash rebates as a sales discount instead of paying with, or using, the equity instruments.

~~118.~~119. A recognized nonadmitted prepaid asset, expense, or sales discount shall not be reversed if a stock option that the counterparty has the right to exercise expires unexercised. As noted in paragraph 116~~115~~, the goods and services shall not be recognized before they are received.

~~119.~~120. A grantor shall recognize either a corresponding increase in equity or a liability, depending on whether the instruments granted satisfy the equity or liability classification criteria established in paragraphs 14-27 for employee share-based payments. As the goods or services are disposed of or consumed, the grantor shall recognize the related cost, unless other statutory accounting principles require costs to be expensed when incurred. In these instances, when the goods or services are received, the grantor shall recognize the related cost.

Initial Measurement – Reporting Entity Grantor/Issuer

~~120.~~121. Share-based payment transactions with non-employees shall be measured at the fair value of the consideration received or the fair value of the equity instruments issued, whichever is more reliably measurable.

~~121.~~122. The accounting for all share-based payment transactions shall reflect the rights conveyed to the holder of the instruments and the obligations imposed on the issuer of the instruments, regardless of how those transactions are structured. The terms of a share-based payment award and any related arrangement affect its value and, except for certain explicitly excluded features, such as a reload feature, shall be reflected in determining the fair value of the equity or liability instruments granted. Assessment of both the rights and obligations in a share-based payment award and any related arrangement and how those rights and obligations affect the fair value of an award requires the exercise of judgment in considering the relevant facts and circumstances. The minimum value method (a method that reflects the time value of an option but ignores the volatility value) is not an acceptable method for determining the fair value of non-employee awards.

~~122.~~123. If the fair value of goods or services received in a share-based payment transaction with non-employees is more reliably measurable than the fair value of the equity instruments issued, the fair value of the goods or services received shall be used to measure the transaction. In contrast, if the fair value of the equity instruments issued in a share-based payment transaction with non-employees is more reliably measurable than the fair value of the consideration received, the transaction shall be measured based on the fair value of the equity instruments issued.

~~123.~~124. Sales incentives in the form of equity instruments shall be measured at the fair value of the sales incentive or the fair value of the equity instruments issued, whichever is more reliably measurable.

~~124.~~125. The issuer/grantor shall measure the fair value of the equity instruments provided in share-based payment transactions using the stock price and other measurement assumptions as of the earlier of the following dates, referred to as the measurement date:

a. The date at which a commitment for performance by the counterparty to earn the equity instruments is reached (a performance commitment[4])

b. The date at which the counterparty's performance is complete.

~~125.~~126. The counterparty's performance is complete when the counterparty has delivered or, in the case of sales incentives, purchased the goods or services, despite the fact that at that date the quantity or all the terms of the equity instruments may yet depend on other events (this would occur, for example, if a target stock price requirement has not been met when the counterparty has delivered the goods or services).

~~126.~~127. Situations may arise in which counterparty performance may be required over a period of time but the equity award granted to the party performing the services is fully vested and nonforfeitable on the date the parties enter into the contract. While this type of arrangement may be rare, because, typically, vesting provisions do exist, the measurement date for an award that is nonforfeitable and that vests immediately could be the date the parties enter into the contract, even though services have not yet been performed.

~~127.~~128. If fully vested, nonforfeitable equity instruments are issued at the date the grantor and grantee enter into an agreement for goods or services (no specific performance is required by the grantee to retain those equity instruments), then, because of the elimination of any obligation on the part of the counterparty to earn the equity instruments, a measurement date has been reached.

~~128.~~129. If an entity grants fully vested, nonforfeitable equity instruments that are exercisable by the grantee only after a specified period of time and the terms of the agreement provide for earlier exercisability if the grantee achieves specified performance conditions, the grantor shall measure the fair value of the equity instruments at the date of grant and shall recognize that measured cost in the same period(s) and in the same manner as if the grantor had paid cash.

[4] A performance commitment is a commitment under which performance by the grantee to earn the equity instruments is probable because of sufficiently large disincentives for nonperformance. The disincentives must result from the relationship between the grantor and the grantee. Forfeiture of the equity instruments as the sole remedy in the event of the grantee's nonperformance is not considered a sufficiently large disincentive for purposes of applying the guidance. In addition, the ability to sue for nonperformance, in and of itself, does not represent a sufficiently large disincentive to ensure that performance is probable. (A granting entity may always be able to sue for nonperformance but it is not always clear whether any significant damages would result.)

Initial Measurement – Reporting Entity Grantee/Provider

~~129.~~130. An entity (the grantee or provider) may enter into transactions to provide goods or services in exchange for equity instruments. The grantee shall measure the fair value of the equity instruments in these transactions using the stock price and other measurement assumptions as of the earlier of either of the following dates referred to as the measurement date:

a. The date the parties come to a mutual understanding of the terms of the equity-based compensation arrangement and a commitment for performance by the grantee to earn the equity instruments (a performance commitment[5]) is reached, or

b. The date at which the grantee's performance necessary to earn the equity instruments is complete (that is, the vesting date).

Measurement Before the Measurement Date

~~130.~~131. In accordance with other accounting guidance, it may be appropriate for an issuer to recognize costs related to share-based payment transactions with non-employees before a measurement date has occurred:

a. If the quantity and terms of the equity instruments are known up front, the equity instruments shall be measured at their then-current fair values at each interim financial reporting date.

b. If the quantity and terms of the equity instruments are not known up front, and the transaction is only impacted by market conditions, the equity instruments shall be measured at their then-current fair values at each interim financial reporting date.

c. If the quantity and terms of the equity instruments are not known up front, and the transaction is only impacted by counterparty performance conditions or both market conditions and counterparty performance conditions, the equity instruments shall be measured at their then-current best estimate of the possible outcomes. When no amount within a range can be deemed a better estimate, then the midpoint of the range shall be used.

Measurement at the Measurement Date – Transactions Involve Only Market Conditions

~~131.~~132. The quantity or terms of an equity instrument may be dependent only on market conditions. If, on the measurement date, the quantity or any of the terms of the equity instruments are dependent on the achievement of market conditions, then the issuer shall use the fair value of the equity instruments for recognition purposes. That fair value shall be calculated as the fair value of the equity instruments without regard to the market condition plus the fair value of the issuer's commitment to change the quantity or terms of the equity instruments based on whether the market condition is met.

~~132.~~133. As it relates to a grantee, if on the measurement date the quantity or any of the terms of the equity instrument are dependent on the achievement of a market condition, then the grantee shall measure revenue based on the fair value of the equity instruments inclusive of the adjustment provisions. That fair value would be calculated as the fair value of the equity instruments without regard to the market condition plus the fair value of the commitment to change the quantity or terms of the equity instruments if the market condition is met. That is, the existence of a market condition that, if achieved, results in an adjustment to an equity instrument generally affects the value of the instrument. Pricing models have been adapted to value many of those path-dependent equity instruments.

[5] See Footnote 4.

~~133.~~134. The quantity or terms of an equity instrument may be dependent on counterparty performance conditions. If, on the measurement date, the quantity or any of the terms of the equity instruments are dependent on the achievement of counterparty performance conditions that, based on the different possible outcomes, result in a range of aggregate fair values for the equity instruments as of that date, then the issuer should utilize the best estimate (that is, the variable terms times the applicable number of equity instruments) amount within that range for recognition purposes. When no amount within the range can be deemed a better estimate, then the midpoint of the range shall be used. The amount may be zero only if zero is determined to be the best estimate. This guidance also applies if the quantity or terms of an equity instrument is dependent on both market conditions and counterparty performance conditions.

Subsequent Measurement

~~134.~~135. After the issuer measures the then-current fair value of the issuer's commitment related to the market condition as described in paragraph 132~~131~~, the issuer shall, to the extent necessary, recognize and classify future changes in the fair value of this commitment in accordance with any relevant accounting guidance on financial instruments.

~~135.~~136. Paragraph 134~~133~~ provides measurement date guidance on the measurement of transactions that involve counterparty performance conditions. As each quantity and term become known and until all the quantities and terms that stem from the counterparty's performance become known, the best estimate or midpoint aggregate fair value measured pursuant to the guidance in that paragraph shall be adjusted, to reflect additional cost of the transaction, using the modification accounting methodology described in paragraphs 73-74~~72-73~~. That is, the adjustment shall be measured at the date of the revision of the quantity or terms of the equity instruments as the difference between the then-current fair value of the revised instruments utilizing the then-known quantity or term and the then-current fair value of the old equity instruments immediately before the quantity or term becomes known. The then-current fair value is calculated using the assumptions that result in the best estimate or midpoint aggregate fair value (in accordance with paragraph 134~~133~~) if the quantity or any other terms remain unknown.

~~136.~~137. Paragraph 134~~133~~ also provides measurement date guidance on the measurement of transactions that involve both market conditions and counterparty performance conditions. Through the date the last performance-related condition is resolved, the issuer shall apply modification accounting (paragraphs 73-74~~72-73~~) for the resolution of both counterparty performance conditions and market conditions. If, at the time the last counterparty performance-related condition is resolved, any market conditions remain, then the issuer shall measure the then-current fair value of the issuer's commitment to issue additional equity instruments or change the terms of the equity instruments based on whether the market condition is met. This measured amount is an additional cost of the transaction. After the issuer measures the then-current fair value of the issuer's commitment related to the market condition, the issuer shall, to the extent necessary, recognize and classify future changes in the fair value of this commitment in accordance with any relevant accounting literature on financial instruments.

~~137.~~138. Paragraph 129~~128~~ addresses the situation in which an entity grants fully vested, nonforfeitable equity instruments with terms that provide for potential acceleration of exercisability and establishes that the grantor shall measure the fair value of the equity instruments at the date of grant and shall recognize that measured cost in the same period(s) and in the same manner as if the grantor had paid cash. For these situations, if, after the arrangement date, the grantee performs as specified and exercisability is accelerated, the grantor shall record incremental cost measured at the date of the revision of the terms of the equity instruments (that is, the acceleration date) as the difference between the then-current fair value of the revised instruments utilizing the accelerated exercisability date and the then-current fair value of the old equity instruments immediately before exercisability is accelerated. If the only change in the terms of the equity instruments is the acceleration of exercisability, the application of this methodology will only result in a significant additional charge if the expected dividend on the underlying instrument exceeds the sum of the effect of discounting the exercise price and the loss of time value (exclusive of the effect of discounting the exercise price) resulting from the early exercise of the equity instrument.

Subsequent Measurement – Grantee Accounting

~~138.~~139. A grantee may be party to an arrangement in which the terms of the equity instruments are subject to adjustment after the measurement date. Paragraphs 140-141~~139-140~~ address transactions in which any of the terms of the equity instruments are subject to adjustment after the measurement date (that is, the terms of the equity instrument are subject to adjustment based on performance above the level committed to in a performance commitment, performance after the instrument is earned, or market conditions) and how the grantee shall account for an increase in fair value as a result of an adjustment (upon resolution of the contingency after the measurement date) as revenue.

~~139.~~140. If, on the measurement date, the quantity or any of the terms of the equity instruments are dependent on the achievement of grantee performance conditions (beyond those conditions for which a performance commitment exists), then changes in fair value of the equity instrument that result from an adjustment to the instrument upon the achievement of a performance condition shall be measured as additional revenue from the transaction using a methodology consistent with modification accounting described in paragraphs 73-74~~72-73~~. That is, the adjustment shall be measured at the date of the revision of the quantity or terms of the equity instrument as the difference between the then-current fair value of the revised instruments utilizing the then-known quantity and terms and the then-current fair value of the old equity instruments immediately before the adjustment.

~~140.~~141. Changes in fair value of the equity instruments after the measurement date unrelated to the achievement of performance conditions shall be accounted for in accordance with any relevant guidance on the accounting and reporting for investments in equity instruments.

Disclosures - Non-Employee Share Based Payment

~~141.~~142. An entity (grantor) that acquires goods or services other than employee services in share-based payment transactions shall provide disclosures similar to those required by paragraphs 104-105~~103-104~~ to the extent that those disclosures are important to an understanding of the effects of those transactions on the financial statements. These disclosures, if applicable, are for annual audited statutory financial statements only.

~~142.~~143. An entity (grantee) shall disclose, in each period's financial statements, the amount of gross operating revenue recognized as a result of nonmonetary transactions addressed within this statement. These disclosures, if applicable, are for annual audited statutory financial statements only.

Relevant Literature

144. This statement adopts *ASU 2014-12, Compensation – Stock Compensation, Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period* (ASU 2014-12) with an effective date of January 1, 2016, with early adoption permitted. ASU 2014-12 allows prospective or retrospective adoption based on the election of the reporting entity. This election is adopted for statutory financial statements; however, reporting entities shall follow the approach used when completing their GAAP financials (if applicable). The disclosures in *SSAP No. 3—Accounting Changes and Corrections of Errors* shall be completed in the first interim and annual reporting period of adoption.

~~143.~~145. This statement adopts with modification GAAP guidance regarding stock options and stock purchase plans reflected in *Topic 718: Compensation – Stock Compensation, as amended by ASU 2010-13, Compensation – Stock Compensation (Topic 18): Effect of Denominating the Exercise Price of a Share-Based Payment Award in the Current of the Market in Which the Underlying Equity Security*

Trades, with the exception of FASB Codification *Subtopic 718-40: Employee Stock Ownership Plans*. Statutory guidance on employee stock ownership plans is provided in *SSAP No. 12—Employee Stock Ownership Plans*. This adoption with modification includes the related implementation guidance reflected within the FASB Codification Topic 718, not reflected within this standard. Modifications to the adopted GAAP guidance are as follows:

a. GAAP references are revised to reference applicable statutory accounting guidance.

b. GAAP reporting line items (either explicitly provided in the statement or adopted by reference – such as the GAAP implementation guidance) shall be replaced to reference applicable statutory annual statement line items. (For example, GAAP references to "other comprehensive income" shall be reflected within "Surplus - Unassigned Funds").

c. GAAP guidance to calculate earnings per share is not applicable to statutory accounting and has not been included within the statement.

d. GAAP effective date and transition, and transition disclosures have not been incorporated. Reporting entities shall follow the effective date and transition elements provided within this statement.

e. Inclusion of guidance specific to statutory for consolidated/holding company plans.

~~144.~~146. This statement adopts with modification GAAP guidance regarding the exchange of equity instruments for goods or services with non-employees as reflected *in Subtopic 505-50 – Equity, Equity-Payments to Non-Employees*. Modifications to this adopted GAAP guidance are as follows:

a. Prepaid assets are nonadmitted.

b. Costs for goods and services shall be recognized when the goods or services are received consistent with other statutory accounting principles.

c. Minimum value method for determining fair value is rejected for all entities.

d. Estimates of expected costs for the exchange of equity instruments dependent on market conditions or performance obligations shall be determined based on the best estimate of fair values. If a better estimate cannot be determined, then the midpoint (rather than the lowest amount) of aggregate fair values within the range shall be used.

e. GAAP references are revised to reference applicable statutory accounting guidance.

~~145.~~147. The adoption with modification of FASB Codification Topic 718 and Subtopic 505-50 detailed in paragraphs 145-146~~143-144~~ also reflects adoption with modification of the following pre-codification GAAP standards:

a. *FAS 123R, Share-Based Payment* (FAS 123R);

b. *FAS 150, Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity* (FAS 150) – (Adopted only to the extent referenced in FAS 123R for classifying instruments as equity or liability for application in this statement. Adopted guidance is reflected in Appendix A);

c. *FASB Staff Position FAS 123(R)-1: Classification and Measurement of Freestanding Financial Instruments Originally issued in Exchange for Employee Services under FASB Statement No. 123(R)* (FAS 123R-1);

d. *FASB Staff Position (FSP) FAS 123(R)-2: Practical Accommodation to the Application of Grant Date as Defined in FASB Statement No. 123(R)* (FSP FAS 123R-2);

e. *FASB Staff Position (FSP) FAS123(R)-4: Classification of Options and Similar Instruments Issued as Employee Compensation That Allow for Cash Settlement upon the Occurrence of a Contingent Event* (FSP FAS 123R-4);

f. *FASB Staff Position (FSP) FAS 123(R)-5: Amendment of FASB Staff Position FAS 123R-1* (FSP FAS 123R-5);

g. *FASB Staff Position (FSP) FAS 123(R)-6: Technical Corrections of FASB Statement No. 123(R)* (FSP FAS 123R-6);

h. *FASB Emerging Issues Task Force 96-18: Accounting for Equity Instruments That are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling Goods or Services;*

i. *FASB Emerging Issues Task Force 97-14: Accounting for Deferred Compensation Arrangements Where Amounts Earned Are Held in a Rabbi Trust and Invested* (EITF 97-14);

j. *FASB Emerging Issues Task Force 00-08: Accounting by a Grantee for an Equity Instrument to Be Received in Conjunction with Providing Goods or Services;*

k. *FASB Emerging Issues Task Force 00-16: Recognition and Measurement of Employer Payroll Taxes on Employee Stock-Based Compensation* (EITF 00-16);

l. *FASB Emerging Issues Task Force 00-18: Accounting Recognition for Certain Transactions Involving Equity Instruments Granted to Other Than Employees*; and

m. *FASB Technical Bulletin 97-01, Accounting under Statement 123 for Certain Employee Stock Purchase Plans with a Look-Back Option* (TB 97-01)

~~146.~~148. The adoption with modification of FASB Codification Topic 718 in this statement reflects rejection of the following pre-codification GAAP standards:

a. *FASB Staff Position (FSP) FAS 123(R)-3: Transition Election Related to Accounting for the Tax Effects of Share-Based Payment Awards* (FSP FAS 123R-3); and

b. *FASB Staff Position (FSP) EITF 03-6-1; Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities* (FSP EITF 03-6-1),.

Effective Date and Transition

~~147.~~149. This statement shall be effective prospectively (paragraph 120~~119~~) for years beginning January 1, 2013, with interim and annual financial reporting thereafter. The cumulative effect of initially applying this statement, if any, shall be recognized as of the required effective date as a change in accounting principle under SSAP No. 3. Early adoption is permitted for December 31, 2012, financial statements, with interim and annual reporting thereafter.

~~148.~~150. Reporting entities with existing share-based payment instruments that applied the guidance contained in *SSAP No. 13—Stock Options and Stock Purchase Plans* (SSAP No. 13) shall apply the requirements of the adopted SSAP No. 104 prospectively to new awards and to awards modified, repurchased, or cancelled after the required effective date. Those reporting entities shall continue to account for any portion of awards outstanding at the date of initial application using the accounting principles originally applied to those awards (SSAP No. 13).

~~149.~~151. The substantive revisions to this statement to incorporate guidance for share-based payment transactions for non-employees, reflected predominantly in paragraphs 116-143~~115-142~~, are effective prospectively initially for years ending December 31, 2014. The cumulative effect of initially applying this statement, if any, shall be recognized as of the required effective date as a change in accounting principle under *SSAP No. 3—Accounting Changes and Corrections of Errors* (SSAP No. 3).

152. The guidance in paragraph 56 is effective as of January 1, 2016, with early adoption permitted.

APPENDIX A – Classification Criteria: Liability or Equity

Classification Criteria

1. As detailed in paragraph 14 of the statement, an entity shall apply the classification criteria detailed in paragraphs 14-27 in the statement, as they are effective at the reporting date, in determining whether to classify as a liability a freestanding financial instrument given to an employee in a share-based payment transaction.

2. The guidance in this Section shall be applied to a freestanding financial instrument in its entirety. Any nonsubstantive or minimal features shall be disregarded in applying the classification provisions of this Section. Judgment, based on consideration of all the terms of an instrument and other relevant facts and circumstances, is necessary to distinguish substantive, nonminimal features from nonsubstantive or minimal features.

Mandatorily Redeemable Financial Instruments

3. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the reporting entity.

4. A financial instrument that embodies a conditional obligation to redeem the instrument by transferring assets upon an event not certain to occur becomes mandatorily redeemable if that event occurs, the condition is resolved, or the event becomes certain to occur.

5. In determining if an instrument is mandatorily redeemable, all terms within a redeemable instrument shall be considered. The following items do not affect the classification of a mandatorily redeemable financial instrument as a liability:

a. A term extension option

b. A provision that defers redemption until a specified liquidity level is reached

c. A similar provision that may delay or accelerate the timing of a mandatory redemption.

6. If a financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument in this statement. However, that financial instrument would be assessed at each reporting period to determine whether circumstances have changed such that the instrument now meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument is reclassified as a liability.

Obligations to Repurchase Issuer's Equity Shares by Transferring Assets

7. An entity shall classify as a liability (or an asset in some circumstances) any financial instrument, other than an outstanding share, that, at inception, has both of the following characteristics:

a. It embodies an obligation to repurchase the issuer's equity shares, or is indexed to such an obligation, and

b. It requires or may require the issuer to settle the obligation by transferring assets.

8. In this statement, "indexed to" is used interchangeably with "based on variations in the fair value of." The phrase "requires or may require" encompasses instruments that either conditionally or

unconditionally obligate the issuer to transfer assets. If the obligation is conditional, the number of conditions leading up to the transfer of assets is irrelevant.

9. Examples of financial instruments that meet the criteria in paragraph 7 of Appendix A include forward purchase contracts or written put options on the issuer's equity shares that are to be physically settled or net cash settled.

10. All obligations that permit the holder to require the issuer to transfer assets result in liabilities, regardless of whether the settlement alternatives have the potential to differ.

11. Certain financial instruments that embody obligations that are liabilities within the scope of this statement also may contain characteristics of assets but be reported as single items. Some examples include the following:

a. Net-cash-settled or net-share-settled forward purchase contracts.

b. Certain combined options to repurchase the issuer's shares.

Those instruments are classified as assets or liabilities initially or subsequently depending on the instrument's fair value on the reporting date.

12. An instrument that requires the issuer to settle its obligation by issuing another instrument (for example, a note payable in cash) ultimately requires settlement by a transfer of assets, accordingly:

a. When applying paragraphs 7-11 of Appendix A, this also would apply for an instrument settled with another instrument that ultimately may require settlement by a transfer of assets (warrants for puttable shares).

b. It is clear that a warrant for mandatorily redeemable shares would be a liability under this statement.

Certain Obligations to Issue a Variable Number of Shares

13. A financial instrument that embodies an unconditional obligation, or a financial instrument other than an outstanding share that embodies a conditional obligation, that the issuer must or may settle by issuing a variable number of its equity shares shall be classified as a liability (or an asset in some circumstances) if, at inception, the monetary value of the obligation is based solely or predominantly on any one of the following:

a. A fixed monetary amount known at inception (for example, a payable settleable with a variable number of the issuer's equity shares),

b. Variations in something other than the fair value of the issuer's equity shares (for example, a financial instrument indexed to the Standard and Poor's S&P 500 Index and settleable with a variable number of the issuer's equity shares), or

c. Variations inversely related to changes in the fair value of the issuer's equity shares (for example, a written put option that could be net share settled).

Prohibition on Combining Freestanding Financial Instruments

14. A freestanding financial instrument that is within the scope of this statement shall not be combined with another freestanding financial instrument in applying paragraphs 3-13 of Appendix A. For example, a freestanding written put option that is classified as a liability under this statement shall not be combined with an outstanding equity share.

Distinguishing Liability from Equity – Scope and Scope Exclusions

15. The guidance in paragraphs 14-27 of this statement applies to any freestanding financial instrument, including one that has any of the following attributes:

a. Comprises more than one option or forward contract, or

b. Has characteristics of both a liability and equity and, in some circumstances, also has characteristics of an asset (for example, a forward contract to purchase the issuer's equity shares that is to be net cash settled). Accordingly, this statement does not address an instrument that has only characteristics of an asset.

For example, an instrument that consists of a written put option for an issuer's equity shares and a purchased call option and nothing else is a freestanding financial instrument. That freestanding financial instrument embodies an obligation to repurchase the issuer's equity shares and is subject to the requirements of this statement.

APPENDIX B – Disclosure Information

1. The following list indicates the minimum information needed to achieve the objectives in paragraphs 104~~103~~ and 142~~141~~ illustrate how the disclosure requirements might be satisfied. In some circumstances, an entity may need to disclose information beyond the following to achieve the disclosure objectives:

a. A description of the share-based payment arrangement(s), including the general terms of awards under the arrangement(s), such as:

i. The requisite service period(s) and any other substantive conditions (including those related to vesting)

ii. The maximum contractual term of equity (or liability) share options or similar instruments

iii. The number of shares authorized for awards of equity share options or other equity instruments.

b. The method it uses for measuring compensation cost from share-based payment arrangements with employees.

c. For the most recent year for which an income statement is provided, both of the following:

i. The number and weighted-average exercise prices (or conversion ratios) for each of the following groups of share options (or share units):

(a) Those outstanding at the beginning of the year

(b) Those outstanding at the end of the year

(c) Those exercisable or convertible at the end of the year

(d) Those that during the year were:

(1) Granted

(2) Exercised or converted

(3) Forfeited

(4) Expired

ii. The number and weighted-average grant-date fair value (or calculated value for an entity that uses that method or intrinsic value for awards measured pursuant to paragraph 49) of equity instruments not specified in (c)(1), for all of the following groups of equity instruments:

(a) Those nonvested at the beginning of the year

(b) Those nonvested at the end of the year

(c) Those that during the year were:

(1) Granted

(2) Vested

(3) Forfeited

d. For each year for which an income statement is provided, both of the following:

i. The weighted-average grant-date fair value (or calculated value for an entity that uses that method or intrinsic value for awards measured at that value pursuant to paragraphs 49-50) of equity options or other equity instruments granted during the year, and

ii. The total intrinsic value of options exercised (or share units converted), share-based liabilities paid, and the total fair value of shares vested during the year.

e. For fully vested share options (or share units) and share options expected to vest at the date of the latest statement of financial position, both of the following:

i. The number, weighted-average exercise price (or conversion ratio), aggregate intrinsic value, and weighted-average remaining contractual term of options (or share units) outstanding, and

ii. The number, weighted-average exercise price (or conversion ratio), aggregate intrinsic value, and weighted-average remaining contractual term of options (or share units) currently exercisable (or convertible).

f. For each year for which an income statement is presented, both of the following (An entity that uses the intrinsic value method pursuant to paragraphs 49-50 is not required to disclose the following information for awards accounted for under that method):

i. A description of the method used during the year to estimate the fair value (or calculated value) of awards under share-based payment arrangements, and

ii. A description of the significant assumptions used during the year to estimate the fair value (or calculated value) of share-based compensation awards, including (if applicable):

(a) Expected term of share options and similar instruments, including a discussion of the method used to incorporate the contractual term of the instruments and employees' expected exercise and postvesting employment termination behavior into the fair value (or calculated value) of the instrument.

(b) Expected volatility of the entity's shares and the method used to estimate it. An entity that uses a method that employs different volatilities during the contractual term shall disclose the range of expected volatilities used and the weighted-average expected volatility. An entity that uses the calculated value method shall disclose the reasons why it is not practicable for it to estimate the expected volatility of its share price, the appropriate industry sector index that it has selected, the reasons for selecting that particular index, and how it has calculated historical volatility using that index.

(c) Expected dividends. An entity that uses a method that employs different dividend rates during the contractual term shall disclose the range of expected dividends used and the weighted-average expected dividends.

(d) Risk-free rate(s). An entity that uses a method that employs different risk-free rates shall disclose the range of risk-free rates used.

(e) Discount for post-vesting restrictions and the method for estimating it.

g. An entity that grants equity or liability instruments under multiple share-based payment arrangements with employees shall provide the information specified in paragraph (a) through (f) separately for different types of awards to the extent that the differences in the characteristics of the awards make separate disclosure important to an understanding of the entity's use of share-based compensation. For example, separate disclosure of weighted-average exercise prices (or conversion ratios) at the end of the year for options (or share units) with a fixed exercise price (or conversion ratio) and those with an indexed exercise price (or conversion ratio) could be important. It also could be important to segregate the number of options (or share units) not yet exercisable into those that will become exercisable (or convertible) based solely on fulfilling a service condition and those for which a performance condition must be met for the options (share units) to become exercisable (convertible). It could be equally important to provide separate disclosures for awards that are classified as equity and those classified as liabilities. In addition, an entity that has multiple share-based payment arrangements with employees shall disclose information separately for different types of awards under those arrangements to the extent that differences in the characteristics of the awards make separate disclosure important to an understanding of the entity's use of share-based compensation.

h. For each year for which an income statement is presented, both of the following:

i. Total compensation cost for share-based payment arrangements

(a) Recognized in income as well as the total recognized tax benefit related thereto

(b) Capitalized as part of the cost of an asset.

ii. A description of significant modifications, including:

(a) The terms of the modifications,

(b) The number of employees affected,

(c) The total incremental compensation cost resulting from the modifications.

i. As of the latest balance sheet date presented, the total compensation cost related to nonvested awards not yet recognized and the weighted-average period over which it is expected to be recognized.

j. If not separately disclosed elsewhere, the amount of cash received from exercise of share options and similar instruments granted under share-based payment arrangements and the tax benefit realized from stock options exercised during the annual period.

k. If not separately disclosed elsewhere, the amount of cash used to settle equity instruments granted under share-based payment arrangements.

l. A description of the entity’s policy, if any, for issuing shares upon share option exercise (or share unit conversion), including the source of those shares (that is, new shares or treasury shares). If as a result of its policy, an entity expects to repurchase shares in the following annual period, the entity shall disclose an estimate of the amount (or a range, if more appropriate) of shares to be repurchased during that period.

2. In addition to the information required by this statement, an entity may disclose supplemental information that it believes would be useful to investors and creditors, such as a range of values calculated on the basis of different assumptions, provided that the supplemental information is reasonable and does not lessen the prominence and credibility of the information required by this statement. The alternative assumptions shall be described to enable users of the financial statements to understand the basis for the supplemental information.

Working Capital Finance Investments

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for working capital finance investments held by reporting entities. This statement amends *SSAP No. 20—Nonadmitted Assets* (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this statement.

SUMMARY CONCLUSION

2. Working capital finance investments represent a confirmed short-term obligation[1] to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office. Pursuant to the working capital finance investment program, this short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third party investor.

3. Working capital finance investments held by a reporting entity represent a right of the reporting entity to receive future payment. This Statement provides accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria.

Working Capital Finance Program - Definitions and Conditions

4. A “working capital finance program” is an open account program under which an investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A working capital finance program is created for the benefit of a commercial investment-grade obligor and its suppliers of goods or services, and facilitated by a finance agent.

5. A working capital finance program transfers a right to payment to an investor from a short term obligation and arises from transactions among:

a. a buyer of goods or services that becomes an obligor to the supplier of goods or services,

b. the supplier(s) of those goods or services,

c. a finance agent, and

d. an investor.

6. A “working capital finance investment” is an interest in payment(s) from a confirmed supplier receivable issued pursuant to a working capital finance program. The payment (maturity) date must not exceed one year from the date of invoice from the supplier to the obligor. This investment is created when the investor purchases from a working capital finance program that is currently designated as NAIC “1” or “2” by the NAIC Securities Valuation Office, any of the following:

a. One or more confirmed supplier receivables;

b. in case of a participation, a participation interest in one or more confirmed supplier receivables issued by the finance agent or lead lender holding confirmed supplier receivables; or

[1] All references to short-term obligations in this statement to refer to obligations not exceeding one year.

c. a certificate, note or other interest manifestation, documented in a way that is verifiable by regulators, representing a legally enforceable interest in a right to payment from a trust, other special purpose entity or pool holding confirmed supplier receivables.

7. "Obligor" is the party that purchases the goods or services that generates the original supplier receivable (and payable for the Obligor). The obligor must be a single entity, which has an NAIC designation of "1" or "2" or a Credit Rating Provider equivalent. The obligor must confirm the supplier receivable described in paragraph 11 as described in the confirmation process in paragraphs 12-14.

8. "Supplier" is the party that sells the goods or services to the obligor. The supplier sells the confirmed supplier receivable in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office at a price agreed to by the finance agent and/or investor.

9. "Investor" is the party purchasing a working capital finance investment in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office.

10. The "finance agent" is a bank, financial institution, other financial intermediary, or service provider that facilitates the working capital finance program, arranges the sale, assignment or transfer of the confirmed supplier receivable to the investor for a fee and administers the payment mechanism. In the case of participation, the finance agent must inform the reporting entity investor of a default or event of default as soon as it becomes aware of such default or event of default. For the working capital finance program to qualify under this SSAP, the finance agent must meet the requirements of either paragraph 10.a. or 10.b.:

a. The finance agent is directly regulated by, or falls under the supervision of, a financial regulator of its domiciliary country provided that such country appears on the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office* List of Jurisdictions Eligible for Netting and that the Securities Valuation Office determines that the regulator is the functional equivalent of the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, or the Federal Deposit Insurance Corporation; or

b. Payments from the obligor must 1) be paid directly to the reporting entity (investor) and cannot flow through the finance agent and 2) there can be no commingling of payments or assets with those of the obligor, supplier, servicer or trust administrator or other investors.

11. A "confirmed supplier receivable" is a first priority perfected security interest or right to payment of a monetary obligation from the obligor arising from the sale of goods or services from the supplier to the obligor the payment of which has been confirmed by the obligor committing and stating that the obligations under the agreement and any payment shall not be affected by the invalidity, unenforceability, existence, performance or non-performance of the underlying commercial trade transaction or any related contract or undertaking nor that it will not protest, delay, or deny, nor offer nor assert any defenses, personal or otherwise, against payment to the supplier or any party taking claims, interests, or rights to payments made by the supplier.

a. The confirmed supplier receivable must be sold, assigned or otherwise transferred in a manner that results in an absolute, irrevocable and legally enforceable obligation that has been confirmed by the Obligor.

b. In the case of a participation, the certificates or other evidence of participation provide an absolute, irrevocable, and legally enforceable obligation of the finance agent or holder of the confirmed supplier receivable to pay to the reporting entity investor all of the amounts due to it under the confirmed supplier receivable, without reduction or delay arising from any claims that the finance agent may have against the reporting entity investor. The reporting entity investor's ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to the discretion of the finance agent or other lenders or investors. The reporting entity investor's ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to, other than during a cure period not to exceed thirty days, the discretion of the finance agent or other lenders or investors.

Confirmation Process

12. In the case of a purchase, the investor shall verify, prior to the sale that the obligor has confirmed the respective amounts, payment dates and related invoice numbers' specified dates and has waived all defenses to payment. In the case of a participation, the finance agent must verify that the obligor has confirmed the respective amounts, payment dates and related invoice numbers' specified due dates, and has waived all defenses to payment in accordance with the confirmation process.

13. The obligor must commit and state that upon confirmation of a supplier receivable it is obligated to pay to the investor, the finance agent, or any third party acting as agent or trustee for the investor, a sum equal to the full amount of that confirmed supplier receivable(s) on a date certain stated in the confirmation and that it waives any right of setoff or other defenses to avoid or delay the full and timely payment of that Confirmed Supplier Receivable. The documents establishing the working capital finance program or the confirmation must state and confirm that the obligation to pay must be independent of any other contracts or claims that might be raised in defense arising from any transaction financed in connection with the WCFP, the confirmed supplier receivable, or any other courses of performance or courses of dealing with the supplier.

14. In the case of participation, the investor must certify that it has a commercially reasonable belief that its participation interest meets the Uniform Commercial Code's standards for creating and preserving first priority security interests in the payments due and in the confirmed supplier receivables. Commercially reasonable belief shall mean the SVO deems the investor's belief reasonable in light of the systems, policies, or practices commonly recognized in the field of investing in participations. The investor must be able to demonstrate to a regulator or to the SVO, upon either's request, the basis for its commercially reasonable belief that the WCFP creates and preserves the investor's ability to enforce a first priority perfected security interest in the confirmed supplier receivables.

15. In the case of a certificate, note, or other manifestation, capable of verification, representing a right to payment from a trust, other special purpose entity, or special purpose pool holding confirmed supplier receivables, the investor must certify that it has a commercially reasonable belief that the documents establishing and governing the working capital finance program create and preserve interests in the confirmed supplier receivables capable of being enforced by the trustee or other entity holding confirmed supplier receivables as first priority perfected security interests under the Uniform Commercial Code. The investor must be able to demonstrate the basis for such belief to a regulator or to the SVO upon either's request. Commercially reasonable belief shall mean the SVO deems the investor's belief reasonable in light of the systems, policies, and practices commonly recognized in the field of investing in securitizations, loan-backed, structured, or trust-issued securities.

Program Requirements

16. The working capital finance program investor must provide in its annual filing with the Securities Valuation Office an annual audit of the consolidated financial statements of which the finance agent is part, which does not report any qualifications related to servicing, and one of the following:

a. An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16, reporting on controls at a service organization related to the administration of the investment; or

b. An annual audit of the internal controls of the consolidated group of which the finance agent is part, which does not note any material weaknesses related to servicing.

The NAIC Securities Valuation Office would review the materiality of the report findings in making their determination of the assignment of a designation.

17. If the credit rating of the working capital finance program or obligor falls to non-investment grade (below the equivalent of NAIC designation "1" or "2"), the reporting entity shall nonadmit, the working capital finance investments obtained under the related working capital finance program and/or the related obligor. Due to the short-term nature of these investments, once an investment is nonadmitted due to the credit rating of the working capital finance program or the obligor, those investments will continue to be nonadmitted.

18. Reporting entity investors must have the ability to monitor the working capital finance program and the credit-related activities of the obligor. Reporting entity investors must provide information as requested to the state of domicile indicating that they have the ability to monitor on an ongoing basis the activities of the working capital finance program. Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.

19. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that if a dispute arises among any of the parties under any of the contracts or agreements that are a part of or that together constitute the working capital finance program, each party agrees that the dispute will be submitted to a court of competent jurisdiction in the United States or a constituent state thereof or of an alternative dispute resolution process recognized thereby. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that any dispute arising under any of the contracts or agreements that are a part of or that together constitute the working capital finance program must be resolved pursuant to the laws of the United States or a constituent state thereof that address the substance of the dispute but excluding those laws addressing conflicts of law.

Exclusions

20. A working capital finance investment excludes any receivables financed through:

a. Factoring: the purchase of receivables in bulk from a supplier where the receivables represent the payment obligations of potentially thousands of buyers to a single supplier, in which the buyers have no relationship with or contractual obligation to pay the factor and retain all legal defenses to payment they may have against the supplier;

b. Forfaiting: the purchase of one or a series of receivables from exporters by a forfaiter to enable the exporter (seller) to finance a commercial transaction with a buyer in which the Obligor has no relationship with or contractual obligation to pay the forfaiter and retains all legal defenses to pay it may have against the seller; or

c. Invoice discounting: the advancement of funds by a finance company to a business entity with the funds advanced limited to a defined percentage of the business entity's eligible and outstanding receivables.

21. Eligible Confirmed Supplier Receivables must not:

a. Include insurance or insurance related assets;

b. Be impaired or in default at the time of purchase;

c. Have a payment (maturity) date longer than one year from the date of the invoice from the Supplier to the Obligor giving rise to the confirmed supplier receivable, and the maturity date must not be subject to change or rolling; nor

d. Include any receivable of any parent or affiliate of the reporting entity investor, and neither the Obligor nor any Supplier may be affiliated with the reporting entity investor. Working Capital Finance Investments that have obligors or vendors that are affiliated with the investor are ineligible, and therefore, nonadmitted assets.

Accounting and Reporting

22. The right to receive payment generated by a working capital finance investment issued under a working capital finance program is considered to meet the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets*, and is an admitted asset to the extent the investment conforms to the requirements set forth in this Statement and the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office*. For programs that comply with all of these elements, working capital finance investments shall be valued and reported in accordance with this Statement, the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office*, and the designation assigned in the NAIC Valuations of Securities product. Programs that do not comply with the elements set forth in this Statement, or the provisions set forth in the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office* are nonadmitted. Working capital finance investments are reported as other invested assets in the financial statements.

23. A working capital finance investment shall be recorded on the trade date. At acquisition, the Working Capital Finance Investment shall be initially reported at cost, excluding brokerage and other related fees, and all other costs (internal costs, or costs paid for origination, purchase or commitment to purchase such investments), which shall be expensed as incurred.

24. After initial acquisition, the Working Capital Finance Investment shall be reported at amortized cost until the specified maturity date, unless the investment, or a portion thereof, is deemed uncollectible or when an other-than-temporary impairment has occurred. In the event that a working capital finance investment is purchased by a reporting entity investor at a premium (amount to be received by the entity under the confirmed supplier receivable is less than the price paid for the investment), the excess paid by the reporting entity investor in comparison to the amount receivable under the confirmed supplier receivable must be immediately expensed.

25. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses from working capital finance investments shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an IMR, realized gains and losses from working capital finance investments shall be reported as net realized capital gains or losses in the statement of income. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

26. A Working Capital Finance Investment may provide for a prepayment penalty or acceleration fee in the event the working capital finance investment is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

27. *SSAP No. 34—Investment Income Due and Accrued* shall be followed for determining and recording investment income earned on working capital finance investments acquired at a discount. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced

for amounts that have been determined to be uncollectible, however amounts more than 15 days overdue are nonadmitted.

Default

28. A working capital finance investment payment that is uncollected by the reporting entity within fifteen days after the due date shall be considered in default and nonadmitted. If the reporting entity has any other working capital finance investment assets from the same defaulting counterparty, all other working capital finance investments from that counterparty shall be nonadmitted. All working capital finance investments from a counterparty identified in default shall be evaluated for impairment.

Impairment

29. An other-than-temporary impairment(INT 06-07) shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a confirmed supplier receivable including the payment on the established due date. Pursuant to this guidance, assessment of other-than-temporary impairment shall include an evaluation of the financial condition and short-term prospects of the obligor. If it is determined that a decline in the fair value of a working capital finance investment below book/adjusted carrying value is due to an other-than-temporary impairment, an impairment loss shall be recognized as a realized loss equal to the entire difference between the working capital finance investment's carrying value and fair value as of the reporting period for which the assessment is made. Fair value shall be determined in accordance with *SSAP No. 100—Fair Value Measurements*, and reflect the price to sell the asset in an orderly market between market participants. As such, the fair value shall reflect the assumptions market participants will use in pricing the asset, including assumptions about risk.

30. For reporting entities required to maintain an AVR/IMR, the entire amount of the realized loss from the other-than temporary impairment shall be recorded through the AVR, in accordance with SSAP No. 7.

31. Upon recognition of an other-than-temporary impairment, the fair value of the working capital finance investment on the measurement date shall become the new cost basis of the working capital finance investment and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Once an investment is determined to be other-than-temporarily impaired, until all expected payments are received, the reporting entity must re-evaluate the investment quarterly and reassess fair value, with recognized realized losses for the difference between the book/adjusted carrying value and the current fair value. This process shall continue until either all expected payments are received, or the entity has recognized a realized loss for the entire uncollected carrying value.

Disclosures

32. The financial statements shall include the following disclosures:

a. Fair value in accordance with *SSAP No. 100—Fair Value Measurements*

b. Concentrations of credit risk in accordance with SSAP No. 27—*Disclosure of Information* a*bout Financial Instruments with Off-Balance-Sheet Risk and Financial Instruments with Concentrations of Credit Risk* (SSAP No. 27) in the annual audited statutory financial reports only.

c. Information regarding the aggregate book/adjusted carrying value of working capital finance investment by designation including gross assets with nonadmitted and net admitted amounts annually. (Note that programs designated 3-6 are nonadmitted.)

	Gross Asset CY	Non-Admitted Asset CY	Net Admitted Asset CY
WCFI Designation 1			
WCFI Designation 2			
WCFI Designation 3			
WCFI Designation 4			
WCFI Designation 5			
WCFI Designation 6			
Total			

d. Annual and quarterly information regarding the aggregate book/adjusted carrying value maturity distribution on the underlying working capital finance investments by the categories of maturities up to 180 days and 181 to 365 days.

e. Any events of default of working capital finance investments during the reporting period.

33. Refer to the preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

34. This statement is effective for years on or after January 1, 2014. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors.*

Affordable Care Act Section 9010 Assessment

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for the Affordable Care Act Section 9010 assessment and disclosures related to the risk sharing provisions of the Affordable Care Act.

SUMMARY CONCLUSION

2. This statement adopts *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* (ASU 2011-06) with modifications identified in paragraph 11. ASU 2011-06 provides specific guidance related to the assessment in Section 9010 of the Affordable Care Act.

Affordable Care Act Section 9010 Assessment

3. The Affordable Care Act (ACA) imposes an assessment on entities that issue health insurance for each calendar year beginning on or after January 1, 2014. Pursuant to Section 9010 of the ACA, a reporting entity's portion of the assessment is paid no later than September 30 of the applicable calendar year (the fee year) beginning in 2014 and is not tax deductible. The amount of the assessment for the reporting entity is based on the ratio of the amount of an entity's subject net health premiums written for any U.S. health risk during the preceding calendar year (data year) to the aggregate amount of subject net health premiums written by all subject U.S. health insurance providers during the preceding calendar year. The ACA includes some significant exclusions regarding which entities are required to pay the assessment. The guidance in this statement applies to all reporting entities that are subject to the fee. The guidance in this statement applies to the unique facts and circumstances in the ACA; accordingly, an entity should apply judgment when evaluating the facts and circumstances of other assessments arrangements before analogizing the guidance for Section 9010 of the ACA.

4. Throughout this discussion of the Section 9010 assessment of the ACA, the following terms apply:

   a. The term "data year" means the calendar year immediately before the fee year. For example, 2014 is the data year for fee year 2015.

   b. The term "fee year" means the calendar year in which the assessment must be paid to the U.S. Treasury.

5. A reporting entity's portion of the annual assessment becomes payable to the U.S. Treasury once the reporting entity provides health insurance (in the fee year) for any subject U.S. health risk for each calendar year beginning on or after January 1, 2014.

6. The liability related to the Section 9010 ACA assessment shall be estimated and recorded in full once the entity provides qualifying health insurance (typically January 1) in the applicable calendar year in which the assessment is paid (fee year) with a corresponding entry to expense. The Section 9010 ACA assessment shall be recognized in full on January 1 of the fee year, in the operating expense category of Taxes, Licenses and Fees.

7. Liability recognition of the Section 9010 fee is not required in the data year. In the data year, the reporting entity is required to reclassify from unassigned surplus to special surplus an amount equal to its estimated subsequent fee year assessment. This segregation in special surplus is accrued monthly throughout the data year. The reclassification from unassigned surplus to special surplus does not reduce total surplus. On January 1 of the fee year, the prior year segregation in special surplus is reversed and the full current fee year assessment liability shall be accrued.

8. The Section 9010 ACA annual assessment does not represent a cost related to the acquisition of policies that is consistent with the definition of acquisition costs in *SSAP No. 71—Policy Acquisition Costs and Commissions*.

Disclosures

9. For the Section 9010 ACA assessment:

a. For the annual reporting period ending December 31, 2013, and thereafter, a reporting entity subject to the assessment under section 9010 of the Affordable Care Act, shall provide a disclosure of the assessment payable in the upcoming year consistent with the guidance provided under *SSAP No. 9—Subsequent Events* (SSAP No. 9) for a Type II subsequent event. The disclosure shall provide information regarding the nature of the assessment and an estimate of its financial impact, including the impact on its risk-based capital position as if it had occurred on the balance sheet date. In accordance with SSAP No. 9, paragraph 9, the reporting entity shall also consider whether there is a need to present pro forma financial statements regarding the impact of the assessment, based on its judgment of the materiality of the assessment.

b. Additionally, for annual reporting periods ending on or after December 31, 2014, the disclosure in paragraph 9.a. is expanded to include information on the amounts reflected in special surplus in the data year.

i. The reporting entity shall disclose the amount of premium written for the current year that is the basis for the determination of the section 9010 fee assessment to be paid in the subsequent year (net assessable premium). Prior year amounts shall also be included for comparative purposes;

ii. Reporting entities shall provide information regarding the nature of the assessment, the estimated amount of the assessment payable in the upcoming year (current and prior year) and the amount of assessment paid (current and prior year), and;

iii. The disclosure shall also provide the Total Adjusted Capital and Authorized Control Level (in dollars) before and after adjustment (as reported in its estimate of special surplus applicable to the 9010 fee) to reflect the fee as of the annual reporting date as if it had been reported on the balance sheet date. The disclosure shall also provide a statement as to whether an RBC action level would have been triggered had the fee been reported as of the balance sheet date.

10. Refer to the preamble for further discussion regarding disclosure requirements.

Relevant Literature

11. *ASU 2011-06: Other Expenses – Fees Paid to the Federal Government by Health Insurers* is adopted with the following modifications: 1) to require full expense recognition on January 1 of the fee year, 2) to require the reclassification from unassigned surplus to special surplus in the data year for the estimated amount payable, and 3) other modifications for statutory accounting terminology as reflected in this statement.

Effective Date and Transition

12. This statement is effective for years beginning January 1, 2014. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with

SSAP No. 3—Accounting Changes and Corrections of Errors. The Section 9010 ACA fee specific guidance in paragraphs 2-8 and paragraph 9.b. was adopted December 2013 with a January 1, 2014, effective date. This guidance was originally reflected in *SSAP No. 35—Guaranty Fund and Other Assessments – Revised* (SSAP No. 35R). The disclosure language in paragraph 9.a. was also moved from SSAP No. 35R, but was originally effective December 31, 2013. The guidance from SSAP No. 35R was moved into this statement in June 2014. This movement was a placement change and did not result in revisions to the accounting guidance previously included in SSAP No. 35R.

APPENDIX A – GLOSSARY 14

APPENDIX B – ACA RISK-SHARING PROVISIONS ROLL-FORWARD ILLUSTRATION 16

This page intentionally left blank.

Accounting for the Risk-Sharing Provisions of the Affordable Care Act

SCOPE OF STATEMENT

1. The Affordable Care Act (ACA) imposes fees and premium stabilization provisions on health insurance issuers offering commercial health insurance. This statement provides accounting for three programs known as risk adjustment, reinsurance and risk corridors that take effect in 2014. Risk adjustment is a permanent risk-spreading program (ACA Section 1343). The temporary transitional reinsurance program (ACA Section 1341) and temporary risk corridors program (ACA Section 1342) are for years 2014 through 2016.

SUMMARY CONCLUSION

2. Specific terms included in Appendix A are unique to these programs and should not be applied to other aspects of statutory accounting. The required payments to the programs by reporting entities are described as "contributions" in the program literature but are referred to in this guidance as assessments for clarity. Amounts redistributed by the programs back to reporting entities are termed "payments" by the programs. These "payments" are recoverables / receivables for the reporting entity and are termed program distributions or receivables (to the reporting entity) in this guidance. The reporting of payable or receivable amounts in this guidance is from the perspective of the reporting entity. The statement based on this statement will nullify *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act.*

3. This statement establishes statutory accounting principles for the risk-sharing provisions of the ACA. The manner in which these provisions are applied in the determination of the medical loss ratios (MLR) and rebates may be different from these as the MLR calculations are based on the ACA Section 2718(b).

Risk Adjustment Program – Description and Overview

4. The risk adjustment program based on Section 1343 of the ACA is effective beginning in the 2014 benefit year and continues as a permanent program.

5. The risk adjustment program includes health plans (except certain exempt and grandfathered plans) in the individual or small group markets both on and off the exchange. All covered risk adjustment plans are required to participate in the risk adjustment program.

6. The purpose of the risk adjustment program is to transfer funds from lower risk plans to higher risk plans within similar plans in the same state in order to adjust premiums for adverse selection among carriers caused by membership shifts due to guarantee issue and community rating mandates. States may set up their own risk adjustment programs, or they may permit Health and Human Services (HHS) to develop and manage the program in the state. In addition to the risk adjustment amount, HHS determines the user fee. In states operating their own risk adjustment program, the state will determine the fee.

7. Risk adjustment assessments and distributions will be computed based on the reporting entity's risk score versus the overall market risk score after applying adjustments. Risk adjustment assessments will be made if the plan average actuarial risk of all of their enrollees in a market and state is lower than the plan average risk of all enrollees in fully insured plans in that market and state risk pool. Risk adjustment distributions will be made to health plan issuers whose plans have an average actuarial risk that is greater than the plan average actuarial risk scores in that market and state risk pool. The reinsurance program is not considered in the computation.

8. HHS will collect a user fee to support the administration of the HHS-operated risk adjustment program. This fee applies to issuers of risk adjustment covered plans in states in which HHS is operating

the risk adjustment program. For example, HHS projects that the per capita risk adjustment user fee for 2014 is approximately $1 per enrollee per year. Similar terms will apply for the user fees of state operated programs.

9. All risk adjustment distributions made to issuers are completely funded through the amounts assessed to other issuers within the same market in the same state to ensure equality between program distributions and assessments. Consequently, risk adjustment assessments will be invoiced prior to processing program distributions to issuers. Once applicable risk adjustment assessments by issuers are received by HHS or the state, funds will be redistributed to the higher risk plans. Each issuer that offers a risk adjustment covered plan will be notified of risk adjustment distributions or assessments by June 30 of the year following the benefit year to align with the program distributions and assessment processing. Risk adjustment assessments owed by an issuer to HHS or the state are required to be remitted within 30 days of notification of the assessment. Once applicable assessments are received by HHS or the state, funds will be redistributed to the higher risk plans.

Risk Adjustment Program – Accounting Treatment

10. The accounting elements of the ACA permanent risk adjustment program, which are considered separately, include the user fee and the risk adjustment assessments and distributions.

11. The user fee is paid to HHS in states where the risk adjustment program is being operated by HHS and to the state program if operated by the state. Risk adjustment user fees shall be treated as government assessments. These fees are treated the same as other non-income-based governmental taxes and fees in that they are recognized as an expense and liability when the premium subject to the assessment is written.

12. Premium adjustments pursuant to the risk adjustment program will be based upon the risk scores (health status) of enrollees, participating in risk adjustment covered plans rather than the actual loss experience of the insured. This program bears some similarities to the Medicare Advantage risk adjustment program[1] under which the plan receives additional funding (or pays additional amounts) based on adjustments to risk scores of enrollees (see *INT 05-05: Accounting for Revenues Under Medicare Part D Coverage*).

13. The risk adjustment payables and receivables shall be accounted for as premium adjustments subject to redetermination as specified in this statement.

a. Risk adjustment payables meet the definition of liabilities as set forth in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* (SSAP No. 5R). Risk adjustment receivables meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this statement.

b. Risk adjustment payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. Reporting entities shall be aware of the significant uncertainties involved in preparing estimates and be both diligent and conservative in their estimations. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk adjustment program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient data to determine a reasonable estimate. Ensuring sufficient data requires that the reporting entity's estimate is based on demonstrated knowledge of the marketplace and annual information which includes patient encounter and diagnosis

[1] The ACA program also has significant differences from the Medicare Advantage risk adjustment program, which is retrospective, administered as a single national program, with most enrollees administered by the federal government. By contrast, the ACA risk adjustment is not retrospective, and is administered by each entity by state and by plan.

code data to determine the differences in the actuarial risk profile of the reporting entity's insureds versus the market participants in the particular market and state risk pool. Sufficient data shall incorporate patient default scores, if applicable, under the terms of the risk adjustment program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.

c. Premium revenue adjustments for the risk adjustment program are estimated for the portion of the policy period that has expired and shall be reported as an immediate adjustment to premium. Accrued risk adjustment receivables shall be recorded as a write-in for other-than-invested assets, with a corresponding entry to premiums; accrued risk adjustment payables shall be recorded as a liability with a corresponding entry to premiums. Reporting entities shall record additions or reductions to revenue resulting from the risk adjustment program in the period in which the changes in risk scores of enrollees result in reasonably estimable additions or reductions. The risk adjustment program receivables shall be reported gross of payables.

d. The risk adjustment receivables are administered through a federal governmental program. Once amounts are collected by the governmental entity, there is an obligation to distribute the funds. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.

e. Provided that the risk adjustment receivables due the reporting entity are determined in a manner that is consistent with the requirements of this statement, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk adjustment amounts under appeal shall be reflected as a nonadmitted asset.

f. Evaluation of the collectibility of all amounts receivable from the risk adjustment program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk adjustment receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

Transitional Reinsurance Program – Description and Overview

14. The transitional reinsurance program based on Section 1341 of the ACA is effective for plan years 2014 through 2016. Reinsurance assessments will be collected and distributions will be issued during the three-year term.

15. All issuers of major medical commercial products and third party administrators (TPAs) on behalf of uninsured group health plans are required to contribute funding at the national contribution rate to HHS. States establishing reinsurance programs may collect additional funding. Non-grandfathered individual plans are eligible to receive benefit program distributions via an excess-of-loss reinsurance system. Grandfathered plans are ineligible. Group plans are required to contribute funding, but are not eligible to receive reinsurance program distributions.

16. In general, this transitional reinsurance program provides funding to issuers in the individual market that incur high claims costs for enrollees. The program requires assessments from all issuers and TPAs on behalf of group health plans based on a per member annual fee established by HHS. The

reinsurance assessment will fund reinsurance program distributions plus disbursements to the U.S. Treasury, in addition to covering administrative expenses of the program.

17. Consequently, the term "reinsurance" does not represent actual reinsurance between licensed insurers as defined by *SSAP No. 61—Revised—Life, Deposit-Type and Accident and Health Reinsurance* (SSAP No. 61R). This program is similar to an involuntary pool in *SSAP No. 63—Underwriting Pools and Associations Including Intercompany Pools* (SSAP No. 63) for the individual insured health products subject to the 2014 ACA market reforms. For the group plans, which are required to contribute funding but are not eligible to receive program distributions, the program is an assessment payable by the reporting entity and not a pool.

18. The national transitional reinsurance program assessment rate for all issuers and TPAs will be established by HHS and will be designed to collect more than $12 billion in 2014 to cover the required $10 billion for the reinsurance program, the $2 billion contribution to the U.S. Treasury, and additional amounts to cover the administrative costs of the federal government entity and applicable reinsurance entities. States electing to operate their own reinsurance program have the option to increase the reinsurance assessment rate to provide additional funding for the reinsurance program or to fund the administrative expenses of the applicable reinsurance entity. Assessments for the reinsurance program must fund the reinsurance program of $10 billion in 2014, $6 billion in 2015 and $4 billion in 2016, plus disbursements to the U.S. Treasury of $2 billion, $2 billion and $1 billion for years 2014 through 2016, in addition to covering administrative expenses of the applicable reinsurance entity or HHS.

19. Reinsurance program distributions will be processed either by the applicable reinsurance entity or by HHS and will be made to issuers of non-grandfathered individual market plans for high claim costs of enrollees. Distributions from the applicable reinsurance entity to insurers providing individual coverage will be calculated as a coinsurance rate multiplied by the eligible claims submitted for an individual enrollee's covered benefits between an attachment point and the reinsurance cap for each benefit year. The coinsurance rate, attachment point and reinsurance cap are initially determined by HHS, but may be modified by the state, if the state chooses to establish its own reinsurance program.

20. Each state is eligible to establish a reinsurance program, regardless of whether the state establishes a Marketplace Exchange. If a state establishes a reinsurance program, the state must enter into a contract with an applicable reinsurance entity or entities or establish a reinsurance entity to carry out the program. If a state does not elect to establish its own reinsurance program, HHS will administer the reinsurance program on behalf of that state. HHS establishes the annual administrative portion for the fee. (For example, the 2014 fee will be $0.11 per-member per-year resulting in $20.3 million of administrative expense funding).

21. Reinsurance assessments to fund the program are made on an annual basis with billing beginning December 15, 2014. An insurer may submit claims for reimbursement when an enrollee of the reinsurance-eligible plan has met the applicable criteria as determined by either the state or HHS. Claims may be submitted through April 30 of the year following the benefit year. HHS will distribute reinsurance program funds among issuers nationally based on submitted claims. Issuers will be notified of pending reinsurance distributions by June 30 following the benefit year. If the requests for distributions exceed the actual assessments collected, HHS will reduce reinsurance distributions on a pro-rata basis. If the requests for distributions are less than actual assessments collected, HHS will increase reinsurance distributions on a pro-rata basis.

Transitional Reinsurance Program – Accounting Treatment

22. Due to the diverse elements of the transitional reinsurance program, which includes characteristics of traditional reinsurance, involuntary pools and governmental assessments, a hybrid accounting approach is required. The accounting treatment for the transitional reinsurance program

outlined below is discussed in terms of the payables and receivables and the impact to the health insurance products subject to the program.

23. The following are the broad groupings of the health insurance products subject to the transitional reinsurance program:

a. Individual insured health products subject to the 2014 ACA market reforms. This excludes grandfathered and non-grandfathered 2013 products (referred to as subject individual insured products);

b. Other insured health products. This encompasses products which are not subject to the ACA market reforms including individual grandfathered and non-grandfathered (referred to as other insured health products);

c. Self-insured health products.

24. The guidance in this section will provide treatment for each of the assessments payable and program distribution receivable elements of the program listed below for the health insurance products listed in paragraph 23.

a. Assessments for reinsurance

b. Administrative costs assessments

c. Additional U.S. Treasury assessment

d. Reinsurance distributions

Subject Individual Insured Health Products

Subject Individual Insured Issuers - Assessments Payable for Reinsurance

25. Transitional reinsurance assessments attributable to enrollees in individual plans are treated as ceded reinsurance premium. This applies both to assessments made at the national assessment rate and to any state-elected additional assessments that will fund reinsurance program distributions. Ceded premiums would be reported as a reinsurance cession and follow reinsurance accounting in accordance with SSAP No. 61R, paragraph 17 and paragraphs 25-27:

26. For the individual coverage issuers, this is an involuntary pool and under the terms of the transitional reinsurance program, the transfer of risk and timely reimbursement requirements of SSAP No. 61R are deemed to be met.

27. With regard to individual coverage issuers, the transitional reinsurance program is more similar to traditional reinsurance than it is to an assessment, because program assessments are made to and program distributions are received from the government or government-sponsored entity. Accordingly, the program is accounted for as reinsurance for individual insured products subject to the transitional reinsurance program.

28. The provisions of SSAP No. 63, paragraph 3, define involuntary pools.

29. The transitional reinsurance program differs from an involuntary pool, in that there is not a proportionate sharing of the entire results of a pool. However, the purpose is very similar: to address the additional costs associated with high-risk individuals. Furthermore, HHS has noted, *"the Affordable Care Act ... requires that states eliminate or modify high-risk pools to the extent necessary to carry out the reinsurance program,"* which likewise highlights the similar purposes of the two mechanisms. Therefore,

SSAP No. 63, paragraph 8, provides additional relevant guidance. As the transitional reinsurance program is a mechanism for sharing the additional costs associated with high-risk individuals, it is accounted for as traditional reinsurance.

Subject Individual Insured Issuers - Reinsurance Administrative Expense Assessments

30. The assessment payable by the reporting entity for administrative expenses attributable to individual coverage is reflected as ceded premium. This applies both to assessments made at the national assessment rate and to any state-required assessments that will provide additional funding for administrative expenses.

31. Normally reinsurance premiums are set at a level intended to cover anticipated claim costs and include an administrative charge component. Therefore, as a matter of consistency, it is appropriate to include the administrative charge component for the transitional reinsurance program in ceded premium for individual insured products.

Subject Individual Insured Issuers - U.S. Treasury Assessment

32. Because this portion of the assessment is earmarked for the U.S. Treasury and not for the reimbursement of claims or to cover the operating costs of the reinsurance program, it is a federal assessment not based on income. This portion of the assessment is not treated as ceded premium, but as an assessment under SSAP No. 35R and is reflected in the same expense category as taxes, licenses and fees. This is also consistent with annual statement expense reporting categories.

Subject Individual Insured Issuers - Reinsurance Program Distributions

33. Program distributions received from the ACA transitional reinsurance program for individual insurance is reflected as ceded claim benefit recoveries. This applies both to distributions received pursuant to the uniform federal reinsurance parameters and to any state distribution received.

34. In keeping with the rationale for reinsurance assessments above, distributions receivable from the transitional reinsurance program for individual insurance products is reflected the same as traditional reinsurance recoveries as described in SSAP No. 61R, paragraph 27.

35. Therefore, recoveries received are reported in the summary of operations and will reduce the ceding entity's reported benefits paid.

36. HHS and all applicable reinsurance entities shall be reported consistent with providers to an involuntary pool and will be treated as authorized reinsurers for the purposes of financial reporting for subject individual health products.

37. All receivables from the transitional reinsurance program are subject to the 90-day nonadmission rule beginning from when program receivables are due to be disbursed by the government or a government-sponsored entity. That is, the 90-day rule begins when governmental receivables are due, not from the date of initial accrual. The announced governmental or government-sponsored entity distribution date shall be the contractual due date similar to Appendix A-791, paragraph 2h, which requires that payments due from the reinsurer are made in cash within ninety (90) days of the settlement date. The receivable is also subject to impairment analysis.

Other Insured Health Products

Other Insured Health Products – Assessments Payable for Reinsurance

38. Transitional reinsurance program reinsurance assessments made for enrollees in fully insured plans other than individual plans are treated as an assessment payable by the reporting entity and charged

to taxes, licenses and fees. This applies both to assessments made at the national assessment rate and to any state assessments that will fund reinsurance program distributions. In this case, for fully insured non-individual plans, the entity cannot, under the terms of the program, be deemed to be "participating," as funds for claim recoveries will not be re-distributed back to the issuer for the coverage that is being assessed. Therefore, issuers of other insured health products that are not for individuals are paying an involuntary fee but are not participating in an involuntary pool.

39. The treatment of the transitional reinsurance program reinsurance assessments for non-individual fully insured plans differs from the treatment for individual plans. Since the non-individual plans are not eligible for reimbursement, they are not participating in a reinsurance arrangement, and thus, the assessments are not treated as ceded premium. As an involuntary assessment, the transitional reinsurance program reinsurance assessments, consistent with SSAP No. 35R are treated as an assessment payable by the reporting entity and charged to taxes, licenses and fees expense. The expense is accrued in proportion to the other insured health enrollees base that will be used to determine the assessments payable as the premium subject to the assessment is written.

Other Insured Health Products - Reinsurance Administrative Expense Assessments

40. The reinsurance program administrative costs for other insured health products are an assessment payable by the reporting entity. This applies both to assessments made at the national assessment rate and to any state assessment that will fund administrative expenses and is reflected in the same expense category as taxes, licenses and fees.

Other Insured Health Products - U.S. Treasury Assessment

41. The additional U.S. Treasury assessment for other insured health products is a federal assessment payable by the reporting entity which is not based on income and is reflected in the same expense category as taxes, licenses and fees.

Other Insured Health Products - Reinsurance Program Distributions (not applicable)

42. Reinsurance recoveries will not occur for insured health products other than individual. Other insured health products will pay the transitional reinsurance program assessments payable but not receive program distributions for claims.

Self-Insured Health Products

Self-Insured Health Products - Assessments Payable for Reinsurance

43. Assessments made on behalf of self-insured plans which are administered by the reporting entity are uninsured plans and are excluded from the reporting entity's statement of operations, with respect to both monies received from the plans and assessments disbursed by the reporting entity. Any resulting liabilities or receivables shall be reported as liabilities and receivables held in connection with uninsured plans. This treatment is consistent with *SSAP No. 47—Uninsured Plans* (SSAP No. 47)*,* paragraphs 5 and 8-11.

44. The self-insured plan, not the reporting entity, is legally liable for assessments for the transitional reinsurance program. The funds are a bona fide pass-through by the reporting entity, which is merely providing a service for the self-insured (uninsured) plan. Therefore, the reporting entity will not report revenues or expenses for the assessments for the transitional reinsurance program.

45. The reporting entity may have received funds from the self-insured plans in advance of making disbursements. In that event, a liability is established for funds held in connection with self-insured plans.

46. The reporting entity, depending on its arrangement with the (uninsured) plan, may make a disbursement before receiving full funding from the plan. In that event, an asset is established for amounts receivable in connection with uninsured plans. The asset would be subject to the rules for admissibility and impairment as prescribed in SSAP No. 47, paragraphs 9-10.

Self-Insured Health Products - Reinsurance Administrative Expense Assessments Payable and U.S. Treasury Assessment

47. A reporting entity providing a service for a self-insured plan that is uninsured shall apply the pass-through treatment for the transitional reinsurance program's administrative cost assessments and additional U.S. Treasury contribution amounts. The uninsured plan, not the reporting entity, is legally liable. Therefore, the reporting entity will not report revenues or expenses with respect to the transitional reinsurance program's administrative cost assessments and additional U.S. Treasury contribution amounts.

Self-Insured Health Products - Reinsurance Payments (not applicable)

48. Reinsurance recoveries will not occur for self-insured health products, as these products will pay fees but not receive claims reimbursements.

Risk Corridors – Description and Overview

49. The risk corridors program based on Section 1342 of the ACA is effective for benefit years beginning in 2014 through 2016. The risk corridors program applies to Qualified Health Plans (QHPs) in the individual and small group markets whether sold on or outside of an exchange.

50. The purpose of the risk corridors program is to provide limitations on issuer losses and gains for QHPs through additional protection against initial pricing risk. The program creates a mechanism for sharing the risk for allowable costs between the federal government and the QHP issuers. The program is applied at the QHP level, not the issuer or market segment level. Although the risk-corridor program provides protection against extreme bounds of experience, there is a substantial corridor in which all variance in experience directly affects the financial return of the reporting entity.

51. To determine whether an issuer pays into (contributes), or receives distributions from, the risk corridors program, HHS will compare Allowable Costs[2] and the Target Amount[3] based on a formula that compares allowable costs. Below is an example (before transition requirements) for a QHP.

a. When a QHP's Allowable Costs for any benefit year are more than 103% but not more than 108% of the Target Amount, HHS will pay the QHP issuer an amount equal to 50% of the Allowable Costs in excess of 103% of the target amount.

b. When a QHP's Allowable Costs for any benefit year are more than 108% of the Target Amount, HHS will pay the QHP issuer an amount equal to 2.5% of the Target Amount plus 80% of the Allowable Costs in excess of 108% of the target Amount.

c. If a QHP's Allowable Costs for any benefit year are less than 97% but not less than 92% of the Target Amount, the QHP issuer must remit assessments payable to HHS in an amount equal to 50% of the difference between 97% of the Target Amount and the Allowable Costs.

[2] With respect to a QHP, Allowable Costs is an amount equal to the sum of incurred claims of the QHP issuer, adjusted to include qualifying expenditures by the QHP for activities that improve health care quality, expenditures for health information technology and meaningful use requirements and other required adjustments.

[3] With respect to a QHP, the Target Amount is an amount equal to the total premiums earned with respect to a QHP, including any premium tax credit under any governmental program, reduced by the allowable administrative costs of the plan.

d. When a QHP's Allowable Costs for any benefit year are less than 92% of the Target Amount, the QHP issuer must remit assessments payable to HHS in an amount equal to the sum of 2.5% of the Target Amount plus 80% of the difference between 92% of the Target Amount and the Allowable Costs.

52. The risk corridors program creates a mechanism for sharing risk for allowable costs between the federal government and QHP issuers. The ACA establishes the risk corridors program as a federal program; consequently, HHS will operate the risk corridors program under federal rules without state variations. The risk corridors program is intended to protect against inaccurate rate setting in the early years of the exchanges by limiting the extent of issuer losses and gains. In the event that risk corridors programs collections are not sufficient to cover all the required distributions, the ACA requires the use of other sources of federal funding for the required distributions, subject to the availability of appropriations.

53. The final risk corridors settlement calculation will be communicated by HHS after the end of the benefit year and after premium and loss adjustments related to the reinsurance and risk adjustment programs have been determined.

Risk Corridors – Accounting Treatment

54. This program is similar to the risk corridors program established for the Medicare Part D prescription drug coverage[4]. However, due to the asymmetrical nature of the risk-corridor calculation, an overstatement of expense in one cell, which is theoretically offset by the understatement of expense in another cell, does not necessarily result in zero financial impact.

55. Payables and receivables pursuant to the temporary risk corridors program shall be accounted for as specified in this statement.

56. Risk corridor assessments meet the definition of liabilities as set forth in SSAP No. 5R. Risk corridor receivables due to the reporting entity meet the definition of an asset and are admissible to the extent that they meet all of the criteria in this statement.

a. Assumptions used in estimating retrospective premium adjustments shall be consistent with the assumptions made in recording other assets and liabilities necessary to reflect the underwriting results of the reporting entity such as claim and loss reserves (including IBNR) and contingent commissions. Contingent commissions and other related expenses shall be adjusted in the same period the additional or return retrospective premiums are recorded.

b. The additions or reductions to premium revenue resulting from the risk corridors program are recognized over the contractual period of coverage, to the extent that such additions or reductions are reasonably estimable. Reporting entities shall be aware of the significant uncertainties involved in preparing estimates and be both diligent and conservative in their estimations. Risk corridors payables and receivables shall be estimated based on experience to date. The method used to estimate the payables and receivables shall be reasonable and consistent between reporting periods. In exercising the judgment required to prepare reasonable estimates for the financial reporting of risk corridors program payables and receivables, the statutory accounting concept of conservatism shall be followed. In addition, reporting entities are required to have sufficient information to determine a reasonable estimate. Part of ensuring sufficient information requires that the reporting entity's estimate is based on demonstrated knowledge of the impacts of the other risk-sharing programs on the risk corridors

[4] The ACA risk corridors program also has significant differences between the Medicare risk corridors program. The ACA risk corridors program is performed at a significantly more granular plan specific level with a pro-rata allocation of the issuer's overall claim costs for the plan's state/market cell.

program and the terms of the risk corridors program. In addition, the estimates shall be consistent with other financial statement assertions and the pricing scenarios used by the reporting entity.

c. The risk corridors receivables are from a federal governmental program. Amounts over 90 days due shall not cause the receivable to be treated as a nonadmitted asset based solely on aging.

d. Provided that the risk corridors receivables due the reporting entity are determined in a manner that is consistent with the requirements of this statement, the receivables are admitted assets until determination of impairment or payment denial is received from the governmental entity or government-sponsored entity administering the program. Upon notification that payments to be paid to the reporting entity will be less than the recorded receivables, any amount in excess of the confirmed amount shall be written off and charged to income, except for amounts that are under appeal. Any receivable for risk adjustment amounts under appeal shall be reflected as a nonadmitted asset.

e. Evaluation of the collectibility of all amounts receivable from the risk corridors program shall be made for each reporting period. If, in accordance with SSAP No. 5R, it is probable that the risk corridors receivables are uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. If it is reasonably possible, that a portion of the balance determined in accordance with this paragraph is not anticipated to be collected and is therefore not written off, the disclosure requirements outlined in SSAP No. 5R shall be followed.

f. Reporting shall be consistent with *SSAP No. 66—Retrospectively Rated Contracts* (SSAP No. 66), paragraph 9 guidance on reporting for retrospective premium.

Disclosures

57. The financial statements shall disclose on an annual and quarterly basis beginning in the first quarter of 2014, the assets, liabilities and revenue elements by program regarding the risk-sharing provisions of the Affordable Care Act for the reporting periods which are impacted by the programs including the listing in paragraphs 57.a. through 57.c. Reporting entities shall also indicate if they wrote any accident and health insurance premium, which is subject to the Affordable Care Act risk-sharing provisions. In the event that the balances are zero, the reporting entity should provide context to explain the reasons for the zero balances, including insufficient data to make an estimate, no balances or premium was excluded from the program, etc. Asset balances shall reflect admitted asset balances. The disclosure shall include the following:

a. ACA Permanent Risk Adjustment Program

i. Premium adjustments receivable due to ACA Risk Adjustment
ii. Risk adjustment user fees payable for ACA Risk Adjustment
iii. Premium adjustments payable due to ACA Risk Adjustment
iv. Reported as revenue in premium for accident and health contracts (written/collected) due to ACA Risk Adjustment
v. Reported in expenses as ACA risk adjustment user fees (incurred/paid)

b. ACA Transitional Reinsurance Program

i. Amounts recoverable for claims paid due to ACA Reinsurance
ii. Amounts recoverable for claims unpaid due to ACA Reinsurance (contra-liability)

iii. Amounts receivable relating to uninsured plans for contributions for ACA Reinsurance
iv. Liabilities for contributions payable due to ACA Reinsurance - not reported as ceded premium
v. Ceded reinsurance premiums payable due to ACA Reinsurance
vi. Liability for amounts held under uninsured plans contributions for ACA Reinsurance
vii. Ceded reinsurance premiums due to ACA Reinsurance
viii. Reinsurance recoveries (income statement) due to ACA Reinsurance payments or expected payments
ix. ACA Reinsurance Contributions – not reported as ceded premium

c. ACA Temporary Risk Corridors Program

i. Accrued retrospective premium due from ACA Risk Corridors
ii. Reserve for rate credits or policy experience rating refunds due to ACA Risk Corridors
iii. Effect of ACA Risk Corridors on net premium income (paid/received)
iv. Effect of ACA Risk Corridors on change in reserves for rate credits

58. In addition, beginning in annual 2014 and both quarterly and annual thereafter, a roll forward of prior year ACA risk-sharing provisions specified asset and liability balances shall be disclosed in the annual statutory Notes to Financial Statements, as illustrated in Appendix B. Note for the roll forward illustration, assets shall be reflected gross of any nonadmission. The reasons for adjustments to prior year balances (i.e. federal audits, revised participant counts, information which impacted risk score projections, etc.) shall also be disclosed. For year-end 2014, all columns and rows are expected to be zero since 2014 is the first year that a receivable or liability will be recorded.

RELEVANT LITERATURE

Generally Accepted Accounting Principles

59. GAAP did not issue additional guidance to address the risk-sharing provisions of the ACA.

Effective Date and Transition

60. This statement is effective for years ending on or after December 15, 2014. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Risk-sharing provisions guidance was previously reflected within *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act* and was effective January 1, 2014. Upon adoption of this SSAP, INT 13-04 was nullified. Disclosures in paragraphs 57 and 58 were adopted in *SSAP No. 35R—Guaranty Fund and Other Assessments,* but were moved to this SSAP prior to publication.

APPENDIX A – GLOSSARY

The terms included in this appendix are specific to the risk-sharing provisions of the ACA; accordingly, they are not intended to be applied to other topics.

Affordable Care Act (ACA) – The Patient Protection and Affordable Care Act (PPACA), commonly called the Affordable Care Act (ACA), is a United States federal statute signed into law on March 23, 2010.

Applicable Reinsurance Entity – A tax-exempt not-for-profit organization, the duties of which shall be to carry out the transitional reinsurance program by coordinating the funding and operation of the risk-spreading mechanisms designed to stabilize the individual markets during the implementation of health reform.

Cell – The risk corridor calculation is done at the QHP (Qualified Health Plan) level – the cell is state, market (individual or small group), QHP.

Assessment – Required payments into the applicable reinsurance entity by all issuers of major medical commercial products and third-party administrators to fund the transitional reinsurance program.

Exchange – Health insurance marketplaces, also called Health Exchanges, are organizations set up to facilitate the purchase of health insurance in every state of the United States in accordance with the Patient Protection and Affordable Care Act. The exchanges are regulated, online marketplaces, administered by either federal or state government, where individuals, families and small businesses can purchase qualified health insurance plans starting October 1, 2013, with coverage beginning January 1, 2014. Exchanges will also determine who qualifies for subsidies and make subsidy payments to insurers on behalf of individuals receiving them. They will also accept applications for other health coverage programs such as Medicaid and Children's Health Insurance Program (CHIP).

Exempt Plans – Certain health plans that are determined not to be a risk adjustment covered plan in the applicable federally certified risk adjustment methodology (45 C.F.R. § 153.20), grandfathered health plans, group health insurance coverage benefits that are not an integral part of a group health plan, are limited scope, or supplemental benefits (45 C.F.R. § 146.145(c)), and individual health insurance coverage excepted benefits (45 C.F.R. § 148.220).

Grandfathered Plans – A group health plan that was created or an individual health insurance policy that was purchased on or before March 23, 2010. Grandfathered plans are exempted from many changes required under the ACA. Plans or policies may lose their "grandfathered" status if they make certain significant changes that reduce benefits or increase costs to consumers. New employees and new family members may be added to grandfathered group plans after March 23, 2010.

Health and Human Services (HHS) – The Department of Health and Human Services (HHS) is the United States government's principal agency that oversees CMS, which administers programs for protecting the health of all Americans and providing essential human services.

Market Segment – Subset of consumers with its own set of demographic and other assumptions such as individual, state/federal, small group, group, Medicaid or Medicare.

Program Distribution– Amounts payable to or redistributed by the applicable reinsurance entity or the HHS to issuers of non-grandfathered individual market plans that incur high claims costs for enrollees and are eligible to receive benefit payments (recoveries).

Qualified Health Plan (QHP) – Under the Affordable Care Act, starting in 2014, an insurance plan that is certified by the Health Insurance Marketplace, provides essential health benefits and follows established limits on cost-sharing (such as deductibles, copayments, and out-of-pocket maximum amounts).

Risk Score – Individual risk score means a relative measure of predicted health care costs for a particular enrollee that is the result of a risk adjustment model. Claims-based risk-assessment models use data, typically from a 12-month period, to identify underlying conditions and assign a risk score for each individual based on an algorithm.

APPENDIX B – ACA RISK-SHARING PROVISIONS ROLL-FORWARD ILLUSTRATION

Receivables are reflected gross of any nonadmission for this illustration.

	Accrued During the Prior Year on Business Written Before December 31 of the Prior Year		Received or Paid as of the Current Year on Business Written Before December 31 of the Prior Year		Differences		Adjustments			Unsettled Balances as of the Reporting Date

Written Premium 53-3
Yearly Renewable Term (YRT) 50-5, 61R-5
Zero Coupon Convertible Bond 26-4

GLOSSARY to the Statements of Statutory Accounting Principles[1]

Adjusted Carrying Value – Carrying value amount adjusted to remove any accrued interest and to add back any of the following amounts: individual nonadmitted amounts, individual valuation allowances (if applicable), and aggregate valuation allowance (if applicable). In effect, this is equivalent to the SAP Book Value. (Not to be confused with the old "book value" reported in the annual statement blanks for data years 2000 and prior.)

Amortized Cost – See SAP Book Value.

Call Provision – Option to buy an asset at a specified price within a specified period. (Also applicable to Call and Call Option.)

Capitation Arrangement – A compensation plan used in connection with some managed care contracts in which a physician or other medical provider is paid a flat amount, usually on a monthly basis, for each subscriber who has elected to use that physician or medical provider.

Credit Rating Provider – CRP stands for Credit Rating Provider and refers to the NRSROs on the NAIC Credit Rating Provider List discussed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*.

Deferred Tax Asset – The deferred tax consequences attributable to deductible temporary differences and carryforwards. A deferred tax asset is measured using the applicable enacted tax rate and provisions of the enacted tax law. Deferred tax assets are subject to the admissibility criteria as outlined in *SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10*, paragraph 11.

Deferred Tax Liability – The deferred tax consequences attributable to taxable temporary differences. A deferred tax liability is measured using the applicable enacted tax rate and provisions of the enacted tax law.

Equity Method – Accounting valuation approach used in which the initial investment is adjusted in accordance with the ownership of another entity. Guidance for using the equity method, and for determining adjustments to the investment under the equity method is detailed in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* (SSAP No. 48) and *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97).

Fair Value – Fair value is defined in *SSAP No. 100—Fair Value Measurements.*

Guaranteed Investment Contract or Guaranteed Interest Contract (GIC) – An insurer-issued funding vehicle, typically issued to retirement plans, under which the insurer accepts a deposit (or, less frequently, a series of deposits) from the purchaser and guarantees to pay a specified interest rate of return on the funds deposited during a specified period of time.

Morbidity Risk – The potential for a person to experience illness, injury, or other physical or psychological impairment, whether temporary or permanent. Morbidity risk excludes the potential for an individual's death, but includes the potential for an illness or injury that results in death.

Mortality Risk – The potential for loss of life, with respect to a specified person or group of people. For reverse mortgages (SSAP No. 39), mortality risk is defined as the risk of loan payments extending beyond the borrower's original projected life expectancy.

[1] Note that some SSAPs may have terminology that is specific to that topic. Refer to the SSAP for clarification. Accordingly, they are not intended to be applied to other topics.

Nonforfeiture – The principle that some types of insurance contract have an economic value to which the contract owner is entitled even upon lapsation or surrender of the contract. A *nonforfeiture value* is the economic value that must be provided to the contract owner upon lapsation or surrender; it can take various forms, such as a lump-sum cash payment, an amount of paid-up insurance, an amount of term insurance, etc.

Nonoperating System Software – Application systems software such as language processors, library routines and debugging aides and other computer software are not considered operating system software.

Operating System Software – The operating system is a program or a series of programs controlling the data job and task management operations of a computer or a computer network through executive scheduling and monitoring. It increases the productivity of a computer installation by managing the allocation of all available computer resources including the control processing unit, main storage and input/output devices.

Original Cost – See SAP Book Value.

Par Value – The nominal (or face value) of a stock or bond.

Recorded Investment – The SAP Book Value (Adjusted Carrying Value) plus Accrued Interest.

SAP Book Value – Original cost, including capitalized acquisition costs and accumulated depreciation, unamortized premium and discount, deferred origination and commitment fees, direct write-downs, and increase/decrease by adjustment.

SAP Carrying Value (Amount) – The SAP book value plus accrued interest and reduced by any valuation allowance (if applicable) and any nonadmitted adjustment applied to the individual investment. Carrying value is used in the determination of impairment.

Statement Value – The SAP book value reduced by any valuation allowance and nonadmitted adjustment applied to an individual investment or a similar group of investments, e.g., bonds, mortgage loans, common stock.

Appendix A
Excerpts of NAIC Model Laws

Introduction

The following appendices are an integral part of the NAIC *Accounting Practices and Procedures Manual*. The guidance herein is referred to by specific statements of statutory accounting principles (SSAPs).

Some appendices define certain terms. Such definitions are not intended to change the meaning of any terms used elsewhere in the NAIC *Accounting Practices and Procedures Manual* and should only be used in the context of the appendix in which it appears and the SSAP that refers to that appendix.

Certain appendices contain requirements regarding reserves, which are effective with new business written after the effective date of the related SSAP. Transition guidance is provided in the related SSAPs.

Appendix A-001

Investments of Reporting Entities

Introduction

Section 1. Reporting Requirements
Section 2. Investment Risk Interrogatories
Section 3. Summary Investment Schedule

Introduction

A reporting entity may acquire, hold or invest in investments or engage in investment practices as set forth in the laws and regulations of its domiciliary state. The disclosure required by this appendix is not intended to preempt such state authority. The financial information disclosed herein is intended solely for the use of state regulators for solvency analysis and should not be used for any other purpose.

Section 1. Reporting Requirements

The following reporting requirements apply to the provisions of this appendix:

1. Annual Statement – Section 3
2. Supplement to Annual Statement filed by April 1 – Section 2
3. Audited Statutory Financial Statements – Sections 2 and 3

Section 2. Investment Risks Interrogatories

Of The.. Insurance Company
Address (City, State, Zip Code) ....
NAIC Group Code... NAIC Company Code............................. Employer's ID Number..

The Investment Risks Interrogatories are to be filed by April 1. They are also to be included with the Audited Statutory Financial Statements.

Answer the following interrogatories by reporting the applicable U.S. dollar amounts and percentages of the reporting entity's total admitted assets held in that category of investments.

1. Reporting entity's total admitted assets as reported on Page 2 of this annual statement: $____________

2. Ten largest exposures to a single issuer/borrower/investment:

	1 Issuer	2 Description of Exposure	3 Amount	4 Percentage of Total Admitted Assets
2.01	....	a.	$...........................	.... %
2.02	....	b.	$...........................	.... %
2.03	....	c.	$...........................	.... %
2.04	....	d.	$...........................	.... %
2.05	....	e.	$...........................	.... %
2.06	....	f.	$...........................	.... %
2.07	....	g.	$...........................	.... %
2.08	....	h.	$...........................	.... %
2.09	....	i.	$...........................	.... %
2.10	....	j.	$...........................	.... %

3. Amounts and percentages of the reporting entity's total admitted assets held in bonds and preferred stocks by NAIC designation:

	Bonds	1	2		Preferred Stocks	3	4
3.01	NAIC – 1	$....................	.... %	3.07	P/RP – 1	$..................	................%
3.02	NAIC – 2	$....................	.... %	3.08	P/RP – 2	$..................	................%
3.03	NAIC – 3	$....................	.... %	3.09	P/RP – 3	$..................	................%
3.04	NAIC – 4	$....................	.... %	3.10	P/RP – 4	$..................	................%
3.05	NAIC – 5	$....................	.... %	3.11	P/RP – 5	$..................	................%
3.06	NAIC – 6	$....................	.... %	3.12	P/RP – 6	$..................	................%

4. Assets held in foreign investments:

4.01 Are assets held in foreign investments less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response, to 4.01 above is yes, responses are not required for interrogatories 5 – 10.

4.02	Total admitted assets held in foreign investments	$	............%
4.03	Foreign-currency-denominated investments	$	............%
4.04	Insurance liabilities denominated in that same foreign currency	$	............%

5. Aggregate foreign investment exposure categorized by NAIC sovereign designation:

		1	2
5.01	Countries designated NAIC – 1	$	.... %
5.02	Countries designated NAIC – 2	$	.... %
5.03	Countries designated NAIC – 3 or below	$	.... %

6. Two largest foreign investment exposures to a single country, categorized by the country's NAIC sovereigndesignation:

		1	2
	Countries designated NAIC – 1:		
6.01	Country:	$	.... %
6.02	Country:	$	.... %
	Countries designated NAIC – 2:		
6.03	Country:	$	.... %
6.04	Country:	$	.... %
	Countries designated NAIC – 3 or below:		
6.05	Country:	$	.... %
6.06	Country:	$	.... %

7. Aggregate unhedged foreign currency exposure: $ ....%

8. Aggregate unhedged foreign currency exposure categorized by NAIC sovereign designation:

		1	2
8.01	Countries designated NAIC – 1	$	.... %
8.02	Countries designated NAIC – 2	$	.... %
8.03	Countries designated NAIC – 3 or below	$	.... %

9. Two largest unhedged foreign currency exposures to a single country, categorized by the country's NAIC sovereign designation:

		1	2
	Countries designated NAIC – 1:		
9.01	Country:	$	.... %
9.02	Country:	$	.... %
	Countries designated NAIC – 2:		
9.03	Country:	$	.... %
9.04	Country:	$	.... %
	Countries designated NAIC – 3 or below:		
9.05	Country:	$	.... %
9.06	Country:	$	.... %

10. Ten largest non-sovereign (i.e. non-governmental) foreign issues:

	1 Issuer	2 NAIC Designation	3	4
10.01	....	....	$	.... %
10.02	....	....	$	.... %
10.03	....	....	$	.... %
10.04	....	....	$	.... %
10.05	....	....	$	.... %
10.06	....	....	$	.... %
10.07	....	....	$	.... %
10.08	....	....	$	.... %
10.09	....	....	$	.... %
10.10	....	....	$	.... %

11. Amounts and percentages of the reporting entity's total admitted assets held in Canadian investments and unhedged Canadian currency exposure:

11.01 Are assets held in Canadian investments less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response to 11.01 is yes, detail is not required for the remainder of Interrogatory 11.

		1	2
11.02	Total admitted assets held in Canadian Investments	$............................	.... %
11.03	Canadian-currency-denominated investments	$............................	.... %
11.04	Canadian-denominated insurance liabilities	$............................	.... %
11.05	Unhedged Canadian currency exposure	$............................	.... %

12. Report aggregate amounts and percentages of the reporting entity's total admitted assets held in investments with contractual sales restrictions:

12.01 Are assets held in investments with contractual sales restrictions less than 2.5% of the Reporting entity's total admitted assets. Yes [ ] No [ ]

If response to 12.01 is yes, responses are not required for the remainder of Interrogatory 12.

	1	2	3
12.02	Aggregate statement value of investments with contractual sales restrictions:	$	............................%
	Largest 3 investments with contractual sales restrictions:		
12.03	....	$	............................%
12.04	....	$	............................%
12.05	....	$	............................%

13. Amounts and percentages of admitted assets held in the ten largest equity interests:

13.01 Are assets held in equity interest less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response to 13.01 is yes, responses are not required for the remainder of Interrogatory 13.

	1 Issuer	2	3
13.02	....	$	............................%
13.03	....	$	............................%
13.04	....	$	............................%
13.05	....	$	............................%
13.06	....	$	............................%
13.07	....	$	............................%
13.08	....	$	............................%
13.09	....	$............................	............................%
13.10	....	$............................	............................%
13.11	....	$	............................%

14. Amounts and percentages of the reporting entity's total admitted assets held in nonaffiliated, privately placed equities:

14.01 Are assets held in nonaffiliated, privately placed equities less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response to 14.01 above is yes, responses are not required for the remainder of Interrogatory 14.

	1	2	3
14.02	Aggregate statement value of investments held in nonaffiliated, privately placed equities:	$	.... %
	Largest 3 investments held in nonaffiliated, privately placed equities:		
14.03	....	$	.... %
14.04	....	$	.... %
14.05	....	$	.... %

15. Amounts and percentages of the reporting entity's total admitted assets held in general partnership interests:

15.01 Are assets held in general partnership interests less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response to 15.01 above is yes, responses are not required for the remainder of Interrogatory 15.

	1	2	3
15.02	Aggregate statement value of investments held in general partnership interests:	$	.... %
	Largest 3 investments in general partnership interests:		
15.03	....	$	.... %
15.04	....	$	.... %
15.05	....	$	.... %

16. Amounts and percentages of the reporting entity's total admitted assets held in mortgage loans:

16.01 Are mortgage loans reported in Schedule B less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response to 16.01 above is yes, responses are not required for the remainder of Interrogatory 16 and Interrogatory 17.

	1 (Type (Residential, Commercial, Agricultural)	2	3
16.02	....	$	.... %
16.03	....	$	.... %
16.04	....	$	.... %
16.05	....	$	.... %
16.06	....	$	.... %
16.07	....	$	.... %
16.08	....	$	.... %
16.09	....	$	.... %
16.10	....	$	.... %
16.11	....	$	.... %

Amount and percentage of the reporting entity's total admitted assets held in the following categories of mortgage loans:

		Loans	
16.12	Construction loans	$	..............................%
16.13	Mortgage loans over 90 days past due	$	..............................%
16.14	Mortgage loans in the process of foreclosure	$	..............................%
16.15	Mortgage loans foreclosed	$	..............................%
16.16	Restructured mortgage loans	$	..............................%

17. Aggregate mortgage loans having the following loan-to-value ratios as determined from the most current appraisal as of the annual statement date:

	Loan-to-Value	Residential		Commercial		Agricultural	
		1	2	3	4	5	6
17.01	above 95%	$	..............%	$....................	.... %	$	.............%
17.02	91% to 95%	$	..............%	$....................	.... %	$	.............%
17.03	81% to 90%	$	..............%	$....................	.... %	$	.............%
17.04	71% to 80%	$	..............%	$....................	.... %	$	.............%
17.05	below 70%	$	..............%	$....................	.... %	$	.............%

18. Amounts and percentages of the reporting entity's total admitted assets held in each of the five largest investments in real estate:

18.01 Are assets held in real estate reported in less than 2.5% of the reporting entity's total admitted assets? Yes [ ] No [ ]

If response to 18.01 above is yes, responses are not required for the remainder of Interrogatory 18.

Largest five investments in any one parcel or group of contiguous parcels of real estate:

	Description 1	2	3
18.02	....	$	....%
18.03	....	$	....%
18.04	....	$	....%
18.05	....	$	....%
18.06	....	$	....%

19. Report aggregate amounts and percentages of the reporting entity's total admitted assets held in investments held in mezzanine real estate loans:

19.01 Are assets held in investments held in mezzanine real estate loans less than 2.5% of the Reporting entity's total admitted assets. Yes [ ] No [ ]

If response to 19.01 is yes, responses are not required for the remainder of Interrogatory 19.

Appendix A-010

Minimum Reserve Standards For Individual And Group Health Insurance Contracts

Definitions

1. “Annual claim cost” is the net annual cost per unit of benefit before the addition of expenses, including claim settlement expenses, and a margin for profit or contingencies. For example, the annual claim cost for a $100 monthly disability benefit, for a maximum disability benefit period of one year, with an elimination period of one week, with respect to a male at age 35, in a certain occupation might be $12, while the gross premium for this benefit might be $18. The additional $6 would cover expenses and profit or contingencies.

2. “Claims accrued” is that portion of claims incurred on or prior to the valuation date that result in liability of the insurer for the payment of benefits for medical services that have been rendered on or prior to the valuation date, and for the payment of benefits for days of hospitalization and days of disability that have occurred on or prior to the valuation date, that the insurer has not paid as of the valuation date, but for which it is liable and will have to pay after the valuation date. This liability is sometimes referred to as a liability for “accrued” benefits. A claim reserve, which represents an estimate of this accrued claim liability, must be established. *SSAP No. 55 defines this as a Claim Liability and not a Claim Reserve.*

3. “Claims reported” are considered as a reported claim for annual statement purposes when an insurer has been informed that a claim has been incurred, if the date reported is on or prior to the valuation date.

4. “Claims unaccrued” represent that portion of claims incurred on or prior to the valuation date which result in liability of the insurer for the payment of benefits for medical services expected to be rendered after the valuation date, and for benefits expected to be payable for days of hospitalization and days of disability occurring after the valuation date. This liability is sometimes referred to as a liability for unaccrued benefits. A claim reserve, which represents an estimate of the unaccrued claim payments expected to be made (which may or may not be discounted with interest), must be established. *SSAP No. 54 defines this as a Claim Reserve differentiated from the Claim Liability in paragraph 2 above.*

5. When an insurer has not been informed, on or before the valuation date, concerning a claim that has been incurred on or prior to the valuation date, the claim is considered an “unreported claim” for annual statement purposes.

6. “Date of disablement” is the earliest date the insured is considered as being disabled under the definition of disability in the contract, based on a doctor’s evaluation or other evidence. Normally this date will coincide with the start of any elimination period.

7. “Elimination period” is a specified number of days, weeks, or months starting at the beginning of each period of loss, during which no benefits are payable.

8. “Gross premium” is the amount of premium charged by the insurer. It includes the net premium (based on claim-cost) for the risk, together with any loading for expenses, profit or contingencies.

9. The term “group long-term disability income” includes group contracts providing group disability income coverage with a maximum benefit duration longer than two years. Group long-term disability income contracts are based on a group pricing structure. The term “group long-term disability” does not

include group short-term disability (coverage with benefit periods of two years or less in maximum duration). It also does not include voluntary group disability income coverage that is priced on an individual risk structure and generally sold in the workplace.

~~9.~~10. The term “group insurance” includes blanket insurance and franchise insurance and any other forms of group insurance.

~~10.~~11. “Level premium” is a premium calculated to remain unchanged throughout either the lifetime of the policy or for some shorter projected period of years. The premium need not be guaranteed; in which case, although it is calculated to remain level, it may be changed if any of the assumptions on which it was based are revised at a later time. Generally, the annual claim costs are expected to increase each year and the insurer, instead of charging premiums that correspondingly increase each year, charges a premium calculated to remain level for a period of years or for the lifetime of the contract. In this case the benefit portion of the premium is more than needed to provide for the cost of benefits during the earlier years of the policy and less than the actual cost in the later years. The building of a prospective contract reserve is a natural result of level premiums.

~~11.~~12. “Long-term care insurance” is any insurance policy or rider advertised, marketed, offered or designed to provide coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis; for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Such term also includes a policy or rider which provides for payment of benefits based upon cognitive impairment or the loss of functional capacity. Long-term care insurance may be issued by insurers; fraternal benefit societies; nonprofit health, hospital, and medical service corporations; prepaid health plans; health maintenance organizations or any similar organization to the extent they are otherwise authorized to issue life or health insurance. Long-term care insurance shall not include any insurance policy which is offered primarily to provide basic Medicare supplement coverage, basic hospital expense coverage, basic medical-surgical expense coverage, hospital confinement indemnity coverage, major medical expense coverage, disability income or related asset-protection coverage, accident only coverage, specified disease or specified accident coverage, or limited benefit health coverage.

~~12.~~13. “Modal Premium” refers to the premium paid on a contract based on a premium term which could be annual, semi-annual, quarterly, monthly, or weekly. Thus if the annual premium is $100 and if, instead, monthly premiums of $9 are paid then the modal premium is $9.

~~13.~~14. Normally the terminal reserve is a positive value. However, if the values of the benefits are decreasing with advancing age or duration it could be a negative value, called a “negative reserve.”

~~14.~~15. “Preliminary Term Reserve Method” is a method of valuation whereby the valuation net premium for each year falling within the preliminary term period is exactly sufficient to cover the expected incurred claims of that year, so that the terminal reserves will be zero at the end of the year. As of the end of the preliminary term period, a new constant valuation net premium (or stream of changing valuation premiums) becomes applicable such that the present value of all such premiums is equal to the present value of all claims expected to be incurred following the end of the preliminary term period.

~~15.~~16. “Present value of amounts not yet due on claims” represents the reserve for “claims unaccrued” (see definition), which may be discounted at interest.

~~16.~~17. “Rating block” means a grouping of contracts determined by the valuation actuary based on common characteristics, such as a policy form or forms having similar benefit designs.

~~17.~~18. The term “reserve” is used to include all items of benefit liability, whether in the nature of incurred claim liability or in the nature of contract liability relating to future periods of coverage, and whether the liability is accrued or unaccrued. An insurer under its contracts promises benefits which result in:

a. Claims that have been incurred, that is, for which the insurer has become obligated to make payment, on or prior to the valuation date. On these claims, payments expected to be made after the valuation date for accrued and unaccrued benefits are liabilities of the insurer which shall be provided for by establishing claim reserves; or

b. Claims that are expected to be incurred after the valuation date. Any present liability of the insurer for these future claims shall be provided for by the establishment of contract reserves and unearned premium reserves.

~~18.~~19. “Terminal reserve” is the reserve at the end of a contract year and is defined as the present value of benefits expected to be incurred after that contract year minus the present value of future valuation net premiums.

~~19.~~20. “Unearned premium reserve” values that portion of the premium paid or due to the insurer which is applicable to the period of coverage extending beyond the valuation date. Thus if an annual premium of $120 was paid on November 1, $20 would be earned as of December 31 and the remaining $100 would be unearned. The unearned premium reserve could be on a gross basis as in this example or on a valuation net premium basis.

~~20.~~21. “Valuation net modal premium” is the modal fraction of the valuation net annual premium that corresponds to the gross modal premium in effect on any contract to which contract reserves apply. Thus if the mode of payment in effect is quarterly, the valuation net modal premium is the quarterly equivalent of the valuation net annual premium.

Scope

~~21.~~22. These standards apply to all individual and group health and accident and sickness insurance coverages, including single premium credit disability insurance. All other credit insurance is not subject to Appendix A-010.

~~22.~~23. When an insurer determines that adequacy of its health insurance reserves requires reserves in excess of the minimum standards specified herein, such increased reserves shall be held and shall be considered the minimum reserves for that insurer.

~~23.~~24. With respect to any block of contracts, or with respect to an insurer’s health business as a whole, a prospective gross premium valuation is the ultimate test of reserve adequacy as of a given valuation date. Such a gross premium valuation will take into account, for contracts in force, in a claims status, or in a continuation of benefits status on the valuation date, the present value as of the valuation date of: all expected benefits unpaid, all expected expenses unpaid, and all unearned or expected premiums, adjusted for future premium increases reasonably expected to be put into effect.

~~24.~~25. Such a gross premium valuation is to be performed whenever a significant doubt exists as to reserve adequacy with respect to any major block of contracts, or with respect to the insurer’s health business as a whole. In the event inadequacy is found to exist, immediate loss recognition shall be made and the reserves restored to adequacy. Adequate reserves (inclusive of claim, premium and contract reserves, if any) shall be held with respect to all contracts, regardless of whether contract reserves are required for such contracts under these standards.

~~25.~~26. Whenever minimum reserves, as defined in this Appendix, exceed reserve requirements as determined by a prospective gross premium valuation, such minimum reserves remain the minimum requirement under these standards.

~~26.~~27. The following paragraphs set forth minimum standards for three categories of health insurance reserves:

a. Claim Reserves;

b. Premium Reserves;

c. Contract Reserves.

~~27.~~28. Adequacy of an insurer's health insurance reserves is to be determined on the basis of all three categories combined. However, these standards emphasize the importance of determining appropriate reserves for each of the three categories separately.

Claim Reserves

~~28.~~29. General:

a. Claim reserves are required for all incurred but unpaid claims on all health insurance policies.

b. Appropriate claim expense reserves are required with respect to the estimated expense of settlement of all incurred but unpaid claims.

c. All such reserves for prior valuation years are to be tested for adequacy and reasonableness along the lines of claim runoff schedules in accordance with the statutory financial statement including consideration of any residual unpaid liability.

~~29.~~30. Minimum Standards for Claim Reserves:

a. Disability Income

i. Interest. The maximum interest rate for claim reserves is specified in Exhibit 1.

ii. Morbidity. Minimum standards with respect to morbidity are those specified in Exhibit 1, except that at the option of the insurer:

(a) For individual disability income claims incurred January 1, 2001, to January 1, 2007, each insurer may elect which of the following to use as the minimum morbidity standard for claim reserves.

(1) The minimum morbidity standard in effect for claim reserves as of the date the claim was incurred, or

(2) The standards as defined in paragraph 30.a.ii.(c) applied to all open claims. Once an insurer elects to calculate reserves for all open claims on the standard defined in paragraph 30.a.ii.(c), all future valuations must be on that basis.

(b~~a~~) For group and individual claims incurred from January 1, 2001, through December 31, 2006, with a duration from date of disablement of less than two years, reserves may be based on the insurer's experience, if such experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

(c~~b~~) For individual disability income claims incurred on or after January 1, 2007, the minimum standards with respect to morbidity are those specified in Exhibit 1, except that, at the option of the insurer, assumptions regarding claim termination rates for the period less than two (2) years from the date of disablement may be based on the insurer's experience, if such experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

(d~~c~~) For group disability income claims incurred from January 1, 2001, through December 31, 2006, with a duration from date of disablement of more than two (2) years but less than five (5) years, reserves may be based on the insurer's experience if such experience is considered credible and for which the insurer maintains underwriting and claim administration control.

(e~~d~~) For group disability income claims incurred on or after January 1, 2007;

(1) Assumptions regarding claim termination rates for the period less than two (2) years from the date of disablement may be based on the insurer's experience, if the experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

(2) Assumptions regarding claim termination rates for the period two (2) or more years but less than five (5) years from the date of disablement may be based on the insurer's experience if such experience is considered credible and for which the insurer maintains underwriting and claim administration control.

(f~~e~~) With respect to claims termination standards (d~~c~~) and (e~~d~~)(2) above, for experience to be considered credible for purposes of this appendix, the company should be able to provide claim termination patterns over no more than six (6) years reflecting at least 5,000 claims terminations during the third through fifth claims durations on reasonably similar applicable policy forms.

A plan of modification to the reserve basis must be in writing and must include:

(1) An analysis of the credibility of the experience;

(2) A description of how all of the insurer's experience is proposed to be used in setting reserves;

(3) A description and quantification of the margins to be included; and

(4) A summary of the financial impact that the proposed plan of modification would have had on the insurer's last filed annual statement.

(g~~f~~) For claim reserves to reflect "sound values" and/or reasonable margins, reserve tables based on credible experience should be adjusted regularly to maintain reasonable margins.

(h~~g~~) For disability income claims incurred prior to January 1, 2007, each insurer may elect to use as the minimum morbidity standard for claim reserves:

(1) The individual and group disability income claims minimum morbidity standard in effect for claim reserves as of the date the claim was incurred; or

(2) The individual and group disability income claims termination standards as defined in Items (c~~b~~) and (e~~d~~), applied to all open claims. Once an insurer elects to calculate reserves for all open claims on the standards defined in Items (c~~b~~) and (e~~d~~), all future valuations must be on that basis.

(3) After the effective date selected by the company in paragraph 30.a.ii.(i), the standards as defined in paragraph 30.a.ii.(i) applied to all open group long-term disability income claims, or

(4) The standards as defined in paragraph 30.b. applied to all open group disability income claims.

Once an insurer elects to calculate reserves for all open claims on a more recent standard, then all future valuations must be on that basis.

(i) For group long-term disability income claims incurred on or after October 1, 2014, or the subsequent date that is chosen for optional early adoption, and before the date specified in paragraph 30.b., the minimum standards with respect to morbidity may be based on the 2012 GLTD termination table or subsequent table with considerations of:

(1) The insurer's own experience computed in accordance with Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual*, and

(2) An adjustment to include an own experience measurement margin derived in accordance with Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual*, and

(3) A credibility factor derived in accordance with Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual*.

b. Subject to the conditions in this Section, the 2012 GLTD or subsequent table with considerations outlined in paragraph 30.a. shall be used in determining minimum standards with respect to morbidity for group long-term disability claims incurred on or after January 1, 2017.

i. For group long-term disability income claims incurred on or after January 1, 2007, but before the effective date selected by the company in paragraph 30.a. ii.(i), and group disability income claims incurred on or after January 1, 2007, that are not group long-term disability income, the minimum standards with respect to morbidity are those specified in Exhibit 1 except that, at the option of the insurer:

(a) Assumptions regarding claim termination rates for the period less than two (2) years from the date of disablement may be based on the insurer's experience, if the experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

(b) Assumptions regarding claim termination rates for the period two (2) or more years but less than five (5) years from the date of disablement may, with the approval of the commissioner, be based on the insurer's experience for which the insurer maintains underwriting and claim administration control. The request for such approval of a plan of modification to the reserve basis must include:

(1) An analysis of the credibility of the experience;

(2) A description of how all of the insurer's experience is proposed to be used in setting reserves;

(3) A description and quantification of the margins to be included;

(4) A summary of the financial impact that the proposed plan of modification would have had on the insurer's last filed annual statement;

(5) A copy of the approval of the proposed plan of modification by the commissioner of the state of domicile; and

(6) Any other information deemed necessary by the commissioner.

(c) Each insurer may elect which of the following to use as the minimum morbidity standard for group long-term disability income claim reserves:

(1) The minimum morbidity standard in effect for claim reserves as of the date the claim was incurred, or

(2) The standards as defined in paragraph 30.a.ii.(i) applied to all open claims.

Once an insurer elects to calculate reserves for all open claims on a more recent standard, then all future valuations must be on that basis.

iii. Duration of Disablement. For contracts with an elimination period, the duration of disablement shall be measured as dating from the time that benefits would have begun to accrue had there been no elimination period.

c~~b~~. All Other Benefits

i. Interest. The maximum interest rate for claim reserves is specified in Exhibit 1.

ii. Morbidity or other Contingency. The reserve shall be based on the insurer's experience, if such experience is considered credible, or upon other assumptions designed to place a sound value on the liabilities.

~~30.~~31. Claim Reserve Methods Generally - A generally accepted actuarial reserving method or other reasonable method or a combination of methods may be used to estimate all claim liabilities. The methods used for estimating liabilities generally may be aggregate methods, or various reserve items may be separately valued. Approximations based on groupings and averages may also be employed. Adequacy of the claim reserves, however, shall be determined in the aggregate.

Premium Reserves

~~31.~~32. General

a. Except as noted in 31.b below, unearned premium reserves are required for all contracts with respect to the period of coverage for which premiums, other than premiums paid in advance, have been paid beyond the date of valuation.

b. Single premium credit disability insurance individual policies and group certificates are excluded from unearned premium reserve requirements of paragraphs 32-34~~31-33~~.

c. If premiums due and unpaid are carried as an asset, such premiums must be treated as premiums in force, subject to unearned premium reserve determination. The value of unpaid commissions, premium taxes, and the cost of collection associated with due and unpaid premiums must be carried as an offsetting liability.

d. The gross premiums paid in advance for a period of coverage commencing after the next premium due date which follows the date of valuation may be appropriately discounted to the valuation date and shall be held as a separate liability .

~~32.~~33. Minimum Standards for Unearned Premium Reserves

a. The minimum unearned premium reserve with respect to any contract is the pro rata unearned modal premium that applies to the premium period beyond the valuation date, with such premium determined on the basis of:

i. The valuation net modal premium on the contract reserve basis applying to the contract; or;

ii. The gross modal premium for the contract if no contract reserve applies.

b. However, in no event may the sum of the unearned premium and contract reserves for all contracts of the insurer subject to contract reserve requirements be less than the gross modal unearned premium reserve on all such contracts, as of the date of valuation. Such reserve shall never be less than the expected claims for the period beyond the valuation date represented by such unearned premium reserve, to the extent not provided for elsewhere.

~~33.~~34. Premium Reserve Methods Generally - The insurer may employ suitable approximations and estimates; including, but not limited to groupings, averages and aggregate estimation; in computing premium reserves. Such approximations or estimates shall be tested periodically to determine their continuing adequacy and reliability.

Contract Reserves

~~34.~~35. General:

a. Contract reserves are required, unless otherwise specified in 34 b. below for:

i. All individual and group contracts with which level premiums are used; or

ii. All individual and group contracts with respect to which, due to the gross premium pricing structure at issue, the value of the future benefits at any time exceeds the value of any appropriate future valuation net premiums at that time. This evaluation may be applied on a rating block basis if the total premiums for the block were developed to support the total risk assumed and expected expenses for the block each year, and a qualified actuary certifies the premium development. The actuary should state in the certification that premiums for the rating block were developed such that each year's premium was intended to cover that year's costs without any prefunding. If the premium is also intended to recover costs for any prior years, the actuary should also disclose the reasons for and magnitude of such recovery. The values specified in this paragraph shall be determined on the basis specified in paragraph 36~~35~~ below.

iii. If rates are determined such that each year's premium is intended to cover that year's cost, the rating block approach results in no contract reserves unless required by paragraph 38~~37~~. If rates are designed to prefund future years' costs, contract reserves will be required.

b. Contracts not requiring a contract reserve are contracts which cannot be continued after one year from issue and contracts already in force on January 1, 2001 for which no contract reserve was required under SSAP No. 54 paragraph 40.

c. The contract reserve is in addition to claim reserves and premium reserves.

d. The methods and procedures for contract reserves shall be consistent with those for claim reserves for any contract, or else appropriate adjustment must be made when necessary to assure provision for the aggregate liability. The definition of the date of incurral must be the same in both determinations.

e. The total contract reserve established shall incorporate provisions for moderately adverse deviations.

~~35.~~36. Minimum Standards for Contract Reserves:

a. Basis:

i. Morbidity or other Contingency. Minimum standards with respect to morbidity are those set forth in Exhibit 1.

(a) Valuation net premiums used under each contract must have a structure consistent with the gross premium structure at issue of the contract as this relates to advancing age of insured, contract duration and period for which gross premiums have been calculated.

(b) Except as provided in paragraph 34~~33~~.a.ii., if for a policy form there is no gross premium variation by age, the valuation net premiums will nonetheless vary based on age at issue for each contract since at issue the present value of valuation net premiums for a contract must equal the present value of tabular claim costs.

(c) Contracts for which tabular morbidity standards are not specified in Exhibit 1 shall be valued using tables established for reserve purposes by a qualified actuary. The morbidity tables shall contain a pattern of incurred claims cost that reflects the underlying morbidity and shall not be constructed for the primary purpose of minimizing reserves.

(d) Effective January 1, 2007, when determining the morbidity assumptions, the actuary shall use assumptions that represent the best estimate of anticipated future experience, but shall not incorporate any expectation of future morbidity improvement. Morbidity improvement is a change, in the combined effect of claim frequency and the present value of future expected claim payments given that a claim has occurred, from the current morbidity tables or experience that will result in a reduction to reserves. It is not the intent of this provision to restrict the ability of the actuary to reflect the morbidity impact for a specific known event that has occurred and that is able to be evaluated and quantified.

(e) Business in force prior to January 1, 2007 may be permitted to retain the original reserve basis, which may not meet the provisions of (d) above.

ii. Interest. The maximum interest rate is specified in Exhibit 1.

iii. Termination rates. Termination rates used in the computation of reserves shall be on the basis of a mortality table as specified in Exhibit 1 except as noted in the following paragraphs.

(a) Under contracts for which premium rates are not guaranteed, and where the effects of insurer underwriting are specifically used by policy duration in the valuation morbidity standard or for return of premium or other deferred cash benefits, total termination rates may be used at ages and durations where these exceed specified mortality table rates, but not in excess of the lesser of:

(1) Eighty percent of the total termination rate used in the calculation of the gross premiums, or

(2) Eight percent.

(b) For long-term care individual policies or group certificates, issued within the period January 1, 2001, to December 31, 2006, the contract reserve may be established on a basis of separate:

(1) Mortality (as specified in Exhibit 1) and

(2) Terminations other than mortality, where the terminations are not to exceed:

a. For policy years one through four (4), the lesser of eighty percent (80%) of the voluntary lapse rate used in the calculation of gross premiums and eight percent (8%);

b. For policy years five (5) and later, the lesser of one hundred percent (100%) of the voluntary lapse rate used in the calculation of gross premiums and four percent (4%).

(c) For long-term care individual policies or group certificates issued on or after January 1, 2007, the contract reserve shall be established on the basis of:

(1) Mortality (as specified in Exhibit 1); and

(2) Terminations other than mortality, where the terminations are not to exceed:

a. For policy year one, the lesser of eighty percent (80%) of the voluntary lapse rate used in the calculation of gross premiums and six percent (6%).

b. For policy years two (2) through four (4), the lesser of eighty percent (80%) of the voluntary lapse rate used in the calculation of gross premiums and four percent (4%).

c. For policy years five (5) and later, the lesser of one hundred percent (100%) of the voluntary lapse rate used in the calculation of gross premiums and two percent (2%), except certificates under policies issued to one or more employers or labor organizations, or to a trust or to the trustees of a fund established by one or more employers or labor organizations, or a combination thereof, for employees or former employees or a combination thereof, or for members or former members or a combination thereof, of a labor organization where the 2% shall be three percent (3%).

(d) Where a morbidity standard specified in Exhibit 1 is on an aggregate basis, such morbidity standard may be adjusted to reflect the effect of insurer underwriting by policy duration. The adjustments must be appropriate to the underwriting.

b. Reserve Method:

i. For insurance except long-term care and return of premium or other deferred cash benefits, the minimum reserve is the reserve calculated on the two-year full preliminary term method; that is, under which the terminal reserve is zero at the first and also the second contract anniversary.

ii. For long-term care insurance, the minimum reserve is the reserve calculated on the one-year full preliminary term method.

iii. (a) For return of premium or other deferred cash benefits, the minimum reserve is the reserve calculated as follows:

(1) On the one year preliminary term method if the benefits are provided at any time before the twentieth anniversary;

(2) On the two year preliminary term method if the benefits are only provided on or after the twentieth anniversary.

(b) The preliminary term method may be applied only in relation to the date of issue of a contract. Reserve adjustments introduced later, as a result of rate increases, revisions in assumptions (e.g., projected inflation rates) or for other reasons, are to be applied immediately as of the effective date of adoption of the adjusted basis.

c. Negative Reserves. Negative reserves on any benefit may be offset against positive reserves for other benefits in the same contract, but the total contract reserve with respect to all benefits combined may not be less than zero.

d. Nonforfeiture Benefits for Long-Term Care Insurance. The contract reserve on a policy basis shall not be less than the net single premium for the nonforfeiture benefits at the appropriate policy duration, where the net single premium is computed according to the above specifications.

~~36.~~37. Alternative Valuation Methods and Assumptions Generally – Provided the contract reserve on all contracts to which an alternative method or basis is applied is not less in the aggregate than the amount determined according to the applicable standards specified above; an insurer may use any reasonable assumptions as to interest rates, termination and/or mortality rates, and rates of morbidity or other contingency. Also, subject to the preceding condition, the insurer may employ methods other than the methods stated above in determining a sound value of its liabilities under such contracts, including but not limited to the following: the net level premium method; the one-year full preliminary term method; prospective valuation on the basis of actual gross premiums with reasonable allowance for future expenses; the use of approximations such as those involving age groupings, groupings of several years of issue, average amounts of indemnity, grouping of similar contract forms; the computation of the reserve for one contract benefit as a percentage of, or by other relation to, the aggregate contract reserves exclusive of the benefit or benefits so valued; and the use of a composite annual claim cost for all or any combination of the benefits included in the contracts valued.

~~37.~~38. Tests For Adequacy and Reasonableness of Contract Reserves:

a. Annually, an appropriate review shall be made of the insurer’s prospective contract liabilities on contracts valued by tabular reserves, to determine the continuing adequacy and reasonableness of the tabular reserves giving consideration to future gross premiums. The insurer shall make appropriate increments to such tabular reserves if such tests indicate that the basis of such reserves is no longer adequate subject, however, to the minimum standards in paragraph 36~~33~~ above.

b. In the event a company has a contract or a group of related similar contracts, for which future gross premiums will be restricted by contract, insurance department regulations, or for other reasons, such that the future gross premiums reduced by expenses for administration, commissions, and taxes will be insufficient to cover future claims, the company shall establish contract reserves for such shortfall in the aggregate.

Reinsurance

~~38.~~39. Increases to, or credits against reserves carried, arising because of reinsurance assumed or reinsurance ceded, must be determined in a manner consistent with these minimum reserve standards and with all applicable provisions of the reinsurance contracts which affect the insurer’s liabilities.

Exhibit 1. Specific Standards For Morbidity, Interest And Mortality

Morbidity

1. Minimum morbidity standards for valuation of specified individual contract health insurance benefits are as follows:

a. Disability Income Benefits Due to Accident or Sickness

i. Contract Reserves:

(a) The 1985 Commissioners Individual Disability Tables A (85CIDA); or

(b) The 1985 Commissioners Individual Disability Tables B (85CIDB).

(c) Each insurer shall elect, with respect to all individual contracts issued in any one statement year, whether it will use Tables A or Tables B as the minimum standard.

ii. Claim Reserves:

(a) For claims incurred on or after January 1, 2002:

The 1985 Commissioners Individual Disability Table A (85CIDA) with claim termination rates multiplied by the following adjustment factors:

Duration	Adjustment Factor	Adjusted Termination Rates*
Week 1	0.366	0.04831
2	0.366	0.04172
3	0.366	0.04063
4	0.366	0.04355
5	0.365	0.04088
6	0.365	0.04271
7	0.365	0.04380
8	0.365	0.04344
9	0.370	0.04292
10	0.370	0.04107
11	0.370	0.03848
12	0.370	0.03478
13	0.370	0.03034
Month 4	0.391	0.08758
5	0.371	0.07346
6	0.435	0.07531
7	0.500	0.07245
8	0.564	0.06655
9	0.613	0.05520
10	0.663	0.04705

Duration	Adjustment Factor	Adjusted Termination Rates*
11	0.712	0.04486
12	0.756	0.04309
13	0.800	0.04080
14	0.844	0.03882
15	0.888	0.03730
16	0.932	0.03448
17	0.976	0.03026
18	1.020	0.02856
19	1.049	0.02518

21	1.107	0.02104
22	1.136	0.01932
23	1.165	0.01865
24	1.195	0.01792
Year 3	1.369	0.16839
4	1.204	0.10114
5	1.199	0.07434
6 and later	1.000	**

* The adjusted termination rates derived from the application of the adjustment factors to the DTS Valuation Table termination rates shown in exhibits 3a, 3b, 3c, 4, and 5 (*Transactions of the Society of Actuaries* (TSA) XXXVII, pp. 457-463) is displayed. The adjustment factors for age, elimination period, class, sex, and cause displayed in exhibits 3a, 3b, 3c, and 4 should be applied to the adjusted termination rates shown in this table.

** Applicable DTS Valuation Table duration rate from exhibits 3c and 4 (TSA XXXVII, pp. 462-463).

The 85CIDA table so adjusted for the computation of claim reserves shall be known as 85CIDC (The 1985 Commissioners Individual Disability Table C).

(b) For claims incurred from January 1, 2001, through December 31, 2001:

Each insurer may elect which of the following to use as the minimum standard for claims incurred prior to January 1, 2002:

(i) The minimum morbidity standard in effect for contract reserves on currently issued contracts, as of the date the claim is incurred, or

(ii) The standard as defined in Item (i), applied to all open claims.

(iii) Once an insurer elects to calculate reserves for all open claims on the standard defined in Item (i), all future valuations.

b. Hospital Benefits, Surgical Benefits and Maternity Benefits (Scheduled benefits or fixed time period benefits only)

i. Contract Reserves:

The 1974 Medical Expense Tables, Table A, Transactions of the Society of Actuaries, Volume XXX, pg. 63. Refer to the paper (in the same volume, pg. 9) to which this table is appended, including its discussions, for methods of adjustment for benefits not directly valued in Table A: "Development of the 1974 Medical Expense Benefits," Houghton and Wolf.

ii. Claim Reserves:

No specific standard. See 1.f.

c. Cancer Expense Benefits (Scheduled benefits or fixed time period benefits only)

i. Contract Reserves:

The 1985 NAIC Cancer Claim Cost Tables.

ii. Claim Reserves:

No specific standard. See 1.f.

d. Accidental Death Benefits

i. Contract Reserves:

The 1959 Accidental Death Benefits Table.

ii. Claim Reserves:

Actual amount incurred.

e. Single Premium Credit Disability

i. Contract Reserves:

(a) For contracts issued on or after January 1, 2002:

(i) For plans having less than a thirty-day elimination period, the 1985 Commissioners Individual Disability Table A (85CIDA) with claim incidence rates increased by twelve percent (12%).

(ii) For plans having a thirty-day and greater elimination period, the 85CIDA for a fourteen-day elimination period with the adjustment in Item (i).

(b) For contracts issued prior to January 1, 2002, each insurer may elect either Item (i) or (ii) to use as the minimum standard. Once an insurer elects to calculate reserves for all contracts on the standard defined in Item (a), all future valuations must be on that basis.

(i) The minimum morbidity standard in effect for contract reserves on currently issued contracts, as of the date the contract was issued, or

(ii) The standard as defined in Item (a), applied to all contracts.

ii. Claim Reserves:

Claim reserves are to be determined as provided in paragraph ~~30~~31.

f. Other Individual Contract Benefits

i. Contract Reserves:

For all other individual contract benefits, morbidity assumptions are to be determined as provided in the reserve standards.

ii. Claim Reserves:

For all benefits other than disability, claim reserves are to be determined as provided in the standards.

2. Minimum morbidity standards for valuation of specified group contract health insurance benefits are as follows:

a. Disability Income Benefits Due to Accident or Sickness where the Model references this Exhibit; otherwise, Actuarial Guideline XLVII, as included in the most current version of the NAIC *Accounting Practices and Procedures Manual.*

i. Contract Reserves:

The 1987 Commissioners Group Disability Income Table (87CGDT).

ii. Claim Reserves:

The 1987 Commissioners Group Disability Income Table (87CGDT);

b. Single Premium Credit Disability

i. Contract Reserves:

(a) For contracts issued on or after January 1, 2002:

(i) For plans having less than a thirty-day elimination period, the 1985 Commissioners Individual Disability Table A (85CIDA) with claim incidence rates increased by twelve percent (12%).

(ii) For plans having a thirty-day and greater elimination period, the 85CIDA for a fourteen-day elimination period with the adjustment in item (i).

ii. For contracts issued prior to January 1, 2002, each insurer may elect either Item (a) or (b) to use as the minimum standard. Once an insurer elects to calculate reserves for all contracts on the standard defined in Item (a), all future valuations must be on that basis.

(a) The minimum morbidity standard in effect for contract reserves on currently issued contracts, as of the date the contract was issued, or

(b) The standard as defined in Item (a), applied to all contracts.

iii. Claim Reserves:

Claim reserves are to be determined as provided in paragraph 31~~30~~.

c. Other Group Contract Benefits

i. Contract Reserves:

For all other group contract benefits, morbidity assumptions are to be determined as provided in the reserve standards.

ii. Claim Reserves:

For all benefits other than disability, claim reserves are to be determined as provided in the standards.

Interest

3. For contract reserves the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of whole life insurance issued on the same date as the health insurance contract.

4. For claim reserves on policies that require contract reserves, the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of whole life insurance issued on the same date as the claim incurral date.

5. For claim reserves on policies not requiring contract reserves, the maximum interest rate is the maximum rate allowed by Appendix A-820 in the valuation of single premium immediate annuities issued on the same date as the claim incurral date, reduced by 100 basis points.

Mortality

6. (a) Unless paragraph 7 or 8 applies, the mortality basis used for all policies except long-term care individual policies and group certificates issued before January 1, 2001 shall be according to a table (but without use of selection factors) permitted by law for the valuation of whole life insurance issued on the same date as the health insurance contract.

(b) For long-term care insurance individual policies or group certificates issued from January 1, 2001 through December 31, 2006 the mortality basis used shall be the 1983 Group Annuity Mortality Table without projection. For long-term care insurance individual policies or group certificates issued on or after January 1, 2007 the mortality basis used shall be the 1994 Group Annuity Mortality Static Table.

7. Other mortality tables adopted by the NAIC and promulgated by the commissioner may be used in the calculation of the minimum reserves if appropriate for the type of benefits and if approved by the commissioner. The request for approval shall include the proposed mortality table and the reason that the standard specified in paragraph 6 Subsection A is inappropriate.

8. For single premium credit insurance using the 85 CIDA table, no separate mortality shall be assumed.

Exhibit 2. Reserves for Waiver of Premium (Supplementary explanatory material)

1. Waiver of premium reserves involve several special considerations. First, the disability valuation tables promulgated by the NAIC are based on exposures that include contracts on premium waiver as in-force contracts. Hence, contract reserves based on these tables are NOT reserves on "active lives" but rather reserves on contracts "in force." This is true for the 1964 CDT and for both the 1985 CIDA and CIDB tables.

2. Accordingly, tabular reserves using any of these tables should value reserves on the following basis:

   a. Claim reserves should include reserves for premiums expected to be waived, valuing as a minimum the valuation net premium being waived.

   b. Premium reserves should include contracts on premium waiver as in-force contracts, valuing as a minimum the unearned modal valuation net premium being waived.

   c. Contract reserves should include recognition of the waiver of premium benefit in addition to other contract benefits provided for, valuing as a minimum the valuation net premium to be waived.

If an insurer is, instead, valuing reserves on what is truly an active life table, or if a specific valuation table is not being used but the insurer's gross premiums are calculated on a basis that includes in the projected exposure only those contracts for which premiums are being paid, then it may not be necessary to provide specifically for waiver of premium reserves. Any insurer using such a true "active life" basis should carefully consider, however, whether or not additional liability should be recognized on account of premiums waived during periods of disability or during claim continuation.

Appendix A-200

Separate Accounts Funding Guaranteed Minimum Benefits Under Group Contracts

Scope

1. This appendix applies to a group life insurance contract providing survivor income benefits, a group annuity contract, or a funding agreement if the contract is a group contract that utilizes a separate account and provides guaranteed minimum benefits. This appendix shall not apply to modified guaranteed annuities or modified guaranteed life insurance or variable annuity or variable life insurance subject to appendices A-255, A-588, A-250, and A-270 or equity index products but this appendix shall apply to index contracts as defined in paragraph 18.

Definitions

2. "Account assets" means separate account assets plus any assets held in the general account or a supplemental account to meet the asset maintenance requirements.

3. "Account contracts" means the contracts providing guaranteed minimum benefits or other benefits and funded by a separate account and, if applicable, funded in part by the general account or a supplemental account to meet the asset maintenance requirements.

4. "Actuarial opinion" means the valuation actuary's opinion covering reserves for contract liabilities under account contracts that is required to be submitted to the commissioner.

5. "Actuarial memorandum" means the memorandum of the valuation actuary that supports the actuarial opinion covering reserves for contract liabilities under account contracts.

6. "Appointed actuary" means the qualified actuary appointed or retained either directly by or by the authority of the board of directors through an executive officer of the company to prepare the annual statement of actuarial opinion for the company as a whole.

7. "Asset maintenance requirements" means the requirement to maintain assets to fund contract benefits in accordance with paragraphs 29-39.

8. "Book value contract" means a fixed accumulation contract (GIC), purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer, that does not participate in the investment experience of a separate account, with a fixed interest rate guarantee, including a guarantee based on an external index, and that is supported by a separate account, the plan of operations of which provides that the separate account's assets are valued as if the assets were held in the insurance company's general account.

9. "Class of contracts" means the set of all contracts to which a given plan of operations pertains.

10. "Contract" means a group life insurance policy, group annuity contract, or funding agreement that is within the scope of this appendix as set forth in paragraph 1.

11. "Contract benefits" means the amounts obligated to be paid by the insurance company under an account contract.

12. "Contract liabilities" means the liabilities of the insurance company under account contracts, including liabilities with respect to which guarantees as to amount are provided by the insurance company and liabilities with respect to which guarantees as to amount are not provided by the insurance company.

13. a. "Derivative instrument" means an agreement, option, instrument or a series or combination of them:

i. To make or take delivery of, or assume or relinquish, a specified amount of one or more underlying interests, or to make a cash settlement in lieu thereof; or

ii. That has a price, performance, value or cash flow based primarily upon the actual or expected price, level, performance, value or cash flow of one or more underlying interests.

b. Derivative instruments include options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures and any other agreements, options or substantially similar instruments or any series or combination of them.

14. "Duration" means, with respect to separate account or supplemental account assets or guaranteed contract liabilities, a measure of the price sensitivity of a stream of cash flows to interest rate movements, including, but not limited to, modified duration or option adjusted duration.

15. "General account" means the assets of the insurance company other than separate account and supplemental account assets, and associated reserves.

16. "Guaranteed minimum benefits" means benefits payable under the terms of the contract that are based on either (1) the greater of subparagraph a. or b., or (2) subparagraph c. of this paragraph where:

a. Is that part of the market value of account assets that determines the contractholder's benefits, i.e., to the extent the assets are beneficially "client" assets; provided, that if asset performance does not determine the contractholder's benefit, this subparagraph equals zero;

b. Is a fixed minimum guarantee related to all or part of the considerations received under the contract; and

c. Is an amount based upon a publicly available interest rates series or an index of the aggregate market value of a group of publicly traded financial instruments, either of which is specified in the contract.

17. "Hedging transaction" means a derivative transaction, involving use of one or more derivative instruments, that is entered into and maintained to reduce:

a. The risk of a change in the value, yield, price, cash flow or quantity of assets or liabilities that the insurer has acquired or incurred or anticipates acquiring or incurring; or

b. The currency exchange risk or the degree of exposure as to assets or liabilities that an insurer has acquired or incurred or anticipates acquiring or incurring.

18. "Index contract" means a contract under which contract benefits shall be based upon a publicly available interest rate series or an index of the aggregate market value of a group of publicly traded financial instruments, either of which is specified in the contract, and that does not provide a guarantee of some or all of the consideration received plus earnings at a fixed rate specified in advance and that does not provide any secondary guarantees on elective benefits or maturity values.

19. "Market value separate account" means a separate account in which the separate account assets are valued at their market value.

20. "Nationally Recognized Statistical Rating Organization (NRSRO)" means a rating organization so designated by the Securities and Exchange Commission of the United States of America (SEC) which has applied to, and whose NRSRO status has been confirmed by, the NAIC Securities Valuation Office.

21. "Plan of operations" means a written plan meeting the requirements of paragraph 27.

22. "Qualified actuary" means an individual who is qualified to sign statements of actuarial opinion in accordance with the qualification standards set forth in Appendix A-820.

23. "Spot rate" corresponding to a given time of benefit payment means the yield on a zero-coupon non-callable and non-prepayable United States government obligation maturing at that time, or the zero-coupon yield implied by the price of a representative sampling of coupon-bearing non-callable and non-prepayable United States government obligations in accordance with a formula set forth in the plan of operations. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country rated in one of the two highest rating categories by an NRSRO and are supported by investments denominated in the currency of the foreign country, the spot rate may be determined by reference to substantially similar obligations of the government of the foreign country.

24. "Supplemental account" means a separate account to which assets may be contributed by the insurance company for the purpose of complying, in whole or in part, with the asset maintenance requirement and with respect to which neither the account contracts nor applicable law shall provide that the assets of the supplemental account are not chargeable with liabilities arising out of any other business of the insurance company.

25. "United States government obligation" means a direct obligation issued, assumed, guaranteed or insured by the United States of America or by an agency or instrumentality of the United States.

26. "Valuation actuary" means the appointed actuary or, alternatively, a qualified actuary designated by the appointed actuary to render the actuarial opinion. Written documentation of any such designation shall be on file at the company and available for review upon request.

Plan of Operations

27. The plan of operations for a class of contracts shall describe the financial implications for the insurer of the issuance of contracts in the class, and shall include at least the following:

a. A description of the class of contracts to which the plan of operations pertains. This should include a description of the products, the markets to which the products will be sold, the benefits that are being offered (including whether those benefits will be paid on a market or book value basis);

b. A statement of the investment policy for the separate account and any supplemental account, including requirements for diversification, maturity, type and quality of assets, and as applicable, target duration for matching guaranteed contract liabilities or the degree to which the investment policy is likely to match the performance of an interest rate series or index on which contract benefits are based;

c. A description of how the value of the separate account assets and any supplemental account is to be determined, including but not limited to, a statement of procedures and rules for valuing securities and other assets that are not publicly traded;

d. A description of how the guaranteed contract liabilities are to be valued, including, if applicable, with respect to guaranteed minimum benefits or other benefits, a description of the methodology for calculating spot rates and the rates proposed to be used to discount guaranteed contract liabilities if higher than the applicable spot rates, but the rate or rates used shall not exceed 105 percent of the spot rate, except that if the expected time of payment of a contract benefit is more than thirty (30) years, it shall be discounted from the expected time of payment to year thirty (30) at a rate of no more than eighty percent (80%) of the thirty-year spot rate and from year thirty (30) to the date of valuation at a rate not greater than 105 percent of the thirty-year spot rate, and shall conservatively reflect expected investment returns (taking into account foreign exchange risks);

e. A statement of how the separate account's operations are designed to provide for payment of contract benefits as they become due, including but not limited to:

  i. A description of the method for estimating the amount and timing of benefit payments;

  ii. The arrangements necessary to provide liquidity to cover contingencies;

  iii. The method to be used to comply with the asset maintenance requirement;

  iv. The manner in which account assets will be allocated between the separate account, any supplemental account, and the general account;

  v. If applicable, the deductions to be used in determining the market value of an asset when determining the asset maintenance requirement when the investment policy of the separate account and any supplemental accounts is not likely to match the performance of an interest rate series or index on which contract benefits are based; and

  vi. For index contracts, the deductions to be used for replicated (synthetic) asset transactions in determining the market value of the separate account.

f. If hedging transactions are to be utilized in managing separate account or any supplemental account assets, a description of the instruments and techniques and an explanation of how they are intended to reduce risk of loss;

g. If the amount of the asset maintenance requirement depends on the separate account, any supplemental account or a subportfolio of either being duration matched, a description of the method used to determine the durations of separate account and any supplemental account assets and guaranteed contract liabilities;

h. If a part of the asset maintenance requirement is to be met by maintaining a reserve liability in the general account, a description of:

  i. The circumstances under which increases and decreases in the general account portion of the reserve liability will be made;

  ii. The circumstances under which transfers will be made between the separate account and the general account; and

  iii. Any arrangements needed to provide sufficient liquidity in the general account to enable the insurance company to make transfers to the separate account when due.

i. A statement as to the extent to which the contracts in the class will provide or applicable law does provide that the separate account assets shall not be chargeable with liabilities arising out of any other business of the insurance company; and

j. If any person other than the insurance company may authorize, approve or review the acquisition and disposition of investments for the separate account or any supplemental account, a statement of the safeguards adopted by the insurance company to assure that the actions to be taken by these persons are appropriate, including a description of the criteria used by the insurance company in selecting the person.

28. Notwithstanding the descriptions in the plan of operations, the insurance company may change the rate used pursuant to paragraph 34 to discount guaranteed contract liabilities and other items applicable to the separate account or any supplemental accounts, such as if the investment portfolio is different from that anticipated by the plan of operations, provided that the rates used shall not exceed the maximum multiples of the spot rates as prescribed in paragraph 27.d.

Asset Maintenance Requirements for Market Value Separate Accounts Supporting Contracts other than Index Contracts

29. At all times an insurer shall hold sufficient assets as a reserve in the general account, the separate account or supplemental accounts, as appropriate, such that the:

a. Market value of the assets held in the separate account, plus

b. The market value of any supplemental account, plus

c. Any assets held in the general account as a reserve for guaranteed contract liabilities, less

d. The deductions provided for in paragraph 30, equals or exceeds the value of guaranteed contract liabilities determined in accordance with paragraph 34.

30. In determining compliance with the asset maintenance requirement and the reserve for guaranteed contract liabilities in accordance with paragraph 29, the insurance company shall deduct a percentage of the market value of the separate account or supplemental account asset or an amount attributable to a replicated (synthetic) asset transaction as follows:

a. For debt instruments, the percentage shall be the NAIC asset valuation reserve "reserve objective factor," but the factor shall be increased fifty percent (50%) for the purpose of this calculation if the difference in durations of the assets and liabilities is more than one-half year;

b. For assets that are not debt instruments, the percentage shall be the NAIC asset valuation reserve "maximum reserve factor"; and

c. For replicated (synthetic) asset transactions, the market value of the separate account or supplemental account assets shall be decreased by an amount equal to the asset valuation reserve for the transaction as if the transaction were occurring in the general account, determined in accordance with SSAP No. 7; but to the extent that the NAIC asset valuation reserve maximum reserve factor was not used in determining the amount of the deduction, the amount of the deduction shall be increased fifty percent (50%) for purposes of this calculation.

31. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by separate account or supplemental account assets denominated in the currency of the foreign country, the percentage deduction for these assets under paragraph 30 shall be that for a substantially similar investment denominated in the currency of the United States.

32. To the extent that guaranteed contract liabilities are denominated in the currency of the United States and are supported by separate account or supplemental account assets denominated in the currency

of a foreign country, and to the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by separate account or supplemental account assets denominated in the currency of the United States, the deduction for debt instruments and replicated (synthetic) assets transactions under paragraph 30 shall be increased by fifteen percent (15%) of its market value unless the currency exchange risk has been adequately hedged, in which case the percentage deduction under paragraph 30 shall be increased by one-half percent (0.5%). No guaranteed contract liabilities denominated in the currency of a foreign country shall be supported by separate account or supplemental account assets denominated in the currency of another foreign country. For purposes of this paragraph, the currency exchange rate on an asset is deemed to be adequately hedged if:

a. It is an obligation of a jurisdiction that is rated in one of two (2) highest rating categories by an NRSRO or a political subdivision or other governmental unit of the jurisdiction, or is organized under the laws of the jurisdiction; and

b. At all times the principal amount and scheduled interest payments on the principal are hedged against the United States dollar pursuant to contracts or agreements that are:

   i. Issued by or traded on a securities exchange or board of trade regulated under the laws of the United States or Canada or a province of Canada;

   ii. Entered into with a United States banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations, that are rated in one of the two (2) highest rating categories by an NRSRO, or with a broker-dealer registered with the Securities and Exchange Commission that has net capital in excess of $250 million; or

   iii. Entered into with any other banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations outstanding, that are rated in one of the two (2) highest rating categories by an NRSRO and that is organized under the laws of a jurisdiction that is rated in one of the two (2) highest rating categories by an NRSRO.

33. All or a portion of the amount needed to comply with the asset maintenance requirement may be allocated to one or more supplemental accounts. If the account contract or applicable law provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurance company, the insurance company shall maintain in a supplemental account or the general account the amount of any account assets in excess of the sum of (i) the amounts contributed (net of withdrawals) by the contractholder, and (ii) the earnings attributable to the amounts contributed (net of withdrawals) by the contractholder.

34. For purposes of paragraphs 29-34, the minimum value of guaranteed contract liabilities is defined to be the sum of the expected guaranteed contract benefits, each discounted at a rate corresponding to the expected time of payment of the contract benefit that is not greater than the maximum multiple of the spot rate supportable by the expected return from the separate account and any supplemental account assets provided that the rate used shall not exceed the maximum multiples of the spot rates as prescribed in paragraph 27.d. or as described in the actuarial opinion. In calculating the minimum value of contract benefits, all guaranteed contract benefits potentially available to the contractholder shall be considered in the valuation process and analysis, and the reserve held shall be sufficient to fund the greatest present value of each independent guaranteed benefit stream, including guaranteed annuitization options available. To the extent that future cash flows are dependent upon the benefit responsiveness features of an employer-sponsored plan, a best estimate or an estimate based on the insurance company's experience shall be used in the projections of the future cash flows. In addition, the valuation actuary shall periodically review the actual experience under the contract to validate the

assumptions used. In projecting cash flows for contingent benefits involving mortality, the mortality tables for these benefits prescribed in Appendix A-820 shall be used.

Asset Maintenance Requirements for Market Value Separate Accounts Supporting Index Contracts

35. At all times an insurance company shall hold sufficient assets as a reserve in the general account, the separate account or supplemental accounts, as appropriate, such that the:

a. Market value of the assets held in the separate account, plus

b. The market value of any supplemental account, plus

c. Any assets held in the general account as a reserve for guaranteed contract liabilities, less

d. Any deduction provided for in paragraph 36, equals or exceeds the value of guaranteed contract liabilities determined in the manner set forth in the plan of operations.

36. In determining compliance with the asset maintenance requirement and the reserves for guaranteed contract liabilities in accordance with paragraph 35, the insurance company shall deduct a percentage of the market value of a separate account or supplemental account asset as set forth in the plan of operations, and for replication (synthetic asset) transactions, the value of the separate account or supplemental account assets shall be decreased in the manner set forth in the plan of operations.

37. All or a portion of the amount needed to comply with the asset maintenance requirement may be allocated to one or more supplemental accounts. If the account contract or applicable law provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurance company, the insurance company shall maintain in a supplemental account or the general account the amount of any account assets in excess of the sum of (i) the amounts contributed (net of withdrawals) by the contractholder, and (ii) the earnings attributable to the amounts contributed (net of withdrawals) by the contractholder.

Asset Maintenance Requirements for Separate Accounts Supporting Book Value Contracts

38. At all times an insurance company shall hold sufficient assets in the general account, the separate account or supplemental accounts, as appropriate, such that the value of the account assets, valued as if the assets were held in the insurance company's general account, equals or exceeds the reserve required for contracts supported by the separate account, determined as if the contracts were held in the general account.

39. All or any portion of the amount needed to comply with the asset maintenance requirement may be allocated to one or more supplemental accounts. If the account contract or applicable law provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurance company, the insurance company shall maintain in a supplemental account or the general account the amount of any account assets in excess of the sum of (i) the amounts contributed (net of withdrawals) by the contractholder, and (ii) the earnings attributable to the amounts contributed (net of withdrawals) by the contractholder.

Asset Valuation Reserve

40. When the insurance company values separate account or supplemental account assets at market and complies with the asset maintenance requirements of the section entitled Asset Maintenance Requirements for Market Value Separate Accounts Supporting Contracts other than Index Contracts or the section entitled Asset Maintenance Requirements for Market Value Separate Accounts Supporting Index Contracts, it need not maintain an asset valuation reserve with respect to these assets.

Reserve Valuation and Documentation

41. Reserves for contracts funded by a market value separate account supporting contracts other than index contracts shall be an amount equal to the following:

a. The total reserve required to be maintained on the valuation date under paragraphs 29-34;

b. Plus the excess, if any, of the market value of separate account assets (to the extent that the market value of the assets determines the contractholder's benefits, i.e., to the extent the assets are beneficially "client" assets) over the amount determined in accordance with subparagraph a. above;

c. Plus any additional amount determined by the valuation actuary as necessary to make adequate provision for all of the contract liabilities.

42. Reserves for index contracts funded by a market value separate account shall be an amount equal to the following:

a. The total reserve required to be maintained on the valuation date under paragraphs 35-37;

b. Plus the excess, if any, of the market value of separate account assets (to the extent that the market value of the assets determines the contractholder's benefits, i.e., to the extent the assets are beneficially "client" assets) over the amount determined in accordance with subparagraph a. above;

c. Plus any additional amounts determined by the valuation actuary as necessary to make adequate provision for all of the contract liabilities.

43. Reserves for book value contracts shall be determined as if the contracts were held in the general account.

44. The amount of any reserves required by paragraph 41.c. or paragraph 42.c. may be established by either:

a. Allocating sufficient assets to the separate account or a supplemental account to satisfy the requirement; or

b. Setting up the additional reserves in the general account.

45. Account assets shall make adequate provision for contract liabilities, taking into account any risk charge payable from the separate account assets and the amount of any reserve liability of the general account and amounts held in any supplemental account with respect to the asset maintenance requirement.

46. The level of risk charges, if any, payable to the general account shall be appropriate in view of such factors as the nature of the guaranteed contract liabilities and losses experienced in connection with account contracts and other pricing factors.

47. The fixed-income asset portfolio shall conform to and justify the rates used to discount contract liabilities for valuation pursuant to paragraph 34 if applicable.

48. The company shall document whether any rates used pursuant to paragraph 34 to discount guaranteed contract liabilities and other items applicable to the separate account or any supplemental account were modified from the rate or rates described in the plan of operations.

49. The company shall substantially conform with Appendix A-822 and maintain internal documentation to either:

a. Demonstrate the adequacy of account assets based upon cash flow analysis; or

b. Explain why cash flow analysis is not appropriate, describe the alternative methodology of asset adequacy testing used, and demonstrate the adequacy of account assets under such methodology.

50. The company's internal documentation pertaining to reserves for contract liabilities under account contracts shall also:

a. Clearly describe the assumptions used in projecting cash flows under each class of assets, and any dynamic portfolio hedging techniques utilized and the tests performed on the utilization of the techniques;

b. Clearly describe how the company reflected the risk of default on obligations and mortgage loans, including obligations and mortgage loans that are not investment grade;

c. Clearly describe how the company has reflected withdrawal risks, if applicable, including a discussion of the positioning of the contracts within the benefit withdrawal priority order pertaining to the contracts;

d. If the plan of operations provides for investments in separate account or supplemental account assets other than United States government obligations, demonstrate that the rates used to discount contract liabilities pursuant to paragraph 34 conservatively reflect expected investment returns (taking into account any foreign exchange risks);

e. If the contracts provide that in certain circumstances they would cease to be funded by a separate account and, instead, would become contracts funded by the general account, clearly describe how any increased reserves would be provided for if and to the extent these circumstances occurred;

f. Document the amount of separate account assets that are not chargeable with liabilities arising out of any other business of the insurance company;

g. Document the amount of reserves and supporting assets as of December 31 and where the reserves and assets are shown in the annual statement;

h. Document the amount of any contingency reserve carried as part of surplus;

i. For book value contracts, document the market value of supporting assets; and

j. Where separate account assets are not chargeable with liabilities arising out of any other business of the insurance company, describe how the level of risk charges payable to the general account provider are appropriate compensation for the risk taken by the general account.

Appendix A-205

Illustrative Disclosure Of Differences Between NAIC Statutory Accounting Practices And Procedures And Accounting Practices Prescribed Or Permitted By The State Of Domicile

XYZ Insurance Company
Footnotes to Financial Statements
December 31, 2002 and 2001

Note 1–Organization

The XYZ Company is a mutual life insurance company domiciled in the state of ABC and licensed to do business in all 50 states. The company markets traditional whole life, term and disability income insurance policies to individuals through its career agency force.

Notes 2–Basis of Presentation

The financial statements of XYZ Company are presented on the basis of accounting practices prescribed or permitted by the ABC Insurance Department.

The ABC Insurance Department recognizes only statutory accounting practices prescribed or permitted by the state of ABC for determining and reporting the financial condition and results of operations of an insurance company, for determining its solvency under the ABC Insurance Law. The National Association of Insurance Commissioners' (the "NAIC") *Accounting Practices and Procedures Manual* version effective January 1, 2001 ("NAIC SAP") has been adopted as a component of prescribed or permitted practices by the state of ABC. The state has adopted certain prescribed accounting practices which differ from those found in NAIC SAP. Specifically, 1) goodwill arising from the purchase of a subsidiary, controlled or affiliated entity is written off directly to surplus in the year it originates by ABC domiciled companies; in NAIC SAP, goodwill in amounts not to exceed 10% of an insurer's capital and surplus may be capitalized and all amounts of goodwill are amortized to unrealized gains and losses on investments over periods not to exceed 10 years, and 2) 100% of all fixed assets may be admitted by ABC domiciled companies; in NAIC SAP, fixed assets are not admitted. The Commissioner of Insurance has the right to permit other specific practices which deviate from prescribed practices.

The Company, with the explicit permission of the Commissioner of Insurance of the state of ABC, records the value of its home office building at fair market value instead of at the depreciated cost method required by NAIC SAP. If the home office building were carried at depreciated cost, home office property and statutory surplus would be decreased by $2,500,000 and $2,300,000 as of December 31, 2002 and 2001, respectively. Additionally, net income would be increased by $120,000 and $103,000 respectively, for the years then ended.

Illustration to use if prescribed or permitted statutory accounting practices (individually or in the aggregate), which differ from the NAIC basis of accounting, prevent the triggering of a regulatory event:

> If the reporting entity had not used the above prescribed and permitted practices that differ from the NAIC basis of accounting a risk based capital regulatory event would have been triggered. The company would have moved to a risk based capital company action level and the total adjusted capital would have been decreased by $300,000.

Illustration to use if prescribed or permitted practices statutory accounting practices, which differ from the NAIC basis of accounting, have no impact on regulatory events:

If the reporting entity has not used the above prescribed and permitted practices that differ from the NAIC basis of accounting a risk based capital regulatory event would not have been triggered. The impact on net income and capital is shown in the following paragraphs.

A reconciliation of the Company's net income and capital and surplus between NAIC SAP and practices prescribed and permitted by the state of ABC is shown below.

	2002	**2001**
Net Income, ABC state basis	$3,200,000	$2,900,000
State Prescribed Practices:		
Depreciation of fixed assets	100,000	110,000
State Permitted Practices:		
Depreciation, home office property	120,000	103,000
Net Income, NAIC SAP	$3,420,000	$3,113,000
Statutory Surplus, ABC state basis	$30,000,000	$27,900,000
State Prescribed Practices:		
Goodwill, net	3,000,000	2,700,000
Fixed Assets, net	(850,000)	(950,000)
State Permitted Practices:		
Home Office Property	(2,500,000)	(2,300,000)
Statutory Surplus, NAIC SAP	$29,650,000	$27,350,000

Appendix A-225

Managing General Agents

Definitions

1. “Managing General Agent” (MGA) means any person, firm, association or corporation who:

   a. Manages all or part of the insurance business of an insurer (including the management of a separate division, department or underwriting office); and

   b. Acts as an agent for such insurer whether known as a Managing General Agent, manager or other similar term, who, with or without the authority, either separately or together with affiliates, produces, directly or indirectly, and underwrites an amount of gross direct written premium equal to or more than five percent (5%) of the policyholder surplus as reported in the last annual statement of the insurer in any one quarter or year together with one or more of the following activities related to the business produced:

      i. Adjusts or pays claims in a material amount;

      ii. Negotiates reinsurance on behalf of the insurer.

   c. Notwithstanding the above, the following persons shall not be considered MGA’s for the purposes of this Appendix:

      i. An employee of the insurer;

      ii. A U.S. Manager of the United States branch of an alien insurer;

      iii. An underwriting manager which, pursuant to contract, manages all or part of the insurance operations of the insurer, is under common control with the insurer, subject to a regulatory holding company act, if any, and whose compensation is not based on the volume of premiums written;

      iv. The attorney-in-fact authorized by and acting for the subscribers of a reciprocal insurer or inter-insurance exchange under powers of attorney.

2. “Underwrite” means the authority to accept or reject risk on behalf of the insurer.

This page intentionally left blank.

Appendix A-235

Interest-Indexed Annuity Contracts

Definition

1. “Interest-indexed annuity contract” means any annuity contract where the interest credits are linked to an external reference.

Valuation Requirements

2. In developing life insurance reserves for interest-indexed annuity contracts, the insurer must be in compliance with the minimum requirements of Appendix A-820.

3. In the calculation of reserves for interest-indexed annuity contracts, future guarantees will be determined by assuming that future interest crediting rates will be equal to the statutory valuation interest rate for such contracts as defined in Appendix A-820.

This page intentionally left blank.

Appendix A-250

Variable Annuities

Definitions

1. “Variable annuity” means a policy or contract, individual or group, that provides for annuity benefits that vary according to the investment experience of a separate account or accounts maintained by the insurer as to the policy or contract.

2. The company shall maintain in each such separate account assets with a value at least equal to the reserves and other contract liabilities with respect to the account.

3. The reserve liability for variable annuities shall be established pursuant to the requirements of Appendix A-820 in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.

This page intentionally left blank.

Appendix A-255

Modified Guaranteed Annuities

Definitions

1. A "Modified Guaranteed Annuity" is a deferred annuity contract, individual or group, the underlying assets of which are held in a separate account, and the values of which are guaranteed if held for specified periods. The contract contains nonforfeiture values that are based upon a market-value adjustment formula if held for shorter periods. This formula may or may not reflect the value of assets held in the separate account. The assets underlying the contract must be in a separate account during the period or periods when the contract holder can surrender the contract.

2. "Interest credits" means all interest that is credited to the contract.

3. "Separate account" means a separate account established pursuant to the insurance laws pertaining to the insurer.

Valuation Requirements

4. Reserve liabilities for modified guaranteed annuities shall be established as provided in Appendix A-820 in accordance with actuarial procedures that recognize:

    a. That assets of the separate account are based on market values;

    b. The variable nature of benefits provided; and

    c. Any mortality guarantees.

5. As a minimum, the separate account liability will equal the surrender value based upon the market-value adjustment formula contained in the contract. If that liability is greater than the market value of the assets, a transfer of assets will be made into the separate account so that the market value of the assets at least equals that of the liabilities. Any additional reserve that is needed to cover future guaranteed benefits shall be established.

6. The market-value adjustment formula, the interest guarantees, and the degree to which projected cash flow of assets and liabilities are matched must also be considered. The company shall determine whether the assets in the separate account are adequate to provide all future benefits that are guaranteed.

Separate Accounts

7. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.

This page intentionally left blank.

Appendix A-270

Variable Life Insurance

Definitions

1. “Variable life insurance policy” means an individual or group policy that provides for life insurance the amount or duration of which varies according to the investment experience of any separate account or accounts established and maintained by the insurer as to the policy.

2. “Affiliate” of an insurer means a person, directly or indirectly, controlling, controlled by, or under common control with the insurer; a person who regularly furnishes investment advice to the insurer with respect to its separate accounts for which a specific fee or commission is charged; or any director, officer, partner or employee of the insurer, controlling or controlled person, or person providing investment advice or any member of the immediate family of such person.

3. “Assumed investment rate” means the rate of investment return that would be required to be credited to a variable life insurance policy, after deduction of charges for taxes, investment expenses and mortality and expense guarantees to maintain the variable death benefit equal at all times to the amount of death benefit, other than incidental insurance benefits, which would be payable under the plan of insurance if the death benefit did not vary according to the investment experience of the separate account.

4. “Benefit base” means the amount to which the net investment return is applied.

5. “Control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or non-management services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing more than ten percent (10%) of the voting securities of any other person. This presumption can be overcome by predominant evidence to the contrary, however, it shall stand until overcome by such predominant contradictory evidence.

6. “Flexible premium policy” means any variable life insurance policy other than a “scheduled premium policy” as defined in paragraph 13.

7. “General account” means all assets of the insurer other than assets in separate accounts.

8. “Incidental insurance benefit” means all insurance benefits in a variable life insurance policy, other than the variable death benefit and the minimum death benefit, including but not limited to, accidental death and dismemberment benefits, disability benefits, guaranteed insurability options, family income or term riders.

9. “Minimum death benefit” means the amount of the guaranteed death benefit, other than incidental insurance benefits, payable under a variable life insurance policy regardless of the investment performance of the separate account.

10. “Net investment return” means the rate of investment return in a separate account to be applied to the benefit base.

11. “Person” means an individual, corporation, partnership, association, trust or fund.

12. “Policy processing day” means the day on which charges authorized in the policy are deducted from the policy’s cash value.

13. “Scheduled premium policy” means a variable life insurance policy under which both the amount and timing of premium payments are fixed by the insurer.

14. “Variable death benefit” means the amount of the death benefit, other than incidental insurance benefits, payable under a variable life insurance policy dependent on the investment performance of the separate account, which the insurer would have to pay in the absence of any minimum death benefit.

Valuation Requirements

15. Reserve liabilities for variable life insurance policies shall be established as provided in Appendix A-820 in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.

16. Reserve liabilities for the guaranteed minimum death benefit shall be the reserve needed to provide for the contingency of death occurring when the guaranteed minimum death benefit exceeds the death benefit that would be paid in the absence of the guarantee, and shall be maintained in the general account of the insurer and shall not be less than the greater of the following minimum reserves:

a. The aggregate total of the term costs, if any, covering a period of one full year from the valuation date or, if less, covering the period provided for in the guarantee not otherwise provided for by the reserves held in the separate account, on each variable life insurance contract, assuming an immediate one-third depreciation in the current value of the assets in the separate account followed by a net investment return equal to the assumed investment rate; or

b. The aggregate total of the “attained age level” reserves on each variable life insurance contract. The “attained age level” reserve on each variable life insurance contract shall not be less than zero and shall equal the “residue,” as described in paragraph 16.b.i. below, of the prior year’s “attained age level” reserve on the contract, with any such “residue,” increased or decreased by a payment computed on an attained age basis as described in paragraph 16.b.ii. below.

i. The “residue” of the prior year’s “attained age level” reserve on each variable life insurance contract shall not be less than zero and shall be determined by adding interest at the valuation interest rate to the prior year’s reserve, deducting the tabular claims based on the “excess,” if any, of the guaranteed minimum death benefit over the death benefit that would be payable in the absence of a guarantee, and dividing the net result by the tabular probability of survival. The “excess” referred to in the preceding sentence shall be based on the actual level of death benefits that would have been in effect during the preceding year in the absence of the guarantee, taking appropriate account of the reserve assumptions regarding the distribution of death claim payments over the year.

ii. The payment referred to in this paragraph shall be computed so that the present value of a level payment of that amount each year over the future period for which charges for this risk will be collected under the contract, is equal to (A) minus (B) minus (C), where (A) is the present value of the future guaranteed minimum death benefits, (B) is the present value of the future death benefits that would be payable in the absence of such guarantee, and (C) is any “residue,” as described in paragraph 16.b.i. of the prior year’s “attained age level” reserve on such variable life insurance contract. This result shall be divided by the present value, at the valuation date, of a temporary life annuity of one per annum at the current attained age payable over the period in which future charges for this risk will be collected under the contract. If no future charges for this risk will be collected under the contract, the payment shall equal (A) minus (B) minus (C). The amounts of the future death benefits referred to in (B) shall be computed assuming a net investment return of the separate account which may differ from the assumed investment rate or the valuation interest but in no event may exceed the maximum interest rate permitted for the valuation of life contracts.

c. The valuation interest rate and mortality table used in computing the two minimum reserves described in 16 a. and 16 b. above shall conform to acceptable standards for the valuation of life insurance contracts. In determining the minimum reserves, the company may employ suitable approximations and estimates, including but not limited to groupings and averages.

17. Incidental Insurance Benefit. Reserve liabilities for all fixed incidental insurance benefits and any guarantees associated with variable accidental insurance benefits shall be maintained in the general account and reserve liabilities for all variable aspects of the variable incidental insurance benefits shall be maintained in a separate account, in amounts determined in accordance with the actuarial procedures appropriate to the benefit.

Separate Accounts

18. The assets of separate accounts shall be valued at least as often as variable benefits are determined but in any event at least monthly.

19. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.

This page intentionally left blank.

Appendix A-440

Insurance Holding Companies

Definitions

1. “Affiliate.” An “affiliate” of, or person “affiliated” with, a specific person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.

2. “Control.” The term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position with or corporate office held by the person. Control shall be presumed to exist if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person. This presumption can be overcome by predominant evidence to the contrary, however, it shall stand until overcome by such predominant contradictory evidence.

3. “Insurance Holding Company System.” An “insurance holding company system” consists of two (2) or more affiliated persons, one or more of which is an insurer.

4. “Person.” A “person” is an individual, a corporation, a limited liability company, a partnership, an association, a joint stock company, a trust, an unincorporated organization, any similar entity or any combination of the foregoing acting in concert, but shall not include any joint venture partnership exclusively engaged in owning, managing, leasing or developing real or tangible personal property.

5. “Securityholder.” A “securityholder” of a specified person is one who owns any security of such person, including common stock, preferred stock, debt obligations and any other security convertible into or evidencing the right to acquire any of the foregoing.

6. “Subsidiary.” A “subsidiary” of a specified person is an affiliate controlled by such person directly or indirectly through one or more intermediaries.

7. “Voting Security.” The term “voting security” shall include any security convertible into or evidencing a right to acquire a voting security.

Standards and Management of an Insurer Within a Holding Company System

8. Transactions Within a Holding Company System

9. Transactions within a holding company system to which an insurer subject to registration is a party shall be subject to the following standards:

   a. The terms shall be fair and reasonable;

   b. Charges or fees for services performed shall be reasonable;

   c. Expenses incurred and payment received shall be allocated to the insurer in conformity with statutory accounting practices consistently applied;

   d. The books, accounts and records of each party to all such transactions shall be so maintained as to clearly and accurately disclose the nature and details of the transactions including such accounting information as is necessary to support the reasonableness of the charges or fees to the respective parties; and

e. The insurer's surplus as regards policyholders following any dividends or distributions to shareholder affiliates shall be reasonable in relation to the insurer's outstanding liabilities and adequate to meet its financial needs. In determining whether an insurer's surplus as regards policyholders is reasonable in relation to the insurer's outstanding liabilities and adequate to meet its financial needs, the following factors, among others, shall be considered:

i. The size of the insurer as measured by its assets, capital and surplus, reserves, premium writings, insurance in force and other appropriate criteria;

ii. The extent to which the insurer's business is diversified among several lines of insurance;

iii. The number and size of risks insured in each line of business;

iv. The extent of the geographical dispersion of the insurer's insured risks;

v. The nature and extent of the insurer's reinsurance program;

vi. The quality, diversification and liquidity of the insurer's investment portfolio;

vii. The recent past and projected future trend in the size of the insurer's investment portfolio;

viii. The surplus as regards policyholders maintained by other comparable insurers;

ix. The adequacy of the insurer's reserves; and

x. The quality and liquidity of investments in affiliates.

Appendix A-585

Universal Life Insurance

Definitions

1. “Cash surrender value” means the net cash surrender value plus any amounts outstanding as policy loans.

2. “Fixed premium universal life insurance policy” means a universal life insurance policy other than a flexible premium universal life insurance policy.

3. “Flexible premium universal life insurance policy” means a universal life insurance policy which permits the policyowner to vary, independently of each other, the amount or timing of one or more premium payments or the amount of insurance.

4. “Interest-indexed universal life insurance policy” means any universal life insurance policy where the interest credits are linked to an external referent.

5. “Net cash surrender value” means the maximum amount payable to the policyowner upon surrender.

6. “Policy value” means the amount to which separately identified interest credits and mortality, expense, or other charges are made under a universal life insurance policy.

7. “Universal life insurance policy” means a life insurance policy where separately identified interest credits (other than in connection with dividend accumulations, premium deposit funds, or other supplementary accounts) and mortality and expense charges are made to the policy. A universal life insurance policy may provide for other credits and charges, such as charges for the cost of benefits provided by rider.

Valuation Requirements

8. The minimum valuation standard for universal life insurance policies shall be the Commissioners Reserve Valuation Method, as described below for such policies, and the tables and interest rates specified below. The terminal reserve for the basic policy and any benefits and/or riders for which premiums are not paid separately as of any policy anniversary shall be equal to the net level premium reserves less (C) and less (D), where:

a. Reserves by the net level premium method shall be equal to ((A)-(B))r where (A), (B) and “r” are as defined below:

i. (A) is the present value of all future guaranteed benefits at the date of valuation.

ii. (B) is the quantity $\frac{\text{PVFB}}{\ddot{a}x}$ äx+t where PVFB is the present value of all benefits guaranteed at issue assuming future guaranteed maturity premiums are paid by the policyowner and taking into account all guarantees contained in the policy or declared by the insurer.

b. äx and äx+t are present values of an annuity of one per year payable on policy anniversaries beginning at ages x and x+t, respectively, and continuing until the highest attained age at which a premium may be paid under the policy. The letter "x" is defined as the issue age and the letter "t" is defined as the duration of the policy.

c. The guaranteed maturity premium for flexible premium universal life insurance policies shall be that level gross premium, paid at issue and periodically thereafter over the period during which premiums are allowed to be paid, which will mature the policy on the latest maturity date, if any, permitted under the policy (otherwise at the highest age in the valuation mortality table), for an amount which is in accordance with the policy structure.[1] The guaranteed maturity premium is calculated at issue based on all policy guarantees at issue (excluding guarantees linked to an external referent). The guaranteed maturity premium for fixed premium universal life insurance policies shall be the premium defined in the policy which at issue provides the minimum policy guarantees.[2]

d. The letter "r" is equal to one, unless the policy is a flexible premium policy and the policy value is less than the guaranteed maturity fund, in which case "r" is the ratio of the policy value to the guaranteed maturity fund.

e. The guaranteed maturity fund at any duration is that amount which, together with future guaranteed maturity premiums, will mature the policy based on all policy guarantees at issue.

f. (C) is the quantity $((a)-(b))\frac{\ddot{a}_{x+t}}{\ddot{a}_{x}}\,r$ where (a)-(b) is as described in paragraph 9 of

Appendix A-820 for the plan of insurance defined at issue by the guaranteed maturity premiums and all guarantees contained in the policy or declared by the insurer.

g. (D) is the sum of any additional quantities analogous to (C) which arise because of structural changes[3] in the policy, with each such quantity being determined on a basis consistent with that of (C) using the maturity date in effect at the time of the change.

h. The guaranteed maturity premium, the guaranteed maturity fund and (B) above shall be recalculated to reflect any structural changes in the policy. This recalculation shall be done in a manner consistent with the descriptions above.

i. Future guaranteed benefits are determined by (1) projecting the greater of the guaranteed maturity fund and the policy value, taking into account future guaranteed maturity premiums, if any, and using all guarantees of interest, mortality, expense deductions, etc., contained in the policy or declared by the insurer; and (2) taking into account any benefits guaranteed in the policy or by declaration which do not depend on the policy value.

j. All present values shall be determined using (i) an interest rate (or rates) specified by Appendix A-820 for policies issued in the same year; (ii) the mortality rates specified by Appendix A-820 for policies issued in the same year; and (iii) any other tables needed to value supplementary benefits provided by a rider which is being valued together with the policy.

9. To the extent that the insurer declares guarantees more favorable than those in the policy (contractual guarantees), such declared guarantees shall be applicable to the determination of future guaranteed benefits.

10. The mortality and interest bases for calculating present values are the minimum standards in Appendix A-820.

11. In effecting structural changes, consistent methods are prescribed when calculating reserves. Several such methods are possible, but perhaps the simplest such method would be that of maintaining proportionality between the Guaranteed Maturity Fund and Guaranteed Maturity Premium values and the current face amount. In applying this method, Guaranteed Maturity Fund and Guaranteed Maturity Premium values could be calculated per dollar of face amount and simply multiplied by the new face amount. This would eliminate much of the complexity involved in other methods.

Alternative Minimum Reserves

12. If, in any policy year, the guaranteed maturity premium on any universal life insurance policy is less than the valuation net premium for such policy, calculated by the valuation method actually used in calculating the reserve thereon but using the minimum valuation standards of mortality and rate of interest, the minimum reserve required for such contract shall be the greater of a. or b.

a. The reserve calculated according to the method, the mortality table, and the rate of interest actually used.

b. The reserve calculated according to the method actually used but using the minimum valuation standards of mortality and rate of interest and replacing the valuation net premium by the Guaranteed Maturity Premium in each policy year for which the valuation net premium exceeds the Guaranteed Maturity Premium.

13. For universal life insurance reserves on a net level premium basis, the valuation net premium is:

$$\frac{\text{PVFB}}{\ddot{a}x}$$

and for reserves on a Commissioners Reserve Valuation Method, the valuation net premium is:

$$\frac{\text{PVFB}}{\ddot{a}x} + \frac{\text{(a)-(b)}}{\ddot{a}x}$$

Footnotes:

1. The maturity amount shall be the initial death benefit where the death benefit is level over the lifetime of the policy except for the existence of a minimum-death-benefit corridor, or shall be the specified amount where the death benefit equals a specified amount plus the policy value or cash surrender value except for the existence of a minimum-death-benefit corridor.

2. The Guaranteed Maturity Premium for both flexible and fixed premium policies shall be adjusted for death benefit corridors provided by the policy. The Guaranteed Maturity Premium may be less than the premium necessary to pay all charges. This can especially happen in the first year for policies with large first year expense charges.

3. Structural changes are those changes which are separate from the automatic workings of the policy. Such changes usually would be initiated by the policyholder and include changes in the guaranteed benefits, changes in latest maturity date, or changes in allowable premium payment period. For fixed premium universal life policies with redetermination of all credits and charges no more frequently than annually, on policy anniversaries, structural changes also include changes in guaranteed benefits, or in fixed premiums, unanticipated by the guaranteed maturity premium for such policies at the date of issue, even if such changes arise from automatic workings of the policy. The recomputation of (B) in paragraph 8.a.ii. above, for fixed premium universal life structural changes, shall exclude from PVFB, the present value of future guaranteed benefits, those guaranteed benefits which are funded by the excess of the insurer's declared guarantees of interest, mortality and expenses, over the guarantees contained in the policy at the date of issue.

Appendix A-588

Modified Guaranteed Life Insurance

The NAIC no longer maintains Model Law 588 as an NAIC sponsored model law; however, as this appendix is referenced in *SSAP No. 56—Separate Accounts,* the Statutory Accounting Principles (E) Working Group has chosen to retain this appendix as a valid NAIC standard.

Definitions

1. “Interest Credits” means all interest that is credited to the policy.

2. “Modified Guaranteed Life Insurance Policy” means an individual or group policy of life insurance, the underlying assets which are held in a separate account, and the values of which are guaranteed if held for specified periods. It contains cash-surrender values that are based upon a market value adjustment formula if held for shorter periods. The formula may, or may not, reflect the value of assets held in the separate account. The assets underlying the policy must be in a separate account during the period or periods when the policyholder can surrender the policy.

3. “Policy processing day” means the day on which charges authorized in the policy are deducted from the policy’s cash value.

4. “Separate account” means a separate account established pursuant to the insurance laws pertaining to the insurer.

Valuation Requirements

5. Reserve liabilities for modified guaranteed life insurance policies shall be established pursuant to the requirements of Appendix A-820 in accordance with actuarial procedures that recognize:

   a. That assets of the separate account are based on market value;

   b. The variable nature of the benefits provided; and

   c. Any mortality guarantees.

6. As a minimum, the separate account liability will equal the surrender value based upon the market value adjustment formula contained in the policy. If that liability is greater than the market value of the assets, a transfer of assets will be made into the separate account so that the market value of the assets at least equals that of the liabilities. Any additional reserve that is needed to cover future guaranteed benefits shall be established.

7. The market value adjustment formula, the interest guarantees and the degree to which projected cash flow of assets and liabilities are matched must also be considered. The company shall determine whether the assets in the separate account are adequate to provide all future guaranteed benefits.

8. Reserve liabilities for all fixed incidental insurance benefits and any guarantees associated with variable incidental insurance benefits shall be maintained in the general account.

Separate Accounts

9. The insurer shall maintain in each separate account assets with a value at least equal to the valuation reserves and other contract liabilities respecting such account.

This page intentionally left blank.

Appendix A-620

Accelerated Benefits

Purpose

The purpose of this Appendix is to provide guidance with respect to accelerated benefit related to individual and group life insurance policies. This Appendix shall apply to all accelerated benefits provisions of individual and group life insurance policies except those subject to Appendix A-641.

Definitions

1. “Accelerated benefits” covered under this Appendix are benefits payable under a life insurance contract:

   a. To a policyowner or certificateholder, during the lifetime of the insured, in anticipation of death or upon the occurrence of specified life-threatening or catastrophic conditions as defined by the policy or rider; and

   b. Which reduce the death benefit otherwise payable under the life insurance contract; and

   c. Which are payable upon the occurrence of a single qualifying event which results in the payment of a benefit amount fixed at the time of acceleration.

2. “Qualifying event” shall mean one or more of the following:

   d. A medical condition which would result in a drastically limited life span as specified in the contract, for example, twenty-four (24) months or less; or

   e. A medical condition which has required or requires extraordinary medical intervention, such as, but not limited to, major organ transplant or continuous artificial life support, without which the insured would die; or

   f. Any condition which usually requires continuous confinement in an eligible institution as defined in the contract if the insured is expected to remain there for the rest of his or her life; or

   g. A medical condition which would, in the absence of extensive or extraordinary medical treatment, result in a drastically limited life span. Such conditions may include, but are not limited to, one or more of the following:

      i. Coronary artery disease resulting in an acute infarction or requiring surgery;

      ii. Permanent neurological deficit resulting from cerebral vascular accident;

      iii. End stage renal failure; or

      iv. Acquired Immune Deficiency Syndrome.

Valuation Requirements

3. When benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves shall be determined in accordance with Appendix A-820. Mortality tables and interest for life insurance reserves as specified in Appendix A-820

shall be used as well as appropriate assumptions for the other provisions incorporated in the policy form. Reserves in the aggregate should be sufficient to cover:

a. Policies upon which no claim has yet arisen.

b. Policies upon which an accelerated claim has arisen.

4. For policies and certificates which provide actuarially equivalent benefits, no additional reserves need to be established.

5. Policy liens and policy loans, including accrued interest, represent assets of the company for statutory reporting purposes. For any policy on which the policy lien exceeds the policy's statutory reserve liability such excess must be held as a nonadmitted asset.

Appendix A-628

Title Insurance

Definitions

1. “Abstract of title” or “abstract” means a written history, synopsis or summary of the recorded instruments affecting the title to real property.

2. “Affiliate” means a specific person that directly, or indirectly through one or more intermediaries, controls, or is controlled by or is under common control with the person specified.

3. “Bona fide employee” of the title insurer or title insurance agent means an individual who devotes substantially all of his or her time to performing services on behalf of a title insurer or title insurance agent and whose compensation for those services is in the form of salary or its equivalent paid by the title insurer or title insurance agent.

4. “Control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract other than a commercial contract for goods or nonmanagement services, or otherwise, unless the power is the result of an official position or corporate office held by the person. Control shall be presumed to exist if a person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of another person. This presumption can be overcome by predominant evidence to the contrary; however, it shall stand until overcome by such predominant contradictory evidence.

5. “Escrow” means written instruments, money or other items deposited by one party with a depository, escrow agent or escrowee for delivery to another party upon the performance of a specified condition or the happening of a certain event.

6. “Escrow, settlement or closing fee” means the consideration for supervising or handling the actual execution, delivery or recording of transfer and lien documents and for disbursing funds.

7. “Net retained liability” means the total liability retained by a title insurer for a single risk, after taking into account any ceded liability and collateral, acceptable to the commissioner, maintained by the insurer.

8. “Person” means any natural person, partnership, association, cooperative, corporation, trust or other legal entity.

9. “Security” or “security deposit” means funds or other property received by the title insurer as collateral to secure an indemnitor’s obligation under an indemnity agreement pursuant to which the insurer is granted a perfected security interest in the collateral in exchange for agreeing to provide coverage in a title insurance policy for a specific title exception to coverage.

10. “Title insurance agent” or “agent” means an authorized person, other than a bona fide employee of the title insurer who, on behalf of the title insurer, performs the following acts, in conjunction with the issuance of a title insurance report or policy:

   a. Determines insurability and issues title insurance reports or policies, or both, based upon the performance or review of a search or abstract of title; and

   b. Performs one or more of the following functions:

i. Collects or disburses premiums, escrow or security deposits or other funds;

ii. Handles escrows, settlements or closings;

iii. Solicits or negotiates title insurance business; or

iv. Records closing documents.

11. "Title insurance business" or "business of title insurance" means:

a. Issuing as insurer or offering to issue as insurer a title insurance policy;

b. Transacting or proposing to transact by a title insurer any of the following activities when conducted or performed in contemplation of or in conjunction with the issuance of a title insurance policy:

i. Soliciting or negotiating the issuance of a title insurance policy;

ii. Guaranteeing, warranting or otherwise insuring the correctness of title searches for all instruments affecting titles to real property, any interest in real property, cooperative units and proprietary leases and for all liens or charges affecting the same;

iii. Handling of escrows, settlements or closings;

iv. Executing title insurance policies;

v. Effecting contracts of reinsurance; or

vi. Abstracting, searching or examining titles;

c. Guaranteeing, warranting or insuring searches or examinations of title to real property or any interest in real property; or

d. Guaranteeing or warranting the status of title as to ownership of or liens on real property and personal property by any person other than the principals to the transaction; or

e. Doing or proposing to do any business substantially equivalent to any of the activities listed in this paragraph in a manner designed to evade the provisions of this Appendix.

12. "Title insurance policy" or "policy" means a contract insuring or indemnifying owners of, or other persons lawfully interested in, real or personal property or any interest in real property, against loss or damage arising from any or all of the following conditions existing on or before the policy date and not excepted or excluded:

a. Defects in or liens or encumbrances on the insured title;

b. Unmarketability of the insured title;

c. Invalidity, lack of priority or unenforceability of liens or encumbrances on the stated property;

d. Lack of legal right of access to the land; or

e. Unenforceability of rights in title to the land.

13. "Title insurance report" or "report" means a preliminary report, commitment or binder issued prior to the issuance of a title insurance policy containing the terms, conditions, exceptions and any other matters incorporated by reference under which the title insurer is willing to issue its title insurance policy.

14. "Title insurer" or "insurer" means a company organized for the purpose of transacting the business of title insurance.

15. "Title plant" means a set of records consisting of documents, maps, surveys or entries affecting title to real property or any interest in or encumbrance on the property, which have been filed or recorded in the jurisdiction for which the title plant is established or maintained.

Admitted Asset Standards

16. An investment in a title plant or plants in an amount equal to the actual cost shall be allowed as an admitted asset for title insurers. The aggregate amount of the investment shall not exceed the lesser of twenty percent (20%) of admitted assets or forty percent (40%) of surplus to policyholders, both as required to be shown on the statutory balance sheet of the insurer for its most recently filed statement with the domiciliary state commissioner; if the amount of the investment exceeds the above limits, the excess amount shall be recorded as a nonadmitted asset.

Reserves

17. A title insurer shall establish and maintain:

a. A known claim reserve in an amount estimated to be sufficient to cover all unpaid losses, claims and allocated loss adjustment expenses arising under title insurance policies, guaranteed certificates of title, guaranteed searches and guaranteed abstracts of title, and all unpaid losses, claims and allocated loss adjustment expenses for which the title insurer may be liable, and for which the insurer has received notice by or on behalf of the insured, holder of a guarantee or escrow or security depositor.

b. A Statutory or Unearned Premium Reserve consisting of:

i. The amount of the statutory or unearned premium or reinsurance reserve legally held at December 31, 2000. The balance of this reserve shall be released in accordance with the state laws in effect prior to January 1, 2001; and

ii. For those title insurance policies and guarantees written after January 1, 2001, reserves shall be established that are equal to the sum of the following items, as set forth in the title insurer's most recent annual statement:

(a) For each title insurance policy on a single risk written or assumed, an amount, as determined by the insurer's state of domicile, per $1,000 of net retained liability for policies under $500,000 and for policies of $500,000 or greater, or any other reasonable method as required by the insurer's state of domicile; and

(b) An amount as determined by the insurer's state of domicile for the escrow, settlement and closing fees collected in contemplation of the issuance of title insurance policies or guarantees.

iii. The aggregate of the amounts set aside in this reserve in any calendar year pursuant to subparagraph b.ii. shall be released from the reserve and restored to net profits over a period of twenty (20) years pursuant to the following formula: thirty-five percent (35%) of the aggregate sum on July 1 of the year next succeeding the year of addition; fifteen percent (15%) of the aggregate sum on July 1 of each of the succeeding two (2) years; ten percent (10%) of the aggregate sum on July 1 of the next succeeding year; three percent (3%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; two percent (2%) of the aggregate sum on July 1 of each of the next three (3) succeeding years; and one percent (1%) of the aggregate sum on July 1 of each of the next succeeding ten (10) years.

iv. The insurer shall calculate a retroactive adjusted statutory or unearned premium reserve on an aggregate basis at January 1, 2001. The adjusted aggregate reserve shall be calculated as if Subsection b. ii. had been in effect for all years beginning twenty (20) years prior to January 1, 2001. If the adjusted aggregate reserve exceeds the aggregate amount set aside for statutory or unearned premiums in the insurer's December 31, 2000 annual statement, the insurer shall–increase its statutory or unearned premium reserve by an amount equal to one-sixth of that excess in each of the succeeding six years, commencing with the 2001 calendar year.

v. The aggregate of the amounts set aside in this reserve in any calendar year as adjustments to the insurer's statutory or unearned premium reserve pursuant to Subsection b. iv. shall be released from the reserve and restored to net profits, or equity if the additions required by subparagraph b.iv. of this section reduced equity directly, over a period not exceeding ten (10) years pursuant to the following table:

Year of Addition	Release
2001	Equally over 10 years
2002	Equally over 9 years
2003	Equally over 8 years
2004	Equally over 7 years
2005	Equally over 6 years
2006	Equally over 5 years

c. A supplemental reserve shall be established consisting of any other reserves necessary, when taken in combination with the reserves required by Subsections a. and b. of this paragraph, to cover the company's liabilities with respect to all losses, claims and loss adjustment expenses.

Appendix A-630

Mortgage Guaranty Insurance

Definitions

1. “Mortgage guaranty insurance” is:

   a. Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, provided the improvement on such real estate is a residential building or a condominium unit or buildings designed for occupancy by not more than four families.

   b. Insurance against financial loss by reason of nonpayment of principal, interest or other sums agreed to be paid under the terms of any note or bond or other evidence of indebtedness secured by a mortgage, deed of trust, or other instrument constituting a lien or charge on real estate, providing the improvement on such real estate is a building or buildings designed for occupancy by five (5) or more families or designed to be occupied for industrial or commercial purposes.

   c. Insurance against financial loss by reason of nonpayment of rent or other sums agreed to be paid under the terms of a written lease for the possession, use or occupancy of real estate, provided the improvement on such real estate is a building or buildings designed to be occupied for industrial or commercial purposes.

2. “Authorized real estate security” for the purpose of this Appendix means an amortized note, bond or other evidence of indebtedness, not exceeding ninety-five percent (95%) of the fair market value of the real estate, secured by a mortgage, deed of trust, or other instrument which constitutes, or is equivalent to, a first lien or charge on real estate; provided:

   a. The real estate loan secured in such manner is one of a type which a bank, savings and loan association, or an insurance company, which is supervised and regulated by a state department or the federal government, is authorized to make, or would be authorized to make, disregarding any requirement applicable to such an institution that the amount of the loan not exceed a certain percentage of the value of the real estate.

   b. The improvement on such real estate is a building or buildings designed for occupancy as specified by paragraphs 1.a. and 1.b. of this Appendix.

   c. The lien on such real estate may be subject to and subordinate to the following:

      i. The lien of any public bond, assessment or tax, when no installment, call or payment of or under such bond, assessment or tax is delinquent.

      ii. Outstanding mineral, oil, water or timber rights, rights-of-way, easements or rights-of-way of support, sewer rights, building restrictions or other restrictions or covenants, conditions or regulations of use, or outstanding leases upon such real property under which rents or profits are reserved to the owner thereof.

3. “Contingency reserve” means an additional premium reserve established to protect policyholders against the effect of adverse economic cycles.

Investment Limitation

4. A mortgage guaranty insurance company shall not report as an admitted asset notes or other evidences of indebtedness secured by mortgage or other lien upon real property. This provision shall not apply to obligations secured by real property, or contracts for the sale of real property, which obligations or contracts of sale are acquired in the course of the good faith settlement of claims under policies of insurance issued by the mortgage guaranty insurance company, or in the good faith disposition of real property so acquired.

Reserves

5. Unearned Premium Reserves - A mortgage guaranty insurance company shall compute and maintain an unearned premium reserve.

6. Loss Reserve - A mortgage guaranty insurance company shall compute and maintain adequate case basis and other loss reserves which accurately reflect loss frequency and loss severity and shall include components for claims reported and for claims incurred but not reported, including estimated losses on:

a. Insured loans which have resulted in the conveyance of property which remains unsold;

b. Insured loans in the process of foreclosure;

c. Insured loans in default for four (4) months or for any lesser period which is defined as default for such purposes in the policy provisions; and

d. Insured leases in default for four (4) months or for any lesser period which is defined as default for such purposes in policy provisions.

7. Contingency Reserve

Each mortgage guaranty insurance company shall compute and maintain a contingency reserve.

8. Reinsurance

Whenever a mortgage guaranty insurance company obtains reinsurance from an insurance company which is properly licensed to provide such reinsurance or from an appropriate governmental agency, the mortgage guaranty insurer and the reinsurer shall establish and maintain the reserves required in this Appendix in appropriate proportions in relation to the risk retained by the original insurer and ceded to the assuming reinsurer so that the total reserves established shall not be less than the reserves required by this Appendix.

Appendix A-641

Long-Term Care Insurance

Definitions

1. “Long-term care insurance” means any insurance policy or rider advertised, marketed, offered or designed to provide coverage for not less than twelve (12) consecutive months for each covered person on an expense incurred, indemnity, prepaid or other basis; for one or more necessary or medically necessary diagnostic, preventive, therapeutic, rehabilitative, maintenance or personal care services, provided in a setting other than an acute care unit of a hospital. Such term includes group and individual annuities and life insurance policies or riders which provide directly or which supplement long-term care insurance. Such term also includes a policy or rider which provides for payment of benefits based upon cognitive impairment or the loss of functional capacity. The term shall also include qualified long-term care insurance contracts. Long-term care insurance may be issued by insurers; fraternal benefit societies; nonprofit health, hospital, and medical service corporations; prepaid health plans; health maintenance organizations or any similar organization to the extent they are otherwise authorized to issue life or health insurance. Long-term care insurance shall not include any insurance policy which is offered primarily to provide basic Medicare supplement coverage, basic hospital expense coverage, basic medical-surgical expense coverage, hospital confinement indemnity coverage, major medical expense coverage, disability income or related asset-protection coverage, accident only coverage, specified disease or specified accident coverage, or limited benefit health coverage. With regard to life insurance, this term does not include life insurance policies which accelerate the death benefit specifically for one or more of the qualifying events of terminal illness, medical conditions requiring extraordinary medical intervention, or permanent institutional confinement, and which provide the option of a lump-sum payment for those benefits and in which neither the benefits nor the eligibility for the benefits is conditioned upon the receipt of long-term care. Notwithstanding any other provision contained herein, any product advertised, marketed or offered as long-term care insurance shall be subject to the provisions of this Appendix.

2. “Applicant” means:

   a. In the case of an individual long-term care insurance policy, the person who seeks to contract for benefits, and

   b. In the case of a group long-term care insurance policy, the proposed certificate holder.

3. “Certificate” means, for the purposes of this Appendix, any certificate issued under a group long-term care insurance policy, which policy has been delivered or issued for delivery.

4. “Group long-term care insurance” means a long-term care insurance policy which is delivered or issued for delivery to:

   a. One or more employers or labor organizations, or to a trust or to the trustees of a fund established by one or more employers or labor organizations, or a combination thereof, for employees or former employees or a combination thereof or for members or former members or a combination thereof, of the labor organizations; or

   b. Any professional, trade or occupational association for its members or former or retired members, or combination thereof, if such association:

      i. Is composed of individuals all of whom are or were actively engaged in the same profession, trade or occupation; and

      ii. Has been maintained in good faith for purposes other than obtaining insurance; or

c. An association or a trust or the trustee(s) of a fund established, created or maintained for the benefit of members of one or more associations. Prior to advertising, marketing or offering such policy, the association or associations, or the insurer of the association or associations, shall evidence that the association or associations have at the outset a minimum of 100 persons and have been organized and maintained in good faith for purposes other than that of obtaining insurance; have been in active existence for at least one year; and have a constitution and bylaws which provide that:

i. The association or associations hold regular meetings not less than annually to further purposes of the members;

ii. Except for credit unions, the association or associations collect dues or solicit contributions from members; and

iii. The members have voting privileges and representation on the governing board and committees.

5. "Policy" means, for the purposes of this Appendix, any policy, contract, subscriber agreement, rider or endorsement delivered or issued for delivery by an insurer; fraternal benefit society; nonprofit health, hospital, or medical service corporation; prepaid health plan; health maintenance organization or any similar organization.

6. a. "Qualified long-term care insurance contract" or "federally tax-qualified long-term care insurance contract" means an individual or group insurance contract that meets the requirements of Section 7702B(b) of the Internal Revenue Code of 1986, as amended, as follows:

i. The only insurance protection provided under the contract is coverage of qualified long-term care services. A contract shall not fail to satisfy the requirements of this subparagraph by reason of payments being made on a per diem or other periodic basis without regard to the expenses incurred during the period to which the payments relate;

ii. The contract does not pay or reimburse expenses incurred for services or items to the extent that the expenses are reimbursable under Title XVIII of the Social Security Act, as amended, or would be so reimbursable but for the application of a deductible or coinsurance amount. The requirements of this subparagraph do not apply to expenses that are reimbursable under Title XVIII of the Social Security Act only as a secondary payor. A contract shall not fail to satisfy the requirements of this subparagraph by reason of payments being made on a per diem or other periodic basis without regard to the expenses incurred during the period to which the payments relate;

iii. The contract is guaranteed renewable, within the meaning of section 7702B(b)(1)(C) of the Internal Revenue Code of 1986, as amended;

iv. The contract does not provide for a cash surrender value or other money that can be paid, assigned, pledged as collateral for a loan, or borrowed except as provided in subparagraph 6.a.v. below;

v. All refunds of premiums, and all policyholder dividends or similar amounts, under the contract are to be applied as a reduction in future premiums or to increase future benefits, except that a refund on the event of death of the insured or a complete surrender or cancellation of the contract cannot exceed the aggregate premiums paid under the contract; and

vi. The contract meets the consumer protection provisions set forth in Section 7702B(g) of the Internal Revenue Code of 1986, as amended.

b. "Qualified long-term care insurance contract" or "federally tax-qualified long term care insurance contract" also means the portion of a life insurance contract that provides long-term care insurance coverage by rider or as part of the contract and that satisfies the requirements of Sections 7702B(b) and (e) of the Internal Revenue Code of 1986, as amended.

Valuation Requirements

7. When long-term care benefits are provided through the acceleration of benefits under group or individual life policies or riders to such policies, policy reserves for the benefits shall be determined in accordance with Appendix A-820. Claim reserves shall also be established in the case when the policy or rider is in claim status.

8. Reserves for policies and riders subject to this Appendix should be based on the multiple decrement model utilizing all relevant decrements except for voluntary termination rates. Single decrement approximations are acceptable if the calculation produces essentially similar reserves, if the reserve is clearly more conservative, or if the reserve is immaterial. The calculations may take into account the reduction in life insurance benefits due to the payment of long-term care benefits. However, in no event shall the reserves for the long-term care benefit and the life insurance benefit be less than the reserves for the life insurance benefit assuming no long-term care benefit.

9. In the development and calculation of reserves for policies and riders subject to this Appendix, due regard shall be given to the applicable policy provisions, marketing methods, administrative procedures and all other considerations which have an impact on projected claim costs, including, but not limited to, the following:

a. Definition of insured events;

b. Covered long-term care facilities;

c. Existence of home convalescence care coverage;

d. Definition of facilities;

e. Existence or absence of barriers to eligibility;

f. Premium waiver provision;

g. Renewability;

h. Ability to raise premiums;

i. Marketing method;

j. Underwriting procedures;

k. Claims adjustment procedures;

l. Waiting period;

m. Maximum benefit;

n. Availability of eligible facilities;

o. Margins in claim costs;

p. Optional nature of benefit;

q. Delay in eligibility for benefit;

r. Inflation protection provisions; and

s. Guaranteed insurability option.

10. When long-term care benefits are provided other than as in the above, reserves shall be determined in accordance with Appendix A-010.

Appendix A-695

Synthetic Guaranteed Investment Contracts

Scope and Application

1. This appendix applies to that portion of a group annuity contract or other agreement defined in paragraph 23 and issued by a life insurer that functions as an accounting record for an accumulation fund and has benefit guarantees relating to a principal amount and levels of interest at a fixed rate of return specified in advance. The fixed rates of return will be constant over the applicable rate periods, and may reflect prior and current market conditions with respect to the segregated portfolio but may not reference future changes in market conditions.

Definitions

2. "Account assets" means the assets in the segregated portfolio plus any assets held in the general account or a separate account to meet the asset maintenance requirements.

3. "Actuarial opinion and memorandum" means the valuation actuary's opinion and memorandum covering synthetic guaranteed investment contract liabilities that is required to be submitted to the commissioner.

4. "Appointed actuary" means the qualified actuary appointed or retained either directly by or by the authority of the board of directors through an executive officer of the company to prepare the annual statement of actuarial opinion for the company as a whole.

5. "Asset maintenance requirement" means the requirement to maintain assets to fund contract benefits in accordance with paragraph 27 of this appendix.

6. "Class of contracts" means the set of all contracts to which a given plan of operation pertains.

7. "Contract value record" means an accounting record, provided by the contract in relation to a segregated portfolio of assets, that is credited with a fixed rate of return over regular periods, and that is used to measure the extent of the insurer's obligation to the contractholder. The fixed rate of return credited to the contract value record is determined by means of a crediting rate formula or declared at the inception of the contract and valid for the entire term of the contract.

8. "Crediting rate formula" means a mathematical formula used to calculate the fixed rate of return credited to the contract value record during any rate period and based in part upon the difference between the contract value record and the market value record amortized over an appropriate period. The fixed rate of return calculated by means of this formula may reflect prior and current market conditions with respect to the segregated portfolio, but may not reference future changes in market conditions.

9. "Duration" means, with respect to the segregated portfolio assets or guaranteed contract liabilities, a measure of price sensitivity to changes in interest rates, such as the Macaulay duration or option-adjusted duration.

10. "Fair market value" means a reasonable estimate of the amount that a knowledgeable buyer of an asset would be willing to pay, and a knowledgeable seller of an asset would be willing to accept, for the asset without duress in an arm's length transaction. In the case of a publicly traded security, the fair market value is the price at which the security is traded or, if no price is available, a price that appropriately reflects the latest bid and asked prices for the security. In the case of a debt instrument that is not publicly traded, the fair market value is the discounted present value of the asset calculated at a

reasonable discount rate. For all other non-publicly traded assets, fair market value will be determined in accordance with valuation practices customarily used within the financial industry.

11. "Guaranteed minimum benefits" means contract benefits on a specified date that may be either:

a. A principal guarantee, with or without a fixed minimum interest rate guarantee, related to the segregated portfolio;

b. An assurance as to the future investment return or performance of the segregated portfolio; or

c. The fair market value of the segregated portfolio, to the extent that the fair market value of the assets determines the contractholder's benefits.

12. a. "Hedging instrument" means:

i. An interest rate futures agreement or foreign currency futures agreement, an option to purchase or sell an interest rate futures agreement or foreign currency futures agreement, or any option to purchase or sell a security or foreign currency, used in a bona fide hedging transaction; or

ii. A financial agreement or arrangement entered into with a broker, dealer or bank, qualified under applicable federal and state securities or banking law and regulation, in connection with investment in one or more securities in order to reduce the risk of changes in market valuation or to create a synthetic investment that, when added to the portfolio, reduces the risk of changes in market valuation.

b. An instrument shall not be considered a hedging instrument or a part of a bona fide hedging transaction if it is purchased in conjunction with another instrument where the effect of the combined transaction is an increase in the portfolio's exposure to market risk.

13. "Investment guidelines" means a set of written guidelines, established in advance by the person with investment authority over the segregated portfolio, to be followed by the investment manager. The guidelines shall include a description of:

a. The segregated portfolio's investment objectives and limitations;

b. The investment manager's degree of discretion;

c. The duration, asset class, quality, diversification, and other requirements of the segregated portfolio; and

d. The manner in which derivative instruments may be used, if at all, in the segregated portfolio.

14. "Investment manager" means the person (including the contractholder) responsible for managing the assets in the segregated portfolio in accordance with the investment guidelines in a fiduciary capacity to the owner of the assets.

15. "Market value record" means an accounting record provided by the contract to reflect the fair market value of the segregated portfolio.

16. “Nationally Recognized Statistical Rating Organization (NRSRO)” means a rating organization so designated by the Securities and Exchange Commission of the United States of America (SEC) which has applied to, and whose NRSRO status has been confirmed by, the NAIC Securities Valuation Office.

17. “Permitted custodial institution” means a bank, trust company or other licensed fiduciary services provider.

18. “Plan of operation” means a written plan meeting the requirements of paragraph 26 of this appendix.

19. “Qualified actuary” means an individual who meets the qualification standards set forth in Appendix A-820.

20. “Rate period” means the period of time during which the fixed rate of return credited to the contract value record is applicable between crediting rate formula adjustments.

21. “Segregated portfolio” means:

a. A portfolio or sub-portfolio of assets to which the contract pertains that is held in a custody or trust account by the permitted custodial institution and identified on the records of the permitted custodial institution as special custody assets held for the exclusive benefit of the retirement plans or other entities on whose behalf the contractholder holds the contract; and

b. Any related cash or currency received by the permitted custodial institution for the account of the contractholder and held in a deposit account for the exclusive benefit of the retirement plans or other entities on whose behalf the contractholder holds the contract.

22. “Spot rate” corresponding to a given time of benefit payment means the yield on a zero-coupon non-callable and non-prepayable United States government obligation maturing at that time, or the zero-coupon yield implied by the price of a representative sampling of coupon-bearing, non-callable and non-prepayable United States government obligations in accordance with a formula set forth in the plan of operation. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country rated in one of the two (2) highest rating categories by an NRSRO and are supported by investments denominated in the currency of the foreign country, the spot rate may be determined by reference to substantially similar obligations of the government of the foreign country.

23. “Synthetic guaranteed investment contract” or “contract” means a group annuity contract or other agreement that in whole or in part establishes the insurer’s obligations by reference to a segregated portfolio of assets that is not owned by the insurer.

24. “United States government obligation” means a direct obligation issued, assumed, guaranteed or insured by the United States of America or by an agency or instrumentality of the United States government.

25. “Valuation actuary” means the appointed actuary or, alternatively, a qualified actuary designated by the appointed actuary to render the actuarial opinion. Written documentation of any such designation shall be on file at the company and available for review upon request.

Plan of Operation

26. The plan of operation for a class of contracts shall describe the financial implications for the insurer of the issuance of contracts in the class, and shall include at least the following:

a. A statement describing the methods and procedures used to value statutory liabilities for purposes of paragraph 27;

b. A description of the allowable investment parameters (such as objectives, asset classes, quality, duration and diversification requirements applied to the assets held within the segregated portfolio) to be reflected in the investment guidelines applicable to each contract issued in the class to which the submitted plan of operation applies; and a description of the procedures that will be followed by the insurer in evaluating the appropriateness of any specific investment guidelines submitted by the contractholder.

Reserves and Documentation

27. Asset maintenance requirements for segregated portfolios covered by this appendix.

a. At all times an insurer shall hold minimum reserves in the general account or one or more separate accounts, as appropriate, equal to the excess, if any, of the value of the guaranteed contract liabilities, determined in accordance with paragraphs 27.f. and 27.g., over the market value of the assets in the segregated portfolio less the deductions provided for in paragraph 27.b. These reserve requirements shall be applied on a contract-by-contract basis.

b. In determining compliance with the asset maintenance requirement and the reserve for guaranteed contract liabilities specified in paragraph 27.a., the insurer shall deduct a percentage of the market value of an asset as follows:

i. For debt instruments, the percentage shall be the NAIC asset valuation reserve "reserve objective factor," but the factor shall be increased by fifty percent (50%) for the purpose of this calculation if the difference in durations of the assets and liabilities is more than one-half year.

ii. For assets that are not debt instruments, the percentage shall be the NAIC asset valuation reserve “maximum reserve factor.”

c. To the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by segregated portfolio assets denominated in the currency of the foreign country, the percentage deduction for these assets under paragraph 27.b. shall be that for a substantially similar investment denominated in the currency of the United States.

d. To the extent that guaranteed contract liabilities are denominated in the currency of the United States and are supported by segregated portfolio assets denominated in the currency of a foreign country, and to the extent that guaranteed contract liabilities are denominated in the currency of a foreign country and are supported by segregated portfolio assets denominated in the currency of the United States, the deduction for debt instruments under paragraph 27.b. shall be increased by fifteen percent (15%) of the market value of the assets unless the currency exchange risk on the assets has been adequately hedged, in which case the percentage deduction under paragraph 27.b. shall be increased by one-half percent (.5%). No guaranteed contract liabilities denominated in the currency of a foreign country shall be supported by segregated portfolio assets denominated in the currency of another foreign country. For purposes of this paragraph, the currency exchange risk on an asset is deemed to be adequately hedged if:

i. It is an obligation of

(a) A jurisdiction that is rated in one of the two (2) highest rating categories by an NRSRO;

(b) Any political subdivision or other governmental unit of such a jurisdiction, or any agency or instrumentality of jurisdiction, political subdivision or other governmental unit; or

(c) An institution that is organized under the laws of any such jurisdiction; and

ii. At all times the principal amount of the obligation and scheduled interest payments on the obligation are hedged against the United States dollar pursuant to contracts or agreements that are:

(a) Issued by or traded on a securities exchange or board of trade regulated under the laws of the United States or Canada or a province of Canada;

(b) Entered into with a United States banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations outstanding, that are rated in one of the two (2) highest rating categories by an NRSRO, or with a broker-dealer registered with the Securities and Exchange Commission that has net capital in excess of $250 million; or

(c) Entered into with any other banking institution that has assets in excess of $5 billion and that has obligations outstanding, or has a parent corporation that has obligations outstanding, that are rated in one of the two (2) highest rating categories by an NRSRO and that is organized under the laws of a jurisdiction that is rated in one of the two (2) highest rating categories by an NRSRO.

e. These contracts may provide for the allocation to one or more separate accounts of all or any portion of the amount needed to meet the asset maintenance requirement. If the contract provides that the assets in the separate account shall not be chargeable with liabilities arising out of any other business of the insurer, the insurer shall maintain in a distinct separate account that is so chargeable:

i. That portion of the amount needed to meet the asset maintenance requirement that has been allocated to separate accounts; less

ii. The amounts contributed to separate accounts by the contractholder in accordance with the contract and the earnings on the contract.

f. For purposes of this paragraph, the minimum value of guaranteed contract liabilities is defined to be the sum of the expected guaranteed contract benefits, each discounted at a rate corresponding to the expected time of payment of the contract benefit that is not greater than the maximum multiple of the spot rate supportable by the expected return from the segregated portfolio assets, and in no event greater than 105 percent of the spot rate as described in the plan of operation or the actuary's opinion and memorandum, except that if the expected time of payment of a contract benefit is more than thirty (30) years, it shall be discounted from the expected date of payment to year thirty (30) at a rate of no more than eighty percent (80%) of the thirty-year spot rate and from year thirty (30) to the date of valuation at a rate not greater than 105 percent of the thirty-year spot rate.

g. In calculating the minimum value of guaranteed contract benefits:

i. All guaranteed benefits potentially available to the contractholder on an ongoing basis shall be considered in the valuation process and analysis, and the reserve held must be sufficient to fund the greatest present value of each independent guaranteed contract benefit. For purposes of this subparagraph, the right granted to the contractholder to exit the contract by discharging the insurer of its guarantee obligation under the contract and taking control of the assets in the segregated portfolio shall not be considered a guaranteed benefit.

ii. To the extent that future guaranteed cash flows are dependent upon the benefit responsiveness of an employer-sponsored plan, a best estimate based on company experience, or other reasonable criteria if company experience is not available, shall be used in the projections of future cash flows.

28. Account assets shall make adequate provision for contract liabilities, taking into account any risk charge payable, the segregated portfolio assets, and the amount of any reserve liability with respect to the asset maintenance requirement.

29. The fixed-income segregated portfolio shall conform to and justify the rates used to discount contract liabilities for valuation pursuant to paragraph 27.f.

30. The company shall document whether any rates used pursuant to paragraph 27.f. to discount guaranteed contract liabilities and other items applicable to the segregated portfolio were modified from the rate or rates described in the plan of operation.

31. The level of risk charges, if any, retained in the general account shall be appropriate in view of such factors as the nature of the guaranteed contract liabilities and losses experienced in connection with account contracts and other pricing factors.

32. The company shall substantially conform with Appendix A-822 and maintain internal documentation to either:

a. Demonstrate the adequacy of account assets based upon cash flow analysis, or

b. Explain why cash flow testing analysis is not appropriate, describe the alternative methodology of asset adequacy testing used, and demonstrate the adequacy of account assets under that methodology;

33. The company's internal documentation pertaining to reserves for synthetic guaranteed investment contract liabilities shall also:

a. Clearly describe the assumptions used in projecting cash flows under each class of assets, and any dynamic portfolio hedging techniques utilized and the tests performed on the utilization of the techniques;

b. Clearly describe how the company has reflected the cost of capital;

c. Clearly describe how the company has reflected the risk of default on obligations and mortgage loans, including obligations and mortgage loans that are not investment grade;

d. Clearly describe how the company has reflected withdrawal risks, if applicable, including a discussion of the positioning of the contracts within the benefit withdrawal priority order pertaining to the contracts;

e. If the plan of operation provides for investments in segregated portfolio assets other than United States government obligations, demonstrate that the rates used to discount contract liabilities pursuant to paragraph 27.f. conservatively reflect expected investment returns, taking into account any foreign exchange risks;

f. If the contracts provide that in certain circumstances they would cease to be funded by a segregated portfolio and, instead would become contracts funded by the general account, clearly describe how any increased reserves would be provided for if and to the extent these circumstances occurred;

g. Document the amount of account assets maintained in a separate account that are not chargeable with liabilities arising out of any other business of the insurance company;

h. Document the amount of reserves and supporting assets as of December 31 and where the reserves are shown in the annual statement;

i. Document the amount of any contingency reserve carried as part of surplus;

j. Document the market value of the segregated asset portfolio; and

k. Where separate account assets are not chargeable with liabilities arising out of any other business of the insurance company, describe how the level of risk charges payable to the general account provides an appropriate compensation for the risk taken by the general account.

34. When the insurer issues a synthetic guaranteed investment contract and complies with the asset maintenance requirements of paragraph 27, it need not maintain an asset valuation reserve with respect to those account assets.

35. This paragraph describes the reserve valuation requirements for contracts subject to this appendix.

a. Reserves for synthetic investment contracts subject to this appendix shall be an amount equal to the sum of the following:

i. The amounts determined as the minimum reserve as required under paragraph 27; and

ii. Any additional amount determined by the insurer's valuation actuary as necessary to make adequate provision for all contract liabilities.

b. The amount of any reserves required by paragraph 35.a. may be established by either:

i. Allocating sufficient assets to one or more separate accounts; or

ii. Setting up the additional reserves in the general account.

This page intentionally left blank.

Appendix A-785

Credit For Reinsurance

Definitions

1. “Commissioner” refers to the commissioner of insurance in the state where credit or a reduction from liability is taken.

2. “Jurisdiction” refers to any state, district or territory of the United States and also to territories, provinces or jurisdictions other than the United States.

3. “Liabilities” shall mean the assuming insurer’s gross liabilities attributable to reinsurance ceded by U. S. domiciled insurers that are not otherwise secured by acceptable means.

4. “Beneficiary” means the entity for whose sole benefit the trust has been established and any successor of the beneficiary by operation of law. If a court of law appoints a successor in interest to the named beneficiary, then the named beneficiary includes and is limited to the court appointed domiciliary receiver (including conservator, rehabilitator or liquidator).

5. “Grantor” means the entity that has established a trust for the sole benefit of the beneficiary. When established in conjunction with a reinsurance agreement, the grantor is the unlicensed, unaccredited assuming insurer.

6. “Obligations,” as used in paragraph 29 of this appendix means:

   a. Reinsured losses and allocated loss expenses paid by the ceding company, but not recovered from the assuming insurer;

   b. Reserves for reinsured losses reported and outstanding;

   c. Reserves for reinsured losses incurred but not reported; and

   d. Reserves for allocated reinsured loss expenses and unearned premiums.

Credit Allowed a Domestic Ceding Insurer

7. Credit for reinsurance shall be allowed a domestic ceding insurer as either an asset or a reduction from liability on account of reinsurance ceded only when the reinsurer meets the requirements of paragraphs 8, 9, 10, 11, 12 or 13 of this appendix. Credit shall be allowed under paragraphs 8, 9, or 10 of this appendix only as respects cessions of those kinds or classes of business which the assuming insurer is licensed or otherwise allowed to write or assume in its state of domicile or, in the case of a U.S. branch of an alien assuming insurer, in the state through which it is entered and licensed to transact insurance or reinsurance. Credit shall be allowed under paragraphs 10 or 11 of this appendix only if the applicable requirements of paragraph 14 have been satisfied.

8. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is licensed to transact insurance or reinsurance in the domiciliary state of the ceding insurer.

9. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is accredited as a reinsurer by the domiciliary state of the ceding insurer. In order to be eligible for accreditation, a reinsurer must:

a. File with the commissioner evidence of its submission to the domiciliary state's jurisdiction;

b. Submit to the domiciliary state's authority to examine its books and records;

c. Be licensed to transact insurance or reinsurance in at least one state, or in the case of a U.S. branch of an alien assuming insurer, is entered through and licensed to transact insurance or reinsurance in at least one state;

d. File annually with the commissioner a copy of its annual statement filed with the insurance department of its state of domicile and a copy of its most recent audited financial statement; and

e. Demonstrate to the satisfaction of the commissioner that it has adequate financial capacity to meet its reinsurance obligations and is otherwise qualified to assume reinsurance from domestic insurers. An assuming insurer is deemed to meet this requirement as of the time of its application if it maintains a surplus as regards policyholders in an amount not less than $20,000,000 and its accreditation has not been denied by the commissioner within ninety (90) days after submission of its application.

10. a. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that is domiciled in, or in the case of a U.S. branch of an alien assuming insurer is entered through, a state that employs standards regarding credit for reinsurance substantially similar to those of the domiciliary state of the ceding insurer and the assuming insurer or U.S. branch of an alien assuming insurer:

i. Maintains a surplus as regards policyholders in an amount not less than $20,000,000; and

ii. Submits to the authority of the domiciliary state to examine its books and records.

b. The requirement of paragraph 10.a.i. does not apply to reinsurance ceded and assumed pursuant to pooling arrangements among insurers in the same holding company system.

11. a. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that maintains a trust fund in a qualified U.S. financial institution, as defined in paragraph 53, for the payment of the valid claims of its U.S. ceding insurers, their assigns and successors in interest. The assuming insurer shall report annually information substantially the same as that required to be reported on the NAIC Annual Statement form by licensed insurers. The assuming insurer shall submit to examination of its books and records by the commissioner and bear the expense of examination.

b. i. Credit for reinsurance shall not be granted under this paragraph 11 unless the form of the trust and any amendments to the trust have been approved by:

(a) The commissioner of the state where the trust is domiciled; or

(b) The commissioner of another state who, pursuant to the terms of the trust instrument, has accepted principal regulatory oversight of the trust.

ii. The trust instrument shall provide that:

(a) Contested claims shall be valid and enforceable out of funds in trust to the extent remaining unsatisfied thirty (30) days after entry of the final order of any court of competent jurisdiction in the United States;

(b) Legal title to the assets of the trust shall be vested in the trustee for the benefit of the grantor's U.S. ceding insurers, their assigns and successors in interest;

(c) The trust shall be subject to examination as determined by the commissioner;

(d) The trust shall remain in effect for as long as the assuming insurer, or any member or former member of a group of insurers, shall have outstanding obligations under reinsurance agreements subject to the trust; and

(e) No later than February 28 of each year the trustee of the trust shall report to the commissioner in writing setting forth the balance in the trust and listing the trust's investments at the preceding year-end, and shall certify the date of termination of the trust, if so planned, or certify that the trust shall not expire prior to the following December 31.

c. The following requirements apply to the following categories of assuming insurer:

i. The trust fund for a single assuming insurer shall consist of funds in trust in an amount not less than the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers, and, in addition, the assuming insurer shall maintain a trusteed surplus of not less than $20,000,000, except as provided in paragraph 11.c.ii. of this appendix.

ii. At any time after the assuming insurer has permanently discontinued underwriting new business secured by the trust for at least three full years, the commissioner with principal regulatory oversight of the trust may authorize a reduction in the required trusteed surplus, but only after a finding, based on an assessment of the risk, that the new required surplus level is adequate for the protection of U.S. ceding insurers, policyholders and claimants in light of reasonably foreseeable adverse loss development. The risk assessment may involve an actuarial review, including an independent analysis of reserves and cash flows, and shall consider all material risk factors, including when applicable the lines of business involved, the stability of the incurred loss estimates and the effect of the surplus requirements on the assuming insurer's liquidity or solvency. The minimum required trusteed surplus may not be reduced to an amount less than thirty percent (30%) of the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers covered by the trust.

iii. (a) In the case of a group including incorporated and individual unincorporated underwriters:

(1) For reinsurance ceded under reinsurance agreements with an inception, amendment or renewal date on or after January 1, 1993, the trust shall consist of a trusteed account in an amount

not less than the respective underwriters' several liabilities attributable to business ceded by U.S. domiciled ceding insurers to any underwriter of the group;

(2) For reinsurance ceded under reinsurance agreements with an inception date on or before December 31, 1992, and not amended or renewed after that date, not-withstanding the other provisions contained herein, the trust shall consist of a trusteed account in an amount not less than the respective underwriters' several insurance and reinsurance liabilities attributable to business written in the United States; and

(3) In addition to these trusts, the group shall maintain in trust a trusteed surplus of which $100,000,000 shall be held jointly for the benefit of the U.S. domiciled ceding insurers of any member of the group for all years of account; and

(b) The incorporated members of the group shall not be engaged in any business other than underwriting as a member of the group and shall be subject to the same level of regulation and solvency control by the group's domiciliary regulator as are the unincorporated members.

(c) Within ninety (90) days after its financial statements are due to be filed with the group's domiciliary regulator, the group shall provide to the commissioner an annual certification by the group's domiciliary regulator of the solvency of each underwriter member; or if a certification is unavailable, financial statements, prepared by independent public accountants, of each underwriter member of the group.

iv. In the case of a group of incorporated underwriters under common administration, the group shall:

(a) Have continuously transacted an insurance business outside the United States for at least three (3) years immediately prior to making application for accreditation;

(b) Maintain aggregate policyholders' surplus of at least $10,000,000,000;

(c) Maintain a trust fund in an amount not less than the group's several liabilities attributable to business ceded by U.S. domiciled ceding insurers to any member of the group pursuant to reinsurance contracts issued in the name of the group;

(d) In addition, maintain a joint trusteed surplus of which $100,000,000 shall be held jointly for the benefit of U.S. domiciled ceding insurers of any member of the group as additional security for these liabilities; and

(e) Within ninety (90) days after its financial statements are due to be filed with the group's domiciliary regulator, make available to the commissioner an annual certification of each underwriter member's solvency by the member's domiciliary regulator and financial statements of each underwriter member of the group prepared by its independent public accountant.

d. For the purposes of this paragraph 11., the term "liabilities" shall mean the assuming insurer's gross liabilities attributable to reinsurance ceded by U.S. domiciled insurers excluding liabilities that are otherwise secured by acceptable means, and shall include:

i. For business ceded by domestic insurers authorized to write accident and health, and property and casualty insurance:

(a) Losses and allocated loss expenses paid by the ceding insurer, recoverable from the assuming insurer;

(b) Reserves for losses reported and outstanding;

(c) Reserves for losses incurred but not reported;

(d) Reserves for allocated loss expenses; and

(e) Unearned premiums.

ii. For business ceded by domestic insurers authorized to write life, health and annuity insurance:

(a) Aggregate reserves for life policies and contracts net of policy loans and net due and deferred premiums;

(b) Aggregate reserves for accident and health policies;

(c) Deposit funds and other liabilities without life or disability contingencies; and

(d) Liabilities for policy and contract claims.

12. Credit shall be allowed when the reinsurance is ceded to an assuming insurer that has been certified as a reinsurer in the domestic state of the ceding insurer and secures its obligations in accordance with the requirements of this paragraph 12.

a. In order to be eligible for certification, the assuming insurer shall meet the following requirements:

i. The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a qualified jurisdiction, as determined by the domestic state of the ceding insurer pursuant to paragraphs 12.c. and 12.k. of this subsection;

ii. The assuming insurer must maintain minimum capital and surplus, or its equivalent, in an amount as provided in paragraph 12.i.iii.(b) of this appendix;

iii. The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the domestic state of the ceding insurer, as provided in paragraph 12.i.iii.(c) of this appendix;

iv. The assuming insurer must agree to submit to the jurisdiction of the domestic state of the ceding insurer, appoint the commissioner of the domestic state of the ceding insurer as its agent for service of process in that state, and agree to provide security for 100 percent of the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers if it resists enforcement of a final U.S. judgment;

v. The assuming insurer must agree to meet applicable information filing requirements as determined by the domestic state of the ceding insurer, both with respect to an initial application for certification and on an ongoing basis; and

vi. The assuming insurer must satisfy any other requirements for certification deemed relevant by the domestic state of the ceding insurer.

b. An association including incorporated and individual unincorporated underwriters may be a certified reinsurer. In order to be eligible for certification, in addition to satisfying requirements of paragraph 12.a. of this appendix:

i. The association shall satisfy its minimum capital and surplus requirements through the capital and surplus equivalents (net of liabilities) of the association and its members, which shall include a joint central fund that may be applied to any unsatisfied obligation of the association or any of its members, in an amount determined by the domestic state of the ceding insurer to provide adequate protection;

ii. The incorporated members of the association shall not be engaged in any business other than underwriting as a member of the association and shall be subject to the same level of regulation and solvency control by the association's domiciliary regulator as are the unincorporated members; and

iii. Within ninety (90) days after its financial statements are due to be filed with the association's domiciliary regulator, the association shall provide to the domestic state of the ceding insurer an annual certification by the association's domiciliary regulator of the solvency of each underwriter member; or if a certification is unavailable, financial statements, prepared by independent public accountants, of each underwriter member of the association.

c. The domestic state of the ceding insurer shall create and publish a list of qualified jurisdictions, under which an assuming insurer licensed and domiciled in such jurisdiction is eligible to be considered for certification by the domestic state of the ceding insurer as a certified reinsurer.

i. In order to determine whether the domiciliary jurisdiction of a non-U.S. assuming insurer is eligible to be recognized as a qualified jurisdiction, the domestic state of the ceding insurer shall evaluate the appropriateness and effectiveness of the reinsurance supervisory system of the jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the non-U.S. jurisdiction to reinsurers licensed and domiciled in the U.S. A qualified jurisdiction must agree to share information and cooperate with the domestic state of the ceding insurer with respect to all certified reinsurers domiciled within that jurisdiction. A jurisdiction may not be recognized as a qualified jurisdiction if the domestic state of the ceding insurer has determined that the jurisdiction does not adequately and promptly enforce final U.S. judgments and arbitration awards. Additional factors may be considered in the discretion of the domestic state of the ceding insurer.

ii. A list of qualified jurisdictions shall be published through the NAIC Committee Process. The domestic state of the ceding insurer shall consider this list in determining qualified jurisdictions. If the domestic state of the ceding insurer approves a jurisdiction as qualified that does not appear on the list of qualified jurisdictions, the state shall provide thoroughly documented justification in accordance with criteria to be developed under regulations.

iii. U.S. jurisdictions that meet the requirement for accreditation under the NAIC financial standards and accreditation program shall be recognized as qualified jurisdictions.

iv. If a certified reinsurer's domiciliary jurisdiction ceases to be a qualified jurisdiction, the domestic state of the ceding insurer has the discretion to suspend the reinsurer's certification indefinitely, in lieu of revocation.

d. The domestic state of the ceding insurer shall assign a rating to each certified reinsurer, giving due consideration to the financial strength ratings that have been assigned by rating agencies deemed acceptable to the commissioner pursuant to regulation. The domestic state of the ceding insurer shall publish a list of all certified reinsurers and their ratings.

e. A certified reinsurer shall secure obligations assumed from U.S. ceding insurers under this subsection at a level consistent with its rating, as specified in paragraph 12.h.i. of this appendix.

i. In order for a domestic ceding insurer to qualify for full financial statement credit for reinsurance ceded to a certified reinsurer, the certified reinsurer shall maintain security in a form acceptable to the domestic state of the ceding insurer and consistent with the provisions of paragraph 18 of this appendix, or in a multibeneficiary trust in accordance with paragraph 11 of this appendix, except as otherwise provided in paragraph 12.e.ii. through 12.e.v. of this appendix.

ii. If a certified reinsurer maintains a trust to fully secure its obligations subject to paragraph 11 of this appendix, and chooses to secure its obligations incurred as a certified reinsurer in the form of a multibeneficiary trust, the certified reinsurer shall maintain separate trust accounts for its obligations incurred under reinsurance agreements issued or renewed as a certified reinsurer with reduced security as permitted by paragraph 12, or comparable laws of other U.S. jurisdictions, and for its obligations subject to paragraph 11 of this appendix. It shall be a condition to the grant of certification under paragraph 12 of this appendix that the certified reinsurer shall have bound itself, by the language of the trust and agreement with the commissioner with principal regulatory oversight of each such trust account, to fund, upon termination of any such trust account, out of the remaining surplus of such trust any deficiency of any other such trust account.

iii. The minimum trusteed surplus requirements provided in paragraph 11 of this appendix are not applicable with respect to a multibeneficiary trust maintained by a certified reinsurer for the purpose of securing obligations incurred under this subsection, except that such trust shall maintain a minimum trusteed surplus of $10,000,000.

iv. With respect to obligations incurred by a certified reinsurer under paragraph 12 of this appendix, if the security is insufficient, the allowable reinsurance credit shall be reduced by an amount proportionate to the deficiency, and the domestic state of the ceding insurer has the discretion to impose further reductions in allowable credit upon finding that there is a material risk that the certified reinsurer's obligations will not be paid in full when due.

v. For purposes of paragraph 12, a certified reinsurer whose certification has been terminated for any reason shall be treated as a certified reinsurer required to secure 100 percent of its obligations.

(a) As used in paragraph 12.e.v., the term "terminated" refers to revocation, suspension, voluntary surrender and inactive status.

(b) If the domestic state of the ceding insurer continues to assign a higher rating as permitted by other provisions of paragraph 12, this requirement does not apply to a certified reinsurer in inactive status or to a reinsurer whose certification has been suspended.

f. If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the domestic state of the ceding insurer has the discretion to defer to that jurisdiction's certification, and has the discretion to defer to the rating assigned by that jurisdiction, and such assuming insurer shall be considered to be a certified reinsurer in the domestic state of the ceding insurer.

g. A certified reinsurer that ceases to assume new business in this state may request to maintain its certification in inactive status in order to continue to qualify for a reduction in security for its in-force business. An inactive certified reinsurer shall continue to comply with all applicable requirements of paragraph 12, and the domestic state of the ceding insurer shall assign a rating that takes into account, if relevant, the reasons why the reinsurer is not assuming new business.

h. The credit allowed under paragraph 12 shall be based upon the security held by or on behalf of the ceding insurer in accordance with a rating assigned to the certified reinsurer by the commissioner. The security shall be in a form consistent with the provisions of paragraph 12 and paragraph 18 of this appendix, and paragraphs 19-50 of this appendix, as applicable. The amount of security required in order for full credit to be allowed shall correspond with the following requirements:

i.

Ratings	**Security Required**
Secure – 1	0%
Secure – 2	10%
Secure – 3	20%
Secure – 4	50%
Secure – 5	75%
Vulnerable – 6	100%

ii. Affiliated reinsurance transactions shall receive the same opportunity for reduced security requirements as all other reinsurance transactions.

iii. The commissioner shall require the certified reinsurer to post one hundred percent (100%), for the benefit of the ceding insurer or its estate, security upon the entry of an order of rehabilitation, liquidation or conservation against the ceding insurer.

iv. In order to facilitate the prompt payment of claims, a certified reinsurer shall not be required to post security for catastrophe recoverables for a period of one year from the date of the first instance of a liability reserve entry by the ceding company as a result of a loss from a catastrophic occurrence as recognized by the commissioner. The one year deferral period is contingent upon the certified reinsurer continuing to pay claims in a timely manner. Reinsurance recoverables for only the following lines of business as reported on the NAIC annual financial statement related specifically to the catastrophic occurrence will be included in the deferral:

(a) Line 1: Fire

(b) Line 2: Allied Lines

(c) Line 3: Farmowners multiple peril

(d) Line 4: Homeowners multiple peril

(e) Line 5: Commercial multiple peril

(f) Line 9: Inland Marine

(g) Line 12: Earthquake

(h) Line 21: Auto physical damage

v. Credit for reinsurance under paragraph 12 of this appendix shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer. Any reinsurance contract entered into prior to the effective date of the certification of the assuming insurer that is subsequently amended after the effective date of the certification of the assuming insurer, or a new reinsurance contract, covering any risk for which collateral was provided previously, shall only be subject to this section with respect to losses incurred and reserves reported from and after the effective date of the amendment or new contract.

vi. Nothing in paragraph 12 of this appendix shall prohibit the parties to a reinsurance agreement from agreeing to provisions establishing security requirements that exceed the minimum security requirements established for certified reinsurers under this section.

i. Certification Procedure

i. The commissioner of the domestic state of the ceding insurer shall post notice on the insurance department’s website promptly upon receipt of any application for certification, including instructions on how members of the public may respond to the application. The commissioner may not take final action on the application until at least thirty (30) days after posting the notice required by this paragraph.

ii. The commissioner of the domestic state of the ceding insurer shall issue written notice to an assuming insurer that has made application and been approved as a certified reinsurer. Included in such notice shall be the rating assigned the certified reinsurer in accordance with paragraph 12.h. of this appendix. The commissioner shall publish a list of all certified reinsurers and their ratings.

iii. In order to be eligible for certification, the assuming insurer shall meet the following requirements:

(a) The assuming insurer must be domiciled and licensed to transact insurance or reinsurance in a Qualified Jurisdiction, as determined by the commissioner pursuant to paragraph 12.c. and 12.k. of this appendix.

(b) The assuming insurer must maintain capital and surplus, or its equivalent, of no less than $250,000,000 calculated in accordance with paragraph 12.i.iv.(h) of this appendix. This requirement may also be satisfied by an association including incorporated and individual unincorporated underwriters having minimum capital and surplus equivalents (net of liabilities) of at least $250,000,000 and a central fund containing a balance of at least $250,000,000.

(c) The assuming insurer must maintain financial strength ratings from two or more rating agencies deemed acceptable by the commissioner. These ratings shall be based on interactive communication between the rating agency and the assuming insurer and shall not be based solely on publicly available information. These financial strength ratings will be one factor used by the commissioner in determining the rating that is assigned to the assuming insurer. Acceptable rating agencies include the following:

(1) Standard & Poor's;

(2) Moody's Investors Service;

(3) Fitch Ratings;

(4) A.M. Best Company; or

(5) Any other Nationally Recognized Statistical Rating Organization.

(d) The certified reinsurer must comply with any other requirements reasonably imposed by the commissioner of the domestic state of the ceding insurer.

iv. Each certified reinsurer shall be rated on a legal entity basis, with due consideration being given to the group rating where appropriate, except that an association including incorporated and individual unincorporated underwriters that has been approved to do business as a single certified reinsurer may be evaluated on the basis of its group rating. Factors that may be considered as part of the evaluation process include, but are not limited to, the following:

(a) The certified reinsurer's financial strength rating from an acceptable rating agency. The maximum rating that a certified reinsurer may be assigned will correspond to its financial strength rating as outlined in the table below. The commissioner shall use the lowest financial strength rating received from an approved rating agency in establishing the maximum rating of a certified reinsurer. A failure to obtain or maintain at least two financial strength ratings from acceptable rating agencies will result in loss of eligibility for certification:

Ratings	Best	S&P	Moody's	Fitch
Secure – 1	A++	AAA	Aaa	AAA
Secure – 2	A+	AA+, AA, AA-	Aa1, Aa2, Aa3	AA+, AA, AA-
Secure – 3	A	A+, A	A1, A2	A+, A
Secure – 4	A-	A-	A3	A-
Secure – 5	B++, B+	BBB+, BBB, BBB-	Baa1, Baa2, Baa3	BBB+, BBB, BBB-
Vulnerable – 6	B, B-C++, C+, C, C-, D, E, F	BB+, BB, BB-, B+, B, B-, CCC, CC, C, D, R	Ba1, Ba2, Ba3, B1, B2, B3, Caa, Ca, C	BB+, BB, BB-, B+, B, B-, CCC+, CC, CCC-, DD

(b) The business practices of the certified reinsurer in dealing with its ceding insurers, including its record of compliance with reinsurance contractual terms and obligations;

(c) For certified reinsurers domiciled in the U.S., a review of the most recent applicable NAIC Annual Statement Blank, either Schedule F (for property/casualty reinsurers) or Schedule S (for life and health reinsurers);

(d) For certified reinsurers not domiciled in the U.S., a review annually of Form CR-F (for property/casualty reinsurers) or Form CR-S (for life and health reinsurers);

(e) The reputation of the certified reinsurer for prompt payment of claims under reinsurance agreements, based on an analysis of ceding insurers' Schedule F reporting of overdue reinsurance recoverables, including the proportion of obligations that are more than ninety (90) days past due or are in dispute, with specific attention given to obligations payable to companies that are in administrative supervision or receivership;

(f) Regulatory actions against the certified reinsurer;

(g) The report of the independent auditor on the financial statements of the insurance enterprise, on the basis described in paragraph (h) below;

(h) For certified reinsurers not domiciled in the U.S., audited financial statements (audited U.S. GAAP basis if available, audited IFRS basis statements are allowed but must include an audited footnote reconciling equity and net income to a U.S. GAAP basis, or, with the permission of the state insurance commissioner, audited IFRS statements with reconciliation to U.S. GAAP certified by an officer of the company), regulatory filings, and actuarial opinion (as filed with the non-U.S. jurisdiction supervisor). Upon the initial application for certification, the commissioner will consider audited financial statements for the last three (3) years filed with its non-U.S. jurisdiction supervisor;

(i) The liquidation priority of obligations to a ceding insurer in the certified reinsurer's domiciliary jurisdiction in the context of an insolvency proceeding;

(j) A certified reinsurer's participation in any solvent scheme of arrangement, or similar procedure, which involves U.S. ceding insurers. The commissioner shall receive prior notice from a certified reinsurer that proposes participation by the certified reinsurer in a solvent scheme of arrangement; and

(k) Any other information deemed relevant by the commissioner.

v. Based on the analysis conducted under paragraph 12.i.iv.(e) of a certified reinsurer's reputation for prompt payment of claims, the commissioner may make appropriate adjustments in the security the certified reinsurer is required to post to protect its liabilities to U.S. ceding insurers, provided that the commissioner shall, at a minimum, increase the security the certified reinsurer is required to post by one rating level under paragraph 12.h. if the commissioner finds that:

(a) more than fifteen percent (15%) of the certified reinsurer's ceding insurance clients have overdue reinsurance recoverables on paid losses of ninety (90) days or more which are not in dispute and which exceed $100,000 for each cedent; or

(b) the aggregate amount of reinsurance recoverables on paid losses which are not in dispute that are overdue by ninety (90) days or more exceeds $50,000,000.

vi. The assuming insurer must submit a properly executed Form CR-1 as evidence of its submission to the jurisdiction of this state, appointment of the commissioner as an agent for service of process in this state, and agreement to provide security for one hundred percent (100%) of the assuming insurer's liabilities attributable to reinsurance ceded by U.S. ceding insurers if it resists enforcement of a final U.S. judgment. The commissioner shall not certify any assuming insurer that is domiciled in a jurisdiction that the commissioner has determined does not adequately and promptly enforce final U.S. judgments or arbitration awards.

vii. The certified reinsurer must agree to meet applicable information filing requirements as determined by the commissioner, both with respect to an initial application for certification and on an ongoing basis. All information submitted by certified reinsurers which are not otherwise public information subject to disclosure shall be exempted from disclosure under [cite state law equivalent of Freedom of Information Act] and shall be withheld from public disclosure. The applicable information filing requirements are, as follows:

(a) Notification within ten (10) days of any regulatory actions taken against the certified reinsurer, any change in the provisions of its domiciliary license or any change in rating by an approved rating agency, including a statement describing such changes and the reasons therefore;

(b) Annually, Form CR-F or CR-S, as applicable;

(c) Annually, the report of the independent auditor on the financial statements of the insurance enterprise, on the basis described in paragraph 12.i.vii.(d) below;

(d) Annually, audited financial statements (audited U.S. GAAP basis if available, audited IFRS basis statements are allowed but must include an audited footnote reconciling equity and net income to a U.S. GAAP basis, or, with the permission of the state insurance commissioner, audited IFRS statements with reconciliation to U.S. GAAP certified by an officer of the company), regulatory filings, and actuarial opinion (as filed with the certified reinsurer's supervisor). Upon the initial certification, audited financial statements for the last three (3) years filed with the certified reinsurer's supervisor;

(e) At least annually, an updated list of all disputed and overdue reinsurance claims regarding reinsurance assumed from U.S. domestic ceding insurers;

(f) A certification from the certified reinsurer's domestic regulator that the certified reinsurer is in good standing and maintains capital in excess of the jurisdiction's highest regulatory action level; and

(g) Any other information that the commissioner may reasonably require.

j. Change in Rating or Revocation of Certification

i. In the case of a downgrade by a rating agency or other disqualifying circumstance, the commissioner shall upon written notice assign a new rating to the certified reinsurer in accordance with the requirements of paragraph 12.i.

ii. The commissioner shall have the authority to suspend, revoke, or otherwise modify a certified reinsurer's certification at any time if the certified reinsurer fails to meet its obligations or security requirements under this section, or if other financial or operating results of the certified reinsurer, or documented significant delays in payment by the certified reinsurer, lead the commissioner to reconsider the certified reinsurer's ability or willingness to meet its contractual obligations.

iii. If the rating of a certified reinsurer is upgraded by the commissioner, the certified reinsurer may meet the security requirements applicable to its new rating on a prospective basis, but the commissioner shall require the certified reinsurer to post security under the previously applicable security requirements as to all contracts in force on or before the effective date of the upgraded rating. If the rating of a certified reinsurer is downgraded by the commissioner, the commissioner shall require the certified reinsurer to meet the security requirements applicable to its new rating for all business it has assumed as a certified reinsurer.

iv. Upon revocation of the certification of a certified reinsurer by the commissioner, the assuming insurer shall be required to post security in accordance with paragraph 18 in order for the ceding insurer to continue to take credit for reinsurance ceded to the assuming insurer. If funds continue to be held in trust in accordance with paragraph 11, the commissioner may allow additional credit equal to the ceding insurer's *pro rata* share of such funds, discounted to reflect the risk of uncollectibility and anticipated expenses of trust administration. Notwithstanding the change of a certified reinsurer's rating or revocation of its certification, a domestic insurer that has ceded reinsurance to that certified reinsurer may not be denied credit for reinsurance for a period of three (3) months for all reinsurance ceded to that certified reinsurer, unless the reinsurance is found by the commissioner to be at high risk of uncollectibility.

k. Qualified Jurisdictions

i. If, upon conducting an evaluation with respect to the reinsurance supervisory system of any non-U.S. assuming insurer, the commissioner of the domestic state of the ceding insurer determines that the jurisdiction qualifies to be recognized as a qualified jurisdiction, the commissioner shall publish notice and evidence of such recognition in an appropriate manner. The commissioner may establish a procedure to withdraw recognition of those jurisdictions that are no longer qualified.

ii. In order to determine whether the domiciliary jurisdiction of a non-U.S. assuming insurer is eligible to be recognized as a qualified jurisdiction, the commissioner shall evaluate the reinsurance supervisory system of the non-U.S. jurisdiction, both initially and on an ongoing basis, and consider the rights, benefits and the extent of reciprocal recognition afforded by the non-U.S. jurisdiction to reinsurers licensed and domiciled in the U.S. The commissioner shall determine the appropriate approach for evaluating the qualifications of such jurisdictions, and create and publish a list of jurisdictions whose reinsurers may be approved by the commissioner as eligible for certification. A qualified jurisdiction must agree to share information and cooperate with the commissioner with respect to all certified reinsurers domiciled within that jurisdiction. Additional factors to be considered in determining whether to recognize a qualified jurisdiction, in the discretion of the commissioner, include but are not limited to the following:

(a) The framework under which the assuming insurer is regulated.

(b) The structure and authority of the domiciliary regulator with regard to solvency regulation requirements and financial surveillance.

(c) The substance of financial and operating standards for assuming insurers in the domiciliary jurisdiction.

(d) The form and substance of financial reports required to be filed or made publicly available by reinsurers in the domiciliary jurisdiction and the accounting principles used.

(e) The domiciliary regulator's willingness to cooperate with U.S. regulators in general and the commissioner in particular.

(f) The history of performance by assuming insurers in the domiciliary jurisdiction.

(g) Any documented evidence of substantial problems with the enforcement of final U.S. judgments in the domiciliary jurisdiction. A jurisdiction will not be considered to be a qualified jurisdiction if the commissioner has determined that it does not adequately and promptly enforce final U.S. judgments or arbitration awards.

(h) Any relevant international standards or guidance with respect to mutual recognition of reinsurance supervision adopted by the International Association of Insurance Supervisors or successor organization.

(i) Any other matters deemed relevant by the commissioner.

iii. A list of qualified jurisdictions shall be published through the NAIC Committee Process. The commissioner shall consider this list in determining qualified jurisdictions. If the commissioner approves a jurisdiction as qualified that does not appear on the list of qualified jurisdictions, the commissioner shall provide thoroughly documented justification with respect to the criteria provided under paragraphs 12.k.ii.(a) to (i).

iv. U.S. jurisdictions that meet the requirements for accreditation under the NAIC financial standards and accreditation program shall be recognized as qualified jurisdictions.

l. Recognition of Certification Issued by an NAIC Accredited Jurisdiction

i. If an applicant for certification has been certified as a reinsurer in an NAIC accredited jurisdiction, the commissioner has the discretion to defer to that jurisdiction's certification, and to defer to the rating assigned by that jurisdiction, if the assuming insurer submits a properly executed Form CR-1 and such additional information as the commissioner requires. The assuming insurer shall be considered to be a certified reinsurer in this State.

ii. Any change in the certified reinsurer's status or rating in the other jurisdiction shall apply automatically in this State as of the date it takes effect in the other jurisdiction. The certified reinsurer shall notify the commissioner of any change in its status or rating within 10 days after receiving notice of the change.

iii. The commissioner may withdraw recognition of the other jurisdiction's rating at any time and assign a new rating in accordance with paragraph 12.j. of this appendix.

iv. The commissioner may withdraw recognition of the other jurisdiction's certification at any time, with written notice to the certified reinsurer. Unless the commissioner suspends or revokes the certified reinsurer's certification in accordance with paragraph 12.j. of this appendix, the certified reinsurer's certification shall remain in good standing in the domestic state of the ceding insurer for a period of three (3) months, which shall be extended if additional time is necessary to consider the assuming insurer's application for certification in this State.

m. Mandatory Funding Clause. In addition to the clauses required under *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance* and *SSAP No. 62R—Property and Casualty Reinsurance*, reinsurance contracts entered into or renewed under paragraph 12 of this appendix shall include a proper funding clause, which requires the certified reinsurer to provide and maintain security in an amount sufficient to avoid the imposition of any financial statement penalty on the ceding insurer under this section for reinsurance ceded to the certified reinsurer.

n. The commissioner shall comply with all reporting and notification requirements that may be established by the NAIC with respect to certified reinsurers and qualified jurisdictions.

13. Credit shall be allowed when the reinsurance is ceded to an assuming insurer not meeting the requirements of paragraphs 8, 9, 10, 11 or 12 of this appendix, but only as to the insurance of risks located in jurisdictions where the reinsurance is required by applicable law or regulation of that jurisdiction.

14. If the assuming insurer is not licensed, accredited or certified to transact insurance or reinsurance in the domiciliary state of the ceding insurer, the credit allowed by paragraphs 10 and 11 of this appendix shall not be allowed unless the assuming insurer agrees in the reinsurance agreements:

a. i. That in the event of the failure of the assuming insurer to perform its obligations under the terms of the reinsurance agreement, the assuming insurer, at the request of the ceding insurer, shall submit to the jurisdiction of any court of competent jurisdiction in any state of the United States, will comply with all requirements necessary to give the court jurisdiction, and will abide by the final decision of the court or of any appellate court in the event of an appeal.

ii. To designate the commissioner or a designated attorney as its true and lawful attorney upon whom may be served any lawful process in any action, suit or proceeding instituted by or on behalf of the ceding insurer.

b. This paragraph 14 is not intended to conflict with or override the obligation of the parties to a reinsurance agreement to arbitrate their disputes, if this obligation is created in the agreement.

15. If the assuming insurer does not meet the requirements of paragraphs 8, 9 or 10, the credit allowed by paragraph 11 or 12 of this appendix shall not be allowed unless the assuming insurer agrees in the trust agreements to the following conditions:

a. Notwithstanding any other provisions in the trust instrument, if the trust fund is inadequate because it contains an amount less than the amount required by paragraph 11 c. of this appendix, or if the grantor of the trust has been declared insolvent or placed into receivership, rehabilitation, liquidation or similar proceedings under the laws of its state or country of domicile, the trustee shall comply with an order of the commissioner with regulatory oversight over the trust or with an order of a court of competent jurisdiction directing the trustee to transfer to the commissioner with regulatory oversight all of the assets of the trust fund.

b. The assets shall be distributed by and claims shall be filed with and valued by the commissioner with regulatory oversight in accordance with the laws of the state in which the trust is domiciled that are applicable to the liquidation of domestic insurance companies.

c. If the commissioner with regulatory oversight determines that the assets of the trust fund or any part thereof are not necessary to satisfy the claims of the U.S. ceding insurers of the grantor of the trust, the assets or part thereof shall be returned by the commissioner with regulatory oversight to the trustee for distribution in accordance with the trust agreement.

d. The grantor shall waive any right otherwise available to it under U.S. law that is inconsistent with this provision.

16. If an accredited or certified reinsurer ceases to meet the requirements for accreditation or certification, the domestic state of the ceding insurer may suspend or revoke the reinsurer's accreditation or certification.

a. The domestic state of the ceding insurer must give the reinsurer notice an opportunity for hearing. The suspension or revocation may not take effect until after the state's order on hearing, unless:

i. The reinsurer waives its right to hearing;

ii. The state's order is based on regulatory action by the reinsurer's domiciliary jurisdiction or the voluntary surrender or termination of the reinsurer's eligibility to transact insurance or reinsurance business in its domiciliary jurisdiction or in the primary certifying state of the reinsurer under paragraph 12.f. of this appendix; or

iii. The domestic state of the ceding insurer finds that an emergency requires immediate action and a court of competent jurisdiction has not stayed the state's action.

b. While a reinsurer's accreditation or certification is suspended, no reinsurance contract issued or renewed after the effective date of the suspension qualifies for credit except to the extent that the reinsurer's obligations under the contract are secured in accordance with paragraph 18. If a reinsurer's accreditation or certification is revoked, no credit for reinsurance may be granted after the effective date of the revocation except to the extent that the reinsurer's obligations under the contract are secured in accordance with paragraph 12.e. or paragraph 18.

Valuation of and Requirements for Trust Assets

17. Assets deposited in the trust shall be valued according to their current fair market value and shall consist only of cash in U.S. dollars, certificates of deposit issued by a U.S. financial institution as defined in paragraph 52, clean, irrevocable, unconditional and "evergreen" letters of credit issued or confirmed by a qualified U.S. financial institution, as defined in paragraph 52, and investments of the type specified in this paragraph, but investments in or issued by an entity controlling, controlled by or under common control with either the grantor or beneficiary of the trust shall not exceed five percent (5%) of total investments. No more than twenty percent (20%) of the total of the investments in the trust may be foreign investments authorized under paragraphs 17.a.v., c., f.ii. or g. of this paragraph, and no more than ten percent (10%) of the total of the investments in the trust may be securities denominated in foreign currencies. For purposes of applying the preceding sentence, a depository receipt denominated in U.S. dollars and representing rights conferred by a foreign security shall be classified as a foreign investment denominated in a foreign currency. The assets of a trust shall be invested only as follows:

a. Government obligations that are not in default as to principal or interest, that are valid and legally authorized and that are issued, assumed or guaranteed by:

i. The United States or by any agency or instrumentality of the United States;

ii. A state of the United States;

iii. A territory, possession or other governmental unit of the United States;

iv. An agency or instrumentality of a governmental unit referred to in paragraphs 17.a.i. and 17.a.ii. if the obligations shall be by law (statutory of otherwise) payable, as to both principal and interest, from taxes levied or by law required to be levied or from adequate special revenues pledged or otherwise appropriated or by law required to be provided for making these payments, but shall not be obligations eligible for investment under this paragraph if payable solely out of special assessments on properties benefited by local improvements; or

v. The government of any other country that is a member of the Organization for Economic Cooperation and Development and whose government obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC;

b. Obligations that are issued in the United States, or that are dollar denominated and issued in a non-U.S. market, by a solvent U.S. institution (other than an insurance company) or that are assumed or guaranteed by a solvent U.S. institution (other than an insurance company) and that are not in default as to principal or interest if the obligations:

i. Are rated A or higher (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC, or if not so rated, are similar in structure and other material respects to other obligations of the same institution that are so rated;

ii. Are insured by at least one authorized insurer (other than the investing insurer or a parent, subsidiary or affiliate of the investing insurer) licensed to insure obligations in this state and, after considering the insurance, are rated AAA (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC; or

iii. Have been designated as Class One or Class Two by the Securities Valuation Office of the NAIC;

c. Obligations issued, assumed or guaranteed by a solvent non U.S. institution chartered in a country that is a member of the Organization for Economic Cooperation and Development or obligations of U.S. corporations issued in a non-U.S. currency, provided that in either case the obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC;

d. An investment made pursuant to the provisions of paragraph 17.a., b. or c. shall be subject to the following additional limitations:

i. An investment in or loan upon the obligations of an institution other than an institution that issues mortgage-related securities shall not exceed five percent (5%) of the assets of the trust;

ii. An investment in any one mortgage-related security shall not exceed five percent (5%) of the assets of the trust;

iii. The aggregate total investment in mortgage-related securities shall not exceed twenty-five percent (25%) of the assets of the trust; and

iv. Preferred or guaranteed shares issued or guaranteed by a solvent U.S. institution are permissible investments if all of the institution's obligations are eligible as investments under paragraphs 17.b.i. and b.iii. of this paragraph, but shall not exceed two percent (2%) of the assets of the trust.

e. As used in this appendix:

i. "Mortgage-related security" means an obligation that is rated AA or higher (or the equivalent) by a securities rating agency recognized by the Securities Valuation Office of the NAIC and that either:

(a) Represents ownership of one or more promissory notes or certificates of interest or participation in the notes (including any rights designed to assure servicing of, or the receipt or timeliness of receipt by the holders of the notes, certificates, or participation of amounts payable under, the notes, certificates or participation), that:

(1) Are directly secured by a first lien on a single parcel of real estate, including stock allocated to a dwelling unit in a residential cooperative housing corporation, upon which is located a dwelling or mixed residential and commercial structure, or on a residential manufactured home as defined in 42 U.S.C.A. Section 5402(6), whether the manufactured home is considered real or personal property under the laws of the state in which it is located; and

(2) Were originated by a savings and loan association, savings bank, commercial bank, credit union, insurance company, or similar institution that is supervised and examined by a federal or state housing authority, or by a mortgagee approved by the Secretary of Housing and Urban Development pursuant to 12 U.S.C.A. Sections 1709 and 1715-b, or, where the notes involve a lien on the manufactured home, by an institution or by a financial institution approved for insurance by the Secretary of Housing and Urban Development pursuant to 12 U.S.C.A. Section 1703; or

(b) Is secured by one or more promissory notes or certificates of deposit or participations in the notes (with or without recourse to the insurer of the notes) and, by its terms, provides for payments of principal in relation to payments, or reasonable projections of payments, or notes meeting the requirements of paragraphs 17.e.i.(a)(1) and 17.e.i.(a)(2);

ii. "Promissory note," when used in connection with a manufactured home, shall also include a loan, advance or credit sale as evidenced by a retail installment sales contract or other instrument.

f. Equity interests

i. Investments in common shares or partnership interests of a solvent U.S. institution are permissible if:

(a) Its obligations and preferred shares, if any, are eligible as investments under this paragraph; and

(b) The equity interests of the institution (except an insurance company) are registered on a national securities exchange as provided in the Securities Exchange Act of 1934, 15 U.S.C. §§ 78a to 78kk or otherwise registered pursuant to that Act, and if otherwise registered, price quotations for them are furnished through a nationwide automated quotations system approved by the Financial Industry Regulatory Authority, or successor organization. A trust shall not invest in equity interests under this paragraph an amount exceeding one percent (1%) of the assets of the trust even though the equity interests are not so registered and are not issued by an insurance company.

ii. Investments in common shares of a solvent institution organized under the laws of a country that is a member of the Organization for Economic Cooperation and Development, if:

(a) All its obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC; and

(b) The equity interests of the institution are registered on a securities exchange regulated by the government of a country that is a member of the Organization for Economic Cooperation and Development.

iii. An investment in or loan upon any one institution's outstanding equity interests shall not exceed one percent (1%) of the assets of the trust. The cost of an investment in equity interests made pursuant to this paragraph, when added to the aggregate cost of other investments in equity interests then held pursuant to this paragraph, shall not exceed ten percent (10%) of the assets in the trust;

g. Obligations issued, assumed or guaranteed by a multinational development bank, provided the obligations are rated A or higher, or the equivalent, by a rating agency recognized by the Securities Valuation Office of the NAIC.

h. Investment companies:

i. Securities of an investment company registered pursuant to the Investment Company Act of 1940, 15 U.S.C. § 802, are allowable investments if the investment company:

(a) Invests at least ninety percent (90%) of its assets in the types of securities that qualify as an investment under paragraphs 17.a., 17.b., or 17.c., or invests in securities that are determined to be substantively similar to the types of securities set forth in paragraphs 17.a., 17.b., or 17.c.; or

(b) Invests at least ninety percent (90%) of its assets in the types of equity interests that qualify as an investment under paragraph 17.f.i.;

ii. Investments made by a trust in investment companies under this paragraph shall not exceed the following limitations:

(a) An investment in an investment company qualifying under paragraph 17.h.i. (a) shall not exceed ten percent (10%) of the assets in the trust and the aggregate amount of investment in qualifying investment companies shall not exceed twenty-five percent (25%) of the assets in the trust; and

(b) Investments in an investment company qualifying under paragraph 17.h.i. (b) of this paragraph shall not exceed five percent (5%) of the assets in the trust and the aggregate amount of investment in qualifying investment companies shall be included when calculating the permissible aggregate value of equity interests pursuant to paragraph 17.f.i.

i. Letters of Credit

i. In order for a letter of credit to qualify as an asset of the trust, the trustee shall have the right and the obligation pursuant to the deed of trust or some other binding agreement (as duly approved by the commissioner), to immediately draw down the full amount of the letter of credit and hold the proceeds in trust for the beneficiaries of the trust if the letter of credit will otherwise expire without being renewed or replaced.

ii. The trust agreement shall provide that the trustee shall be liable for its negligence, willful misconduct or lack of good faith. The failure of the trustee to draw against the letter of credit in circumstances where such draw would be required shall be deemed to be negligence and/or willful misconduct.

Asset or Reduction from Liability for Reinsurance Ceded by a Domestic Insurer to an Assuming Insurer not Meeting the Requirements detailed above under "Credit Allowed a Domestic Ceding Insurer" (paragraphs 7-17)

18. An asset or a reduction from liability for the reinsurance ceded by a domestic insurer to an assuming insurer not meeting the requirements under "Credit Allowed a Domestic Ceding Insurer" (paragraphs 7-17) shall be allowed in an amount not exceeding the liabilities carried by the ceding insurer. The reduction shall be in the amount of funds held by or on behalf of the ceding insurer, including funds held in trust for the ceding insurer, under a reinsurance contract with the assuming insurer as security for the payment of obligations thereunder, if the security is held in the United States subject to withdrawal solely by, and under the exclusive control of, the ceding insurer; or, in the case of a trust, held in a qualified U.S. financial institution, as defined under "Qualified U.S. Financial Institutions" at paragraph 53. This security may be in the form of:

a. Cash;

b. Securities listed by the Securities Valuation Office of the National Association of Insurance Commissioners, including those deemed exempt from filing as defined by the *Purposes and Procedures Manual of the NAIC Securities Valuation Office*, and qualifying as admitted assets;

Drafting Note: The *Purposes and Procedures Manual of the NAIC Securities Valuation Office* has been renamed the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, however, the Model law refers to the previous name.

c. i. Clean, irrevocable, unconditional and evergreen letters of credit, issued or confirmed by a qualified U.S. financial institution, as defined in paragraph 52, effective no later than December 31 of the year for which the filing is being made, and in the possession of, or in trust for, the ceding insurer on or before the filing date of its annual statement;

ii. Letters of credit meeting applicable standards of issuer acceptability as of the dates of their issuance (or confirmation) shall, notwithstanding the issuing (or confirming) institution's subsequent failure to meet applicable standards of issuer acceptability, continue to be acceptable as security until their expiration, extension, renewal, modification or amendment, whichever first occurs.

d. An admitted asset or a reduction from liability for reinsurance ceded to an unauthorized assuming insurer pursuant to this appendix shall be allowed only when the requirements of paragraph 14 and the applicable portions under the sections below titled "Trust Agreements Qualified under Paragraph 18", "Letters of Credit Qualified under Paragraph 18", and "Other Security" at paragraph 50.

Trust Agreements Qualified under Paragraph 18

19. The trust agreement shall be entered into between the beneficiary, the grantor and a trustee, which shall be a qualified U.S. financial institution as defined in paragraph 53.

20. The trust agreement shall create a trust account into which assets shall be deposited.

21. All assets in the trust account shall be held by the trustee at the trustee's office in the United States.

22. The trust agreement shall provide that:

a. The beneficiary shall have the right to withdraw assets from the trust account at any time, without notice to the grantor, subject only to written notice from the beneficiary to the trustee;

b. No other statement or document is required to be presented to withdraw assets, except that the beneficiary may be required to acknowledge receipt of withdrawn assets;

c. It is not subject to any conditions or qualifications outside of the trust agreement; and

d. It shall not contain references to any other agreements or documents except as provided for in paragraph 29.

23. The trust agreement shall be established for the sole benefit of the beneficiary.

24. The trust agreement shall require the trustee to:

a. Receive assets and hold all assets in a safe place;

b. Determine that all assets are in such form that the beneficiary, or the trustee upon direction by the beneficiary, may whenever necessary negotiate any such assets, without consent or signature from the grantor or any other person or entity;

c. Furnish to the grantor and the beneficiary a statement of all assets in the trust account upon its inception and at intervals no less frequent than the end of each calendar quarter;

d. Notify the grantor and the beneficiary within ten (10) days, of any deposits to or withdrawals from the trust account;

e. Upon written demand of the beneficiary, immediately take any and all steps necessary to transfer absolutely and unequivocally all right, title and interest in the assets held in the trust account to the beneficiary and deliver physical custody of the assets to the beneficiary; and

f. Allow no substitutions or withdrawals of assets from the trust account, except on written instructions from the beneficiary, except that the trustee may, without the consent of but with notice to the beneficiary, upon call or maturity of any trust asset, withdraw such asset upon condition that the proceeds are paid into the trust account.

25. The trust agreement shall provide that at least thirty (30) days, but not more than forty-five (45) days, prior to termination of the trust account, written notification of termination shall be delivered by the trustee to the beneficiary.

26. The trust agreement shall be made subject to and governed by the laws of the state in which the trust is domiciled.

27. The trust agreement shall prohibit invasion of the trust corpus for the purpose of paying compensation to, or reimbursing the expenses of, the trustee. In order for a letter of credit to qualify as an asset of the trust, the trustee shall have the right and the obligation pursuant to the deed of trust or some other binding agreement, as duly approved by the commissioner, to immediately draw down the full amount of the letter of credit and hold the proceeds in trust for the beneficiaries of the trust if the letter of credit will otherwise expire without being renewed or replaced.

28. The trust agreement shall provide that the trustee shall be liable for its negligence, willful misconduct or lack of good faith. The failure of the trustee to draw against the letter of credit in circumstances where such draw would be required shall be deemed to be negligence and/or willful misconduct.

29. Notwithstanding other provisions of this appendix, when a trust agreement is established in conjunction with a reinsurance agreement covering risks other than life, annuities and accident and health, where it is customary practice to provide a trust agreement for a specific purpose, the trust agreement may provide that the ceding insurer shall undertake to use and apply amounts drawn upon the trust account, without diminution because of the insolvency of the ceding insurer or the assuming insurer, only for the following purposes:

a. To pay or reimburse the ceding insurer for the assuming insurer's share under the specific reinsurance agreement regarding any losses and allocated loss expenses paid by the ceding insurer, but not recovered from the assuming insurer, or for unearned premiums due to the ceding insurer if not otherwise paid by the assuming insurer;

b. To make payment to the assuming insurer of any amounts held in the trust account that exceed 102 percent of the actual amount required to fund the assuming insurer's obligations under the specific reinsurance agreement; or

c. Where the ceding insurer has received notification of termination of the trust account and where the assuming insurer's entire obligations under the specific reinsurance agreement remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the obligations and deposit those amounts in a separate account, in the name of the ceding insurer in any qualified U.S. financial institution as defined in paragraph 53 apart from its general assets, in trust for such uses and purposes specified in paragraphs 29.a.

and b. above as may remain executory after such withdrawal and for any period after the termination date.

30. Notwithstanding other provisions of this appendix, when a trust agreement is established to meet the requirements of paragraph 18 in conjunction with a reinsurance agreement covering life, annuities or accident and health risks, where it is customary to provide a trust agreement for a specific purpose, the trust agreement may provide that the ceding insurer shall undertake to use and apply amounts drawn upon the trust account, without diminution because of the insolvency of the ceding insurer or the assuming insurer, only for the following purposes:

a. To pay or reimburse the ceding insurer for:

i. The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurer, to the owners of policies reinsured under the reinsurance agreement on account of cancellations of the policies; and

ii. The assuming insurer's share under the specific reinsurance agreement of surrenders and benefits or losses paid by the ceding insurer, but not yet recovered from the assuming insurer, under the terms and provisions of the policies reinsured under the reinsurance agreement;

b. To pay to the assuming insurer amounts held in the trust account in excess of the amount necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer; or

c. Where the ceding insurer has received notification of termination of the trust and where the assuming insurer's entire obligations under the specific reinsurance agreement remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the assuming insurer's share of liabilities, to the extent that the liabilities have not yet been funded by the assuming insurer, and deposit those amounts in a separate account, in the name of the ceding insurer in any qualified U. S. financial institution apart from its general assets, in trust for the uses and purposes specified in paragraphs 30.a. and b. as may remain executory after withdrawal and for any period after the termination date.

31. Either the reinsurance agreement or the trust agreement must stipulate that assets deposited in the trust account shall be valued according to their current fair market value and shall consist only of cash in United States dollars, certificates of deposit issued by a United States bank and payable in United States dollars, and investments permitted by the Insurance Code or any combination of the above, provided investments in or issued by an entity controlling, controlled by or under common control with either the grantor or the beneficiary of the trust shall not exceed five percent (5%) of total investments. The agreement may further specify the types of investments to be deposited. If the reinsurance agreement covers life, annuities or accident and health risks, then the provisions required by this paragraph must be included in the reinsurance agreement.

32. Notwithstanding any other provisions in the trust instrument, if the grantor of the trust has been declared insolvent or placed into receivership, rehabilitation, liquidation or similar proceedings under the laws of its state or country of domicile, the trustee shall comply with an order of the commissioner with regulatory oversight over the trust or court of competent jurisdiction directing the trustee to transfer to the commissioner with regulatory oversight or other designated receiver all of the assets of the trust fund. The assets shall be applied in accordance with the priority statutes and laws of the state in which the trust is domiciled applicable to the assets of insurance companies in liquidation. If the commissioner with

regulatory oversight determines that the assets of the trust fund or any part thereof are not necessary to satisfy claims of the U.S. beneficiaries of the trust, the assets or any part of them shall be returned to the trustee for distribution in accordance with the trust agreement.

33. The trust agreement may provide that the trustee may resign upon delivery of a written notice of resignation, effective not less than ninety (90) days after the beneficiary and grantor receive the notice and that the trustee may be removed by the grantor by delivery to the trustee and the beneficiary of a written notice of removal, effective not less than ninety (90) days after the trustee and the beneficiary receive the notice, provided that no such resignation or removal shall be effective until a successor trustee has been duly appointed and approved by the beneficiary and the grantor and all assets in the trust have been duly transferred to the new trustee.

34. The grantor may have the full and unqualified right to vote any shares of stock in the trust account and to receive from time to time payments of any dividends or interest upon any shares of stock or obligations included in the trust account. Any interest or dividends shall be either forwarded promptly upon receipt to the grantor or deposited in a separate account established in the grantor’s name.

35. The trustee may be given authority to invest, and accept substitutions of, any funds in the account, provided that no investment or substitution shall be made without prior approval of the beneficiary, unless the trust agreement specifies categories of investments acceptable to the beneficiary and authorizes the trustee to invest funds and to accept substitutions that the trustee determines are at least equal in market value to the assets withdrawn and that are consistent with the restrictions in paragraph 38.b.

36. The trust agreement may provide that the beneficiary may at any time designate a party to which all or part of the trust assets are to be transferred. Transfer may be conditioned upon the trustee receiving, prior to or simultaneously, other specified assets.

37. The trust agreement may provide that, upon termination of the trust account, all assets not previously withdrawn by the beneficiary shall, with written approval by the beneficiary, be delivered over to the grantor.

38. A reinsurance agreement may contain provisions that:

a. Require the assuming insurer to enter into a trust agreement and to establish a trust account for the benefit of the ceding insurer, and specifying what the agreement is to cover;

b. Require the assuming insurer, prior to depositing assets with the trustee, to execute assignments or endorsements in blank, or to transfer legal title to the trustee of all shares, obligations or any other assets requiring assignments, in order that the ceding insurer, or the trustee upon the direction of the ceding insurer, may whenever necessary negotiate these assets without consent or signature from the assuming insurer or any other entity;

c. Require that all settlements of account between the ceding insurer and the assuming insurer be made in cash or its equivalent; and

d. Stipulate that the assuming insurer and the ceding insurer agree that the assets in the trust account, established pursuant to the provisions of the reinsurance agreement, may be withdrawn by the ceding insurer at any time, notwithstanding any other provisions in the reinsurance agreement, and shall be utilized and applied by the ceding insurer or its successors in interest by operation of law, including without limitation any liquidator, rehabilitator, receiver or conservator of such company, without diminution because of insolvency on the part of the ceding insurer or the assuming insurer, only for the following purposes:

i. To pay or reimburse the ceding insurer for:

(a) The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurer, to the owners of policies reinsured under the reinsurance agreement because of cancellations of such policies;

(b) The assuming insurer's share of surrenders and benefits or losses paid by the ceding insurer pursuant to the provisions of the policies reinsured under the reinsurance agreement; and

(c) Any other amounts necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer;

ii. To make payment to the assuming insurer of amounts held in the trust account in excess of the amount necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer.

39. The reinsurance agreement also may contain provisions that:

a. Give the assuming insurer the right to seek approval from the ceding insurer, which shall not be unreasonably or arbitrarily withheld, to withdraw from the trust account all or any part of the trust assets and transfer those assets to the assuming insurer, provided:

i. The assuming insurer shall, at the time of withdrawal, replace the withdrawn assets with other qualified assets having a current fair market value equal to the market value of the assets withdrawn so as to maintain at all times the deposit in the required amount; or

ii. After withdrawal and transfer, the current fair market value of the trust account is no less than 102 percent of the required amount.

b. Provide for the return of any amount withdrawn in excess of the actual amounts required for paragraph 38.d., and for interest payments at a rate not in excess of the prime rate of interest on such amounts;

c. Allow the award by any arbitration panel or court of competent jurisdiction of:

i. Interest at a rate different from that provided in paragraph 39.b.;

ii. Court or arbitration costs;

iii. Attorney's fees; and

iv. Any other reasonable expenses.

40. Financial Reporting - A trust agreement may be used to reduce any liability for reinsurance ceded to an unauthorized assuming insurer in statutory financial statements when established on or before the date of filing of the statutory financial statement of the ceding insurer. Further, the reduction for the existence of an acceptable trust account may be up to the current fair market value of acceptable assets

available to be withdrawn from the trust account at that time, but such reduction shall be no greater than the specific obligations under the reinsurance agreement that the trust account was established to secure.

41. The failure of any trust agreement to specifically identify the beneficiary as defined in paragraph 4 shall not be construed to affect any actions or rights that the commissioner may take or possess pursuant to the provisions of the laws of the domiciliary state.

Letters of Credit Qualified under Paragraph 18

42. The letter of credit must be clean, irrevocable, unconditional and issued or confirmed by a qualified U.S. financial institution as defined in paragraph 52. The letter of credit shall contain an issue date and expiration date and shall stipulate that the beneficiary need only draw a sight draft under the letter of credit and present it to obtain funds and that no other document need be presented. The letter of credit also shall indicate that it is not subject to any condition or qualifications outside of the letter of credit. In addition, the letter of credit itself shall not contain reference to any other agreements, documents or entities, except as provided in paragraph 49.a. If a court of law appoints a successor in interest to the named beneficiary, then the named beneficiary includes and is limited to the court appointed domiciliary receiver (including conservator, rehabilitator or liquidator).

43. The heading of the letter of credit may include a boxed section containing the name of the applicant and other appropriate notations to provide a reference for the letter of credit. The boxed section shall be clearly marked to indicate that such information is for internal identification purposes only.

44. The letter of credit shall contain a statement to the effect that the obligation of the qualified U.S. financial institution under the letter of credit is in no way contingent upon reimbursement with respect thereto.

45. The term of the letter of credit shall be for at least one year and shall contain an “evergreen clause” that prevents the expiration of the letter of credit without due notice from the issuer. The “evergreen clause” shall provide for a period of no less than thirty (30) days notice prior to expiration date or nonrenewal.

46. The letter of credit shall state whether it is subject to and governed by the laws of the ceding insurers state or the Uniform Customs and Practice for Documentary Credits of the International Chamber of Commerce (Publication 600) or International Standby Practices of the International Chamber of Commerce Publication 590 (ISP98), or any successor publication, and all drafts drawn thereunder shall be presentable at an office in the United States of a qualified U.S. financial institution.

47. If the letter of credit is made subject to the Uniform Customs and Practice for Documentary Credits of the International Chamber of Commerce Publication 600 (UCP 600) or International Standby Practices of the International Chamber of Commerce Publication 590 (ISP98), or any successor publication, then the letter of credit shall specifically address and provide for an extension of time to draw against the letter of credit in the event that one or more of the occurrences specified in Article 36 of Publication 600 or any other successor publication, occur.

48. If the letter of credit is issued by a financial institution authorized to issue letters of credit, other than a qualified U.S. financial institution as described in paragraph 42, then the following additional requirements shall be met:

a. The issuing financial institution shall formally designate the confirming qualified U.S. financial institution as its agent for the receipt and payment of the drafts; and

b. The “evergreen clause” shall provide for thirty (30) days notice prior to expiration date for nonrenewal.

49. Reinsurance agreement provisions:

a. The reinsurance agreement in conjunction with which the letter of credit is obtained may contain provisions that:

i. Require the assuming insurer to provide letters of credit to the ceding insurer and specify what they are to cover;

ii. Stipulate that the assuming insurer and ceding insurer agree that the letter of credit provided by the assuming insurer pursuant to the provisions of the reinsurance agreement may be drawn upon at any time, notwithstanding any other provisions in the agreement, and shall be utilized by the ceding insurer or its successors in interest only for one or more of the following reasons:

(a) To pay or reimburse the ceding insurer for:

(1) The assuming insurer's share under the specific reinsurance agreement of premiums returned, but not yet recovered from the assuming insurers, to the owners of policies reinsured under the reinsurance agreement on account of cancellations of such policies;

(2) The assuming insurer's share, under the specific reinsurance agreement, of surrenders and benefits or losses paid by the ceding insurer, but not yet recovered from the assuming insurers, under the terms and provisions of the policies reinsured under the reinsurance agreement; and

(3) Any other amounts necessary to secure the credit or reduction from liability for reinsurance taken by the ceding insurer;

(b) Where the letter of credit will expire without renewal or be reduced or replaced by a letter of credit for a reduced amount and where the assuming insurer's entire obligations under the reinsurance agreement remain unliquidated and undischarged ten (10) days prior to the termination date, to withdraw amounts equal to the assuming insurer's share of the liabilities, to the extent that the liabilities have not yet been funded by the assuming insurer and exceed the amount of any reduced or replacement letter of credit, and deposit those amounts in a separate account in the name of the ceding insurer in a qualified U.S. financial institution apart from its general assets, in trust for such uses and purposes specified in paragraph 49.a.ii.(a) as may remain after withdrawal and for any period after the termination date.

iii. All of the provisions of paragraph 49.a. shall be applied without diminution because of insolvency on the part of the ceding insurer or assuming insurer.

b. Nothing contained in paragraph 49.a. shall preclude the ceding insurer and assuming insurer from providing for:

i. An interest payment, at a rate not in excess of the prime rate of interest, on the amounts held pursuant to paragraph 49.a.ii.; or

ii. The return of any amounts drawn down on the letters of credit in excess of the actual amounts required for the above or any amounts that are subsequently determined not to be due.

Other Security

50. A ceding insurer may take credit for unencumbered funds withheld by the ceding insurer in the United States subject to withdrawal solely by the ceding insurer and under its exclusive control.

51. Credit will not be granted, nor an asset or reduction from liability allowed, to a ceding insurer for reinsurance effected with assuming insurers meeting the requirements of this appendix or otherwise in compliance with this appendix unless the reinsurance agreement:

a. Includes a proper insolvency clause, which stipulates that reinsurance is payable directly to the liquidator or successor without diminution regardless of the status of the ceding company;

b. Includes a provision pursuant to Section [cite state law equivalent to Section 2 of the Credit for Reinsurance Model Law] whereby the assuming insurer, if an unauthorized assuming insurer, has submitted to the jurisdiction of an alternative dispute resolution panel or court of competent jurisdiction within the United States, has agreed to comply with all requirements necessary to give the court or panel jurisdiction, has designated an agent upon whom service of process may be effected, and has agreed to abide by the final decision of the court or panel; and

c. Includes a proper reinsurance intermediary clause, if applicable, which stipulates that the credit risk for the intermediary is carried by the assuming insurer.

Qualified U.S. Financial Institutions

52. For purposes of paragraphs 17, 18.c., 42 and 48, a “qualified U.S. financial institution” means an institution that:

a. Is organized or (in the case of a U.S. office of a foreign banking organization) licensed, under the laws of the United States or any state thereof;

b. Is regulated, supervised and examined by U.S. federal or state authorities having regulatory authority over banks and trust companies; and

c. Has been determined by either the commissioner or the Securities Valuation Office of the National Association of Insurance Commissioners to meet such standards of financial condition and standing as are considered necessary and appropriate to regulate the quality of financial institutions whose letters of credit will be acceptable to the commissioner.

53. A “qualified U.S. financial institution” means, for purposes of those provisions of this appendix specifying those institutions that are eligible to act as a fiduciary of a trust, an institution that:

a. Is organized, or in the case of a U.S. branch or agency office of a foreign banking organization, licensed, under the laws of the United States or any state thereof and has been granted authority to operate with fiduciary powers; and

b. Is regulated, supervised and examined by federal or state authorities having regulatory authority over banks and trust companies.

Appendix A-791

Life And Health Reinsurance Agreements

Accounting Requirements

1. This Appendix shall not apply to assumption reinsurance, yearly renewable term reinsurance or certain nonproportional reinsurance such as stop loss or catastrophe reinsurance.

Q *– Aside from assumption reinsurance, what other types of reinsurance are exempt from the accounting requirements?*

A *– Yearly renewable term (YRT) and certain nonproportional reinsurance arrangements, such as stop loss and catastrophe reinsurance are exempt because these do not normally provide significant surplus relief and therefore are outside the scope of this Appendix. If a catastrophe arrangement takes a reserve credit for actual losses beyond the attachment point or the unearned premium reserve (UPR) of the current year's premium, there will most likely be no regulatory concern.*

Similarly, if a YRT treaty provides incidental reserve credits for the ceding insurer's net amount at risk for the year with no other allowance to enhance surplus, there will most likely be no regulatory concern. For purposes of this exemption, a treaty labeled as YRT does not meet the intended definition of YRT if the surplus relief in the first year is greater than that provided by a YRT treaty with zero first year reinsurance premium and no additional allowance from the reinsurer.

Additional pertinent information applicable to all YRT treaties and to non-proportional reinsurance arrangements is contained in paragraphs 19 and 20 of SSAP No. 61R.

2. No insurer shall, for reinsurance ceded, reduce any liability or establish any asset in any statutory financial statement if, by the terms of the reinsurance agreement, in substance or effect, any of the following conditions exist:

a. Renewal expense allowances provided or to be provided to the ceding insurer by the reinsurer in any accounting period are not sufficient to cover anticipated allocable renewal expenses of the ceding insurer on the portion of the business reinsured, unless a liability is established for the present value of the shortfall (using assumptions equal to the applicable statutory reserve basis on the business reinsured). Those expenses include commissions, premium taxes and direct expenses including, but not limited to, billing, valuation, claims and maintenance expected by the company at the time the business is reinsured;

Q *– What should be included in the renewal expense allowances with regard to direct expenses? An allocation of salaries? Computer usage? Or just marginal expenses directly related to the business reinsured such as claim payment expenses, postage, etc.?*

A *– The primary purpose of the accounting requirements is to prohibit credit for reinsurance under financial arrangements where the ceding company enters into an agreement for the principal purpose of producing significant surplus aid for the ceding insurer on a temporary basis, while not transferring all of the significant risks inherent in the business being reinsured.*

Paragraph 2.a. implements that purpose by prohibiting credit for reinsurance in certain instances where the ceding insurer is afforded a large ceding commission at the inception of the agreement resulting in a significant increase in surplus only to have such surplus increase be drained away in subsequent periods because renewal expense allowances provided under the agreement are insufficient to cover the direct *allocable costs estimated at the time the business is reinsured, which are anticipated to be incurred by the ceding insurer in maintaining the business reinsured.*

An exception to complete disallowance of credit for reinsurance is allowed in situations where the ceding insurer reflects a liability for the present value of the shortage between renewal expense allowances provided under the agreement and the direct allocable costs expected in the future by the insurer in maintaining the business reinsured. This liability must be calculated using actuarial assumptions that are consistent with those utilized in the statutory reserve calculation. The expenses to be accounted for in establishing this liability should represent all costs of the ceding insurer in servicing the business that is subject to the agreement.

In determining what the ceding insurer should include in the renewal expenses with regard to direct expenses, there should be an allocation of all renewal expenses anticipated at the time the business is reinsured including salaries, computer usage, postage, etc. This comprehensive calculation should recognize that the anticipated expense levels may be estimated; a comparison with pricing assumptions may be considered in determining the reasonableness of such assumptions.

When an agreement does not comply with paragraph 2.a., this area of non-compliance should be addressed by the posting of a reserve for the present value of the deficiency rather than denial for credit for reinsurance, assuming that no other area of non-compliance is encountered with the agreement and that the assets received corresponding to the ceding commission are in compliance with the Codification, including Appendix A-785. For example, the assets received corresponding to the ceding commission must be admissible and not subject to repayment to the reinsurer.

b. The ceding insurer can be deprived of surplus or assets at the reinsurer’s option or automatically upon the occurrence of some event, such as the insolvency of the ceding insurer, except that termination of the reinsurance agreement by the reinsurer for nonpayment of reinsurance premiums or other amounts due, such as modified coinsurance reserve adjustments, interest and adjustments on funds withheld, and tax reimbursements, shall not be considered to be such a deprivation of surplus or assets;

Q *– With regard to existing business, should the coinsurance reserve percentage or the coinsurance reserve amount not be allowed to increase in a combination coinsurance/modified coinsurance treaty? How would the rule be applicable to the difference between the total reserve and the amount of funds withheld in a coinsurance with funds withheld treaty?*

A *– Under a combination coinsurance/modified coinsurance (co/modco) arrangement the ceding company and the reinsurer both establish reserves for future claim payments. Treaty provisions which adjust the reserves each party holds in lieu of transferring funds owed to the reinsurer are acceptable. However, adjustment of reserves in lieu of payment when funds are due to the ceding company is a violation of the accounting requirements since it is a depletion of the ceding company's assets. In other words, statutory gains can be used to increase the modified coinsurance reserve but statutory losses cannot be used to reduce the modified coinsurance reserve. This is the case even if the agreement provides for this adjustment at inception and never requires a payment to be owed by the reinsurer.*

Under a coinsurance with funds withheld treaty the reinsurer establishes the entire amount of reserve liability on its share of reinsured policies, but the ceding company withholds a portion of the reinsurer’s assets typically in an amount less than the reserves, to offset future obligations. Provided the withheld assets are not withheld for any purpose other than the payment of future claims, it is not a violation of the accounting requirements for the reinsurer to require full use of such withheld assets for the payment of claims prior to using any other assets owned by the reinsurer.

Paragraph 2.b. disallows reinsurance credit if the ceding company can be deprived of assets at the reinsurer's option or automatically upon the occurrence of some event. Thus, a provision in a coinsurance with funds withheld or modified coinsurance treaty which unilaterally or automatically allows the reinsurer to convert the treaty to coinsurance at some later date would be of concern. Although the parties could have entered a coinsurance agreement at inception, regulators are concerned that the reinsurer would take invested assets from the ceding company at a time which would be to the detriment of the ceding company's policyholders. Therefore, a conversion provision will not violate paragraph 2.b. only if all of the following are met:

i) *the triggers for conversion are limited to ceding company violations of treaty provisions, including complying representations and warranties; the occurrence of a violation has been determined; and the ceding company has been given an opportunity and refuses to promptly remedy the violation;*

ii) *the conversion is structured so that the surplus of the ceding company will remain unchanged immediately following the conversion;*

iii) *the invested assets to be transferred upon conversion are less than or equal to the modco reserve, in the case of modco or co/modco, or to the Funds Withheld, in the case of coinsurance funds withheld, and have been maintained in a Trust or Escrow Account since inception of the agreement; and*

iv) *the reinsurance complies with Credit for Reinsurance requirements (see Appendix A-785) immediately upon conversion.*

c. The ceding insurer is required to reimburse the reinsurer for negative experience under the reinsurance agreement, except that neither offsetting experience refunds against current and prior years' losses under the agreement nor payment by the ceding insurer of an amount equal to the current and prior years' losses under the agreement upon voluntary termination of in force reinsurance by the ceding insurer shall be considered such a reimbursement to the reinsurer for negative experience. Voluntary termination does not include situations where termination occurs because of unreasonable provisions which allow the reinsurer to reduce its risk under the agreement. An example of such a provision is the right of the reinsurer to increase reinsurance premiums or risk and expense charges to excessive levels forcing the ceding company to prematurely terminate the reinsurance treaty;

d. The ceding insurer must, at specific points in time scheduled in the agreement, terminate or automatically recapture all or part of the reinsurance ceded;

e. The reinsurance agreement involves the possible payment by the ceding insurer to the reinsurer of amounts other than from income realized from the reinsured policies. For example, it is improper for a ceding company to pay reinsurance premiums, or other fees or charges to a reinsurer which are greater than the direct premiums collected by the ceding company;

Q *– Should a reinsurer have a unilateral right to establish underlying cost of insurance rates or credited interest rates for policies which are wholly or partially reinsured?*

A *– No, only the ceding company has the right to set the cost of insurance rates charged policyholders and to set the rates of interest credited to them. However, a representation (but not a warranty) that the ceding company shall vary nonguaranteed elements reinsured in a manner consistent with the ceding company's documented procedures, in effect at the time the agreement was entered into, does not violate the accounting requirements.*

***Q –** May a reinsurance contract allow the reinsurer to change the cost of insurance that the ceding company must pay under the treaty?*

***A –** So long as the aggregate amounts payable by the ceding company in any settlement period do not exceed the income of the reinsured policies during that period, the treaty's structure would not be in violation of paragraph 2.e. There is not compliance if any changes could cause payments made by the ceding company to exceed income from the reinsured business, unless the change is necessary to conform to the documented procedures represented to the reinsurer at the time the treaty was entered into and as long as the ceding company has the ability to change the insurance rates it charges policyholders by at least as much as was included in the original representation.*

***Q –** If a reinsured policy allows the ceding company to guarantee rates of interest to be credited to the policyholder which are greater than those guaranteed by the policy, may a reinsurance contract allow the reinsurer to limit its participation in such credited rate as long as it at least provides for the amount based on the rate guaranteed in the contract?*

***A –** So long as the aggregate amounts payable by the ceding company in any settlement period do not exceed the income of the reinsured policies during that period, the treaty's structure would not be in violation of paragraph 2.e. There is not compliance if any changes could cause payments made by the ceding company to exceed income from the reinsured business, unless the limited participation reflects a change in declared interest rates which is necessary to conform to the documented procedures represented to the reinsurer at the time the treaty was entered into and as long as the ceding company has the ability to change the declared interest rates to be credited to policyholders by at least as much as was included in the original representation.*

f. The treaty does not transfer all of the significant risk inherent in the business being reinsured. The following table identifies for a representative sampling of products or type of business, the risks which are considered to be significant. For products not specifically included, the risks determined to be significant shall be consistent with this table.

Risk categories:

i. Morbidity

ii. Mortality

iii. Lapse

This is the risk that a policy will voluntarily terminate prior to the recoupment of a statutory surplus strain experienced at issue of the policy.

iv. Credit Quality

This is the risk that invested assets supporting the reinsured business will decrease in value. The main hazards are that assets will default or that there will be a decrease in earning power. It excludes market value declines due to changes in interest rate.

v. Reinvestment

This is the risk that interest rates will fall and funds reinvested (coupon payments or monies received upon asset maturity or call) will therefore earn less than expected. If asset durations are less than liability durations, the mismatch will increase.

vi. Disintermediation

This is the risk that interest rates rise and policy loans and surrenders increase or maturing contracts do not renew at anticipated rates of renewal. If asset durations are greater than the liability durations, the mismatch will increase. Policyholders will move their funds into new products offering higher rates. The company may have to sell assets at a loss to provide for these withdrawals.

g. i. The credit quality, reinvestment, or disintermediation risk is significant for the business reinsured and the ceding company does not (other than for the classes of business excepted in paragraph g.ii.) either transfer the underlying assets to the reinsurer or legally segregate such assets in a trust or escrow account or otherwise establish a satisfactory mechanism which legally segregates, by contract or contract provision, the underlying assets.

***Q** – Is asset segmentation an acceptable mechanism for legal segregation of assets?*

***A** – Generally no. Segmentation involves the allocation of a company's general account investment earnings over several lines of business, or various groups of policies within those lines, such that the performance of one corporate bond, for example, may affect the earnings of several segments within a company. The accounting for the segmentation is largely internal, and the detail of the record keeping varies from company to company.*

The fundamental purpose of the requirement for a reinsurance treaty to employ the use of a segregated asset portfolio ("SAP") is that all payments (interest, benefits, allowances, etc.) must be made from the SAP, so as to eliminate any problems that could arise in determining what asset or assets should be sold, and to avoid disputes in the event of insolvency. Any sale of assets that could affect policies not subject to reinsurance, or policies subject to reinsurance with other reinsurers is problematic.

In addition, auditing the performance of a treaty using traditional segmentation methods would be extremely difficult and prone to disagreement, which could provide a reinsurer with broad leverage to contest amounts due that reinsurer, especially in the event of insolvency or rehabilitation of the ceding company.

It is important to determine that the arrangement in place does in fact transfer all of the risks of the underlying assets supporting the reinsured business to the reinsurer.

***Q** – If a percentage of all policies in a block of business is reinsured, must the company segregate that percentage of the assets supporting the business, or can it segregate all the assets?*

***A** – The company may segregate only assets supporting the reinsured portion or the segregated asset portfolio may represent the entire block of business if the reinsured portion is the same for all policies. In the latter case, the reinsurer would take its proportionate share of the SAP performance.*

***Q** – If the ceding company cedes a portion of each policy in a block of business to one reinsurer and a portion to another, while retaining some itself, does it have to segregate assets separately for each reinsurer, or is it acceptable to have all the assets segregated together with each reinsurer responsible for its portion of the investment risk?*

***A** – The ceding company does not need to segregate assets separately for each reinsurer if the treaties are virtually identical.*

***Q** – At the time assets are legally segregated under a coinsurance with funds withheld treaty, should they be valued at market value, statutory value, or some combination?*

A *– The assets should be valued at their statutory admitted value.*

Q *– When the assets are legally segregated, how are the funds withheld payables and receivables reported?*

A *– The payables and receivables are recorded in the same manner as in a funds withheld treaty where the assets are not legally segregated and will usually mirror the value of the funds withheld account. However, the funds withheld account, which reflects the statutory admitted value of the assets in the SAP, will fluctuate, and thus may differ from the reserves on the reinsured business.*

ii. Notwithstanding the requirements of paragraph g.i., the assets supporting the reserves for the following classes of business and any classes of business which do not have a significant credit quality, reinvestment or disintermediation risk may be held by the ceding company without segregation of such assets:

(a) Health Insurance - LTC/LTD

(b) Traditional Non-Par Permanent

(c) Traditional Par Permanent

(d) Adjustable Premium Permanent

(e) Indeterminate Premium Permanent

(f) Universal Life Fixed Premium

(no dump-in premiums allowed)

The associated formula for determining the reserve interest rate adjustment must use a formula which reflects the ceding company's investment earnings and incorporates all realized and unrealized gains and losses reflected in the statutory statement. The following is an acceptable formula:

$$\text{Rate} = \frac{2\,(I + CG)}{X + Y - I - CG}$$

Where:
I is the net investment income
CG is capital gains less capital losses
X is the current year cash and invested assets plus investment income due and accrued less borrowed money
Y is the same as X but for the prior year

h. Settlements are made less frequently than quarterly or payments due from the reinsurer are not made in cash within ninety (90) days of the settlement date.

i. The ceding insurer is required to make representations or warranties not reasonably related to the business being reinsured.

j. The ceding insurer is required to make representations or warranties about future performance of the business being reinsured.

k. The reinsurance agreement is entered into for the principal purpose of producing significant surplus aid for the ceding insurer, typically on a temporary basis, while not transferring all of the significant risks inherent in the business reinsured and, in substance or effect, the expected potential liability to the ceding insurer remains basically unchanged.

3. Any increase in surplus net of federal income tax resulting from reinsurance agreements entered into or amended after the effective date of the Codification which involve the reinsurance of business issued prior to the effective date of the agreements shall be identified separately on the insurer's statutory financial statement as a surplus item and recognition of the surplus increase as income shall be reflected on a net of tax basis as earnings emerge from the business reinsured.

{For example, on the last day of calendar year N, company XYZ pays a $20 million initial commission and expense allowance to company ABC for reinsuring an existing block of business. Assuming a 34% tax rate, the net increase in surplus at inception is $13.2 million ($20 million - $6.8 million) which is reported on the "Aggregate write-ins for gains and losses in surplus" line in the Capital and Surplus account. $6.8 million (34% of $20 million) is reported as income on the "Commissions and expense allowances on reinsurance ceded" line of the Summary of Operations.

At the end of year N+1 the business has earned $4 million. ABC has paid $.5 million in profit and risk charges in arrears for the year and has received a $1 million experience refund. Company ABC's annual statement would report $1.65 million (66% of ($4 million - $1 million - $.5 million) up to a maximum of $13.2 million) on the "Commissions and expense allowance on reinsurance ceded" line of the Summary of Operations, and -$1.65 million on the "Aggregate write-ins for gains and losses in surplus" line of the Capital and Surplus account. The experience refund would be reported separately as a miscellaneous income item in the Summary of Operations.}

Written Agreements

4. No reinsurance agreement or amendment to any agreement may be used to reduce any liability or to establish any asset in any financial statement, unless the agreement, amendment or a binding letter of intent has been duly executed by both parties no later than the "as of date" of the financial statement.

5. In the case of a letter of intent, a reinsurance agreement or an amendment to a reinsurance agreement must be executed within a reasonable period of time, not exceeding ninety (90) days from the execution date of the letter of intent, in order for credit to be granted for the reinsurance ceded.

Appendix A-812

Smoker/Nonsmoker Mortality Tables for Use in Determining Minimum Reserve Liabilities

Purpose

1. The purpose of this Appendix is to permit the use of mortality tables that reflect differences in mortality between smokers and nonsmokers in determining minimum reserve liabilities for plans of insurance with separate premium rates for smokers and nonsmokers.

Definitions

2. As used in this Appendix, “1980 CSO Table, with or without Ten-Year Select Mortality Factor” means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the Society of Actuaries Committee to Recommend New Mortality Tables for Valuation of Standard Individual Ordinary Life Insurance, referred to as the Commissioners 1980 Standard Ordinary Mortality Table. The same select factors will be used for both smokers and nonsmokers tables.

3. As used in this Appendix, “1980 CET Table” means that mortality table consisting of separate rates of mortality for male and female lives, developed by the Society of Actuaries Committee to Recommend New Mortality Tables for Valuation of Standard Individual Ordinary Life Insurance, and referred to as the Commissioners 1980 Extended Term Insurance Table.

4. As used in this Appendix, the phrase “smoker and nonsmoker mortality tables” refers to the mortality tables with separate rates of mortality for smokers and nonsmokers derived from the tables defined in paragraphs 2-3 which were developed by the Society of Actuaries Task Force on Smoker/Nonsmoker Mortality and the California Insurance Department staff and recommended by the NAIC Technical Staff Actuarial Group.

5. As used in this Appendix, the phrase “composite mortality tables” refers to the mortality tables defined in paragraphs 2-3 as they were originally published with rates of mortality that do not distinguish between smokers and nonsmokers.

Alternate Tables

6. For any policy of insurance delivered or issued for delivery after the effective date of Codification, at the option of the company and subject to the conditions stated in paragraph 7 of this Appendix;

   a. The 1980 CSO Smoker and Nonsmoker Mortality Tables, with or without Ten-Year Select Mortality Factors, may be substituted for the 1980 CSO Table, with or without Ten-Year Select Mortality Factors, and

   b. The 1980 CET Smoker and Nonsmoker Mortality Tables may be substituted for the 1980 CET Table for use in determining minimum reserve liabilities.

Conditions

7. For each plan of insurance with separate rates for smokers and nonsmokers an insurer may

   a. Use composite mortality tables to determine minimum reserve liabilities,

b. Use smoker and nonsmoker mortality tables to determine the valuation net premiums and additional minimum reserves, if any, required by Appendix A-820 and use composite mortality tables to determine the basic minimum reserves, or

c. Use smoker and nonsmoker mortality to determine minimum reserve liabilities.

Appendix A-815

Model Regulation Permitting the Recognition of Preferred Mortality Rates For Use in Determining Minimum Reserve Liabilities

Purpose

1. The purpose of this regulation is to recognize, permit and prescribe the use of mortality tables that reflect differences in mortality between preferred and standard lives in determining minimum reserve liabilities in accordance with paragraph 3.a.iii. of Appendix A-820 Standard Valuation Law and paragraphs 16 and 17 of Appendix A-830 Valuation of Life Insurance Model Regulation.

2. **Definitions**

a. "2001 CSO Mortality Table" means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the American Academy of Actuaries CSO Task Force from the Valuation Basic Mortality Table developed by the Society of Actuaries Individual Life Insurance Valuation Mortality Task Force, and adopted by the NAIC in December 2002. The 2001 CSO Mortality Table is included in the *Proceedings of the NAIC (2nd Quarter 2002)* and supplemented by the 2001 CSO Preferred Class Structure Mortality Table defined below in Subsection B. Unless the context indicates otherwise, the "2001 CSO Mortality Table" includes both the ultimate form of that table and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality tables. Mortality tables in the 2001 CSO Mortality Table include the following:

i. "2001 CSO Mortality Table (F)" means that mortality table consisting of the rates of mortality for female lives from the 2001 CSO Mortality Table.

ii. "2001 CSO Mortality Table (M)" means that mortality table consisting of the rates of mortality for male lives from the 2001 CSO Mortality Table.

iii. "Composite mortality tables" means mortality tables with rates of mortality that do not distinguish between smokers and nonsmokers.

iv. "Smoker and nonsmoker mortality tables" means mortality tables with separate rates of mortality for smokers and nonsmokers.

b. "2001 CSO Preferred Class Structure Mortality Table" means mortality tables with separate rates of mortality for super preferred nonsmokers, preferred nonsmokers, residual standard nonsmokers, preferred smokers, and residual standard smoker splits of the 2001 CSO Nonsmoker and Smoker Tables, as adopted by the NAIC at the September, 2006 national meeting and published in the *NAIC Proceedings {3rd Quarter 2006}*. Unless the context indicates otherwise, the "2001 CSO Preferred Class Structure Mortality Table" includes both the ultimate form of that table and the select and ultimate form of that table. It includes both the smoker and nonsmoker mortality tables. It includes both the male and female mortality tables and the gender composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality table.

c. "Statistical agent" means an entity with proven systems for protecting the confidentiality of individual insured and insurer information; demonstrated resources for and history of ongoing electronic communications and data transfer ensuring data integrity with insurers, which are its members or subscribers; and a history of and means for aggregation of data and accurate promulgation of the experience modifications in a timely manner.

2001 CSO Preferred Class Structure Table

3. At the election of the company, for each calendar year of issue, for any one or more specified plans of insurance and subject to satisfying the conditions stated in this regulation, the 2001 CSO Preferred Class Structure Mortality Table may be substituted in place of the 2001 CSO Smoker or Nonsmoker Mortality Table as the minimum valuation standard for policies issued on or after January 1, 2007. For policies issued on or after January 1, 2004 (effective date of adoption of the 2001 CSO Mortality Table for Use in Determining Minimum Reserve Liabilities and Nonforfeiture Benefits), and prior to January 1, 2007, these tables may be substituted with the consent of the commissioner and subject to the conditions of paragraph 4. In determining such consent, the commissioner may rely on the consent of the commissioner of the company's state of domicile. No such election shall be made until the company demonstrates at least 20% of the business to be valued on this table is in one or more of the preferred classes. A table from the 2001 CSO Preferred Class Structure Mortality Table used in place of a 2001 CSO Mortality Table, pursuant to the requirements of this rule, will be treated as part of the 2001 CSO Mortality Table only for purposes of reserve valuation pursuant to the requirements of the NAIC model regulation, "Recognition of the 2001 CSO Mortality Table For Use In Determining Minimum Reserve Liabilities And Nonforfeiture Benefits Model Regulation."

4. **Conditions**

a. For each plan of insurance with separate rates for preferred and standard nonsmoker lives, an insurer may use the super preferred nonsmoker, preferred nonsmoker, and residual standard nonsmoker tables to substitute for the nonsmoker mortality table found in the 2001 CSO Mortality Table to determine minimum reserves. At the time of election and annually thereafter, except for business valued under the residual standard nonsmoker table, the appointed actuary shall certify that:

i. The present value of death benefits over the next ten years after the valuation date, using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

ii. The present value of death benefits over the future life of the contracts, using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

b. For each plan of insurance with separate rates for preferred and standard smoker lives, an insurer may use the preferred smoker and residual standard smoker tables to substitute for the smoker mortality table found in the 2001 CSO Mortality Table to determine minimum reserves. At the time of election and annually thereafter, for business valued under the preferred smoker table, the appointed actuary shall certify that:

i. The present value of death benefits over the next ten years after the valuation date, using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the preferred smoker valuation basic table corresponding to the valuation table being used for that class.

ii. The present value of death benefits over the future life of the contracts, using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the preferred smoker valuation basic table.

c. Unless exempted by the commissioner, every authorized insurer using the 2001 CSO Preferred Class Structure Table shall annually file with the commissioner, with the NAIC, or with a statistical agent designated by the NAIC and acceptable to the commissioner, statistical reports showing mortality and such other information as the commissioner may deem necessary or expedient for the administration of the provisions of this regulation. The form of the reports shall be established by the commissioner or the commissioner may require the use of a form established by the NAIC or by a statistical agent designated by the NAIC and acceptable to the commissioner.

d. The use of the 2001 CSO Preferred Class Structure Table for the valuation of policies issued prior to January 1, 2007 shall not be permitted in any statutory financial statement in which a company reports, with respect to any policy or portion of a policy coinsured, either of the following:

i. In cases where the mode of payment of the reinsurance premium is less frequent than the mode of payment of the policy premium, a reserve credit that exceeds, by more than the amount specified in this paragraph as Y, the gross reserve calculated before reinsurance. Y is the amount of the gross reinsurance premium that (a) provides coverage for the period from the next policy premium due date to the earlier of the end of the policy year and the next reinsurance premium due date, and (b) would be refunded to the ceding entity upon the termination of the policy.

ii. In cases where the mode of payment of the reinsurance premium is more frequent than the mode of payment of the policy premium, a reserve credit that is less than the gross reserve, calculated before reinsurance, by an amount that is less than the amount specified in this paragraph as Z. Z is the amount of the gross reinsurance premium that the ceding entity would need to pay the assuming company to provide reinsurance coverage from the period of the next reinsurance premium due date to the next policy premium due date minus any liability established for the proportionate amount not remitted to the reinsurer.

For purposes of this condition, both the reserve credit and the gross reserve before reinsurance (i) for the mean reserve method shall be defined as the mean reserve minus the deferred premium asset, and (ii) for the mid-terminal reserve method shall include the unearned premium reserve. A company may estimate and adjust its accounting on an aggregate basis in order to meet the conditions to use the 2001 CSO Preferred Class Structure Table.

Effective Date

5. The effective date of this regulation is after January 1, 2007.

This page intentionally left blank.

Appendix A-817

Preneed Life Insurance Minimum Standards for Determining Reserve Liabilities and Nonforfeiture Values

Scope

1. This rule applies to preneed insurance contracts, as defined in paragraph 5 and to similar policies and certificates.

Purpose

2. The purpose of this appendix is to establish for preneed insurance products minimum mortality standards for reserves and nonforfeiture values, and to require the use of the 1980 Commissioners Standard Ordinary (CSO) Life Valuation Mortality Table for use in determining the minimum standard of valuation of reserves and the minimum standard nonforfeiture values for preneed insurance products.

Definitions

3. The term "**2001 CSO Mortality Table**" means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the American Academy of Actuaries CSO Task Force from the Valuation Basic Mortality Table developed by the Society of Actuaries Individual Life Insurance Valuation Mortality Task Force, and adopted by the NAIC in December 2002. The 2001 CSO Mortality Table is included in the *Proceedings of the NAIC (2nd Quarter 2002)*. Unless the context indicates otherwise, the "2001 CSO Mortality Table" includes both the ultimate form of that table and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality tables.

4. The term "**Ultimate 1980 CSO**" means the Commissioners' 1980 Standard Ordinary Life Valuation Mortality Tables (1980 CSO) without ten-year (10-year) selection factors, incorporated into the 1980 amendments to the NAIC Standard Valuation Law approved in December 1983.

5. For the purposes of this guidance, preneed insurance is any life insurance policy or certificate that is issued in combination with, in support of, with an assignment to, or as a guarantee for a prearrangement agreement for goods and services to be provided at the time of and immediately following the death of the insured. Goods and services may include, but are not limited to embalming, cremation, body preparation, viewing or visitation, coffin or urn, memorial stone, and transportation of the deceased. The status of the policy or contract as preneed insurance is determined at the time of issue in accordance with the policy form filing.

Minimum Valuation Mortality Standards

6. For preneed insurance contracts, as defined in paragraph 5, and similar policies and contracts, the minimum mortality standard for determining reserve liabilities and nonforfeiture values for both male and female insureds shall be the Ultimate 1980 CSO.

Minimum Valuation Interest Rate Standards

7. The interest rates used in determining the minimum standard for valuation of preneed insurance shall be the calendar year statutory valuation interest rates as defined in Appendix *A-820 Minimum Life and Annuity Reserve Standards*, paragraphs 5-8.

8. The interest rates used in determining the minimum standard for nonforfeiture values for preneed insurance shall be the calendar year statutory nonforfeiture interest rates.

Minimum Valuation Method Standards

9. The method used in determining the standard for the minimum valuation of reserves of preneed insurance shall be the method defined in Appendix *A-820 Minimum Life and Annuity Reserve Standards*, paragraphs 9-11.

Transition Rules

10. For preneed insurance policies issued on or after the effective date of this appendix and before January 1, 2012, the 2001 CSO may be used as the minimum standard for reserves and minimum standard for nonforfeiture benefits for both male and female insureds.

11. If an insurer elects to use the 2001 CSO as a minimum standard for any policy issued on or after the effective date of this appendix and before January 1, 2012, the insurer shall provide, as a part of the actuarial opinion memorandum submitted in support of the company's asset adequacy testing, an annual written notification to the domiciliary commissioner. The notification shall include:

a. A complete list of all preneed policy forms that use the 2001 CSO as a minimum standard;

b. A certification signed by the appointed actuary stating that the reserve methodology employed by the company in determining reserves for the preneed policies issued after the effective date and using the 2001 CSO as a minimum standard, develops adequate reserves (For the purposes of this certification, the preneed insurance policies using the 2001 CSO as a minimum standard cannot be aggregated with any other policies.); and

c. Supporting information regarding the adequacy of reserves for preneed insurance policies issued after the effective date of this guidance and using the 2001 CSO as a minimum standard for reserves.

12. Preneed insurance policies issued on or after January 1, 2012, must use the Ultimate 1980 CSO in the calculation of minimum nonforfeiture values and minimum reserves.

Effective Date

13. This rule is applicable to preneed insurance policies and certificates and similar contracts and certificates, as specified in paragraph 5, issued on or after January 1, 2011.

Appendix A-818

Determining Reserve Liabilities for Credit Life Insurance Model Regulation

Definitions

1. "2001 CSO Mortality Table" means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the American Academy of Actuaries CSO Task Force from the Valuation Basic Mortality Table developed by the Society of Actuaries Individual Life Insurance Valuation Mortality Task Force, and adopted by the NAIC in December 2002. The 2001 CSO Mortality Table is included in the *Proceedings of the NAIC (2nd Quarter 2002)*. Unless the context indicates otherwise, the "2001 CSO Mortality Table" includes both the ultimate form of that table and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the age-nearest-birthday and age-last-birthday bases of the mortality tables.

2. "Composite mortality tables" means mortality tables with rates of mortality that do not distinguish between smokers and nonsmokers.

3. "Credit life insurance" means insurance on a debtor or debtors, pursuant to or in connection with a specific loan or other credit transaction, to provide for satisfaction of a debt, in whole or in part, upon the death of an insured debtor.

4. Credit life insurance does NOT include:

   a. Insurance written in connection with a credit transaction that is:

      i. Secured by a first mortgage or deed of trust; and

      ii. Made to finance the purchase of real property or the construction of a dwelling thereon, or to refinance a prior credit transaction made for such a purpose;

   b. Insurance sold as an isolated transaction on the part of the insurer and not related to an agreement or a plan for insuring debtors of the creditor.

   c. Insurance for which no identifiable charge is made to the debtor.

   d. Insurance on accounts receivable.

5. This rule applies to credit life insurance policies and certificates, and those similar policies and certificates where there is no identifiable charge made to the debtor.

2001 CSO Male Composite Ultimate Mortality Table

6. The minimum standard for both male and female insureds shall be 2001 CSO Male Composite Ultimate Mortality Table.

7. Where the credit life insurance policy or certificate insures two lives, the minimum standard shall be twice the mortality in the 2001 CSO Male Composite Ultimate Mortality Table based on the age of the older insured.

Minimum Standards

8. Appendix A-830 shall not apply to credit life insurance.

9. The interest rates used in determining the minimum standard for valuation shall be the calendar year statutory valuation interest rates as defined in Appendix A-820, paragraphs 5-8.

10. The method used in determining the minimum standard for valuation shall be the commissioners reserve valuation method as defined in Appendix A-820, paragraphs 9-11.

Appendix A-820

Minimum Life and Annuity Reserve Standards

Definitions

1. A "qualified actuary" is an individual who:

   a. Is a member in good standing of the American Academy of Actuaries;

   b. Is qualified to sign statements of actuarial opinion for life and health insurance company annual statements in accordance with the American Academy of Actuaries qualification standards for actuaries signing such statements;

   c. Is familiar with the valuation requirements applicable to life and health insurance companies;

   d. Has not been found by the Commissioner (or if so found has subsequently been reinstated as a qualified actuary), following appropriate notice and hearing to have:

      i. Violated any provision of, or any obligation imposed by, the Insurance Law or other law in the course of his or her dealings as a qualified actuary;

      ii. Been found guilty of fraudulent or dishonest practices;

      iii. Demonstrated his or her incompetence, lack of cooperation, or untrustworthiness to act as a qualified actuary;

      iv. Submitted to the Commissioner during the past five (5) years, pursuant to this regulation, an actuarial opinion or memorandum that the Commissioner rejected because it did not meet the provisions of this regulation including standards set by the Actuarial Standards Board; or

      v. Resigned or been removed as an actuary within the past five (5) years as a result of acts or omissions indicated in any adverse report on examination or as a result of failure to adhere to generally acceptable actuarial standards; and

   e. Has not failed to notify the Commissioner of any action taken by any Commissioner of any other state similar to that under subparagraph d. above.

Valuation Requirements

2. Reserves reported in the financial statements shall:

   a. Be computed in accordance with presently accepted actuarial standards,

   b. Be based on actuarial assumptions that produce reserves at least as great as those called for in any contract provision as to reserve basis and method, and are in accordance with all other contract provisions,

   c. Be computed on the basis of assumptions consistent with those used in computing the corresponding items in the annual statement of the preceding year-end with any exceptions disclosed in the notes to the financial statements, and

d. Include provision for all actuarial reserves and related statement items which ought to be established.

Computation of Minimum Standard for Life Insurance and Endowment Benefits

3. The minimum standard for the valuation of all life insurance and endowment policies and contracts shall be the commissioners reserve valuation methods defined in paragraphs 9-11, valuation interest rates provided in paragraphs 5-8, and the following tables:

a. For all ordinary policies of life insurance issued on the standard basis on or after January 1, 2004, excluding preneed policies (which follow Appendix A-817) any disability and accidental death benefits in the policies:

i. The Commissioners 2001 Standard Ordinary Mortality Table;

ii. At the election of the company for any one or more specified plans of life insurance, the Commissioners 2001 Standard Ordinary Mortality Table with 25-Year Select Mortality Factors; or

iii. Any ordinary mortality table adopted subsequently by the National Association of Insurance Commissioners for use in determining the minimum standard for valuation for such policies;

b. For all ordinary policies of life insurance issued on the standard basis, prior to January 1, 2004, excluding any disability and accidental death benefits in the policies and including preneed policies issued on or after January 1, 2012 (see A-817):

i. The Commissioners 1980 Standard Ordinary Mortality Table;

ii. At the election of the company for any one or more specified plans of life insurance, the Commissioners 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors;

c. For all industrial life insurance policies issued on the standard basis, excluding any disability and accidental death benefits in the policies, the Commissioners 1961 Standard Industrial Mortality Table or any industrial mortality table adopted after 1980 by the National Association of Insurance Commissioners for use in determining the minimum standard of valuation for the policies;

d. For total and permanent disability benefits in or supplementary to ordinary policies or contracts, the tables of Period 2 disablement rates and the 1930 to 1950 termination rates of the 1952 Disability Study of the Society of Actuaries, with due regard to the type of benefit or any tables of disablement rates and termination rates adopted after 1980 by the National Association of Insurance Commissioners, for use in determining the minimum standard of valuation for those policies. Any such table shall, for active lives, be combined with a mortality table permitted for calculating the reserves for life insurance policies;

e. For accidental death benefits in or supplementary to policies, the 1959 Accidental Death Benefits Table or any accidental death benefits table adopted after 1980 by the National Association of Insurance Commissioners for use in determining the minimum standard of valuation for those policies. The table shall be combined with a mortality table for calculating the reserves for life insurance policies; and

f. For group life insurance, life insurance issued on the substandard basis and other special benefits: tables which provide for an adequate reserve.

Computation of Minimum Standard for Annuities

4. The minimum standard for the valuation of all individual annuity and pure endowment contracts and for all annuities and pure endowments purchased under group annuity and pure endowment contracts, shall be the commissioners annuity reserve valuation methods defined in paragraphs 12 and 13, valuation interest rates provided in paragraphs 5-8, and the tables defined in Appendix A-821.

Computation of Minimum Standard Valuation Interest Rates by Calendar Year of Issue - All Business

5. The interest rates used in determining the minimum standard for the valuation of policies issued on or after the effective date of the Codification shall be the calendar year statutory valuation interest rates as defined below:

a. Calendar Year Statutory Valuation Interest Rates

i. The calendar year statutory valuation interest rates, I, shall be determined as follows and the results rounded to the nearer one-quarter of one percent:

(a) For life insurance:

$$I = .03 + W(R_1 - .03) + \frac{W}{2}(R_2 - .09);$$

(b) For single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and from guaranteed interest contracts with cash settlement options:

$$I = .03 + W(R - .03)$$

where R_1 is the lesser of R and .09,

R_2 is the greater of R and .09,

R is the reference interest rate defined in paragraph 7,

and W is the weighting factor defined in paragraph 6;

(c) For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on an issue year basis, except as stated in subparagraph (b) above, the formula for life insurance stated in subparagraph (a) above shall apply to annuities and guaranteed interest contracts with guarantee durations in excess of ten (10) years and the formula for single premium immediate annuities stated in subparagraph (b) above shall apply to annuities and guaranteed interest contracts with guarantee duration of ten (10) years or less;

(d) For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the formula for single premium immediate annuities stated in subparagraph (b) above shall apply.

(e) For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a change in fund basis, the formula for single premium immediate annuities stated in subparagraph (b) above shall apply.

ii. However, if the calendar year statutory valuation interest rate for a life insurance policy issued in any calendar year determined without reference to this sentence differs from the corresponding actual rate for similar policies issued in the immediately preceding calendar year by less than one-half of one percent (1/2 of 1%), the calendar year statutory valuation interest rate for the life insurance policies shall be equal to the corresponding actual rate for the immediately preceding calendar year.

6. The weighting factors referred to in the formulas stated above are given in the following tables:

a. Weighting Factors for Life Insurance:

Guarantee Duration (Years)	Weighting Factors
10 or less	.50
More than 10, but not more than 20	.45
More than 20	.35

For life insurance, the guarantee duration is the maximum number of years the life insurance can remain in force on a basis guaranteed in the policy or under options to convert to plans of life insurance with premium rates or nonforfeiture values or both which are guaranteed in the original policy;

b. Weighting factor for single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and guaranteed interest contracts with cash settlement options:

.80

c. Weighting factors for other annuities and for guaranteed interest contracts, except as stated in subparagraph (b) above, shall be as specified in Items i., ii. and iii. below, according to the rules and definitions in items iv., v. and vi. below:

i. For annuities and guaranteed interest contracts valued on an issue year basis:

Guarantee Duration (Years)	Weighting Factor for Plan Type A	B	C
5 or less:	.80	.60	.50
More than 5, but not more than 10:	.75	.60	.50
More than 10, but not more than 20:	.65	.50	.45
More than 20:	.45	.35	.35

		Plan Type		
		A	B	C
ii.	For annuities and guaranteed interest contracts valued on a change in fund basis, the factors shown in Item i. above increased by:	.15	.25	.05

		Plan Type		
		A	B	C
iii.	For annuities and guaranteed interest contracts valued on an issue year basis (other than those with no cash settlement options) that do not guarantee interest on considerations received more than one year after issue or purchase and for annuities and guaranteed interest contracts valued on a change in fund basis that do not guarantee interest rates on considerations received more than twelve (12) months beyond the valuation date, the factors shown in Item i. or derived in Item ii. increased by:	.05	.05	.05

iv. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, the guarantee duration is the number of years for which the contract guarantees interest rates in excess of the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty (20) years. For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the guaranteed duration is the number of years from the date of issue or date of purchase to the date annuity benefits are scheduled to commence.

v. Plan type as used in the above tables is defined as follows:

(a) Plan Type A: At any time policyholder may withdraw funds only (l) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without an adjustment but installments over five years or more, or (3) as an immediate life annuity, or (4) no withdrawal permitted.

(b) Plan Type B: Before expiration of the interest rate guarantee, policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without an adjustment but in installments over five years or more, or (3) no withdrawal permitted. At the end of interest rate guarantee, funds may be withdrawn without an adjustment in a single sum or installments over less than five years.

(c) Plan Type C: Policyholder may withdraw funds before expiration of interest rate guarantee in a single sum or installments over less than five years either (1) without adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) subject only to a fixed surrender charge stipulated in the contract as a percentage of the fund.

vi. A company may elect to value guaranteed interest contracts with cash settlement options and annuities with cash settlement options on either an issue year basis or on a change in fund basis. Guaranteed interest contracts with no cash settlement options and other annuities with no cash settlement options must be valued on an issue year basis. An issue year basis of valuation refers to a valuation basis under which the interest rate used to determine the minimum valuation standard for the entire duration of the annuity or guaranteed interest contract is the calendar year valuation interest rate for the year of issue or year of purchase of the annuity or guaranteed interest contract, and the change in fund basis of valuation refers to a valuation basis under which the interest rate used to determine the minimum valuation standard applicable to each change in the fund held under the annuity or guaranteed interest contract is the calendar year valuation interest rate for the year of the change in the fund.

7. The reference interest rate referred to in paragraph 5 of this Appendix shall be defined as follows:

a. For all life insurance, the lesser of the average over a period of thirty-six (36) months and the average over a period of twelve (l2) months, ending on June 30 of the calendar year preceding the year of issue, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

b. For single premium immediate annuities and for annuity benefits involving life contingencies arising from other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or year of purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

c. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a year of issue basis, except as stated in subparagraph (b) above, with guarantee duration in excess of ten (10) years, the lesser of the average over a period of thirty-six (36) months and the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

d. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a year of issue basis, except as stated in subparagraph (b) above, with guarantee duration of ten (10) years or less, the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody’s Investors Service, Inc.;

e. For other annuities with no cash settlement options and for guaranteed interest contracts with no cash settlement options, the average over a period of twelve (12) months, ending on June 30 of the calendar year of issue or purchase, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody's Investors Service, Inc.;

f. For other annuities with cash settlement options and guaranteed interest contracts with cash settlement options, valued on a change in fund basis, except as stated in subparagraph b. above, the average over a period of twelve (12) months, ending on June 30 of the calendar year of the change in the fund, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody's Investors Service, Inc.

8. In the event that the monthly average of the composite yield on seasoned corporate bonds is no longer published by Moody's Investors Service, Inc. or in the event that the National Association of Insurance Commissioners determines that the monthly average of the composite yield on seasoned corporate bonds as published by Moody's Investors Service, Inc. is no longer appropriate for the determination of the reference interest rate, then an alternative method for determination of the reference interest rate adopted by the National Association of Insurance Commissioners may be substituted.

Reserve Valuation Method—Life Insurance and Endowment Benefits

9. Except as otherwise provided in this Appendix, reserves according to the commissioners reserve valuation method, for the life insurance and endowment benefits of policies providing for a uniform amount of insurance and requiring the payment of uniform premiums shall be the excess, if any, of the present value, at the date of valuation, of the future guaranteed benefits provided for by those policies, over the then present value of any future modified net premiums therefore. The modified net premiums for a policy shall be the uniform percentage of the respective contract the premiums for the benefits that the present value, at the date of issue of the policy, of all modified net premiums shall be equal to the sum of the then present value of the benefits provided for by the policy and the excess of a. over b., as follows:

a. A net level annual premium equal to the present value, at the date of issue, of the benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per annum payable on the first and each subsequent anniversary of the policy on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan for insurance of the same amount at an age one year higher than the age at issue of the policy.

b. A net one-year term premium for the benefits provided for in the first policy year.

10. For a life insurance policy for which the contract premium in the first policy year exceeds that of the second year and for which no comparable additional benefit is provided in the first year for the excess and which provides an endowment benefit or a cash surrender value or a combination in an amount greater than the excess premium, the reserve according to the commissioners reserve valuation method as of any policy anniversary occurring on or before the assumed ending date defined herein as the first policy anniversary on which the sum of any endowment benefit and any cash surrender value then available is greater than the excess premium shall, except as otherwise provided in paragraphs 17 and 18, be the greater of the reserve as of the policy anniversary calculated as described in the preceding paragraph and the reserve as of the policy anniversary calculated as described in those paragraphs, but with (i) the value defined in that paragraph being reduced by fifteen percent (15%) of the amount of such excess first year premium, (ii) all present values of benefits and premiums being determined without reference to premiums or benefits provided for by the policy after the assumed ending date, (iii) the policy being assumed to mature on that date as an endowment, and (iv) the cash surrender value provided on that

date being considered as an endowment benefit. In making the above comparison the mortality stated in paragraph 3 and interest bases stated in paragraphs 5-8 shall be used.

11. Reserves according to the commissioners reserve valuation method shall be calculated by a method consistent with the principles of paragraphs 9 and 10 for:

a. Life insurance policies providing for a varying amount of insurance or requiring the payment of varying premiums;

b. Group annuity and pure endowment contracts purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended;

c. Disability and accidental death benefits in all policies and contracts; and

d. All other benefits, except life insurance and endowment benefits in life insurance policies and benefits provided by all other annuity and pure endowment contracts.

Reserve Valuation Method—Annuity and Pure Endowment Benefits

12. Paragraph 13 shall apply to all annuity and pure endowment contracts other than group annuity and pure endowment contracts purchased under a retirement plan or plan of deferred compensation, established or maintained by an employer (including a partnership or sole proprietorship) or by an employee organization, or by both, other than a plan providing individual retirement accounts or individual retirement annuities under Section 408 of the Internal Revenue Code, as now or hereafter amended.

13. Reserves according to the commissioners annuity reserve method for benefits under annuity or pure endowment contracts, excluding any disability and accidental death benefits in the contracts, shall be the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, provided for by the contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of the contract, that become payable prior to the end of the respective contract year. The future guaranteed benefits shall be determined by using the mortality table, if any, and the interest rate, or rates, specified in the contracts for determining guaranteed benefits. The valuation considerations are the portions of the respective gross considerations applied under the terms of the contracts to determine nonforfeiture values.

Minimum Reserves

14. In no event shall a company’s aggregate reserves for all life insurance policies, excluding disability and accidental death benefits be less than the aggregate reserves calculated in accordance with the methods set forth in paragraphs 9-11, 12-13, 17-18 and 19 and the mortality table or tables and rate or rates of interest used in calculating nonforfeiture benefits for the policies.

Optional Reserve Calculation

15. Reserves for any category of policies, contracts or benefits, may be calculated, at the option of the company, according to any standards that produce greater aggregate reserves for the category than those calculated according to the minimum standard provided here, but the rate or rates of interest used for policies and contracts, other than annuity and pure endowment contracts, shall not be higher than the corresponding rate or rates of interest used in calculating any nonforfeiture benefits provided there.

16. A company that shall have adopted at any time a standard of valuation producing greater aggregate reserves than those calculated according to the minimum standard provided here may, adopt a lower standard of valuation, but not lower than the minimum provided here; provided that the holding of additional reserves previously determined by a qualified actuary shall not be deemed to be the adoption of a higher standard of valuation.

Reserve Calculation—Valuation Net Premium Exceeding the Gross Premium Charged

17. If in any contract year the gross premium charged by a life insurance company on a policy or contract is less than the valuation net premium for the policy or contract calculated by the method used in calculating the reserve but using the minimum valuation standards of mortality and rate of interest, the minimum reserve required for the policy or contract shall be the greater of either the reserve calculated according to the mortality table, rate of interest, and method actually used for the policy or contract, or the reserve calculated by the method actually used for the policy or contract but using the minimum valuation standards of mortality and rate of interest and replacing the valuation net premium by the actual gross premium in each contract year for which the valuation net premium exceeds the actual gross premium. The minimum valuation standards of mortality and rate of interest to be used are those standards stated in paragraph 3 and paragraphs 5-8 of this Appendix.

18. For a life insurance policy for which the gross premium in the first policy year exceeds that of the second year and for which no comparable additional benefit is provided in the first year for the excess and which provides an endowment benefit or a cash surrender value or a combination in an amount greater than the excess premium, the provisions of paragraphs 17 and 18 shall be applied as if the method actually used in calculating the reserve for the policy were the method described in paragraph 9. The minimum reserve at each policy anniversary of such a policy shall be the greater of the minimum reserve calculated in accordance with paragraphs 9 and 10 and the minimum reserve calculated in accordance with paragraphs 17 and 18.

Reserve Calculation—Indeterminate Premium Plans

19. In the case of a plan of life insurance that provides for future premium determination, the amounts of which are to be determined by the insurance company based on then estimates of future experience, or in the case of a plan of life insurance or annuity that is of such a nature that the minimum reserves cannot be determined by the methods described above, the reserves that are held under the plan shall:

a. Be appropriate in relation to the benefits and the pattern of premiums for that plan; and

b. Be computed by a method that is consistent with the principles of this Appendix and which produce a good and sufficient reserve.

This page intentionally left blank.

Appendix A-821

Annuity Mortality Table for Use in Determining Reserve Liabilities for Annuities

Purpose

1. The purpose of this Appendix is to recognize the following mortality tables for use in determining the minimum standard of valuation for annuity and pure endowment contracts: the 1983 Table “a,” the Annuity 2000 Mortality Table, and the 1994 Group Annuity Reserving (1994 GAR) Table.

Definitions

2. As used in this Appendix “1983 Table ‘a’” means that mortality table developed by the Society of Actuaries Committee to Recommend a New Mortality Basis for Individual Annuity Valuation and adopted as a recognized mortality table for annuities in June 1982 by the National Association of Insurance Commissioners.

3. As used in this Appendix “1994 GAR Table” means that mortality table developed by the Society of Actuaries Group Annuity Valuation Table Task Force and shown in the *Proceedings of the NAIC*.

4. As used in this Appendix “Annuity 2000 Mortality Table” means that mortality table developed by the Society of Actuaries Committee on Life Insurance Research and shown in the Proceedings of the NAIC.

Individual Annuity or Pure Endowment Contracts

5. Except as provided in paragraph 6 of this Appendix, the Annuity 2000 Mortality Table shall be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract.

6. The 1983 Table “a” without projection is to be used for determining the minimum standards of valuation for an individual annuity or pure endowment contract solely when the contract is based on life contingencies and is issued to fund periodic benefits arising from:

a. Settlements of various forms of claims pertaining to court settlements or out of court settlements from tort actions;

b. Settlements involving similar actions such as workers’ compensation claims; or

c. Settlements of long term disability claims where a temporary or life annuity has been used in lieu of continuing disability payments.

Group Annuity or Pure Endowment Contracts

7. The 1994 GAR Table shall be used for determining the minimum standard of valuation for any annuity or pure endowment purchased under a group annuity or pure endowment contract.

Application of the 1994 GAR Table

8. In using the 1994 GAR Table, the mortality rate for a person age x in year (1994 + n) is calculated as follows:

$$q_x^{1994+n} = q_x^{1994} (1 - AA_x)^n$$

where the q_x^{1994} and AA_xs are as specified in the 1994 GAR Table.

Appendix A-822

Asset Adequacy Analysis Requirements

Definitions

1. “Asset adequacy analysis” means an analysis of the adequacy of reserves and related actuarial items, in light of the assets supporting such reserves and related items, to meet the obligations of an insurer.

Asset Adequacy Analysis

2. The reserves and related items, when considered in light of the assets held by the company with respect to such reserves and related actuarial items including, but not limited to, the investment earnings on the assets, and the considerations anticipated to be received and retained under the policies and contracts, shall make adequate provision, according to presently accepted actuarial standards of practice, for the anticipated cash flows required by the contractual obligations and related expenses of the company.

3. If the company determines as the result of asset adequacy analysis that a reserve should be held in addition to the aggregate reserve held and calculated in accordance with methods set forth in Appendix A-820, the company shall establish the additional reserve.

4. Additional reserves established above and deemed not necessary in subsequent years may be released. The release of such reserves would not be deemed an adoption of a lower standard of valuation.

This page intentionally left blank.

Appendix A-830

Valuation of Life Insurance Policies (Including the Introduction and Use of New Select Mortality Factors)

Purpose

1. The purpose of this appendix is to provide:

   a. Tables of select mortality factors and rules for their use;

   b. Rules concerning a minimum standard for the valuation of plans with nonlevel premiums or benefits; and

   c. Rules concerning a minimum standard for the valuation of plans with secondary guarantees.

2. The method for calculating basic reserves defined in this appendix will constitute the Commissioners' Reserve Valuation Method for policies to which this appendix is applicable.

Applicability

3. This appendix shall apply to all life insurance policies, with or without nonforfeiture values, issued on or after the effective date of this appendix, subject to the following exceptions and conditions. Nothing in this section shall be construed to expand the applicability of the Valuation of Life Insurance Policies Model Regulation to include life insurance policies exempted under this section.

   a. Exceptions

      i. This appendix shall not apply to any individual life insurance policy issued on or after the effective date of this appendix if the policy is issued in accordance with and as a result of the exercise of a reentry provision contained in the original life insurance policy of the same or greater face amount, issued before the effective date of this appendix, that guarantees the premium rates of the new policy. This appendix also shall not apply to subsequent policies issued as a result of the exercise of such a provision, or a derivation of the provision, in the new policy.

      ii. This appendix shall not apply to any universal life policy that meets all the following requirements:

         (a) Secondary guarantee period, if any, is five (5) years or less;

         (b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables as defined in paragraph 9 and the applicable valuation interest rate. For contracts issued beginning January 1, 2004, the net level reserve premium is based on the ultimate mortality rates in the 2001 CSO Mortality Table; and

         (c) The initial surrender charge is not less than 100 percent of the first year annualized specified premium for the secondary guarantee period.

Drafting Note: Policies with a secondary guarantee are described in paragraph 29.

iii. This appendix shall not apply to any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

iv. This appendix shall not apply to any variable universal life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

v. This appendix shall not apply to a group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year.

vi. This appendix shall not apply to preneed policies, which follow the requirements of A-817.

b. Conditions

i. Calculation of the minimum valuation standard for policies with guaranteed nonlevel gross premiums or guaranteed nonlevel benefits (other than universal life policies), or both, shall be in accordance with the provisions of paragraphs 21-28.

ii. Calculation of the minimum valuation standard for flexible premium and fixed premium universal life insurance policies, that contain provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period shall be in accordance with the provisions of paragraphs 29-32.

Definitions

4. “Basic reserves” means reserves calculated in accordance with Appendix A-820, paragraphs 9-11.

5. “Contract segmentation method” means the method of dividing the period from issue to mandatory expiration of a policy into successive segments, with the length of each segment being defined as the period from the end of the prior segment (from policy inception, for the first segment) to the end of the latest policy year as determined below. For contracts beginning January 1, 2004, all calculations are made using the 2001 CSO Mortality Rate, and, if elected, the optional minimum mortality standard for deficiency reserves stipulated in paragraph 17. (or any other valuation mortality table adopted by the National Association of Insurance Commissioners (NAIC) after the effective date of this appendix for this purpose), and, if elected, the optional minimum mortality standard for deficiency reserves stipulated in paragraph 17 of this appendix. The length of a particular contract segment shall be set equal to the minimum of the value *t* for which G_t is greater than R_t (if G_t never exceeds R_t the segment length is deemed to be the number of years from the beginning of the segment to the mandatory expiration date of the policy), where G_t and R_t are defined as follows:

$$G_t = \frac{GPx+k+t}{GP_{x+k+t-1}}$$

where: x = original issue age;

k = the number of years from the date of issue to the beginning of the segment;

t = 1, 2, ...; *t* is reset to 1 at the beginning of each segment;

$GP_{x+k+t-1}$ = Guaranteed gross premium per thousand of face amount for year *t* of the segment, ignoring policy fees only if level for the premium paying period of the policy.

$$R_t = \frac{q_{x+k+t}}{q_{x+k+t-1}}$$

However, R_t may be increased or decreased by one percent in any policy year, at the company's option, but R_t shall not be less than one;

where: x, k and t are as defined above, and

The value of "$q_{x+k+t-1}$" is the valuation mortality rate for deficiency reserves in policy year k+t, but using the unmodified select mortality rates if modified select mortality rates are used in the computation of deficiency reserves.

However, if GP_{x+k+t} is greater than 0 and $GP_{x+k+t-1}$ is equal to 0, G_t shall be deemed to be 1000. If GP_{x+k+t} and $GP_{x+k+t-1}$ are both equal to 0, G_t shall be deemed to be 0.

Drafting Note: The purpose of the one percent tolerance in the R factor is to prevent irrational segment lengths due to such things as premium rounding. For example, consider a plan in which gross premiums are designed at some point to be a ratio times the underlying ultimate mortality rates, where the ratio varies by issue age. The resulting segments may be greater than one year, because the guaranteed gross premiums are not expressed in fractional cents. The tolerance factor allows the creation of one year segments for a plan in which premiums parallel the underlying valuation mortality table.

6. "Deficiency reserves" means the excess, if greater than zero, of

a. Minimum reserves calculated in accordance with Appendix A-820, paragraphs 17 and 18, over

b. Basic reserves.

7. "Guaranteed gross premiums" means the premiums under a policy of life insurance that are guaranteed and determined at issue.

8. "Maximum valuation interest rates" means the interest rates defined in Appendix A-820, paragraphs 5-8 (Computation of Minimum Standard by Calendar Year of Issue – All Business) that are to be used in determining the minimum standard for the valuation of life insurance policies.

9. "1980 CSO valuation tables" means the Commissioners' 1980 Standard Ordinary Mortality Table (1980 CSO Table) without ten-year selection factors, referenced in Appendix A-820, and variations of the 1980 CSO Table approved by the NAIC, such as the smoker and nonsmoker versions approved in December 1983.

Drafting Note: This appendix defines the 1980 CSO Tables without the existing ten -year select mortality factors to assure that, if select mortality factors are elected, only one set of factors may be applied to the base valuation mortality table.

10. "Scheduled gross premium" means the smallest illustrated gross premium at issue for other than universal life insurance policies. For universal life insurance policies, scheduled gross premium means the smallest specified premium described in paragraph 29.c., if any, or else the minimum premium described in paragraph 29.d.

11. a. "Segmented reserves" means reserves, calculated using segments produced by the contract segmentation method, equal to the present value of all future guaranteed benefits

less the present value of all future net premiums to the mandatory expiration of a policy, where the net premiums within each segment are a uniform percentage of the respective guaranteed gross premiums within the segment. The uniform percentage for each segment is such that, at the beginning of the segment, the present value of the net premiums within the segment equals:

i. The present value of the death benefits within the segment, plus

ii. The present value of any unusual guaranteed cash value (see paragraph 24) occurring at the end of the segment, less

iii. Any unusual guaranteed cash value occurring at the start of the segment, plus

iv. For the first segment only, the excess of the Item (a) over Item (b), as follows:

(a) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for in the first segment after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary within the first segment on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.

(b) A net one year term premium for the benefits provided for in the first policy year.

b. The length of each segment is determined by the "contract segmentation method," as defined in paragraph 5.

c. The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the sum of the lengths of all segments of the policy.

d. For both basic reserves and deficiency reserves computed by the segmented method, present values shall include future benefits and net premiums in the current segment and in all subsequent segments.

Drafting Note: The segmentation requirement should not be limited to plans with no cash surrender values; otherwise companies could avoid segmentation entirely by designing policies with minimal (positive) cash values. Segmentation for plans with cash surrender values should be based solely upon gross premium levels. Basing segmentation upon the level of cash surrender values introduces complications because of the inter-relationship between minimum cash surrender values and gross premium patterns. The requirements of this appendix relating to reserves for plans with unusual cash values and to reserves if cash values exceed calculated reserves serve to link required reserves and cash surrender values. The calculation of segmented reserves shall not be linked to the occurrence of a positive unitary terminal reserve at the end of a segment. The requirement of this appendix to hold the greater of the segmented reserve or the unitary reserve eliminates the need for any linkage.

12. "Tabular cost of insurance" means the net single premium at the beginning of a policy year for one-year term insurance in the amount of the guaranteed death benefit in that policy year.

13. "Ten-year select factors" means the select factors referenced in Appendix A-820.

14. a. "Unitary reserves" means the present value of all future guaranteed benefits less the present value of all future modified net premiums, where:

i. Guaranteed benefits and modified net premiums are considered to the mandatory expiration of the policy; and

ii. Modified net premiums are a uniform percentage of the respective guaranteed gross premiums, where the uniform percentage is such that, at issue, the present value of the net premiums equals the present value of all death benefits and pure endowments, plus the excess of Item (a) over Item (b), as follows:

(a) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary of the policy on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.

(b) A net one year term premium for the benefits provided for in the first policy year.

b. The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the length from issue to the mandatory expiration of the policy.

Drafting Note: The purpose of this paragraph is to define as specifically as possible what has become commonly called the unitary method. Appendix A-820 does not define the term "unitary" for policies with nonlevel premiums or benefits; its requirement for reserves "computed by a method that is consistent with the principles of Appendix A-820" has not been uniformly interpreted.

15. "Universal life insurance policy" means any individual life insurance policy under the provisions of which separately identified interest credits (other than in connection with dividend accumulations, premium deposit funds, or other supplementary accounts) and mortality or expense charges are made to the policy.

General Calculation Requirements for Basic Reserves and Premium Deficiency Reserves

16. Prior to January 1, 2004, at the election of the company for any one or more specified plans of life insurance, the minimum mortality standard for basic reserves may be calculated using the 1980 CSO valuation tables with select mortality factors. Effective January 1, 2004, the 2001 CSO Mortality Table is the minimum standard for basic reserves (or any other valuation mortality table adopted by the NAIC after the effective date of the 2001 CSO table for this purpose). Prior to January 1, 2004 if select mortality factors are elected, they may be:

a. The ten-year select mortality factors referenced in Appendix A-820;

b. The select mortality factors in Attachment 1 of this appendix; or

Drafting Note: The select mortality factors for duration 1 through 15 in Attachment 1 of this appendix reflect the Society of Actuaries' data for the years 1983 through 1986, split by sex and smoking status, with fifteen years of mortality improvement, based on Society of Actuaries' Projection Scale A applied. A 50% margin was added. The factors were then graded to the 1980 CSO Tables over the next five durations. A 50% margin was deemed appropriate to provide a reasonable margin, with little likelihood that actual experience for significant blocks of business would exceed it.

c. Any other table of select mortality factors adopted by the NAIC after the effective date of this appendix for the purpose of calculating basic reserves.

17. Deficiency reserves, if any, are calculated for each policy as the excess, if greater than zero, of the quantity A over the basic reserve. The quantity A is obtained by recalculating the basic reserve for the policy using guaranteed gross premiums instead of net premiums when the guaranteed gross premiums are less than the corresponding net premiums. At the election of the company for any one or more specified plans of insurance, the quantity A and prior to January 1, 2004 the corresponding net premiums used in the determination of quantity A may be based upon the 1980 CSO valuation tables with select mortality factors (or any other valuation mortality table adopted by the NAIC after the effective date of this appendix). If select mortality factors are elected, they may be:

a. The ten-year select mortality factors referenced in Appendix A-820;

b. The select mortality factors in Attachment 1 of this appendix;

Effective January 1, 2004, the 2001 CSO Mortality Table is the minimum standard for deficiency reserves. If select mortality rates are used, they may be multiplied by X percent for durations in the first segment, subject to the conditions specified in Sections 17c. to iv. (a). In demonstrating compliance with those conditions, the demonstrations may not combine the results of tests that utilize the 1980 CSO Mortality Table with those tests that utilize the 2001 CSO Mortality Table, unless the combination is explicitly required by regulation or necessary to be in compliance with relevant Actuarial Standards of Practice.

Drafting Note: The select mortality factors in Attachment 1 of this appendix do not reflect the underwriting risk classes that have evolved since the period of the underlying experience. In light of this consideration and the recent recognition of the regulatory value of actuarial opinions, this appendix allows actuarial judgment to be used for deficiency reserves.

c. For durations in the first segment, X percent of the select mortality factors in Attachment 1 of this appendix, subject to the following:

i. X may vary by policy year, policy form, underwriting classification, issue age, or any other policy factor expected to affect mortality experience;

ii. X is such that, when using the valuation interest rate used for basic reserves, Item (a) is greater than or equal to Item (b);

(a) The actuarial present value of future death benefits, calculated using the mortality rates resulting from the application of X;

(b) The actuarial present value of future death benefits calculated using anticipated mortality experience without recognition of mortality improvement beyond the valuation date;

iii. X is such that the mortality rates resulting from the application of X are at least as great as the anticipated mortality experience, without recognition of mortality improvement beyond the valuation date, in each of the first five (5) years after the valuation date;

iv. The appointed actuary shall increase X at any valuation date where it is necessary to continue to meet all the requirements of paragraph 17.c.;

v. The appointed actuary may decrease X at any valuation date as long as X continues to meet all the requirements of paragraph 17.c.; and

vi. The appointed actuary shall specifically take into account the adverse effect on expected mortality and lapsation of any anticipated or actual increase in gross premiums.

(a) If X is less than 100 percent at any duration for any policy, the following requirements shall be met:

(i) The appointed actuary shall annually prepare an actuarial opinion and memorandum for the company in conformance with the asset adequacy analysis requirements as outlined in Appendix A-822;

(ii) The appointed actuary shall disclose, in the Regulatory Asset Adequacy Issues Summary, the impact of the insufficiency of assets to support the payment of benefits and expenses and the establishment of statutory reserves during one or more interim periods; and

(iii) The appointed actuary shall annually opine for all policies subject to this appendix as to whether the mortality rates resulting from the application of X meet the requirements of paragraph 17.c. This opinion shall be supported by an actuarial report, subject to appropriate Actuarial Standards of Practice promulgated by the Actuarial Standards Board of the American Academy of Actuaries. The X factors shall reflect anticipated future mortality, without recognition of mortality improvement beyond the valuation date, taking into account relevant emerging experience.

d. Any other table of select mortality factors adopted by the NAIC after the effective date of this appendix for the purpose of calculating deficiency reserves.

18. This paragraph applies to both basic reserves and deficiency reserves. Any set of select mortality factors may be used only for the first segment. However, if the first segment is less than ten (10) years, the appropriate ten-year select mortality factors referenced in Appendix A-820 may be used thereafter through the tenth policy year from the date of issue.

Drafting Note: This appendix does not allow the use of select mortality factors beyond the first segment. The rationale is that the result of a premium increase that is sufficient to require a new segment will be increased lapsation, leading to mortality deterioration after the increase. Also, for policies that have reentry provisions, select mortality factors shall not be used in segments beginning after reentry unless a new policy is actually issued. However, this appendix allows the use of the ten-year select mortality factors referenced in Appendix A-820 beyond the first segment (but in no case beyond the tenth policy year) in recognition that the mortality deterioration is unlikely to occur to a significant degree within the first ten (10) years.

19. In determining basic reserves or deficiency reserves, guaranteed gross premiums without policy fees may be used where the calculation involves the guaranteed gross premium but only if the policy fee is a level dollar amount after the first policy year. In determining deficiency reserves, policy fees may be included in guaranteed gross premiums, even if not included in the actual calculation of basic reserves.

20. Reserves for policies that have changes to guaranteed gross premiums, guaranteed benefits, guaranteed charges, or guaranteed credits that are unilaterally made by the insurer after issue and that are effective for more than one year after the date of the change shall be the greatest of the following: (1) reserves calculated ignoring the guarantee, (2) reserves assuming the guarantee was made at issue, and (3) reserves assuming that the policy was issued on the date of the guarantee.

Calculation of Minimum Valuation Standard for Policies with Guaranteed Nonlevel Gross Premiums or Guaranteed Nonlevel Benefits (Other than Universal Life Policies)

21. Basic Reserves

a. Basic reserves shall be calculated as the greater of the segmented reserves and the unitary reserves. Both the segmented reserves and the unitary reserves for any policy shall use the same valuation mortality table and selection factors. At the option of the insurer, in calculating segmented reserves and net premiums, either of the adjustments described in subparagraph i. or ii. below may be made:

i. Treat the unitary reserve, if greater than zero, applicable at the end of each segment as a pure endowment and subtract the unitary reserve, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.

ii. Treat the guaranteed cash surrender value, if greater than zero, applicable at the end of each segment as a pure endowment; and subtract the guaranteed cash surrender value, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.

22. Deficiency Reserves

a. The deficiency reserve at any duration shall be calculated:

i. On a unitary basis if the corresponding basic reserve determined by paragraph 21 is unitary;

ii. On a segmented basis if the corresponding basic reserve determined by paragraph 21 is segmented; or

iii. On the segmented basis if the corresponding basic reserve determined by paragraph 21 is equal to both the segmented reserve and the unitary reserve.

b. Paragraph 22 shall apply to any policy for which the guaranteed gross premium at any duration is less than the corresponding modified net premium calculated by the method used in determining the basic reserves, but using the minimum valuation standards of mortality (specified in paragraph 17) and rate of interest.

c. Deficiency reserves, if any, shall be calculated for each policy as the excess if greater than zero, for the current and all remaining periods, of the quantity A over the basic reserve, where A is obtained as indicated in paragraph 17.

d. For deficiency reserves determined on a segmented basis, the quantity A is determined using segment lengths equal to those determined for segmented basic reserves.

23. Minimum Value

a. Basic reserves may not be less than the tabular cost of insurance for the balance of the policy year, if mean reserves are used. Basic reserves may not be less than the tabular cost of insurance for the balance of the current modal period or to the paid-to-date, if later, but not beyond the next policy anniversary, if mid-terminal reserves are used. The tabular cost of insurance shall use the same valuation mortality table and interest rates as that used for the calculation of the segmented reserves. However, if select mortality factors are used, they shall be the ten-year select factors referenced in Appendix A-820. In no case may total reserves (including basic reserves, deficiency reserves and any reserves held for supplemental benefits that would expire upon contract termination) be less than the amount that the policyowner would receive (including the cash surrender value of the supplemental benefits, if any, referred to above), exclusive of any deduction for policy loans, upon termination of the policy. Effective January 1, 2004, the valuation mortality table used in determining the tabular cost of insurance shall be the ultimate mortality rates in the 2001 CSO Mortality Table.

24. Unusual Pattern of Guaranteed Cash Surrender Values

Drafting Note: This requirement is independent of both the segmentation process and the unitary process. After the greater of the segmented or the unitary reserve has been determined, then this paragraph imposes an additional floor on the ultimate reserve. The purpose of this paragraph is to assure adequate funding of significant increases in guaranteed cash surrender values.

a. For any policy with an unusual pattern of guaranteed cash surrender values, the reserves actually held prior to the first unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the first unusual guaranteed cash surrender value as a pure endowment and treating the policy as an *n* year policy providing term insurance plus a pure endowment equal to the unusual cash surrender value, where *n* is the number of years from the date of issue to the date the unusual cash surrender value is scheduled.

b. The reserves actually held subsequent to any unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the policy as an *n* year policy providing term insurance plus a pure endowment equal to the next unusual guaranteed cash surrender value, and treating any unusual guaranteed cash surrender value at the end of the prior segment as a net single premium, where

i. *n* is the number of years from the date of the last unusual guaranteed cash surrender value prior to the valuation date to the earlier of:

(a) The date of the next unusual guaranteed cash surrender value, if any, that is scheduled after the valuation date; or

(b) The mandatory expiration date of the policy; and

ii. The net premium for a given year during the *n* year period is equal to the product of the net to gross ratio and the respective gross premium; and

iii. The net to gross ratio is equal to Item (a) divided by Item (b) as follows:

(a) The present value, at the beginning of the *n* year period, of death benefits payable during the *n* year period plus the present value, at the beginning of the n year period, of the next unusual guaranteed cash surrender value, if any, minus the amount of the last unusual guaranteed cash surrender value, if any, scheduled at the beginning of the *n* year period.

(b) The present value, at the beginning of the *n* year period, of the scheduled gross premiums payable during the *n* year period.

c. For purposes of this paragraph, a policy is considered to have an unusual pattern of guaranteed cash surrender values if any future guaranteed cash surrender value exceeds the prior year's guaranteed cash surrender value by more than the sum of:

i. One hundred ten percent (110%) of the scheduled gross premium for that year;

ii. One hundred ten percent (110%) of one year's accrued interest on the sum of the prior year's guaranteed cash surrender value and the scheduled gross premium using the nonforfeiture interest rate used for calculating policy guaranteed cash surrender values; and

iii. Five percent (5%) of the first policy year surrender charge, if any.

25. Optional Exemption for Yearly Renewable Term Reinsurance. At the option of the company, the following approach for reserves on YRT reinsurance may be used:

Drafting Note: Traditional reserves for yearly renewable term (YRT) reinsurance, the calculations of which this section describes, are already adequate and sufficient. However, without this option in the appendix, YRT reinsurance would be subject to the more complex segmentation calculations.

a. Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.

b. Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in paragraph 23.

c. Deficiency reserves.

i. For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective maximum guaranteed gross premium.

ii. Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with subparagraph i. above.

d. Prior to January 1, 2004, for purposes of this paragraph, the calculations use the maximum valuation interest rate and the 1980 CSO mortality tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this appendix by the NAIC for this purpose. Effective January 1, 2004, the calculations specified in this paragraph (25) shall use the ultimate mortality rates in the 2001 CSO Mortality Table.

e. A reinsurance agreement shall be considered YRT reinsurance for purposes of this paragraph if only the mortality risk is reinsured.

f. If the assuming company chooses this optional exemption, the ceding company's reinsurance reserve credit shall be limited to the amount of reserve held by the assuming company for the affected policies.

26. Optional Exemption for Attained-Age-Based Yearly Renewable Term Life Insurance Policies. At the option of the company, the following approach for reserves for attained-age-based YRT life insurance policies may be used:

Drafting Note: Traditional reserves for attained-age-based YRT policies, the calculations of which this subsection describes, are already adequate and sufficient. However, without this option in the appendix, these policies would be subject to the more complex segmentation calculations.

a. Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.

b. Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in paragraph 23.

c. Deficiency reserves.

i. For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective maximum guaranteed gross premium.

ii. Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with subparagraph i. above.

d. Prior to January 1, 2004, for purposes of this paragraph, the calculations use the maximum valuation interest rate and the 1980 CSO valuation tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this appendix by the NAIC for this purpose. Effective January 1, 2004, the calculations specified in this paragraph shall use the ultimate mortality rates in the 2001 CSO Mortality Table.

e. A policy shall be considered an attained-age-based YRT life insurance policy for purposes of this subsection if:

i. The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are based upon the attained age of the insured such that the rate for any given policy at a given attained age of the insured is independent of the year the policy was issued; and

ii. The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are the same as the premium rates for policies covering all insureds of the same sex, risk class, plan of insurance and attained age.

f. For policies that become attained-age-based YRT policies after an initial period of coverage, the approach of this subsection may be used after the initial period if:

i. The initial period is constant for all insureds of the same sex, risk class and plan of insurance; or

ii. The initial period runs to a common attained age for all insureds of the same sex, risk class and plan of insurance; and

iii. After the initial period of coverage, the policy meets the conditions of paragraph 26.e. above.

g. If this election is made, this approach shall be applied in determining reserves for all attained-age-based YRT life insurance policies issued on or after the effective date of this appendix.

27. Exemption from Unitary Reserves for Certain *n*-Year Renewable Term Life Insurance Polices. Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met:

Drafting Note: Without this exemption, companies issuing certain *n*-year renewable term policies could be forced to hold reserves higher than *n*-year term reserves, even though in many cases gross premiums are well above valuation mortality rates.

a. The policy consists of a series of *n*-year periods, including the first period and all renewal periods, where *n* is the same for each period, except that for the final renewal period, n may be truncated or extended to reach the expiry age, provided that this final renewal period is less than 10 years and less than twice the size of the earlier n-year periods, and for each period, the premium rates on both the initial current premium scale and the guaranteed maximum premium scale are level;

b. Prior to January 1, 2004, the guaranteed gross premiums in all *n*-year periods are not less than the corresponding net premiums based upon the 1980 CSO Table with or without the ten-year select mortality factors. Effective January 1, 2004, the calculations specified in this paragraph shall use the ultimate mortality rates in the 2001 CSO Mortality Table; and

c. There are no cash surrender values in any policy year.

28. Exemption from Unitary Reserves for Certain Juvenile Policies. Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met, based upon the initial current premium scale at issue:

a. At issue, the insured is age twenty-four (24) or younger;

b. Until the insured reaches the end of the juvenile period, which shall occur at or before age twenty-five (25), the gross premiums and death benefits are level, and there are no cash surrender values; and

c. After the end of the juvenile period, gross premiums are level for the remainder of the premium paying period, and death benefits are level for the remainder of the life of the policy.

Drafting Note: The jumping juvenile policy described has traditionally been valued in two segments. This exemption will allow that practice to continue without requiring the calculation of reserves on a unitary basis. However, within each segment, both basic and deficiency reserves shall comply with the segmented reserve requirements.

Calculation of Minimum Valuation Standard for Flexible Premium and Fixed Premium Universal Life Insurance Policies That Contain Provisions Resulting in the Ability of a Policyowner to Keep a Policy in Force Over a Secondary Guarantee Period

29. General

a. Policies with a secondary guarantee include:

i. A policy with a guarantee that the policy will remain in force at the original schedule of benefits, subject only to the payment of specified premiums;

ii. Prior to January 1, 2004 a policy in which the minimum premium at any duration is less than the corresponding one year valuation premium, calculated using the maximum valuation interest rate and the 1980 CSO valuation tables with or without ten-year select mortality factors, or any other table adopted after the effective date of this appendix by the NAIC for this purpose. Effective January 1, 2004, the one-year valuation premium shall be calculated using the ultimate mortality rates in the 2001 CSO Mortality Table; or

iii. A policy with any combination of subparagraph i. and ii.

Drafting Note: Universal life and variable universal life policies with secondary guarantees that meet the requirements of paragraph 3.a.ii. are not subject to this appendix.

b. A secondary guarantee period is the period for which the policy is guaranteed to remain in force subject only to a secondary guarantee. When a policy contains more than one secondary guarantee, the minimum reserve shall be the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees. Secondary guarantees that are unilaterally changed by the insurer after issue shall be considered to have been made at issue. Reserves described in paragraphs 30 and 31 below shall be recalculated from issue to reflect these changes.

c. Specified premiums mean the premiums specified in the policy, the payment of which guarantees that the policy will remain in force at the original schedule of benefits, but which otherwise would be insufficient to keep the policy in force in the absence of the guarantee if maximum mortality and expense charges and minimum interest credits were made and any applicable surrender charges were assessed.

d. For purposes of this paragraph, the minimum premium for any policy year is the premium that, when paid into a policy with a zero account value at the beginning of the policy year, produces a zero account value at the end of the policy year. The minimum premium calculation shall use the policy cost factors (including mortality charges, loads and expense charges) and the interest crediting rate, which are all guaranteed at issue.

e. The one-year valuation premium means the net one-year premium based upon the original schedule of benefits for a given policy year. The one-year valuation premiums for all policy years are calculated at issue. The select mortality factors defined in paragraphs 17.b., 17.c. and 17.d. may not be used to calculate the one-year valuation premiums.

f. The one-year valuation premium should reflect the frequency of fund processing, as well as the distribution of deaths assumption employed in the calculation of the monthly mortality charges to the fund.

30. Basic Reserves for the Secondary Guarantees. Basic reserves for the secondary guarantees shall be the segmented reserves for the secondary guarantee period. In calculating the segments and the segmented reserves, the gross premiums shall be set equal to the specified premiums, if any, or otherwise to the minimum premiums, that keep the policy in force and the segments will be determined according to the contract segmentation method as defined in paragraph 5.

31. Deficiency Reserves for the Secondary Guarantees. Deficiency reserves, if any, for the secondary guarantees shall be calculated for the secondary guarantee period in the same manner as described in paragraph 22 with gross premiums set equal to the specified premiums, if any, or otherwise to the minimum premiums that keep the policy in force.

32. Minimum Reserves. The minimum reserves during the secondary guarantee period are the greater of:

a. The basic reserves for the secondary guarantee plus the deficiency reserve, if any, for the secondary guarantees; or

b. The minimum reserves required by other appendices governing universal life plans.

Attachment 1

SELECT MORTALITY FACTORS

This Attachment contains tables of select mortality factors that are the bases to which the respective percentage of paragraphs 16.b., 17.b. and 17.c. are applied.

The six tables of select mortality factors contained herein include: (1) male aggregate, (2) male nonsmoker, (3) male smoker, (4) female aggregate, (5) female nonsmoker, and (6) female smoker.

These tables apply to both age last birthday and age nearest birthday mortality tables.

For sex-blended mortality tables, compute select mortality factors in the same proportion as the underlying mortality. For example, for the 1980 CSO-B Table, the calculated select mortality factors are eighty percent (80%) of the appropriate male table in this Attachment, plus twenty percent (20%) of the appropriate female table in this Attachment.

Attachment 1

SELECT MORTALITY FACTORS

Male, Aggregate

Issue	Duration

Appendix B
Interpretations of the Emerging Accounting Issues (E) Working Group

Introduction

The NAIC Emerging Accounting Issues (E) Working Group (EAIWG) is responsible for responding to Statutory Accounting Principle (SAP) questions that generally relate to application, interpretation and clarification.

The NAIC Statutory Accounting Principles (E) Working Group (SAPWG) addressed all generally accepted accounting principles (GAAP) pronouncements included in categories a, b and c of the Statutory Hierarchy issued through 1996 during the initial drafting of the SSAPs. As documented in the Policy Statement on the Maintenance of Statutory Accounting Principles (included in Appendix F), the SAPWG will continue to review new GAAP guidance for applicability to SAP. Beginning January 1, 1999, the EAIWG has addressed the EITF opinions issued subsequent to 1996.

Appendix B includes the final interpretations of the EAIWG through December 2014.

Reporting entities should note that the interpretations are generally effective when finalized by the EAIWG. This Manual may not include all of the interpretations currently in effect due to the fact that it is printed annually. As items are adopted, updates to the Manual are posted to the following password-protected Web site:

www.naic.org/committees_e_app_manual_updates.htm

Appendix B - Interpretations of Emerging Accounting Issues (E) Working Group - Volume I

In 2009, the Emerging Accounting Issues (E) Working Group reached a consensus to incorporate "rejected" and "non-applicable" FASB EITFs that do not provide additional statutory accounting guidance in a listing within a designated interpretation. This interpretation (INT 99-00) included reference of all FASB EITFs, including those previously included in Appendix B as a statutory accounting interpretation, that were 1) rejected as not applicable to statutory accounting; 2) rejected without providing additional statutory guidance; or 3) rejected on the basis of issues rejected in an SSAP. In 2014, the Statutory Accounting Principles (E) Working Group adopted a proposal to move all references to rejected GAAP material from INT 99-00 into *Issue Paper No. 99—Nonapplicable GAAP Pronouncements*.

In 2013, the Statutory Accounting Principles (E) Working Group adopted a proposal to remove completely superseded SSAPs and nullified interpretations (INTs) from the printed Manual and include these items on the Statutory Accounting Principles (E) Working Group "Updates to the Accounting Practices and Procedures Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). By including on this password-protected updates page, annual subscribers to the printed *Accounting Practices and Procedures Manual* will continue to have access to the superseded and nullified guidance for historical purposes. The completely superseded SSAPs and nullified INTs are still included in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM. References on the face of the INTs are classified as current or superseded.

No.	Title	Page

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-03: Illustration of the Accounting/Reporting of Deposit-Type Contracts in Accordance with SSAPs No. 51, 52 and 56

INT 00-03 Dates Discussed

December 6, 1999, March 13, 2000

INT 00-03 References

Current:
SSAP No. 51—Life Contracts (SSAP No. 51)
SSAP No. 52—Deposit-Type Contracts (SSAP No. 52)
SSAP No. 56—Separate Accounts (SSAP No. 56)

INT 00-03 Issue

1. Deposit-type contracts, as defined in SSAP No. 52 may be maintained in the general account or transferred to the separate account of an insurance company. During the process of preparing Blanks proposals to conform the reporting requirements to the SSAPs, the Impact of Codification on NAIC Publications Working Group noted an inconsistency in the reporting of deposit-type contracts between SSAP No. 52 and SSAP No. 56. At the 1999 NAIC Fall National Meeting, SSAP No. 56 was amended to clarify that the requirements of SSAP No. 52 are applicable to separate account deposit-type contracts.

2. Exhibit A is included as an illustration of accounting/reporting of separate account deposit-type contracts in accordance with SSAP Nos. 51, 52 and 56. Is this illustration consistent with the intent of the Codification of Statutory Accounting Principles (E) Working Group?

INT 00-03 Discussion

3. The Working Group reached a consensus that Exhibit A is consistent with the intent of the SSAPs.

INT 00-03 Status

4. No further discussion is planned.

Illustrative Example of the Accounting/Reporting of Deposit-Type Contracts in Accordance with SSAPs 51/52

NOTE: Entries presented in this illustration may not reflect all accounting entries associated with the activity, e.g., some "due from" or "due to" entries are eliminated to simplify the example.

1. Contractholder surrendered an ordinary life insurance policy and elected to place the proceeds ($100,000) under a supplementary contract without life contingencies (SCWOLC).

General Account Statement

a.	Surrender Benefits & Withdrawals	$100,000	
	Liability for Deposit –Type Contracts		$100,000
b.	Aggregate Reserves for Life Policies	$100,000	
	Increase in Aggregate Reserves for Life Policies		$100,000

2. Insurer transfers, pursuant to contract provisions, $95,000 to separate account fund for SCWOLC contracts from general account fund for SCWOLC contracts; $5,000 is retained in the general account.

General Account Statement

a.	Liability for Deposit –Type Contracts	$95,000	
	Transfers to Separate Accounts		$95,000
b.	Transfers to Separate Account	$95,000	
	Cash		$95,000

Separate Accounts Statement

c.	Other transfers from General Account (net)	$95,000	
	Transfers on account of deposit-type contracts		$95,000
d.	Cash	$95,000	
	Other Transfers from General Account		$95,000
e.	Increase in liability for deposit-type contracts	$95,000	
	Liability for Deposit-Type Contracts		$95,000

3. Insurer establishes a $4,000 CARVM valuation allowance for this contract in the separate account fund.

Separate Accounts Statement

a.	Liability for Deposit-Type Contracts	$4,000	
	Increase in liability for deposit-type contracts		$4,000
b.	Change in expense allowances recognized in reserves	$4,000	
	Other transfers from General Account (net)		$4,000

General Account Statement

c.	Transfers to Separate Accounts (net)	$4,000	
	Transfer to/or (from) Separate Accounts		$4,000

4. Insurer’s separate account fund for SCWOLC contracts assets earns $2,000 investment income that is immediately credited to the separate account fund for SCWOLC contracts.

Separate Accounts Statement

a.	Cash	$2,000	
	Net investment income		$2,000
b.	Increase in liability for deposit-type contracts	$2,000	
	Liability for Deposit-Type Contracts		$2,000

5. Contractholder is paid a $1,000 SCWOLC contract benefit from the separate account fund. The example has been simplified to show the cash flows from the Separate Account to the General Account and the payment to the contractholder from the General Account.

General Account Statement

a.	Cash	$1,000	
	Liability for Deposit-Type Contracts		$1,000
b.	Liability for Deposit-Type Contracts	$1,000	
	Cash		$1,000

Separate Accounts Statement

c.	Transfers on account of deposit-type contracts	$1,000	
	Cash		$1,000
d.	Liability for Deposit-type Contracts	$1,000	
	Increase in liability for deposit-type contracts		$1,000

6. Contractholder requests the insurer to purchase a variable annuity contract (insurance product) with $25,000 drawn from the separate account fund supporting the SCWOLC contract (deposit-type contract) and transfer it to a separate fund supporting variable annuities. This example has been simplified and ignores the internal cash exchange.

General Account Statement

a.	Transfers to Separate Accounts	$25,000	
	Premiums and Annuity Considerations		$25,000

Separate Accounts Statement

b.	Liability for Deposit-Type Contracts	$25,000	
	Increase in liability for deposit-type contracts		$25,000
c.	Transfers on account of deposit-type contracts	$25,000	
	Other transfers to general account (net)		$25,000
d.	Other transfers to general account (net)	$25,000	
	Net Premiums and Annuity Considerations		$25,000
e.	Increase in aggregate reserve for life, annuity	$25,000	
	Aggregate Reserve for life, annuity		$25,000

7. Contractholder in accordance with a Group GIC contract requests that $15,000 be withdrawn from the Group GIC Separate Account fund maintained by the insurer and transferred to the contractholder's Separate Account fund supporting the SCWOLC contract.

Separate Accounts Statement

a.	Liability for Deposit-Type Contracts (GIC)	$15,000	
	Increase in liability for deposit-type contracts		$15,000
b.	Transfers on account of deposit-type contracts	$15,000	
	Cash		$15,000
c.	Cash	$15,000	
	Transfers on account of deposit-type contracts		$15,000
d.	Increase in liability for deposit-type contracts	$15,000	
	Liability for Deposit-Type Contracts (SCWOLC)		$15,000

General Accounts Statement

e.	Other transfers to separate account (net)	$15,000	
	Liability for Deposit-Type Contracts (SCWOLC)		$15,000
f.	Liability for Deposit-Type Contracts (SCWOLC)	$15,000	
	Other transfers to separate account (net)		$15,000

8. Contractholder is assessed the annual administration fee of $100 for the SCWOLC contract.

Separate Accounts Statement

a.	Administration fees	$100	
	Cash		$100
b.	Liability for Deposit-type contracts	$100	
	Increase in liability for deposit-type contracts		$100

General Account Statement

c.	Cash	$100	
	Management fees		$100

GENERAL ACCOUNT
ANNUAL STATEMENT FOR THE YEAR 2001 OF THE

SUMMARY OF OPERATIONS
(Excluding Unrealized Capital Gains and Losses)

		1 Current Year	2 Prior Year
1.	Premiums and annuity considerations for life and accident and health policies and contracts (Exhibit 1, Part 1, Line 20.4, Col. 1, less Col. 11)	25,000	
2.	Considerations for supplementary contracts with life contingencies		
3.	Net investment income (Exhibit 2, Line 16)		
4.	Amortization of Interest Maintenance Reserve (IMR) (Page 33, Line 5)		
5.	Separate Accounts net gain from operations excluding unrealized gains or losses		
6.	Commissions and expense allowances on reinsurance ceded (Exhibit 1, Part 2, Line 26.1, Col. 1)		
7.	Reserve adjustments on reinsurance ceded		
8.	Miscellaneous Income:		
	8.1 Income from fees associated with investment management, administration and contract guarantees from Separate Accounts	100	
	8.2 Charges and fees for deposit-type contracts		
	8.3 Aggregate write-ins for miscellaneous income		
9.	Totals (Lines 1 to 8.3)	25,100	
10.	Death benefits		
11.	Matured endowments (excluding guaranteed annual pure endowments)		
12.	Annuity benefits (Exhibit 11, Part 2, Line 6.4, Cols. 4 + 8)		
13.	Disability benefits and benefits under accident and health policies		
14.	Coupons, guaranteed annual pure endowments and similar benefits		
15.	Surrender benefits and withdrawals for life contracts	100,000	
16.	Group conversions		
17.	Interest and adjustments on policy or deposit-type contract funds		
18.	Payments on supplementary contracts with life contingencies		
19.	Increase in aggregate reserves for life and accident and health policies and contracts	(100,000)	
20.	Totals (Lines 10 to 19)	0	
21.	Commissions on premiums, annuity considerations and deposit-type contract funds (direct business only) (Exhibit 1, Part 2, Line 31, Col. 1, less Col. 11)		
22.	Commissions and expense allowances on reinsurance assumed (Exhibit 1, Part 2, Line 26.2, Col. 1, less Col. 11)		
23.	General insurance expenses (Exhibit 5, Line 10, Cols. 1 + 2 + 3)		
24.	Insurance taxes, licenses and fees, excluding federal income taxes (Exhibit 6, Line 7, Cols. 1 + 2 + 3)		
25.	Increase in loading on deferred and uncollected premiums		
26.	Net transfers to or (from) Separate Accounts	21,000	
27.	Aggregate write-ins for deductions		
28.	Totals (Lines 20 to 27)	21,000	
29.	Net gain from operations before dividends to policyholders and federal income taxes (Line 9 minus Line 28)	4,100	
30.	Dividends to policyholders		
31.	Net gain from operations after dividends to policyholders and before federal income taxes (Line 29 minus Line 30)		
32.	Federal and foreign income taxes incurred (excluding tax on capital gains)		
33.	Net gain from operations after dividends to policyholders and federal income taxes and before realized capital gains or (losses) (Line 31 minus Line 32)		
34.	Net realized capital gains or (losses) less capital gains tax and transferred to the IMR (Exhibit 3, Footnote (a), Line 3C)		
35.	Net income (Line 33 plus Line 34)		
	CAPITAL AND SURPLUS ACCOUNT		
36.	Capital and surplus, December 31, prior year (Page 3, Line 38, Col. 2)		
37.	Net income (Line 35)		
38.	Change in net unrealized capital gains (losses)		
39.	Change in net unrealized foreign exchange capital gain (loss)		
40.	Change in net deferred income tax		
41.	Change in nonadmitted assets and related items (Exhibit 12, Line 6, Col. 3)		
42.	Change in liability for reinsurance in unauthorized companies		
43.	Change in reserve on account of change in valuation basis, (increase) or decrease (Exhibit 8A, Line 9999999, Col. 4)		
44.	Change in asset valuation reserve (Page 34, Lines 2 through 4 plus 8, 11 and 12, Col. 7)		
45.	Change in treasury stock (Page 3, Lines 36.1 and 36.2 Col. 2 minus Col. 1)		
46.	Surplus (contributed to) withdrawn from Separate Accounts during period		
47.	Other changes in surplus in Separate Accounts statement		
48.	Change in surplus notes		
49.	Cumulative effect of changes in accounting principles		
50.	Capital changes:		
	50.1 Paid in		
	50.2 Transferred from surplus (Stock Dividend)		
	50.3 Transferred to surplus		
51.	Surplus adjustment:		
	51.1 Paid in		
	51.2 Transferred to capital (Stock Dividend)		
	51.3 Transferred from capital		
	51.4 Change in surplus as a result of reinsurance		
52.	Dividends to stockholders		
53.	Aggregate write-ins for gains and losses in surplus		
54.	Net change in capital and surplus for the year (Lines 37 through 53)		
55.	Capital and surplus, December 31, current year (Lines 36 + 54) (Page 3, Line 38)

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-20: Application of SEC SAB No. 99, *Materiality* to the Preamble of the AP&P Manual

INT 00-20 Dates Discussed

June 12, 2000; September 20, 2000; June 11, 2001; October 16, 2001

INT 00-20 References

Current:
Preamble to the NAIC *Accounting Practices and Procedures Manual* (Preamble)

INT 00-20 Issue

1. In summary, SEC Staff Accounting Bulletin No. 99, *Materiality* (SAB No. 99) addresses two issues; 1) may a company or auditor assume the immateriality of items that fall below a percentage threshold set by management or its auditors to determine whether amounts and items are material to the financial statements? and 2) may a company make intentional immaterial misstatements in its financial statements? The SEC staff answers each question as NO and gives numerous references to FASB guidelines to support their opinion.

2. The issue is whether the responses outlined in SAB No. 99 can be applied to statutory accounting and the concept of materiality as defined in paragraphs 44-49 of the Preamble?

INT 00-20 Discussion

3. At the 2000 Spring National Meeting, the Statutory Accounting Principles (E) Working Group (SAPWG) reviewed SAB No. 99 for incorporation into the *Accounting Practices and Procedures Manual* (AP&P Manual or Manual). The SAPWG determined that no modifications to the Preamble were warranted and referred the issue to the NAIC/AICPA Working Group for their consideration. The SAPWG felt the SAB had applicability to management of reporting entities, independent auditors and State Examiners. The NAIC/AICPA WG reviewed the SAB and determined that an interpretation of the Preamble was a more effective way to adopt the SAB for statutory accounting. The NAIC/AICPA WG felt that the AP&P Manual reached a larger audience than the A/S Instructions or Examiner's Handbook.

4. The Working Group reached a consensus to adopt an interpretation of the concept of materiality based on certain matters outlined in SAB No. 99. The Working Group believes the responses below provide additional support for the concepts delineated in Section VI of the Preamble. The SAB contains numerous references to SEC guidelines and GAAP pronouncements that are not reflected in this interpretation as such matters are not necessarily applicable or appropriate for statutory financial reporting. The interpretative responses (as modified by this interpretation) are as follows:

> **QUESTION:** Paragraph 49 of the Preamble states "The provisions of this Manual need not be applied to immaterial items." May a reporting entity's management, state examiner or independent auditor of the entity's financial statements assume the immateriality of items that fall below a percentage threshold set by management, state examiner or independent auditor to determine whether amounts and items are material to the financial statements?

INTERPRETIVE RESPONSE No. Over time, the NAIC is aware that reporting entities have developed quantitative thresholds as "rules of thumb" to assist in the preparation of their financial statements, and that state examiners and independent auditors also have used these thresholds in their evaluation of whether items might be considered material to users of a reporting entity's financial statements. One rule of thumb in particular suggests that the misstatement or omission of an item that falls under a 5% of surplus threshold is not material in the absence of particularly egregious circumstances, such as self-dealing or misappropriation by senior management. Exclusive reliance on this or any percentage or numerical threshold has no basis in the accounting literature or the law.

The use of a percentage as a numerical threshold, such as 5% of surplus, may provide the basis for a preliminary assumption that - without considering all relevant circumstances - a deviation of less than the specified percentage with respect to a particular item on the reporting entity's financial statements is unlikely to be material. The NAIC has no objection to such a "rule of thumb" as an initial step in assessing materiality. But quantifying, in percentage terms, the magnitude of a misstatement is only the beginning of an analysis of materiality; it cannot appropriately be used as a substitute for a full analysis of all relevant considerations. Materiality concerns the significance of an item to users of the reporting entity's financial statements. A matter is "material" if there is a substantial likelihood that a reasonable person would consider it important.

QUESTION: May a reporting entity make intentional immaterial misstatements in its financial statements?

INTERPRETIVE RESPONSE No. In certain circumstances, intentional immaterial misstatements are unlawful.

Each reporting entity must make and keep books, records, and accounts, that, in reasonable detail, accurately and fairly reflect the acquisitions and dispositions of assets of the reporting entity and must maintain internal control that is sufficient to provide reasonable, but not absolute, assurances that, among other things, transactions are recorded as necessary to permit the preparation of financial statements in conformity with the revised *Accounting Practices and Procedures Manual*. In this context, determinations of what constitutes "reasonable assurance" and "reasonable detail" are based not on a "materiality" analysis but on the level of detail and degree of assurance that would satisfy prudent individuals in the conduct of their own affairs. It is unlikely that it is ever "reasonable" for a reporting entity to record misstatements or not to correct known misstatements as part of an ongoing effort directed by or known to senior management for the purpose of "managing" reported results or financial position.

The National Commission on Fraudulent Financial Reporting, also known as the Treadway Commission, in its 1987 report,

> The tone set by top management - the corporate environment or culture within which financial reporting occurs - is the most important factor contributing to the integrity of the financial reporting process. Notwithstanding an impressive set of written rules and procedures, if the tone set by management is lax, fraudulent financial reporting is more likely to occur.

Statement on Auditing Standards No. ("SAS") 54, "Illegal Acts by Clients," and SAS No. 82, "Consideration of Fraud in a Financial Statement Audit" provide guidance to the independent auditor. Pursuant to paragraph 38 of SAS 82, if the independent auditor determines there is evidence that fraud may exist, the independent auditor must discuss the matter with the appropriate level of management. The auditor must report directly to the audit committee fraud involving senior management and fraud that causes a material misstatement of the financial statements. Paragraph 4 of SAS No. 82 states that "misstatements arising from fraudulent financial reporting are intentional misstatements or omissions of amounts or disclosures in financial statements to deceive financial statement users." SAS No. 82 further states that fraudulent financial reporting may involve falsification or alteration of accounting records; misrepresenting or omitting events, transactions or other information in the financial statements; and the intentional misapplication of accounting principles relating to amounts, classifications, the manner of presentation, or disclosures in the financial statements. The clear implication of SAS No. 82 is that immaterial misstatements may be fraudulent financial reporting.

Independent auditors that learn of intentional misstatements may also be required to (1) re-evaluate the degree of audit risk involved in the audit engagement, (2) determine whether to revise the nature, timing, and extent of audit procedures accordingly, and (3) consider whether to resign.

Intentional misstatements also may signal the existence of reportable conditions or material weaknesses in the reporting entity’s system of internal accounting control designed to detect and deter improper accounting and financial reporting.

An auditor is required to report to the audit committee any reportable conditions or material weaknesses in a reporting entity’s system of internal accounting control that the auditor discovers in the course of the examination of the registrant's financial statements.

INT 00-20 Status

5. No further discussion planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-24: EITF 98-13: Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of the Investee and EITF 99-10: Percentage Used to Determine the Amount of Equity Method Losses

INT 00-24 Issue

1. EITF 98-13 and Topic No. D-68, *Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of an Investee* (EITF 98-13 or Topic D-68) provides the FASB staff position that Accounting Principles Board Opinion No. 18, *The Equity Method of Accounting for Investments in Common Stock* (APB No. 18) requires an investor that owns common (or other voting) stock and also (a) owns debt securities (including mandatorily redeemable preferred stock), (b) owns preferred stock, or (c) has extended loans to the investee to continue to report losses. Paragraph 13 of FASB Statement 114, *Accounting by Creditors for Impairment of a Loan* (FAS 114) as amended by FASB Statement 118, *Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures* (FAS 118) provides that when a loan is impaired, a creditor shall measure impairment based on the present value of expected future cash flows discounted at the loan's effective interest rate. Paragraph 12 of FASB Statement 115, *Accounting for Certain Investments in Debt and Equity Securities* (FAS 115) provides that investments in both debt securities not held to maturity and equity securities that have readily determinable fair values shall be carried at fair value.

2. EITF 99-10, *Accounting by an Equity Method Investor for Investee Losses When the Investor Has Loans to and Investments in Other Securities of an Investee* (EITF 99-10) and Topic No. D-68 provides the FASB staff position on an investor's accounting when more than one type of interest is held. Specifically, the FASB staff announced that APB No. 18 requires that when an investor owns common stock and also (a) owns debt securities (including mandatorily redeemable preferred stock), (b) owns preferred stock, or (c) has extended loans to the investee (collectively referred to as "other investments”), the equity method investor should continue to report losses up to the investor's investment carrying value, including any additional financial support made or committed to by the investor. EITF 98-13 provides guidance on the interaction between the applicable literature for those instruments and APB No. 18 for situations in which an investee is incurring losses and (a) an investor is not required to advance additional funds to the investee and (b) previous losses have reduced the common stock investment account to zero. However, neither

Topic D-68 nor EITF 98-13 provides guidance on how an investor should calculate the amount of equity method losses or subsequent income in that circumstance.

3. The issue is, when an investor is required to account for a common stock investment using the equity method, how the equity method loss pickup from the application of APB No. 18 (when the carrying amount of the common stock has been reduced to zero) interacts with the applicable literature relating to investments in the other securities of the investee (either FAS 114 or FAS 115), and if an investor owns common stock and "other investments" in an investee and is not required to advance additional funds to the investee and if previous losses have reduced the common stock investment account to zero, how additional equity method losses should be measured and recognized by the investor.

INT 00-24 Discussion

4. The Working Group reached a consensus to adopt the final conclusions reached in EITF 98-13 and 99-10 with modification as follows:

5. The EITF reached a consensus that in situations where (a) an investor is not required to advance additional funds to the investee and (b) previous losses have reduced the common stock investment account to zero, the investor should continue to report its share of equity method losses in its statement of operations to the extent of and as an adjustment to the adjusted basis of the other investments in the investee. The order in which those equity method losses should be applied to the other investments should follow the seniority of the other investments (that is, priority in liquidation). For each period, the adjusted basis of the other investments should be adjusted for the equity method losses, then the investor should apply SSAP No. 97 to the other investments, as applicable.

6. For purposes of this consensus, other investments in the investee include, but are not limited to, preferred stock, debt securities, and loans to the investee (collectively referred to as loans and securities). The cost basis of the other investments is the original cost of those investments adjusted for the effects of other-than-temporary write-downs, unrealized gains and losses, and amortization of any discount or premium on debt securities or loans. The adjusted basis is the cost basis adjusted for the valuation allowance account for an investee loan and the cumulative equity method losses applied to the other investments. Equity method income subsequently recorded should be applied to the adjusted basis of the other investments in reverse order of the application of the equity method losses (that is, equity method income is applied to the more senior securities first).

7. When the investor has loans and securities of the investee that are within the scopes of SSAP No. 97, the investor should perform the following in order to determine the amount of equity method loss to report at the end of a period:

a. Apply SSAP No. 97 to determine the maximum amount of equity method losses.

b. Determine whether the adjusted basis of the other investment(s) in the investee is positive.

i. When the adjusted basis is positive, the adjusted basis of the other investments should be adjusted for the amount of the equity method loss based on its seniority. For investments accounted for in accordance with SSAP No. 30, this adjusted basis becomes the security's basis from which subsequent changes in fair value are measured.

ii. When the adjusted basis reaches zero, equity method losses should cease being reported; however, the investor should continue to track the amount of unreported equity method losses for purposes of applying SSAP No. 97. (If one of the other investments is sold at a time when its carrying value exceeds its adjusted basis, the difference between the cost basis of that other investment and its adjusted basis at the time of sale represents equity method losses that were originally applied to that other investment but effectively reversed upon its sale. Accordingly, that excess represents unreported equity method losses that should continue to be tracked before future equity method income can be reported.

c. After applying SSAP No. 97, apply *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)* (SSAP No. 30) to the adjusted basis of the other investments in the investee, as applicable. Apply appropriate statutory accounting principles to other investments that are not within the scope of SSAP No. 30.

8. The EITF reached a consensus that an investor should not recognize equity method losses based solely on the percentage of investee common stock held by the investor.

9. The EITF observed that an entity should utilize a single entity-wide approach to determine the amount of its equity method losses when previous losses have reduced the common stock investment account to zero and that the selected policy should be disclosed in the footnotes to the financial statements.

10. The provisions of these consensuses are effective for interim or annual periods beginning after January 1, 2001.

11. Refer to Exhibit 00-24A for an example that illustrates application of these consensuses.

INT 00-24 Status

12. No further discussion is planned.

Exhibit 00-24A
ILLUSTRATION OF THE APPLICATION OF THE INT 00-24 CONSENSUS'S

XYZ Investment in ABC Company

1. ABC Company is a life insurance company, formed January 2, 20X1 to sell health insurance in the state of New York. On January 2, 20X1, XYZ Insurance Company invested $500,000 in ABC, and purchased 100,000 shares of common stock at par, and 40,000 shares of preferred stock at par. ABC Preferred stock is non-voting, 5% cumulative.

2. XYZ determined it has obtained a controlling interest in ABC as XYZ owns 50% of the voting interests of ABC. XYZ accounted for its investment in ABC Insurance Company under the statutory equity method of accounting. The following table is selected information from the financial statements of ABC Insurance Company.

	1/2/20X1	12/31/20X1	12/31/20X2	12/31/20X3	12/31/20X4
Capital and Surplus:					
Common stock, $1 par, 200,000 shares issued and outstanding	$ 200,000	$ 200,000	$ 200,000	$ 200,000	$ 200,000
Preferred stock, $10 par, 100,000 shares issued and outstanding	$1,000,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Surplus Notes			$ 500,000	$ 500,000	$ 500,000
Unassigned Funds (Surplus)		$ 130,000	($ 180,000)	($ 630,000)	($1,430,000)
Total Capital and Surplus	$1,200,000	$1,330,000	$1,520,000	$ 1,070,000	$ 270,000

	12/31/20X5	12/31/20X6	12/31/20X7	12/31/20X8	12/31/20X9
Capital and Surplus:					
Common stock, $1 par, 200,000 shares issued and outstanding	$ 200,000	$ 200,000	$ 200,000	$ 200,000	$ 200,000
Preferred stock, $10 par, 100,000 shares issued and outstanding	$1,000,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Surplus Notes	$ 500,000	$1,000,000	$1,000,000	$1,000,000	$1,000,000
Unassigned Funds (Surplus)	($1,980,000)	($1,830,000)	($1,280,000)	($ 430,000)	$ 820,000
Total Capital and Surplus	($280,000)	$ 370,000	$ 920,000	$1,770,000	$3,020,000

3. At 1/2/20X1, XYZ recorded the following entry to record its investment in ABC:

Investment in ABC Common stock	$ 100,000	
Investment in ABC Preferred stock	$ 400,000	
Cash		$ 500,000

To record initial investment in ABC Insurance Company.

4. During the year ended 12/31/20X1, ABC had statutory net income before dividends of $200,000. At 12/31/20X1, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.10 per share. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X1.

Investment in ABC Common stock	$ 75,000	
Unrealized Gain/Loss		$ 75,000

To record 20X1 unrealized gain on investment in ABC Common. (($200,000 - $50,000) * 50%)

Cash	$ 10,000	
Unrealized Gain/Loss	$ 10,000	
Dividend Income		$ 10,000
Investment in ABC Common stock		$ 10,000

To record 20X1 dividend on ABC Common. (100,000 shares * $.10)

5. During the year ended 12/31/20X2, ABC issued an 8% surplus note of $500,000. XYZ purchased 100% of the surplus note. During that same year, ABC incurred a statutory net loss before dividends of $250,000. At 12/31/20X2, ABC declared and paid a 5% preferred dividend, and a common stock dividend of $.05 per share. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Investment in ABC Surplus Notes	$ 500,000	
Cash		$ 500,000

To record investment in ABC Insurance Company surplus notes.

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X2.

Unrealized Gain/Loss	$ 150,000	
Investment in ABC Common stock		$ 150,000

To record 20X2 unrealized loss on investment in ABC Common. (($-250,000 - $50,000) * 50%)

Cash	$ 5,000	
Unrealized Gain/Loss	$ 5,000	
Dividend Income		$ 5,000
Investment in ABC Common stock		$ 5,000

To record 20X2 dividend on ABC Common. (100,000 shares * $.05)

6. During the year ended 12/31/20X3, ABC Insurance Company incurred a statutory net loss before dividends of $400,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X3.

Unrealized Gain/Loss	$ 182,000	
Investment in ABC Preferred stock		$ 172,000
Investment in ABC Common stock		$ 10,000

To record 20X3 unrealized loss on investment in ABC Common and Preferred.

Total net loss and preferred stock dividend ($450,000).

Common stock component reduces the Investment in ABC Common stock component to $0. (20,000 * 50%)

Total net loss and preferred dividend (-$400,000 - $50,000)	$450,000
Less amount used to reduce common stock investment to $0	20,000
Amount remaining to be allocated to investment in preferred	430,000
XYZ ownership % of preferred	40%
XYZ reduction in investment in preferred	$172,000

7. During the year ended 12/31/20X4, ABC Insurance Company incurred a statutory net loss before dividends of $750,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X4.

Unrealized Gain/Loss	$ 458,000	
Investment in ABC Preferred stock		$ 228,000
Investment in ABC Surplus note		$ 230,000

To record 20X4 unrealized loss on investment in ABC Preferred and Surplus Notes.

Total net loss and preferred stock dividend ($800,000).

Common stock component reduces the Investment in ABC Preferred stock component to $0. (570,000 * 40%)

Preferred stock component calculated as:

Total net loss and preferred dividend (-$750,000 - $50,000)	$800,000
Less amount used to reduce preferred stock investment to $0	570,000
Amount remaining to be allocated to investment in surplus note	230,000
XYZ ownership % of surplus note	100%
XYZ reduction in investment in ABC Surplus Notes	$230,000

8. During the year ended 12/31/20X5, ABC Insurance Company incurred a statutory net loss before dividends of $500,000. ABC Insurance Company did not declare any dividends, and no interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Dividends Receivable	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X5.

Unrealized Gain/Loss	$ 270,000	
Investment in ABC Surplus note		$ 270,000

To record 20X5 unrealized loss on investment in ABC Surplus Notes.

Total ABC net loss and preferred stock dividend (-$500,000 - $50,000).

Surplus Note component calculated as:

Total net loss and preferred dividend (-$500,000 - $50,000)	$550,000
XYZ ownership % of ABC Surplus Note	100%
	$550,000
Amount of unrealized loss recognized in 20X5	$270,000
Amount of unrealized loss suspended	$280,000

9. Since XYZ has not guaranteed any liabilities of ABC, the reduction they would recognize is limited to their remaining investment in ABC Surplus Notes. Therefore, they would only recognize a 20X5 unrealized loss on their investment in ABC of $270,000.

10. During the year ended 12/31/20X6, ABC Insurance Company realigned their marketing efforts and modified the products they were selling. ABC also issued an additional 8% surplus note of $500,000. This surplus note was purchased by an unaffiliated third party. During the year ended 12/31/X6, ABC Insurance Company had statutory net income before dividends of $200,000. ABC Insurance Company did not declare any dividends on common stock, but declared and paid current and dividends in arrears on preferred. XYZ recorded the following entries:

Cash	$ 80,000	
Dividends Receivable		$ 60,000
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X6, and receipt of preferred dividends receivable for 20X3, 20X4 and 20X5.

11. XYZ did not record any change in their investment in ABC Surplus Notes, ABC Preferred or ABC Common, since ABCs' net income after preferred dividends did not exceed the losses accumulated during the period that XYZ suspended recording unrealized losses.

12. The following amounts were tracked:

Total ABC net income and preferred stock dividend ($200,000 - $50,000).

Surplus Note component calculated as:

Total net income and preferred dividend ($200,000 - $50,000)	$150,000
XYZ ownership % of ABC Surplus Note	50%
Amount of unrealized loss suspended in 20X5	$ 75,000
Remaining amount of unrealized loss suspended	$280,000
	$205,000

13. During the year ended 12/31/20X7, ABC Insurance Company had statutory net income before dividends of $600,000. At 12/31/20X7, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X7.

Investment in ABC Surplus Notes	$ 70,000	
Unrealized Gain/Loss		$ 70,000

To record 20X7 unrealized gain on investment in ABC Surplus Notes.

Total ABC net income and preferred stock dividend ($600,000 - $50,000).
Surplus Note component calculated as:

Total net income and preferred dividend ($600,000 - $50,000)	$550,000
XYZ ownership % of ABC Surplus Note	50%
	$275,000
Remaining amount of unrealized loss suspended in 20X5	$205,000
20X7 amount of unrealized gain on investment in ABC Surplus Note	$ 70,000

14. During the year ended 12/31/20X8, ABC Insurance Company had statutory net income before dividends of $900,000. At 12/31/20X8, ABC declared and paid a 5% preferred dividend. No interest or principal repayments of the surplus note were approved. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X8.

Total ABC net income and preferred stock dividend ($900,000 - $50,000).
Surplus Note component calculated as:

Total net income and preferred dividend ($900,000 - $50,000)	$850,000
XYZ ownership % of ABC Surplus Note	50%
20X8 amount of unrealized gain on investment in ABC Surplus Note	$425,000

Investment in ABC Surplus Notes	$ 425,000	
Unrealized Gain/Loss		$ 425,000

To record 20X8unrealized gain on investment in ABC Surplus Notes.

15. During the year ended 12/31/20X9, ABC Insurance Company had statutory net income, before interest on surplus notes and dividends, of $1,400,000. The Commissioner approved one year's interest payment on the surplus notes. At 12/31/20X9, ABC declared and paid a 5% preferred dividend, and a $.10 dividend per share on Common stock. XYZ recorded the following entries:

Cash	$ 20,000	
Dividend Income		$ 20,000

To record preferred dividend income from ABC Insurance Company for 20X9.

Cash	$ 40,000	
Interest Income		$ 40,000

To record surplus notes interest income from ABC Insurance Company for 20X9. ($500,000 * 8%)

Investment in ABC Surplus Notes	$ 5,000	
Investment in ABC Preferred Stock	$ 400,000	
Investment in ABC Common Stock	$ 130,000	
Unrealized Gain/Loss		$ 535,000

To record 20X9 unrealized gain on investment in ABC Common, Preferred and Surplus Notes.

Components computed as follows:

Total Net Income net of preferred stock dividend and interest on surplus notes ($1,400,000 - $50,000 - $80,000)	$ 1,270,000
Less amount needed to restore investment in surplus notes	($ 10,000)
Amount available for preferred stock and common stock investment restoration	$ 1,260,000
Amount needed to restore preferred stock component	($ 1,000,000)
Amount available to restore common stock component	$ 260,000

Surplus Notes component ($10,000 * 50%)	$ 5,000
Preferred Stock component ($1,000,000 * 40%)	$ 400,000
Common stock component ($260,000 * 50%)	$ 130,000

Cash	$ 10,000	
Unrealized Gain/Loss	$ 10,000	
Dividend Income		$ 10,000
Investment in ABC Common stock		$ 10,000

To record 20X9 dividend on ABC Common. (100,000 shares * $.10)

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 00-26: EITF 98-3: Determining Whether a Nonmonetary Transaction Involves Receipt of Productive Assets or of a Business

INT 00-26 Dates Discussed

June 12, 2000; September 11, 2000; March 5, 2006; June 11, 2006; December 10, 2006; March 10, 2007

INT 00-26 References

Current:
SSAP No. 95—Exchange of Nonmonetary Assets, A replacement of SSAP No. 28—Nonmonetary Transactions (SSAP No. 95)

Superseded:
SSAP No. 28—Nonmonetary Transactions (SSAP No. 28)

INT 00-26 Issue

1. The basic principle contained in APB Opinion No. 29, *Accounting for Nonmonetary Transactions* (APB No. 29) is that an exchange of nonmonetary assets should be recorded at fair value. Certain modifications to that basic principle are contained in paragraphs 20-23 of APB No. 29. Paragraph 21.b. provides that accounting for an exchange of productive assets for similar productive assets should be based on the recorded amount of the nonmonetary assets relinquished. Paragraph 4 of APB No. 29 states that Opinion is not applicable to business combinations.

2. APB Opinion No. 16, *Business Combinations* (APB No. 16) provides accounting guidance for business combinations. Paragraph 1 of APB No. 16 states that "a business combination occurs when a corporation and one or more incorporated or unincorporated businesses are brought together into one accounting entity. The single entity carries on the activities of the previously separate, independent enterprises."

3. It is not clear whether exchanges of certain types of assets, for example, radio stations, cable systems, and hotels, are considered exchanges of productive assets or business combinations.

4. The issues are whether the exchange of assets or groups of assets involving the receipt of a consolidated business can be considered an exchange of similar productive assets accounted for at historical cost pursuant to paragraph 21 of APB No. 29 and how a "business" should be defined.

5. In December of 2004, the Financial Accounting Standards Board (FASB) issued *FAS 153: Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (FAS 153), which addresses the measurement of exchanges of nonmonetary assets. It eliminates the exception from fair value measurement for nonmonetary exchanges of similar productive assets in paragraph 21.b. of APB No. 29, and replaces it with an exception for exchanges that do not have commercial substance. This statement specifies that a nonmonetary exchange has commercial substance if the future cash flows of the entity are expected to change significantly as a result of

the exchange. While the guidance referred to above has been amended, the statutory accounting guidance included in the following discussion is not impacted and remains in effect.

INT 00-26 Discussion

6. The Working Group reached a consensus to update the description of the issue by adding an explanatory paragraph 5, which discusses amendments to APB No. 29 resulting from FAS 153.

7. The Working Group reached a consensus to adopt the conclusions reached in EITF 98-3 with modification. APB No. 29 is adopted with SSAP No. 95. Although APB No. 16 is rejected in SSAP No. 68, the issues raised in EITF 98-3 are applicable to statutory accounting and SSAP No. 95. The modified conclusions of EITF 98-3 are outlined in paragraphs 8-15.

8. The EITF reached a consensus that the guidance below should be used to evaluate whether a business has been received in a nonmonetary exchange transaction.

9. A business is a self-sustaining integrated set of activities and assets conducted and managed for the purpose of providing a return to investors. A business consists of (a) inputs, (b) processes applied to those inputs, and (c) resulting outputs that are used to generate revenues. For a transferred set of activities and assets to be a business, it must contain all of the inputs and processes necessary for it to continue to conduct normal operations after the transferred set is separated from the transferor, which includes the ability to sustain a revenue stream by providing its outputs to customers.

10. The elements necessary for a transferred set to continue to conduct normal operations will vary by industry and by the operating strategies of the transferred set. An evaluation of the necessary elements should consider:

Inputs

a. Long-lived assets, including intangible assets, or rights to the use of long-lived assets.

b. Intellectual property.

c. The ability to obtain access to necessary materials or rights.

d. Employees.

Processes

e. The existence of systems, standards, protocols, conventions, and rules that act to define the processes necessary for normal, self-sustaining operations, such as (i) strategic management processes, (ii) operational processes, and (iii) resource management processes.

Outputs

f. The ability to obtain access to the customers that purchase the outputs of the transferred set.

11. A transferred set of activities and assets fails the definition of a business if it excludes one or more of the above items such that it is not possible for the set to continue normal operations and sustain a revenue stream by providing its products and/or services to customers. However, if the excluded item or items are only minor (based on the degree of difficulty and the level of investment necessary to obtain access to or to acquire the missing item(s)), then the transferred set is capable of continuing normal operations and is a business. The assessment of whether

excluded items are only minor should be made without regard to the attributes of the transferee and should consider such factors as the uniqueness or scarcity of the missing element, the time frame, the level of effort, and the cost required to obtain the missing element. If goodwill is present in a transferred set of activities and assets, it should be presumed that the excluded items are minor and that the transferred set is a business.

12. The assessment of whether a transferred set is a business should be made without regard to how the transferee intends to use the transferred set. In other words, it is not relevant to the evaluation of whether the transferred set is a business whether the transferee will actually operate the set on a stand-alone basis or intends to continue using the transferred set in the same manner as the transferor.

13. If all but a de minimis amount of the fair value of the transferred set of activities and assets is represented by a single tangible or identifiable intangible asset, the concentration of value in the single asset is an indicator that an asset rather than a business is being received.

14. The level of working capital or the adequacy of financing necessary to conduct normal operations in the transferred set is not an indicator either way as to whether the set meets the definition of a business. Likewise, if the planned principal operations of the transferred set have commenced, the presence and/or expectation of continued operating losses while the set seeks to achieve the level of market share necessary to attain profitability is not an indicator of whether or not the set is a business. However, if the transferred set is in the development stage and has not commenced planned principal operations, the set is presumed not to be a business.

15. The determination of whether a transferred set of assets and activities is or is not a business is a three-step process. First, one must identify the elements included in the transferred set. Second, one must compare the identified elements in the transferred set to the complete set of elements necessary for the transferred set to conduct normal operations in order to identify any missing elements. Third, if there are missing elements, one must make an assessment as to whether the missing elements cause one to conclude that the transferred set is not a business. That assessment is based on the degree of difficulty or the level of investment (relative to the fair value of the transferred set) necessary to obtain access to or to acquire the missing elements. If the degree of difficulty and level of investment necessary to obtain access to or to acquire the missing elements are not significant, then the missing elements are considered minor and their absence would not cause one to conclude that the transferred set is not a business. The determination of the degree of difficulty or level of investment necessary to obtain access to or to acquire the missing elements requires significant judgment and is dependent on the particular facts and circumstances.

INT 00-26 Status

16. On March 10, 2007, the Working Group reached a consensus to remove SSAP No. 68 from the references section of this interpretation; as it should not be used to interpret SSAP No. 68. No further discussion is planned.

INT 00-28 Issue

1. APB No. 16, *Business Combinations* (APB No. 16) appears to include contradictory guidance about the date that should be used to value equity securities issued to effect a business combination accounted for using the purchase method. Paragraph 74 of APB No. 16 states that "the market price for a reasonable period before and after the date the terms of the acquisition are agreed to and announced should be considered in determining the fair value of securities issued." However, paragraph 94 of APB No. 16 refers to determining the cost of an acquired company as of the date of acquisition, which is defined in paragraph 93 as, "ordinarily . . . the date assets are received and other assets are given or securities are issued." This Issue addresses that apparent contradiction.

2. The interval between initiating and completing a business combination may involve an extended period of time. Although management of the companies involved may agree to and announce the terms of a business combination at the initiation date, internal or external contingencies, such as the need to obtain shareholder or regulatory approvals, may exist and prevent concurrent consummation of the combination. Because of the length of time that may be required to resolve those contingencies, the market price of the securities that are expected to be issued to effect a purchase business combination may fluctuate. As a result, the total cost of the acquired company assigned by the acquirer may vary significantly depending on the date that is used to value the securities that are issued.

3. The issues are:

a. The date that should be used to value marketable equity securities of the acquirer issued to effect a business combination accounted for using the purchase method when the number of the acquirer's shares or amount of other consideration is not subject to change pursuant to the existing terms of the acquisition agreement

b. The date that should be used as the measurement date to value equity securities of the acquirer issued in a purchase business combination if the number of the acquirer's shares or amount of other consideration to be issued could change pursuant to a formula in the initial acquisition agreement.

INT 00-28 Discussion

4. The Working Group reached a consensus to adopt the final conclusions reached in EITF 99-12, *Determination of the Measurement Date for the Market Price of Acquirer Securities*

Issued in a Purchase Business Combination (EITF 99-12) with modification. Although APB 16 is rejected in SSAP No. 68, the issues identified in EITF 99-12 are applicable to paragraph 3 of SSAP No. 68. The issue of cost is defined as:

> 3. The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another. It shall be used for all purchases of SCA entities including partnerships, joint ventures, and limited liability companies. The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of: (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition. Contingent consideration issued in a purchase business combination that is embedded in a security or that is in the form of a separate financial instrument shall be recorded by the issuer at fair value at the acquisition date.

5. As shown in subsection b of the excerpted paragraph above, SSAP No. 68 does not address the timing issues raised in EITF 99-12 of "other assets distributed".

6. The modifications to the conclusions reached in EITF 99-12 are as follows:

7. The EITF reached a consensus on Issue 1 that the value of the acquirer's marketable equity securities issued to effect a purchase business combination should be determined, pursuant to the guidance in paragraph 74 of APB No. 16, based on the market price of the securities over a reasonable period of time before and after the terms of the acquisition are agreed to and announced. In other words, the date of measurement of the value of the acquirer's marketable equity securities should not be influenced by the need to obtain shareholder or regulatory approvals. EITF members observed that the reasonable period of time referred to in paragraph 74 of APB No. 16 is intended to be very short, such as a few days before and after the acquisition is agreed to and announced. EITF members also observed that in transactions involving a hostile tender offer, the measurement date for the value of the acquirer's marketable equity securities occurs when the proposed transaction is announced and sufficient shares have been tendered to make the offer binding or when the proposed acquisition becomes nonhostile, as evidenced by the target company's agreement to the purchase price.

8. The EITF also reached a consensus that if the purchase price (the number of shares or the amount of other consideration) is subsequently changed as a result of further negotiations or a revised acquisition agreement, a new measurement date for valuing the acquirer's marketable equity securities that will be issued to effect the combination is established as of the date of the change. The Working Group clarified that if the change in the number of shares or other consideration is not substantive, a new measurement date does not result from the change.

9. The EITF addressed the accounting for contingent consideration issued to effect a purchase business combination in Issue No. 97-8, *Accounting for Contingent Consideration Issued in a Purchase Business Combination* (EITF 97-8). The measurement guidance in this Issue is to be applied to the acquirer's equity securities issued to effect a business combination accounted for using the purchase method, including those instruments that meet the criteria in EITF 97-8 for recording as part of the cost of the business acquired. (EITF 97-8 was adopted by the Working Group in SSAP No. 68.)

10. The EITF reached a consensus on Issue 2 that if the application of the formula results in a change to the number of shares or the amount of other consideration to be issued in the purchase business combination, then the first date on which the number of acquirer shares and the amount of other consideration become fixed without subsequent revision is the measurement date. That is, the measurement date is the earliest date, from the date the terms of the acquisition are agreed to and announced to the date of final application of the formula pursuant to the acquisition

agreement, on which subsequent applications of the formula do not result in a change in the number of shares or the amount of other consideration. For example, assume the terms of a purchase business combination are agreed to and announced on March 1, 1999. Also assume that the purchase agreement includes a formula arrangement that specifies that an adjustment will be made to the number of shares issued in the business combination if the average closing security price for the 10 days ending June 30, 1999, is less than $16. If the 10-day average closing security price drops below $16 for the first time on June 1, 1999, and does not subsequently recover to an amount equal to or greater than $16 from June 1, 1999 through June 30, 1999, June 1, 1999 is the measurement date. However, if the originally announced number of shares or amount of other consideration does not change as a result of final application of the formula, then the initial date that the terms were agreed to and announced is the measurement date. The EITF noted that a new measurement date does not occur as a result of the application of a nonsubstantive formula in the original agreement.

11. As another example, assume that the terms of the acquisition are agreed to and announced on March 31, 1999. The number of shares to be issued in the business combination is equal to $20 million divided by the June 30, 1999 closing market price of the acquirer's common stock; however, if the June 30, 1999 closing market price of the acquirer’s common stock is less than $16 or greater than $24, the exchange ratio is adjusted as follows: (a) if the closing market price is less than $16, the acquirer will issue 1,250,000 shares of its common stock for the outstanding common shares of the target company, and (b) if the closing market price is greater than $24, the acquirer will issue 833,000 shares of its common stock for the outstanding common shares of the target company. The variable exchange ratio represents a formula and, as a result, if the stock price changes during the period from March 31, 1999 through June 30, 1999, but remains within the $16-$24 range, the measurement date is June 30, 1999. However, if the acquirer’s closing common stock price exceeds $24 on June 1, 1999, and remains above $24 through June 30, 1999, the number of shares to be issued in the transaction becomes fixed on June 1, 1999, and that date is the measurement date.

12. The EITF also reached a consensus that the securities should be valued based on market prices a few days before and after the measurement date determined in Issue 2 but that the measurement period would not include any dates after the date the business combination is consummated.

13. The EITF reached a consensus that the consensus reached on Issue 1 should only be applied prospectively to purchase business combinations consummated on or after January 1, 2001. The EITF reached a consensus that the consensuses reached on Issue 2 should be applied prospectively to purchase business combinations initiated on or after January 1, 2001. An entity should apply its existing policy prior to the effective date of the consensus on Issue 2.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 01-18: Consolidated or Legal Entity Level – Limitations on EDP Equipment, Goodwill and Deferred Tax Assets Admissibility

INT 01-18 Dates Discussed

March 26, 2001; June 11, 2001

INT 01-18 References

Current:
SSAP No. 16R—Electronic Data Processing Equipment and Accounting for Software (SSAP No. 16R)
SSAP No. 19—Furniture, Fixtures and Equipment; Leasehold Improvements Paid by the Reporting Entity as Lessee; Depreciation of Property and Amortization of Leasehold Improvements (SSAP No. 19)
SSAP No. 68—Business Combinations and Goodwill (SSAP No. 68)
SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10 (SSAP No. 101)

Superseded:
SSAP No. 79—Depreciation of Nonoperating System Software – An Amendment to SSAP No. 16—Electronic Data Processing Equipment and Software (SSAP No. 79)
SSAP No. 10R—Income Taxes—A Temporary Replacement of SSAP No. 10 (SSAP No. 10R)

INT 01-18 Issue

1. Case Number 1: The reporting entity has several wholly-owned insurance company subsidiaries. The reporting entity will account for its investment in these subsidiaries at their underlying statutory equity in accordance with *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, A Replacement of SSAP No. 88* (SSAP No. 97).

2. Case Number 2: A reporting entity has deferred tax assets (DTAs) in excess of those that are allowed to be admitted in accordance with the guidance in SSAP No. 101 paragraph 11. The reporting entity files a consolidated tax return with one or more affiliates. Those affiliates have deferred tax liabilities (DTLs) that exceed the remaining DTAs available for admission after application of paragraphs 11.a. and 11.b. of SSAP No. 101 at the affiliates' legal entity level.

3. The accounting issues are:

Case Number 1:

When applying the limitations described in paragraph 11 of SSAP No. 101, paragraph 4 of SSAP No. 16R, and paragraph 7 of SSAP No. 68 to the parent reporting entity's adjusted capital and surplus, is the reporting entity required to exclude any net deferred tax assets, EDP equipment and operating system software, and net positive goodwill included in its insurance subsidiaries' valuation? Or, is the limitation calculated solely based on the legal entity's adjusted capital and surplus?

The effect of looking solely at the legal entity is to allow for the "stacking" of intangibles, so that the parent reporting entity may effectively have more than the defined limitations “invested” in deferred tax assets, EDP equipment and operating system software and goodwill. These assets are limited at each subsidiary legal entity level.

Case Number 2:

Can the reporting entity offset its DTAs against existing gross DTLs of an affiliated entity? This offset would be pursuant to the allowance of an offset against existing DTLs under SSAP No. 101 paragraph 11.c. This offset would occur only after application of paragraphs 11.a. and 11.b. for both the reporting entity and the affiliate. The premise for the offset is that both entities file a consolidated federal income tax return and that future deductible items of the reporting entity are, by current tax law, able to offset future income items of the affiliate. The affiliates for this purpose would have to have a tax sharing agreement that required payment from one affiliate to another for loss usage.

INT 01-18 Discussion

4. The Working Group reached a consensus as follows:

Case Number 1:

The Working Group reached a consensus that in applying the limitations described in paragraph 11.b.ii. of SSAP No. 101, paragraph 4 of SSAP No. 16R, and paragraph 7 of SSAP No. 68 to the parent reporting entity's adjusted capital and surplus, the reporting entity shall not exclude any net deferred tax assets, EDP equipment, operating system software, and net positive goodwill included in its insurance subsidiaries valuation.

Case Number 2:

The Working Group reached a consensus that the reporting entity shall not offset it's DTAs against existing gross DTLs of an affiliated entity.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 01-25: Accounting for U.S. Treasury Inflation-Indexed Securities

INT 01-25 Dates Discussed

June 11, 2001; October 16, 2001; September 10, 2002; December 8, 2002

INT 01-25 References

Current:
SSAP No. 26—Bonds, excluding Loan-backed and Structured Securities (SSAP No. 26)

INT 01-25 Issue

1. Treasury inflation-indexed securities are direct obligations of the United States government, and are backed by the full faith and credit of the government. The principal is protected against inflation. Since the principal is indexed to the Consumer Price Index and grows with inflation, the investor is guaranteed that the real purchasing power of the principal will keep pace with the rate of inflation (Based on the Reference CPI-U, which has a three-month lag). Although deflation could cause the principal to decline, Treasury will pay at maturity an amount that is no less than the par amount as of the date the security was first issued.

2. Interest is also protected from inflation. The investor will receive semiannual interest payments, based on a fixed semiannual interest rate applied to the inflation-adjusted principal, so that the investor is guaranteed a real rate of return above inflation.

> Summary of the Structure and Index:
>
> Principal amount. The principal amount of Treasury inflation-indexed securities will be adjusted for changes in the level of inflation. The inflation-adjusted principal amount of the securities can be calculated daily. However, the inflation adjustment will not be payable by Treasury until maturity, when the securities will be redeemed at the greater of their inflation-adjusted principal amount or the principal amount of the securities on the date of original issuance (i.e., par).
>
> Index. The index for measuring the inflation rate will be the nonseasonally adjusted CPI-U (U.S. City Average All Items Consumer Price Index for All Urban Consumers). CPI-U was selected by Treasury because it is the best known and most widely accepted measure of inflation.
>
> Interest payments. Every six months Treasury will pay interest based on a fixed rate of interest determined at auction. Semiannual interest payments are determined by multiplying the inflation-adjusted principal amount by one-half the stated rate of interest on each interest payment date.
>
> Payment at maturity. If at maturity the inflation-adjusted principal is less than the par amount of the security (due to deflation), the final payment of principal of the security by Treasury will not be less than the par amount of the security at issuance. In such a circumstance, Treasury will pay an additional amount at maturity so that the additional amount plus the inflation-adjusted principal amount will equal the par amount of the securities on the date of original issuance. Initially, the securities will be issued with a 10-year maturity; however, Treasury expects to issue other maturities over time.
>
> Stripping. The securities will be eligible for the STRIPS program (Separate Trading of Registered Interest and Principal of Securities) as of the first issue date. Unlike the

conventional STRIPS program, however, interest components stripped from different inflation-indexed securities, at least initially, will not be interchangeable or fungible with interest components from other securities, even if they have the same payment or maturity date.

3. The accounting issue is how should changes to inflation-adjusted principal be recorded?

4. At the September 10, 2002 and December 8, 2002 the Working Group expanded this interpretation to address specific questions regarding U.S. Treasury Inflation-Indexed Securities purchased at either a premium or discount and how the inflation adjustment interacts with any such premium or discount, as well as the calculation of each of these amounts.

5. The following example will be used to highlight issues concerning the amortization of premium and inflation adjustment for a typical security:

Assume:	
Par value of TIP security	$500,000
Inflation factor at date of purchase	1.12075
Price at date of purchase	102.96875
Original issue date 6/30/X0	
Purchase date 06/30/X6	
Maturity date 06/30/X10	
Amount of inflation adjustment at date of purchase	
($500,000 * .12075)	$60,375
Total purchase price	
($500,000*1.12075*1.0296875)	$577,011
Premium at date of purchase	
($577,011 - $500,000 - $60,375)	$16,636

6. The issues are:

Issue a. – If accretion or amortization should be recognized over the period of time the security is owned.

Issue b. – Assuming that at the end of the accounting period, 12/31/X6, the inflation factor is 1.13000, what the correct book value of the security would be.

Issue c. – Assuming that at the end of the accounting period, 12/31/X6, the inflation factor is 1.12000, what the correct value of the security would be.

Issue d. – How changes in accounting treatment would be handled.

INT 01-25 Discussion

7. At its October 16, 2001 meeting, the Working Group reached a consensus that the inflation adjustment be recognized as an unrealized gain until such time as it is paid, at which time it should be recognized as a realized gain. If there is a deflation adjustment, such amounts should only be recognized to the extent of any previously recognized inflation adjustment for that particular security, (reduce any unrealized gain on that security to zero) as the investor is guaranteed at maturity to receive at least the par amount of the security. (See paragraph 8.c. below for amendments to this paragraph adopted at the December 8, 2002 meeting.)

8. At its December 8, 2002 meeting, the Working Group reached a consensus on the following issues related to the purchase of a treasury inflation-indexed security at either a premium or a discount, how the inflation adjustment interacts with any such premium or discount, as well as the calculation of each of these amounts.

> Issue a. – The $16,636 premium paid for the security should be amortized over the remaining life of the security. Therefore, if the inflation adjustment factor never changed from the 1.12075 at date of purchase, the security would have a book value at maturity of $560,375, the amount the reporting entity would receive at maturity date ($500,000*1.12075).
>
> Issue b. – The reporting entity should record the unrealized gain/loss based on the difference in the inflation factor times the par amount, and amortize the premium over the remaining life of the security.
>
> Issue c. – In the case where the inflation factor is reduced to a factor not less than 1.0000, the reporting entity should reflect the change in the inflation adjustment as well as amortization of premium. Paragraph 7 of this interpretation is amended as follows:
>
> > 7. The Working Group reached a consensus that the inflation adjustment be recognized as an unrealized gain until such time as it is paid, at which time it should be recognized as a realized gain. If there is a deflation adjustment, such amounts should only be recognized to the extent the inflation factor is not reduced to an amount less than 1.0000 as the investor is guaranteed at maturity to receive at least the par amount of the security.
>
> Issue d. - A change in accounting principle should be recorded per the requirements of *SSAP No. 3—Accounting Changes and Corrections of Errors*, paragraph 5:
>
> > 5. The cumulative effect of changes in accounting principles shall be reported as adjustments to unassigned funds (surplus) in the period of the change in accounting principle. The cumulative effect is the difference between the amount of capital and surplus at the beginning of the year and the amount of capital and surplus that would have been reported at that date if the new accounting principle had been applied retroactively for all prior periods.
>
> In the specific question noted, if the reporting entity is currently recognizing both amortization of premium as well as the change in the inflation adjustment factor as amortization of premium, there should not be a cumulative effect on surplus to record.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 01-31: Assets Pledged as Collateral

INT 01-31 Dates Discussed

October 16, 2001; December 10, 2001; March 18, 2002; September 12, 2004; December 5, 2004; March 3, 2012; August 31, 2012

INT 01-31 References

Current:
SSAP No. 4—Assets and Nonadmitted Assets (SSAP No. 4)
SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 103)

Superseded/Nullified:
SSAP No. 18—Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 18)
SSAP No. 33—Securitization (SSAP No. 33)
SSAP No. 45—Repurchase Agreements, Reverse Repurchase Agreements and Dollar Repurchase Agreements (SSAP No. 45)
SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 91R)
INT 99-02: Accounting for Collateral in Excess of Debt Principal (INT 99-02)

INT 01-31 Issue

1. Insurers may enter into certain transactions that require the granting of a security interest in certain assets to another party to serve as collateral for their performance under a contract. The arrangement is commonly referred to as a pledge, typically accomplished by delivery of assets to the secured party or to an independent custodian. In these transactions, the pledging insurer typically (1) continues to receive the income on the pledged collateral and (2) can remove and substitute other securities with little or no advance notice to the secured party as long as they comply with related investment quality and market value agreement provisions. Examples include collateral pledged under investment, derivative, debt obligations and policyholder transactions.

2. Specific examples of collateral pledged for derivative and investment transactions include but are not limited to: (1) securities posted with a broker as margin for futures and options transactions, (2) securities pledged to secure credit exposure with swap counterparties, (3) securities pledged under reverse repurchase agreements or securitizations that are accounted for as secured borrowing transactions and (4) securities pledged under securities lending transactions.

3. Specific examples of collateral pledged for debt obligations and policyholder transactions include but are not limited to assets pledged to secure (1) debt borrowings from or insurance contracts issued to banking entities and (2) insurance contracts issued to governmental entities such as municipalities.

4. Under these transactions, the fair value of the securities pledged as collateral may exceed the contract balance (swap fair value, advance balance, policyholder account balance, etc). For this interpretation, this excess carrying value of securities pledged over the corresponding asset or contract balance is called the "overcollateralization" amount.

5. The accounting issue is whether the assets pledged as collateral under the various transactions mentioned above should be considered admitted assets.

INT 01-31 Discussion

6. The Working Group reached a consensus that if the collateral had not been pledged in the examples described above, it is assumed the underlying asset would be recorded as an admitted asset under SSAP No. 4 (e.g. they are readily marketable assets available to meet both current and future policyholder obligations). In addition, it is assumed that the asset would not be considered impaired under SSAP No. 5R due to a default, fair value decline, or other loss contingency.

7. Therefore, for the examples described above, the pledging insurer would record the collateral (including the overcollateralization amount) as an admitted asset until they have committed a contract default that has not been cured in accordance with the contract provisions. This accounting is in accordance with the provisions of SSAP No. 103. This consensus of reporting collateral as an admitted asset is further supported by SSAP Nos. 4 and 5 since generally, the insurer can readily substitute pledged assets. Additionally, an insurer may typically unwind the transaction allowing the assets to be available to the pledging insurer to meet policyholder obligations. Furthermore, no event has occurred to indicate an impairment or potential loss contingency with respect to such pledged assets. The fact that some pledged assets may constitute an overcollaterlization amount does not change this analysis. Accordingly, all assets pledged in support of these type transactions should also be admitted.

8. At the time of an uncured default, the provisions of paragraph 20 of SSAP No. 103 shall be used to determine the appropriate accounting treatment for the collateral. If the secured party utilizes collateral to offset all or a portion of the liability owed by the pledging insurer as a result of the default, then the collateral amount utilized to offset the liability shall be removed from the balance sheet. At the same time, the amount of the liability that was offset should be removed from the balance sheet since that obligation has been satisfied through the secured party's utilization of that collateral. To the extent that an uncured default remains without the secured party utilizing the collateral to offset the obligation, the pledging insurer should only record an admitted asset for the amount of collateral that it can redeem.

INT 01-31 Status

9. As of March 18, 2002, the consensus position of this interpretation is consistent with the position of the NAIC Invested Asset (E) Working Group. This interpretation will be reviewed by the FAS 140 Subgroup of the NAIC Statutory Accounting Principles (E) Working Group in conjunction of its consideration of incorporating GAAP pronouncement *FAS 140, Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities, a replacement of FASB Statement 125* into the statutory accounting model. As such, this interpretation is subject to amendment pending disposition of the FAS 140 Subgroup's review of collateral and FAS 140 in its entirety.

10. On September 12, 2004, the Working Group noted that the review of FAS 140 was complete and INT 01-31 was listed as an interpretation of SSAP No. 91R. On March 3, 2012, the Working Group adopted with modification *FAS 166—Accounting for Transfers of Financial Assets, an Amendment of FAS 140* (FAS 166). With this adoption, there was no change to the consensus opinion within this interpretation, and this INT was listed as an interpretation of SSAP No. 103.

11. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 02-22: Accounting for the U.S. Terrorism Risk Insurance Program

INT 02-22 Dates Discussed

December 8, 2002, March 9, 2003

INT 02-22 References

Current:
SSAP No. 35R—Guaranty Fund and Other Assessments (SSAP No. 35R)
SSAP No. 62R—Property and Casualty Reinsurance (SSAP No. 62R)

INT 02-22 Issue

1. The Terrorism Risk Insurance Act of 2002 establishes a temporary Federal program in the Department of the Treasury that provides for a system of shared public and private compensation for insured losses resulting from acts of terrorism, i.e., subject losses. The Terrorism Insurance Program (or the "Program") requires that all entities that meet the definition of an insurer under the act (generally, commercial property/casualty insurers that are licensed in the U.S.) participate in the Program. The Program becomes effective upon enactment and runs through December 31, 2005. (For purposes of the act, there is a "Transition Period" that runs from enactment through December 31, 2002, and three "Program Years" that run from January 1st through December 31st of 2003, 2004, and 2005, respectively.) The amount of compensation paid to participating insurers under the Program is 90% of subject losses, after an insurer deductible, and subject to an annual cap. The deductible under the Program is 1% for the Transition Period, 7% for Program Year 1, 10% for Program Year 2, and 15% for Program Year 3. In each case, the deductible percentage is multiplied times the insurer's direct earned premiums from the calendar year immediately preceding the respective Transition or Program year. The annual cap limits the amount of terrorism losses paid by insurers and the amount of Federal reimbursement and is $100 billion for Program Year 1 (combined with the Transition Period), Program Year 2, and Program Year 3

2. The Program provides for the establishment of a mandatory surcharge on all covered policyholders to provide for recoupment of defined losses paid by the Department of Treasury. To the extent that the amount of Federal financial assistance exceeds the amount recovered through the mandatory surcharge, the Department of Treasury may impose a second surcharge. The two surcharges combined may not exceed 3% of the annual premium charged for the insured policy. The Program provides that the Department of the Treasury shall collect the surcharges and further provides that insurers shall collect the surcharges and remit such amounts collected to the Department of Treasury.

3. The issues are:

Issue 1: Does the Program result in a transfer of underwriting risk for terrorism losses to the Department of Treasury and, if so, how should the recovery from the Department of Treasury for terrorism losses be accounted for by insurers?

Issue 2: How should the imposition of the surcharges on policyholders by the Department of Treasury be accounted for by insurers?

INT 02-22 Discussion

4. The Working Group reached a consensus as follows:

> Issue 1: Because the Program results in losses from acts of terrorism (above the defined insurer deductibles) being paid by the Department of Treasury, there is a transfer of insurance risk and accordingly, the recovery of such losses should be reported as reinsured losses.
>
> Issue 2: Because the terrorism loss risk-spreading premium is imposed on policyholders as a surcharge and the Department of Treasury provides for insurers to collect the surcharge "and remit amounts collected to the Secretary," the surcharge generally meets the requirements of paragraph 13 of SSAP No. 35R and should be accounted for as such.

INT 02-22 Status

5. No further discussion is planned.

6. The Act has been extended through December 31, 2014, with the enactment of the Reauthorization Act.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 03-02: Modification to an Existing Intercompany Pooling Arrangement

INT 03-02 Dates Discussed

March 9, 2003; June 22, 2003

INT 03-02 References

Current:
SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance (SSAP No. 61R)
SSAP No. 62R—Property and Casualty Reinsurance (SSAP No. 62R)
SSAP No. 63—Underwriting Pools and Associations Including Intercompany Pools (SSAP No. 63)

INT 03-02 Issue

1. Insurance groups that utilize intercompany pooling arrangements often modify these arrangements from time to time for various business reasons. These business reasons commonly include mergers, acquisitions, dispositions or a restructuring of the group's legal entity structure. As an insurance group's business objectives and strategies evolve, it may be necessary for the insurance group's legal entity structure to similarly evolve in order to address the insurance group's business needs.

2. SSAP No. 63, paragraphs 5 and 7, defines and describes intercompany pooling as an arrangement among affiliated entities whereby "all of the pooled business is ceded to the lead entity and then retroceded back to the pool participants in accordance with their stipulated shares." This arrangement is established through "a conventional quota share reinsurance agreement…" Arrangements whereby there is one lead company that retains 100% of the pooled business and all or some of the affiliated companies have a 0% net share of the pool may qualify as intercompany pooling."

3. Therefore, in order to effectuate a modification to the existing intercompany pooling arrangement, companies must either 1) amend the existing reinsurance agreement, or 2) execute new agreements. The latter scenario may entail executing at least two agreements: a commutation of the existing agreement, and a new quota share agreement(s) that covers both past and future periods.

4. To illustrate, in order to effectuate a relatively simple modification, such as changing pooling participation percentages without changing the pool participants, companies often simply amend the existing pooling agreement. Alternatively, in order to effectuate a more complex modification, such as changing (by adding or removing) the number of pool participants, a company must commute the existing pooling agreement and execute a new quota share agreement(s). In conjunction with executing the appropriate reinsurance agreements, a transfer of assets and liabilities amongst the impacted affiliates is also required in order to implement the new reinsurance agreement(s). At issue is the appropriate valuation basis to be used for assets and liabilities that are transferred pursuant to the new reinsurance agreement(s).

5. Since SSAP No. 63 does not specifically address modifications to intercompany pooling arrangements, insurance groups that modify their intercompany pooling arrangements must refer elsewhere in Statutory Accounting Principles (SAP) for relevant guidance. The obvious guidance

for such transactions is SSAP No. 62R since an intercompany pooling arrangement is, by definition, affiliated reinsurance. There is, however, a minority opinion that *SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties* (SSAP No. 25) appears to apply due to the affiliated nature of these transactions. Since the guidance and intent of SSAP No. 62R and SSAP No. 25 provide for different valuation bases, this interpretation serves to provide definitive guidance as to which SSAP is relevant for these transactions and, therefore, clarify the appropriate valuation basis to be used for assets and liabilities transferred pursuant to a modification to an intercompany pooling arrangement.

SSAP No. 62R Approach:

6. This approach refers to the guidance and statutory accounting intent from SSAP No. 62R since intercompany pooling arrangements are defined and established through reinsurance. Further, since modifications to intercompany pooling agreements typically involve the transfer of net liabilities incurred since the inception of the existing pooling agreement (i.e., prior to the effective date of the new agreement), the retroactive reinsurance accounting guidance in paragraphs 28-34 of SSAP No. 62R is applicable. Paragraph 28 states that this special accounting treatment is warranted "due to the potential abuses involving the creation of surplus to policyholders and the distortion of underwriting results…" However, paragraph 31.d. specifically applies to intercompany reinsurance arrangements, and amendments to intercompany reinsurance agreements, since the reinsurance agreement is among companies 100% owned by a common parent. This paragraph allows prospective accounting treatment for intercompany reinsurance agreements that do not result in a gain in surplus as a result of the transaction.

7. To provide historical perspective, prior to the adoption (with modification) of FASB *Statement No. 113, Accounting and Reporting for Reinsurance of Short-Duration and Long-Duration Contracts* (FAS 113) as SAP, paragraph 31.d. was added as one of the SAP modifications. The intent of adding paragraph 31.d. was to specifically exclude intercompany reinsurance agreements among entities 100% owned by a common parent from retroactive reinsurance accounting requirements as a result of amending or modifying these agreements, provided there is no surplus gain. The presumption in this intent was that there would be no gains to the ceding entity resulting from implementing amendments or modifications to these types of reinsurance agreements.

8. Therefore, based on the foregoing guidance and background, the statutory accounting intent is to avoid surplus gains for the ceding entity as a result of implementing a modification to an intercompany pooling arrangement. On that basis, such a modification does not represent an economic transaction to the insurance group or to the impacted companies. As such, the transfer of both the assets and the liabilities valued at statutory book value ensures that there is no impact to surplus as a result of implementing a modification to an existing pooling arrangement.

SSAP No. 25 Approach:

9. An approach different from that which refers to reinsurance accounting guidance is to refer to the guidance in SSAP No. 25 since some may view a modification to an intercompany pooling agreement as a related party transaction involving the exchange of assets or liabilities. In this case, paragraphs 12-16 of SSAP No. 25 would appear applicable. This guidance specifies differing valuation bases, depending on whether the transaction is considered an economic or a non-economic transaction. Paragraph 12 states that "…The appearance of permanence is also an important criterion is assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed…" Since insurance groups often modify intercompany pooling arrangements, this type of transaction is not permanent, and may be construed as a non-economic transaction.

Paragraph 16.b. states that "non-economic transactions . . . shall be recorded at the lower of existing book value or fair value at the date of the transaction."

10. It appears that this guidance is intended to address matters involving discrete or isolated transfers of assets and/or liabilities between affiliates rather than transfers of assets and liabilities effected in relation to executing reinsurance transactions (the guidance for which is SSAP No. 62R). Additionally, application of this guidance would result in a change to the surplus of the insurance group as a result of implementing a modification to an existing intercompany pooling arrangement. As previously stated, the statutory accounting intent is to avoid surplus gains for the insurance group as a result of implementing a modification to an intercompany pooling arrangement.

11. The accounting issues are:

a. What is the relevant guidance for modifications to intercompany pooling arrangements?

b. What is the appropriate valuation basis to be used for assets and liabilities that are transferred among affiliates in conjunction with the execution of a new reinsurance agreement(s) that serves to substantively modify an existing intercompany pooling arrangement?

INT 03-02 Discussion

The Working Group reached a consensus as follows:

12. SSAP No. 62R provides accounting for property and casualty reinsurance agreements including specific guidance on intercompany pooling agreements. SSAP No. 62R provides two methods of accounting for changes in intercompany pooling agreements, depending on whether or not the pooling results in a gain in surplus.

13. The appropriate valuation basis to be used for assets and liabilities that are transferred among affiliates in conjunction with the execution of a new reinsurance agreement(s) that serves to substantively modify an existing intercompany pooling arrangement is statutory book value for assets and statutory value for liabilities. Book value is defined in the glossary of the *Accounting Practices and Procedure Manual*.

INT 03-02 Status

14. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 04-17: Impact of Medicare Modernization Act on Postretirement Benefits

INT 04-17 Dates Discussed

September 14, 2004; December 5, 2004

INT 04-17 References

Current:
SSAP No. 92—Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14 (SSAP No. 92)

Superseded:
SSAP No. 10R—Income Taxes (SSAP No. 10R)
SSAP No. 14—Postretirement Benefits Other Than Pensions (SSAP No. 14)
SSAP No. 89—Accounting for Pensions, A Replacement of SSAP No. 8 (SSAP No. 89)

INT 04-17 Issue

1. In December 2003, the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the Act) became law. Under the Act, starting in 2006, retirees will have the ability to obtain prescription drug benefits through a new Medicare Part D program and companies that continue to provide postretirement prescription drug benefits to their retirees may be eligible to receive a new federal subsidy.

2. In May 2004, FASB adopted the Board directed FASB Staff Position (FSP) *FAS 106-2, Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003* (FSP FAS 106-2). The guidance found in FSP FAS 106-2 superseded the earlier guidance in *FSP FAS 106-1, Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003* and was intended as being the final guidance on this subject.

3. Questions have arisen regarding whether an employer that provides postretirement prescription drug coverage should recognize the effects of the Act on the plan's accumulated postretirement benefit obligation (APBO) and the employer's postretirement benefit costs and, if so, when and how to account for those effects.

INT 04-17 Discussion

4. The Working Group reached a consensus to adopt the final conclusions reached in FSP FAS 106-2 with the following modifications:

a. Postretirement benefits should be accounted for in accordance with SSAP No. 92.

b. Income Taxes should be accounted for in accordance with SSAP No. 101.

c. Calculations shall not exclude non-vested employees.

d. Any references to *FSP FAS 106-1, Accounting and Disclosure Requirements Related to the Medicare Prescription Drug, Improvement and Modernization Act of 2003* are removed as this guidance was superseded by FSP FAS 106-2.

e. The effective date is universal for both public and non-public entities.

5. Per FSP FAS 106-2:

> 3. The guidance in this FSP related to accounting for the subsidy applies only to the sponsor of a single-employer defined benefit postretirement health care plan for which (a) the employer has concluded that prescription drug benefits available under the plan to some or all participants for some or all future years are "actuarially equivalent" to Medicare Part D and thus qualify for the subsidy under the Act and (b) the expected subsidy will offset or reduce the employer's share of the cost of the underlying postretirement prescription drug coverage on which the subsidy is based. This Interpretation also provides guidance for the disclosures about the effects of the subsidy for an employer that sponsors a postretirement health care benefit plan that provides prescription drug coverage but for which the employer has not yet been able to determine actuarial equivalency.
>
> 4. Although this FSP provides limited guidance on certain other related aspects of accounting and disclosure necessitated by the Act (for example, changes in assumed participation rates and health care cost trend rates, as well as income tax accounting) that guidance is not intended to supersede or in any way limit the application of other relevant authoritative literature. This FSP does not address the accounting for the subsidy in situations that may arise in which the expected subsidy exceeds the employer's share of the cost of the underlying postretirement prescription drug coverage on which the subsidy is based. It also does not address accounting for the subsidy by multiemployer health and welfare benefit plans or by the sponsors or participating employers of those plans.

6. The Act introduces two new features to Medicare that an employer needs to consider in determining those measurements: (a) a subsidy that is based on 28 percent of an individual beneficiary's annual prescription drug costs between $250 and $5,000 (subject to indexation and the provisions of the Act as to "allowable retiree costs") and (b) the opportunity for a retiree to obtain a prescription drug benefit under Medicare.

7. Per FSP FAS 106-2:

> 9. An employer's eligibility for the 28 percent subsidy depends on whether the prescription drug benefit available under its plan is at least "actuarially equivalent" to the Medicare Part D benefit. At present, detailed regulations necessary to implement the Act have not been issued, including those that would specify the manner in which actuarial equivalency must be determined, the evidence required to demonstrate actuarial equivalency, and the documentation requirements necessary to be entitled to the subsidy.[1] In addition, the magnitude of the subsidy for an employer depends on how many of the employer's Medicare-eligible retired Plan participants choose not to enroll in the *voluntary* Medicare Part D plan. Further, specific regulations regarding the payment/reimbursement mechanism for the subsidy are yet to be defined by the appropriate administrative agency. Accordingly, questions have been raised regarding whether the subsidy is substantively similar to other Medicare benefits that existed when Statement 106 was issued and therefore should be accounted for as a reduction of the APBO and net periodic postretirement benefit cost, or whether the subsidy represents a

[1] Section 1860D-11(c) of the Social Security Act, as amended by the Act, states that "the Secretary [of Health and Human Services] shall establish processes and methods for determining the actuarial valuation of prescription drug coverage."

payment to the employer that is determined by reference to its plan's benefit payments but is not, in and of itself, a direct reduction of postretirement benefit costs. Under either view, there is also a question as to when the subsidy should be given accounting recognition.

Effect on Per Capita Claims Cost

10. Regardless of the impact of the subsidy, the existence of prescription drug coverage under Medicare Part D may have an effect on an employer's per capita claims cost for a plan that currently provides a prescription drug benefit. That effect depends on (a) whether current and future retirees (or their beneficiaries under the employer-sponsored plan) enroll in the voluntary Medicare Part D plan and (b) the Act's macro-socioeconomic effects on health care cost trends and consumers' behavior.

Plan Amendments

11. In response to the Act, or for other reasons, an employer may amend an existing plan (or establish a new one). To the extent that an employer amends a plan (positively or negatively), the APBO will be affected by the direct effects of the change in benefits attributed to employee services already rendered. If an amendment changes the determination as to the actuarial equivalency of benefits available under the plan, the expected subsidy to the employer also will change.

Income Tax Accounting

12. The Act excludes receipt of the subsidy from the taxable income of the employer for federal income tax purposes.[2] Accordingly, this Interpretation addresses how that provision affects the accounting for the temporary difference related to the employer's accrued postretirement benefit cost under Statement 109, *Accounting for Income Taxes.*

FASB Staff Position

13. Paragraph 35 of Statement 106 specifies that health care coverage provided by Medicare shall be taken into account in measuring the employer's postretirement health care benefit obligation. Paragraph 40 of Statement 106 requires presently enacted changes in relevant laws to be considered in current period measurements of net periodic postretirement benefit cost and the APBO. Therefore, under that guidance, measures of the APBO and net periodic postretirement benefit cost on or after the date of enactment shall reflect the effects of the Act.

Effect of the Subsidy on Benefits Attributable to Past Service

14. When an employer initially accounts for the subsidy pursuant to the effective date and transition guidance in paragraphs 23–32, its effect on the APBO shall be accounted for as an actuarial experience gain pursuant to paragraphs 56 and 59 or 60 of Statement 106.

Effect of the Subsidy on Current Measures of Net Periodic Postretirement Benefit Cost

15. Because the subsidy affects the employer's share of its plan's costs, the subsidy is included in measuring the costs of benefits attributable to current service. Therefore, the subsidy reduces service cost (as defined in paragraph 47 of Statement 106) when it is recognized as a component of net periodic postretirement benefit cost.

[2] New Section 139A of the Internal Revenue Code established by Section 1202 of the Act.

Changes in Estimates

16. If an estimate of the expected subsidy subsequently changes—as a result of changes in regulations or legislation, changes in the underlying estimates of postretirement prescription drug costs, or for reasons other than a plan amendment—the effect of the change in estimate is an actuarial experience gain or loss pursuant to paragraph 56 of Statement 106.

Plan Amendments

17. If prescription drug benefits currently available under an existing plan are deemed not actuarially equivalent as of the date of enactment of the Act, but the plan is subsequently amended to provide actuarially equivalent benefits, the direct effect of the plan amendment on the APBO (that is, the effect of only the change in prescription drug coverage) and the effect on the APBO from any resulting subsidy to which the employer is expected to be entitled as a result of the amendment shall be combined. If that combined effect reduces the APBO, it is deemed to be an actuarial experience gain pursuant to paragraph 56 of Statement 106. If the combined effect increases the APBO, it is deemed to be prior service cost that shall be accounted for pursuant to paragraphs 50-54 of Statement 106.

18. A plan that provides prescription drug benefits that previously were deemed actuarially equivalent under the Act may be subsequently amended to reduce its prescription drug coverage and that reduced coverage may not be considered actuarially equivalent. In that circumstance, any actuarial experience gain related to the subsidy previously recognized is unaffected. However, the combined net effect on the APBO of (a) the subsequent plan amendment that reduces benefits under the plan and thus disqualifies the benefits as actuarially equivalent and (b) the elimination of the subsidy shall be accounted for as prior service cost (credit) as of the date the amendment is adopted.

Income Tax Accounting

19. In the periods in which the subsidy affects the employer's accounting for the plan, it shall have no effect on any plan-related temporary difference accounted for under Statement 109 because the subsidy is exempt from federal taxation. That is, the measure of any temporary difference shall continue to be determined as if the subsidy did not exist. To illustrate, consider the following simple example.

> Prior to the adoption of this FSP, an employer's carrying amount of accrued postretirement benefit cost (the amount recognized in the statement of financial position) is $100 for a noncontributory, unfunded prescription drug benefit plan with only inactive participants who are not yet eligible to collect benefits. Assuming a tax rate of 35 percent and no corresponding tax basis for the accrued postretirement benefit cost, the employer would report a $35 deferred tax asset related to that $100 deductible temporary difference. Because the employer has a policy of amortizing gains and losses under paragraph 59 of Statement 106, upon adoption of the FSP and recognition of a $28 actuarial gain resulting from the subsidy, neither the carrying amount of accrued postretirement benefit cost nor the deferred tax asset would change. Subsequently, ignoring interest on the APBO (which includes interest on the subsidy), as the actuarial gain related to the subsidy is amortized as a component of net periodic postretirement benefit cost, the carrying amount of accrued postretirement cost would be reduced. However, the associated temporary difference and deferred tax asset would remain unchanged. That is, after the gain related to the subsidy is amortized in its entirety, the carrying amount of accrued postretirement benefit cost would be $72, and the deferred tax asset would remain at $35.

> For purposes of simplicity, this example ignores complexities regarding the amount and timing of the subsidies reflected in the carrying amount of accrued postretirement benefit cost arising from any of the following: (a) netting gains and losses and application of the corridor amortization approach described in paragraph 59 of Statement 106, (b) recognition of additional subsidies through amortization of prior service costs that include effects of the subsidy, or (c) reduction in future service and interest costs. Those complexities must be considered in determining the temporary difference on which the deferred tax effects under Statement 109 will be based. However, providing detailed guidance on the application of Statement 109 to postretirement benefits other than pensions is beyond the scope of this FSP.

INT 04-17 Disclosures

8. Per FSP FAS 106-2:

> 20. Until an employer is able to determine whether benefits provided by its plan are actuarially equivalent, it shall disclose the following in financial statements for interim or annual periods:
>
> a. The existence of the Act
>
> b. The fact that measures of the APBO or net periodic postretirement benefit cost do not reflect any amount associated with the subsidy because the employer is unable to conclude whether the benefits provided by the plan are actuarially equivalent to Medicare Part D under the Act.

9. In interim and annual financial statements for the first period in which an employer includes the effects of the subsidy in measuring the net postretirement benefit cost and the first period in which an employer includes the effects of the subsidy in measuring net periodic postretirement benefit cost, it shall disclose the following:

a. The reduction in the net postretirement benefit cost for the subsidy related to benefits attributed to former employees.

b. The effect of the subsidy on the measurement of net periodic postretirement benefit cost for the current period. That effect includes (1) any amortization of the actuarial experience gain in (a) as a component of the net amortization called for by paragraph 49 of SSAP No. 92, (2) the reduction in current period service cost due to the subsidy, and (3) the resulting reduction in interest cost on the net postretirement benefit cost as a result of the subsidy.

c. Any other disclosures required by paragraph 64.q. of SSAP No. 92 which requires disclosure of "An explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by this statement."

10. For purposes of the disclosures required by paragraphs 64.a. of SSAP No. 92, an employer shall disclose gross benefit payments (paid and expected, respectively), including prescription drug benefits, and separately the gross amount of the subsidy receipts (received and expected, respectively).

INT 04-17 Effective Date and Transition

11. This interpretation is effective for reporting years beginning on or after January 1, 2005 with early adoption allowed. A change resulting from adoption of this interpretation should be accounted for as detailed in paragraphs 12 and 13. A change resulting from the adoption of this

Interpretation shall be accounted for as a change in accounting principle in accordance with SSAP No. 3.

12. Per FSP FAS 106-2:

> 24. … If the effects of the Act—including the subsidy, if any, changes in participation rates, and changes in estimated health care costs—cause the employer to conclude that enactment of the Act was not a "significant event" pursuant to paragraph 73 of Statement 106, the effects of the Act shall be incorporated in the next measurement of plan assets and obligations otherwise required by Statement 106 following the effective date of this FSP. If an employer concludes that enactment of the Act was a significant event, but either (a) benefits available under its plan are not actuarially equivalent to Medicare Part D or (b) the employer is unable to conclude (refer to paragraph 33) whether any benefits are actuarially equivalent, it shall measure any effects of the Act other than the subsidy (for example, changes in estimated participation rates or health care costs) at the next measurement date for plan assets and obligations required by paragraphs 28–32 of this FSP.

13. Per FSP FAS 106-2:

> 27. For a plan (a) that provides benefits that are considered actuarially equivalent as of the date of enactment, based on information that is available as of the date of adoption of this interpretation, and (b) for which enactment of the Act was a significant event, this interpretation provides two alternative methods of transition—retroactive application to the date of enactment (paragraphs 28–29) or prospective application from the date of adoption (paragraph 30).
>
> Retroactive application to date of enactment
>
> 28. When this FSP is initially adopted, a remeasurement of the plan's assets and APBO, including the effects of the subsidy, if applicable, as well as the other effects of the Act, shall be made as of the earlier of (a) the plan's measurement date that normally would have followed enactment of the Act or (b) the end of the employer's interim or annual period that includes the date of the Act's enactment. As an alternative, employers are permitted, but not required, to perform that remeasurement as of the date of enactment. The measurement of the APBO shall be based on the plan provisions in place on the measurement date. Plan amendments occurring after the measurement date pursuant to (a) or (b) above shall not be anticipated in performing that measurement. However, if prior to the effective date of this FSP, a plan is amended so as to not be considered actuarially equivalent, the employer shall not reflect any effects of the subsidy in the transitional measurements required by this FSP. If the prescription drug coverage provided by a plan was amended after December 8, 2003, but before January 31, 2004 (the date before which plan amendments would not cause the deferral provided by FSP FAS 106-1 to expire), the effects of the prescription drug plan amendment and the consequential effects of the subsidy shall be accounted for pursuant to the applicable guidance in either paragraph 17 or 18 of this FSP.
>
> 29. The effects of measuring plan assets and obligations under paragraph 28 generally will not affect the accrued or prepaid postretirement benefit cost reported in the employer's statement of financial position as of the measurement date.[3] However, those measurements will affect net periodic postretirement benefit cost for periods subsequent to the date of the re-measurement.[4] To the extent that previously issued financial reports

[3] The paragraph 28 measurement would affect the statement of financial position if, pursuant to paragraph 60 of Statement 106, the employer has a policy of immediately recognizing gains and losses.

[4] Depending on the measurement date selected for the plan pursuant to paragraph 72 of Statement 106, the net periodic postretirement benefit cost may not be affected by the Act in the employer's reporting period immediately following the measurement required by paragraph 28. For example, for a public company with a December 31 fiscal year-end, the

for periods prior to the effective date of this FSP would have been affected by the remeasurement of plan assets and obligations under paragraph 28, the requirements in paragraph 20 of APB Opinion No. 20, Accounting Changes, and paragraph 10 of FASB Statement No. 3, Reporting Accounting Changes in Interim Financial Statements, as applicable, shall be followed.[5] In calculating the effects on prior periods, the guidance in paragraphs 17 and 18 of this FSP applies to plan amendments adopted subsequent to the measurement date described in paragraph 28 but before the effective date of this FSP. The effects of any such amendment shall be determined as of the date the plan amendment is adopted. The following examples illustrate the application of the provisions in this paragraph.

> Example A—Calendar Year-End, September 30 Measurement Date
>
> Calendar Company, a public company, sponsors a postretirement health care benefit plan that provides prescription drug coverage. It has a December 31 year-end for financial reporting purposes and uses a September 30 measurement date pursuant to paragraph 72 of Statement 106. Calendar Company elected to defer any accounting for the effects of the Act pursuant to FSP FAS 106-1 and made that election in the quarter ending March 31, 2004, the first period in which the plan's accounting for the effects of the Act normally would have been reflected in Calendar Company's financial statements.
>
> Calendar Company adopts the guidance in this FSP as of July 1, 2004, the beginning of its third quarter. Calendar Company and its actuarial advisors determine that benefits provided by the plan as of the date of enactment were at least actuarially equivalent to Medicare Part D, and, accordingly, Calendar Company will be entitled to the subsidy. Calendar Company performs an interim measurement of the effects of the Act on the APBO as of December 31, 2003, the end of its interim (and annual) period that includes the date of the Act's enactment and determines that the aggregate effect on service cost, interest cost, and amortization of gains and losses results in a reduction of $500 in annual net periodic postretirement benefit cost compared to that amount calculated without considering the effects of the Act.
>
> The effect of applying this FSP has no cumulative effect on Calendar Company's retained earnings as of December 31, 2003. Because Calendar Company uses a September 30 measurement date, the accounting for the plan is reflected in Calendar Company's financial statements on a one-quarter lag. Therefore, the Act had no effect on net periodic postretirement benefit cost for the first quarter. Accordingly, in applying the guidance in Statement 3, Calendar Company reports net periodic postretirement benefit cost for the nine-month period ending September 30, 2004, reflecting $250 (the second and third quarter amounts) of the $500 annual reduction. Net periodic postretirement benefit cost included in third quarter results of operations reflects only that quarter's $125 reduction due to the Act. When presented for comparative purposes, for example in summary quarterly financial information in the annual report or for comparative purposes in the 2005 second quarter financial report, the results of operations for the second quarter of 2004 will be restated to reflect a $125 reduction in net periodic postretirement benefit cost due to the Act.

end of the employer's interim period that includes the date of enactment would be December 31, 2003. If that employer uses a September 30 measurement date pursuant to paragraph 72 of Statement 106, the effects of the Act on the plan would first affect net periodic postretirement benefit cost in the employer's interim period that begins April 1, 2004.

[5] Paragraph 10 of Statement 3 states that no cumulative effect of a change in accounting principle shall be included in net income of the interim period, other than the first interim period, in which the change is adopted. However, financial information for the pre-change interim periods of the fiscal year in which the change is made shall be restated on the basis of the new accounting principle whenever those pre-change interim periods are subsequently presented.

Example B—April 30 Year-End, April 30 Measurement Date

Spring Company, a public company, sponsors a postretirement health care benefit plan that provides prescription drug coverage. It has an April 30 year-end for financial reporting purposes and uses April 30 as the measurement date for plan assets and obligations under Statement 106. Spring Company elected to defer any accounting for the effects of the Act pursuant to FSP FAS 106-1 and made that election in the quarter ending January 31, 2004, the first period in which the plan's accounting for the effects of the Act normally would have been reflected in Spring Company's financial statements.

Spring Company adopts the guidance in this FSP as of August 1, 2004, the beginning of its second quarter. Spring Company and its actuarial advisors determine that benefits provided by the plan as of the date of enactment were at least actuarially equivalent to Medicare Part D, and, accordingly, Spring Company will be entitled to the subsidy. Spring Company measures the effects of the Act on the APBO as of January 31, 2004, the end of its interim period that includes the date of the Act's enactment and determines that the aggregate effect on service cost, interest cost, and amortization of gains and losses results in a reduction of $500 in annual net periodic postretirement benefit cost compared to that amount calculated without considering the effects of the Act.

Because the date for remeasuring the plan's assets and obligations required by this FSP—for an employer that elects retroactive application—occurs in Spring Company's prior fiscal year, the cumulative effect of applying the guidance in this FSP on Spring Company's retained earnings as of April 30, 2004, is $125 (the fourth quarter effect on net periodic postretirement cost, ignoring any deferred income tax effects, which may be none). That cumulative effect of a change in accounting principle is recognized in Spring Company's net income for the six months ending October 31, 2004. Assuming no other changes in assumptions or other gains and losses arise in the regularly scheduled April 30, 2004 measurement of the plan, pursuant to the guidance in Statement 3, Spring Company reports net periodic postretirement benefit cost for the six-month period ending October 31, 2004, reflecting $250 (the first and second quarter amounts) of the $500 annual reduction. Net periodic postretirement benefit cost included in second quarter results of operations reflects only that quarter's $125 reduction due to the Act. When presented for comparative purposes, for example in summary quarterly financial information in the annual report or for comparative purposes in the next fiscal year's first quarter financial report, the results of operations for the quarter ended July 31, 2004, will be restated to reflect the $125 reduction in net periodic postretirement benefit cost due to the Act and the $125 cumulative effect of the change in accounting principle.

Prospective application as of date of adoption

30. When this FSP is initially adopted, a remeasurement of the plan's assets and APBO, including the effects of the subsidy, if applicable, as well as the other effects of the Act, shall be made as of the beginning of the period of adoption pursuant to the guidance in paragraph 73 of Statement 106. The measurement of the APBO shall be based on the plan provisions in place on the measurement date and shall incorporate the best available current information regarding actuarial assumptions and discount rates. The results of that measurement shall be used to determine net periodic postretirement benefit cost in interim periods following the date of adoption until the next measurement date otherwise required by Statement 106. The following example illustrates the application of the provisions of this paragraph.

Example C—Calendar Year-End, September 30 Measurement Date

Calendar Company, a public company, sponsors a postretirement health care benefit plan that provides prescription drug coverage. It has a December 31 year-end for financial reporting purposes and uses a September 30 measurement date pursuant to paragraph 72 of Statement 106. Calendar Company elected to defer any accounting for the effects of the Act pursuant to FSP FAS 106-1 and made that election in the quarter ending March 31, 2004, the first period in which the plan's accounting for the effects of the Act normally would have been reflected in Calendar Company's financial statements.

Calendar Company adopts the guidance in this FSP as of July 1, 2004, the beginning of its third quarter. Calendar Company and its actuarial advisors determine that benefits provided by the plan as of the date of enactment were at least actuarially equivalent to Medicare Part D, and, accordingly, Calendar Company will be entitled to the subsidy. Calendar Company measures the effects of the Act on the APBO as of April 1, 2004, the beginning of the plan's interim period that corresponds to the plan sponsor's first reporting period beginning after June 15, 2004, and determines that the aggregate effect on service cost, interest cost, and amortization of gains and losses results in a reduction of $500 in annual net periodic postretirement benefit cost compared to that amount calculated without considering the effects of the Act.

Net periodic postretirement benefit cost for the quarters ending September 30 and December 31, 2004, reflecting the activity in the plan for the quarters ending June 30 and September 30, 2004, will include a $125 per quarter reduction in net periodic postretirement benefit cost due to the effects of the Act.

Nonpublic entity with only small plans

31. If enactment of the Act constitutes a significant event for a plan, a nonpublic entity that meets the criteria in paragraph 23 may follow the guidance in paragraph 28, including the related transition guidance described in paragraph 29, or may incorporate the effects of the Act prospectively in measures of net periodic postretirement benefit cost and plan assets and obligations for fiscal years beginning after December 15, 2004.

Employer That Did Not Elect Deferral

32. For an employer that did not elect the deferral option provided under FSP FAS 106-1 and whose previous accounting for the effects of the Act differs from the guidance in this FSP, the adoption of this FSP constitutes a change in accounting principle under Opinion 20. Accordingly, the cumulative effect of retroactive application of this FSP to the date of the Act's enactment shall be reflected in the financial statements following the provisions of paragraph 20 of Opinion 20 and paragraphs 9 and 10 of Statement 3, as applicable.

Subsequent Determination of Actuarial Equivalence Absent a Plan Amendment

33. When adopting this FSP, an employer and its actuarial consultants may be unable to determine the extent to which the benefits provided by a plan are actuarially equivalent as of the date of the initial measurement applying the guidance in this FSP. If clarifying regulations related to the Act or new information about the interpretation or determination of *actuarial equivalency* under the Act becomes available, the employer shall reconsider whether the benefits provided under its plan, as presently constructed, are actuarially equivalent.[6] If that reconsideration results in a conclusion that benefits provided by the plan are actuarially equivalent (or that additional benefits provided by the

[6] The guidance in this paragraph does not apply if a plan amendment is the event that gives rise to the employer's reconsideration of actuarial equivalency. The guidance in paragraphs 17 and 18 of this FSP apply to plan amendments.

plan are actuarially equivalent in the case of a plan under which an employer previously had determined that some benefits were actuarially equivalent), that conclusion could be a significant event pursuant to paragraph 73 of Statement 106.[7] If the effects of the subsidy on the plan are significant, a measurement of plan assets and obligations shall be performed as of the date that actuarial equivalency is determined. Any effect on the APBO due to the subsidy shall be reflected as an actuarial gain consistent with the guidance in paragraph 14 of this FSP. Measures of net periodic postretirement benefit cost for subsequent periods would reflect the effects of those measurements (reported on a lag basis, if appropriate; refer to footnote 6). Prior financial statements shall not be retroactively adjusted nor shall a cumulative effect for prior periods be recognized in income.

INT 04-17 Status

14. No further discussion is planned.

[7] To the extent that some benefits under a plan are determined to be actuarially equivalent at the date of adoption of the FSP, the provisions of paragraphs 24–32 apply.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 04-21: EITF 02-9: Accounting for Changes That Result in a Transferor Regaining Control of Financial Assets Sold

INT 04-21 Dates Discussed

December 5, 2004; March 13, 2005; March 3, 2012; August 31, 2012

INT 04-21 References

Current:
SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 103)

Superseded:
SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 91R)

INT 04-21 Issue

1. EITF No. 02-9, *Accounting for Changes That Result in a Transferor Regaining Control of Financial Assets Sold* (EITF 02-9) expands on a key concept presented in FASB Statement No. 140, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (FAS 140), paragraph 55. This key concept requires a transferred financial asset that has been accounted for as sold to be accounted for as "re-purchased" if the basis for that sale accounting subsequently becomes invalid.

2. The following is excerpted from EITF 02-9:

> 1. …One circumstance that has raised questions about the application of paragraph 55 occurs when the provisions of paragraph 55 are triggered because the transferor holds a contingent right such as a contingent call option on the transferred financial assets (for example, a removal of accounts provision or "ROAP") and the contingency has been met. This issue assumes that the transferee is not consolidated by the transferor.
>
> 2. Under Statement 140, rights held by the transferor (typically in the form of purchased options or forward purchase contracts) only preclude sale accounting under paragraph 9.c.(2) if they provide the transferor with (a) the unilateral right to cause the holder to return specific transferred financial assets, and (b) more than a trivial benefit. One class of contingent rights (including certain ROAPs 1) does not preclude sale accounting because it does not include unilateral rights. The most common type of ROAP is a default ROAP, which gives the holder the right but not the obligation to purchase (call) a loan that is in default (the meaning of default typically is specifically defined in each transaction). Such rights are common in credit card securitizations and in securitizations sponsored by the Government National Mortgage Association (GNMA) 2 and other governmental or quasi-governmental agencies. Once the contingency is met (in this case, when a given loan goes into default), the call option on that asset (loan) is no longer contingent. At that point, the transfer fails the criterion in paragraph 9.c.(2) of Statement 140 because the transferor has the unilateral right to purchase a specific transferred financial asset and obtains more than a trivial benefit. Under the requirements of paragraph 55, when a contingency related to a transferor's contingent right has been met, the transferor generally must account for the "re-purchase" of a specific subset of the financial assets transferred to and held by the qualifying entity. The transferor must do so regardless of whether it intends to exercise its call option.

3. Per EITF 02-9, the issues are:

Issue 1—How the transferor should account for the transferor's beneficial interests when the underlying assets are re-recognized under the provisions of paragraph 55 because the transferor's contingent right (for example, a ROAP or other contingent call option on the transferred financial assets) becomes exercisable, including whether any gain or loss should be recognized by the transferor when paragraph 55 is applied.

Issue 2—Whether under any circumstances a loan loss allowance should initially be recorded for loans that do not meet the definition of a security when they are re-recognized under the provisions of paragraph 55

Issue 3—How re-recognition under paragraph 55 of assets sold affects the accounting for the related servicing asset.

Issue 4—After a paragraph 55 event, how the transferor should account for the transferor's interests (other than the servicing asset).

INT 04-21 Discussion

4. EITF 02-9 consensus on each issue is as follows:

5. The Task Force reached a consensus on Issue 1 that upon application of paragraph 55, no gain or loss should be recognized in earnings with respect to any of the transferor's beneficial interests. Beneficial interests should be evaluated periodically for possible impairment, including at the time paragraph 55 is applied. A gain or loss may be recognized upon the exercise of a ROAP or similar contingent right with respect to the "re-purchased" transferred financial assets that were sold if the ROAP or similar contingent right held by the transferor is not accounted for as a derivative under Statement 133 and is not at-the-money, resulting in the fair value of those repurchased assets being greater or less than the related obligation to the transferee.

6. The Task Force reached a consensus on Issue 3 that under no circumstances should a loan loss allowance be initially recorded for loans that do not meet the definition of a security when they are re-recognized pursuant to paragraph 55.

7. The Task Force reached a consensus on Issue 4 that when a paragraph 55 event occurs, the accounting for the servicing asset related to the previously sold financial assets does not change as a result of the application of paragraph 55. That is, even though the transferor has regained control over the previously sold assets, the cash flows from those assets will contractually be paid to the SPE, which will then distribute the proceeds to satisfy its contractual obligations (including obligations to the beneficial interest holders). Because the transferor, as servicer, is still contractually required to collect the asset's cash flows for the benefit of the SPE and otherwise service the assets, it should continue to recognize the servicing asset and assess the asset for impairment as required by Statement 140.

8. The Task Force reached a consensus on Issue 5 that when a paragraph 55 event occurs, the transferor should continue to account for the transferor's interests in those underlying financial assets apart from any re-recognized financial assets. That is, the transferor's interests should not be combined with and accounted for with the re-recognized financial assets. However, a subsequent event that results in the transferor reclaiming those financial assets from the transferee—for example, the exercise of a ROAP or the consolidation by the transferor of the securitization entity in accordance with applicable generally accepted accounting principles, including Interpretation 46R—would result in a recombination of the transferor's interests with the underlying financial assets.

5. The Working Group reached a consensus to adopt EITF 02-9 as an interpretation of SSAP No. 103, with modification as follows:

a. Change references to FAS 140 to SSAP No. 103 including paragraph-specific references. Modify FAS 140, paragraph 55 references to refer to SSAP No. 103, paragraph 59.

b. Change references to FASB Statement No. 133, *Accounting for Derivative Instruments and Hedging Activities* to SSAP No. 86 as an interpretation of SSAP No. 91R.

c. Remove reference to Interpretation 46R as FASB Interpretation No. 46, *Consolidation of Variable Interest Entities,* is pending review for statutory accounting. (The prior GAAP guidance in FASB Interpretation FIN 46 was rejected for statutory accounting in *SSAP No. 3—Accounting Changes and Corrections of Errors*.)

d. Limit the applicability of EITF 02-9, Issue 3 to only valuation allowances applicable to statutory accounting for mortgage loans and real estate under development as provided in *SSAP No. 37—Mortgage Loans* and real estate under development as discussed in *SSAP No. 38—Acquisition, Development and Construction Arrangements*.

6. This interpretation was originally effective for years beginning January 1, 2005, to be consistent with the original effective date of SSAP No. 91R. Revisions adopted to this interpretation on March 3, 2012, are in accordance with the adoption with modification of FAS 166 in a new SSAP to superseded SSAP No. 91R.

INT 04-21 Status

7. In 2009, *FAS 166, Accounting for Transfers of Financial Assets, an Amendment of FAS 140*, was issued. In addition to amending FAS 140, it also amended FASB EITF 02-9. FAS 166 was adopted for statutory accounting in SSAP No. 103 to supersede SSAP No. 91R. On March 3, 2012, corresponding revisions to INT 04-21 were also adopted to reflect the updated GAAP guidance adopted for statutory accounting interpreting SSAP No. 103. These changes will not be tracked in subsequent editions of the Manual.

8. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 05-05: Accounting for Revenues Under Medicare Part D Coverage

INT 05-05 Dates Discussed

September 28, 2005; December 3, 2005

INT 05-05 References

Current:
SSAP No. 47—Uninsured Plans (SSAP No. 47)
SSAP No. 54—Individual and Group Accident and Health Contracts (SSAP No. 54)
SSAP No. 66—Retrospectively Rated Contracts (SSAP No. 66)
SSAP No. 84—Health Care Receivables and Receivables Under Government Insured Plans (SSAP No. 84)

INT 05-05 Issue

1. The Medicare Modernization Act of 2003 (MMA) created a new program, commonly known as Medicare Part D, whereby Medicare recipients may obtain prescription coverage offered by insurers who have been approved by the Centers for Medicare and Medicaid Services (CMS). Insurers who offer Medicare Part D coverage will, starting in January 2006, receive several different types of funds relating to the program. Some of these funds relate to portions of the coverage that require an annual reconciliation, resulting in the return of any excess funds received. Other funds may be received (or may be required to be returned) to offset experience that is especially unfavorable (or, respectively, favorable).

2. How should the various components of the funds received or receivable by an insurer from Medicare Part D coverage be accounted for?

INT 05-05 Discussion

3. The attached appendix provides a listing of terms to which CMS ascribes a specific meaning. This list has been enhanced to include other terms in order to facilitate consistent application for accounting and the NAIC's Risk Based Capital formula. It should be noted that the terms included in the attached appendix are for the most part defined by CMS. Consequently, the term 'reinsurance payment' does not represent actual reinsurance as defined by *SSAP No. 61R—Life, Deposit-Type and Accident and Health Reinsurance* (SSAP No. 61R).

4. The Working Group reached a consensus to adopt the following guidance as it applies to the various funds to be received under the Medicare Part D program. The funds should be accounted for in accordance with one of the three SSAP's outlined below:

a. Specific funds received as reimbursements (or advance payments) for uninsured claims under a partially uninsured plan should be accounted for under SSAP No. 47. These funds include 'Reinsurance Payments' and 'Low Income Subsidy (cost-sharing portion)'. These funds are paid by the Government for a portion of claims above the out-of-pocket threshold or relate to PDP payments for all or a portion of the deductible, the coinsurance and the co-payment amounts for low-income beneficiaries.

b. Specific funds received by the PDP Sponsor from either the Medicare Part D enrollee or the government as payment for Standard Coverage that will be subject to retrospective premium adjustments should be accounted for under SSAP No. 66. These funds include 'Direct Subsidy', 'Low Income Subsidy (premium portion)', 'Beneficiary Premium (standard coverage portion)', 'Part D Payment Demonstration' and 'Risk Corridor Payment Adjustment'. The funds noted above have a final policy amount that is calculated based on the loss experience of the insured during the term of the policy, therefore should be treated as such.

c. Specific funds received as premiums for coverage that is not retrospectively rated should be accounted for under SSAP No. 54. These funds include 'Beneficiary Premium (supplemental benefit portion)', as these payments are considered to be standard premium payments that do not meet the definitions under SSAP No. 47 or SSAP No. 66 as defined in 4.a. and 4.b.

5. The collectibility and any nonadmission of amounts receivable from the government insured or uninsured plans are addressed in SSAP No. 84, paragraph 23 and SSAP No. 47, paragraph 11.c., respectively.

INT 05-05 Status

6. No further discussion is planned.

Appendix – Commonly Used Terms for Medicare Part D Coverage

The federal Centers for Medicare and Medicaid Services (CMS) oversees the Medicare Part D prescription drug coverage, including both coverage provided through a stand-alone Prescription Drug Plan (PDP) and coverage provided as part of a Medicare Advantage plan. CMS ascribed specific meaning to most of the following terms. Other terms have been defined below in order to facilitate consistent application.

Beneficiary Premium (Standard Coverage Portion) – The amount received from the Part D enrollee (directly, or from CMS after being withheld from Social Security benefits) as payment for the Standard Coverage. This includes any late enrollment penalties that the PDP Sponsor receives for an enrollee. The Beneficiary Premium is accounted for as health premium.

Beneficiary Premium (Supplemental Benefit Portion) – The amount received from the Part D enrollee (directly, or from CMS after being withheld from Social Security benefits) as payment for Supplemental Benefits. The Beneficiary Premium is accounted for as health premium.

Coverage Year Reconciliation – A reconciliation made after the close of each calendar year, to determine the amounts that a PDP Sponsor is entitled to for the Low-Income Subsidy (Cost-Sharing Portion), the Reinsurance Payment, and the Risk Corridor Payment Adjustment. To the extent that interim payments (if any) from CMS exceeded the amounts determined by the reconciliation, the PDP Sponsor must return the excess to the government; to the extent that interim payments (if any) from CMS fell short of the amounts determined by the reconciliation, the government will make an additional payment to the PDP Sponsor. The Coverage Year Reconciliation results in the Low-Income Subsidy (Cost-Sharing Portion) and the Reinsurance Payment being essentially a self-insured (by the government) component of the Part D coverage, subject to SSAP No. 47. The Coverage Year Reconciliation also results in the treatment of the Risk Corridor Payment Adjustment as a retrospective premium adjustment, subject to SSAP No. 66.

Direct Subsidy – The amount the government pays to the PDP Sponsor for the Standard Coverage. These payments are accounted for as health premium.

Low-Income Subsidy (Cost-Sharing Portion) – The amount the government pays to the PDP Sponsor for additional benefits provided to low-income enrollees. The additional benefits may include payment for some or all of the deductible, the coinsurance, and the co-payment above the out-of-pocket threshold. These payments are accounted for as payments made under a self-insured plan.

Low-Income Subsidy (Premium Portion) – The amount the government pays to the PDP Sponsor for low-income enrollees in lieu of part or all of the Beneficiary Premium (Standard Coverage Portion). These payments are accounted for as health premium.

PDP Sponsor – The entity that provides stand-alone Part D coverage (as opposed to Part D coverage provided through a Medicare Advantage plan).

Reinsurance Payment – An amount paid by the government for benefit costs above the out-of-pocket threshold (see "Standard Coverage"). Generally, when costs exceed the out-of-pocket threshold, the government pays 80% of the costs, the enrollee pays 5% (or the specified co-payments of either $2 for generic and $5 for brand name prescriptions), and the PDP Sponsor pays the remainder (typically, 15% of the costs). The amount paid by the government is treated as a claim payment made by a self-insured benefit plan rather than as revenue to the PDP Sponsor, and the claims do not flow through the PDP sponsor's income statement. In cases where the government prepays the Reinsurance Payment on an estimated basis, the prepayment is treated as a deposit, which again does not pass through the PDP Sponsor's income statement.

The amount paid by the enrollee is paid directly to the pharmacy; therefore there is no required accounting for this amount by the PDP sponsor.

Part D Payment Demonstration – A payment from the government to a PDP Sponsor participating in CMS's Part D Payment Demonstration. The Payment Demonstration is a special arrangement in which the PDP sponsor receives a predetermined per-enrollee capitation payment and the government no longer provides reinsurance for the 80% of costs in excess of the out-of-pocket threshold. Rather, the PDP sponsor assumes the risk for this 80% of costs, in addition to its normal 15% share of costs in excess of this threshold. However, risk corridor protection does still apply to this 80% share of costs. These payments are accounted for as health premium.

Reinsurance Coverage – The Medicare Part D provision under which the PDP Sponsor may receive a Reinsurance Payment. This does not include payments under the Part D Payment Demonstration.

Risk Corridor Payment Adjustment – An amount, by which the government adjusts its payments to the PDP Sponsor, based on how actual benefit costs vary from the costs anticipated in the PDP Sponsor's bid for the Part D contract (the "target amount" of costs). The government establishes thresholds for symmetric risk corridors around the target amount, using percentages of the target amount. If actual costs exceed the target amount but are less than the first threshold upper limit, then no adjustment is made. If actual costs exceed the first threshold upper limit, the government will make an additional payment equal to 50% (75% in 2006 and 2007, or 90% under some circumstances) of the excess that falls between the first and second thresholds, and 80% of the excess that falls above the second threshold. However, if actual costs are less than the target amount, then the PDP Sponsor must make a comparable payment to the government. For 2006 and 2007, the first and second thresholds are 2.5% and 5%, respectively; for 2008-2011, they are 5% and 10%; and for 2012 and later, the thresholds have not yet been established, but will be no less than the 2008-2011 values. Risk corridor payment adjustments are accounted for as retrospective premium adjustments on retrospectively rated contracts.

Risk Corridor Protection – The Medicare Part D provision under which the PDP sponsor may receive (or pay) a Risk Corridor Payment Adjustment. Most employer plans providing Medicare Part D are not eligible for Risk Corridor Protection.

Standard Coverage – The Part D benefit design that conforms to certain standards prescribed by the government. The standard coverage comprises: no coverage for an annual initial deductible; coverage net of a coinsurance provision (25% of costs are payable by the insured) for costs up to an initial coverage limit; a range beyond the initial coverage limit, in which the insured pays all of the prescription drug costs –i.e. no coverage by the PDP; and an annual out-of-pocket threshold, above which the insured pays the greater of a specified co-payment or 5% of the drug cost. The various limits and thresholds are set at specified dollar amounts for 2006, which will be increased in later years based on the growth in drug expenditures. Wherever the term "Standard Coverage" is used as part of these instructions, the same treatment would be applied to coverage that has been approved as actuarially equivalent coverage. With respect to amounts above the out-of-pocket threshold, see the definitions of "Reinsurance Payment" and "Part D Payment Demonstration."

Supplemental Benefits – Benefits in excess of the Standard Coverage. These benefits typically will cover some portion of the deductible, the co-payments, or the "coverage gap" between the initial coverage limit and the out-of-pocket threshold. Supplemental Benefits are part of an enrollee's Part D coverage, so they are not placed in the "Other" category in the RBC formula. However, they are not subject to either the Reinsurance Payment or the Risk Corridor Payment Adjustment, so they receive less favorable RBC treatment than the Standard Coverage.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)

INT 06-02 Dates Discussed

March 5, 2006; June 11, 2006; September 10, 2006

INT 06-02 References

Current:
SSAP No. 26—Bonds, excluding Loan-Backed and Structured Securities (SSAP No. 26)
SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities) (SSAP No. 30)
SSAP No. 32—Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities) (SSAP No. 32)
SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies (SSAP No. 48)

INT 06-02 Issue

1. A certified capital company (CAPCO) is a state legislated venture capital firm that can be a partnership, corporation, trust or limited liability company, profit or not-for-profit, for which investors who invest cash to acquire an equity interest or qualified debt instrument receive state premium or income tax credit. Although these investments are sometimes termed by different acronyms, they will be referred to as a CAPCO for purposes of this issue.

2. A reporting entity that qualifies as a certified investor typically earns, in the year the investment is made, a vested credit against state premium or income taxes equal to greater than 100% of the investor's investment of certified capital, of which a certain percent (varies by state; example: 10%, 25%) may be taken in any taxable year. The credit to be applied in any one year may not exceed the entity's state premium or income tax liability for the taxable year. Any unused tax credit may be carried forward until the premium or income tax credit is used (varies by state; some indefinitely, in other instances there is a specified expiration date, such as 2010; 2020). In some cases, a certified investor may transfer or assign unused premium or income tax credits. In addition to tax credits, the CAPCO often pays a nominal amount of interest and has a specified principal repayment date. The CAPCO often provides for a mechanism that guarantees the principal repayment.

3. Depending on the terms of the agreement, a CAPCO may make prepayments of principal and interest on its indebtedness.

4. The accounting issues are:

Issue 1: How should investments in a CAPCO be accounted for?

Issue 2: If the CAPCO agreement provides for the majority of interest to be paid in advance, how should it be earned?

INT 06-02 Discussion

5. For Issue 1, the Working Group came to a consensus that reporting entities should account and report for investments in CAPCO's consistent with the agreement structure within the guidance provided below:

a. Investment in a debt instrument of a CAPCO shall be reported as a bond in accordance with the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 26, paragraph 7.

b. Investment in an equity interest of a CAPCO shall be reported as common stock and reported at fair value as stated in SSAP No. 30, paragraph 7.

c. Investment in preferred stock interest of a CAPCO shall be reported as preferred stock in accordance with the *Purposes and Procedures Manual of the NAIC ~~Securities Valuation~~Investment Analysis Office* and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (Valuations of Securities manual) as stated in SSAP No. 32, paragraphs 15-18.

d. Investment in a Joint Venture, Partnership and Limited Liability Company (LLC) shall be reported in accordance with SSAP No. 48, paragraphs 5-6. The reported value of the investment shall be decreased in proportion to the premium tax credits utilized.

e. The tax credits shall be recognized as a reduction of the tax liabilities as they are utilized. Tax credits received are not to be included in investment income.

6. For Issue 2, the Working Group came to a consensus that reporting entities should account for any prepaid interest received by the insurer to be recorded as an unearned interest liability and should be amortized over the life of the security. This is consistent with the treatment of prepaid interest in SSAP's No. 37 and 49. This is also consistent with SSAP No. 34, which states that gross investment income should be reported as earned, and includes a change in unearned investment income.

INT 06-02 Status

7. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 06-07: Definition of Phrase "Other Than Temporary"

INT 06-07 Dates Discussed

September 10, 2006; December 10, 2006

INT 06-07 References

Current:

SSAP No. 99—Accounting for Certain Securities Subsequent to an Other-Than-Temporary Impairment (SSAP No. 99)

Affects:
Nullifies the prior interpretation on this topic, *INT 02-07 Definition of Phrase "Other Than Temporary"*

INT 06-07 Issue

1. The *Accounting Practices and Procedures Manual* contains guidance for determining when an investment is considered impaired within each of the above identified statements. Those statements should also be used to determine the measurement of an impairment loss. Each of the above statements also makes reference to an "other than temporary" decline in fair value. This interpretation is designed to address questions related to that phrase, as well as summarize the statutory accounting process for determining when an investment is considered impaired.

Step 1: Determine Whether an Investment Is Impaired

2. The decision for determining when an investment is considered impaired is dictated by the applicable SSAP and the respective impairment indicators included in each of the SSAPs. If an impairment indicator is present, the determination of an impairment shall be assessed at the

individual security or investment level as reported in the annual statement and supporting schedules. For those SSAPs that require the reporting entity to use the fair value to determine if an impairment has occurred, the determination of that value shall be consistent with how the term fair value is defined within *SSAP No. 100—Fair Value Measurements*. Once a reporting entity has determined that an impairment indicator is present, the reporting entity shall continue to evaluate whether the investment is impaired each subsequent reporting period until either (a) the investment experiences a recovery of the fair value up to (or beyond) its carrying value or (b) the investor recognizes an other-than-temporary impairment loss.

Step 2: Evaluate Whether an Impairment Is Other Than Temporary

3. There are numerous factors to be considered when determining whether an impairment is other than temporary and their relative significance will vary from case to case. The Emerging Accounting Issues (E) Working Group (Working Group) has been asked if the phrase "other than temporary" should be interpreted to mean "permanent." The Working Group[1] believes the Statutory Accounting Principles (E) Working Group consciously chose the phrase "other than temporary" as the analysis was not intended to determine whether an individual security or investment was "permanently impaired." The fair value of assets may decline for various reasons. The market price may be affected by general market conditions, which reflect prospects for the economy as a whole, or by specific information pertaining to an industry or an individual company. Such declines require further investigation by management. Acting upon the premise that a write-down may be required, management should consider all available evidence to evaluate the fair value of its investment.

4. The Working Group believes that the following items are only a few examples of the factors, which, individually or in combination, indicate that a security's decline in value is specific to an issuer's fundamental credit difficulties, or that a non-interest related decline is other than temporary and that a write-down of the carrying value is required:

a. The length of time and the extent to which the fair value has been less than cost;

b. The financial condition and short-term prospects of the issuer, including any specific events that may influence the operations of the issuer, such as changes in technology, that may impair the earnings potential of the asset or the discontinuance of a segment of the business that may affect the future earnings potential; or

c. The intent and ability of the holder to retain its investment in the issuer for a period of time sufficient to allow for any anticipated recovery in value.

5. An interest related impairment should be deemed other-than-temporary when an investor has the intent to sell an investment, at the reporting date, before recovery of the cost of the investment. The investor should consider whether its cash or working capital requirements and contractual or regulatory obligations indicate that the investment may need to be sold before the forecasted recovery occurs. The term "interest related" includes a declining value due to both increases in the risk free interest rate and general credit spread widening. Credit spreads can widen or contract for a variety of reasons, including supply/demand imbalances in the marketplace or perceived higher/lower risk of an entire sector. If the declining value is caused, in whole or in part, due to credit spreads widening, but not due to fundamental credit problems of the issuer, the change in credit spreads is deemed to be interest related. Fundamental credit

[1] The recommendations provided by the Working Group were developed in part from SEC Staff Accounting Bulletin No. 59–*Noncurrent Marketable Equity Securities* (SAB 59). As such, readers of this Interpretation should understand that SAB 59 has not been adopted as part of Statutory Accounting Principles as SAB's are not part of the Statutory Hierarchy (see Preamble).

problems exist with the issuer when there is evidence of financial difficulty that may result in the issuer being unable to pay principal or interest when due.

6. Unless evidence exists to support the assertion that the decline in fair value below carrying value is temporary, a write-down, accounted for as a realized loss, should be recorded. In accordance with the guidance of the SSAPs, such loss should be recognized in income for the period in which other than temporary impairment is determined to have occurred. The adjusted carrying value reflecting the impairment loss of the individual security or investment shall be the new cost basis of the individual security or investment.

7. The Working Group has also been asked if it is appropriate for reporting entities, independent auditors or state examiners to apply predefined thresholds to the phrase “other than temporary”? The Working Group is aware that certain insurers, independent auditors and state examiners, over time, have developed quantitative thresholds as “rules of thumb” to assist in the evaluation of asset impairment. One rule of thumb in particular suggests that if the fair value is less than its carrying value by 20 percent or more, then it is considered to be other than temporarily impaired. Another suggests that an asset is other than temporarily impaired if the fair value has been less than cost for more than 6 months. The use of a numerical threshold may provide the basis for a preliminary assumption that – without considering all relevant circumstances – an impairment may have occurred. Identifying the impairment is only the beginning of the analysis; it cannot appropriately be used as a substitute for a full analysis of all relevant qualitative considerations. Exclusive reliance on such thresholds removes the ability of management to apply its judgment, a concept inherent to the impairment model.

Step 3: If the Impairment is Other Than Temporary, the Cost Basis of the Individual Asset Shall Be Written Down to a New Cost Basis and the Amount of the Write-Down Is Accounted for as a Realized Loss

8. If an impairment is considered other than temporary, the cost or carrying value of the asset should be written down to reflect its value in accordance with the relevant SSAP. A company's management should follow the impairment guidance in the SSAP pertaining to that particular asset class while considering various factors on a case-by-case basis in determining the amount of the realized loss that should be recorded.

INT 06-07 Discussion

9. The Working Group reached a consensus to adopt with modification paragraph 6, 7 and 11 of *FSP FAS115-1/124-1: The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments* (FSP FAS 115-1/124-1). This INT rejects paragraphs 1-5, 8-10, 12-15, and 19 of FSP FAS 115-1/124-1. This INT does not address paragraphs 16-18 and footnote 1 to paragraph 7 of FSP FAS115-1/124-1.

10. Paragraphs 3-8 of this interpretation incorporate the guidance that was in *INT 02-07: Definition of Phrase “Other Than Temporary”* (INT 02-07), paragraphs 3-9, with an addition to clarify the general credit spread widening that was discussed in INT 02-07, paragraph 6. On final adoption of this Interpretation, INT 02-07 is nullified.

11. FSP FAS 115-1/124-1 nullified the requirements of paragraphs 10-18 of EITF 03-01: *The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments* (EITF 03-1) and carried forward the requirements of paragraphs 8, 9, 21 and 22 of the EITF to the FSP. The Working Group notes that the remaining paragraphs of EITF 03-01 either primarily related to the EITF process or are inconsistent with the current statutory model for impairment and are

rejected. The Statutory Accounting Principles (E) Working Group is separately considering the disclosures related to the FSP.

12. FSP EITF 03-1-1: Effective Date of Paragraphs 10-20 of EITF Issue No. 03-1 (FSP EITF 03-1-1) was issued by the EITF on September 30, 2004, and delayed the effective date for the measurement and recognition guidance contained in paragraphs 10-20 of EITF 03-1. The delay of the effective date for paragraphs 10-20 of Issue 03-1 was superseded concurrent with the final issuance of FSP FAS 115-1/124-1 and as such, is rejected.

INT 06-07 Status

13. INT 06-07 nullifies *INT 02-07: Definition of Phrase "Other Than Temporary."*

14. No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 06-12: Tax Deposits Submitted in Accordance with Section 6603 of the Internal Revenue Service (IRS) Code

INT 06-12 Dates Discussed

September 10, 2006; December 10, 2006

INT 06-12 References

Current:
SSAP No. 101—Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10 (SSAP No. 101)

Superseded:
SSAP No. 10R—Income Taxes – A Temporary Replacement of SSAP No. 10 (SSAP No. 10R)

INT 06-12 Issue

1. The American Jobs Creation Act of 2004 enacted on October 22, 2004, added new section 6603 to the Internal Revenue Service Code (the Code) to permit a taxpayer to make a deposit with the Internal Revenue Service to suspend the running of interest under section 6601 on a potential underpayment of tax. A deposit may be made with respect to certain underpayments of tax that have not been assessed at the time of the deposit.

2. Section 6603(a) provides that a taxpayer may make a deposit with the Service that may be used by the Secretary to pay any income, gift, estate, or generation-skipping taxes imposed on the taxpayer under the Code, or certain excise taxes imposed on the taxpayer under the Code. Section 6603(b) provides that, to the extent that a deposit is used by the Service to pay tax, the tax shall be treated as paid on the date the deposit is made for purposes of computing interest on underpayments under section 6601.

3. Section 6603(c) provides that the Service will return to the taxpayer any amount of a deposit that the taxpayer requests in writing be returned unless the amount has previously been used to pay tax or the Service determines that collection of tax is in jeopardy.

4. The accounting issue is whether protective tax deposits meet the definition of current income tax recoverable as that term is used in SSAP No. 101, paragraph 9.

INT 06-12 Discussion

5. The Working Group reached a consensus that deposits made with the Internal Revenue Service, as described in paragraphs 1-3 of this interpretation, meet the definition of a current income tax recoverable as defined in SSAP No. 101, paragraph 9, as the reporting entity has made the deposit under its substantial authority and the deposit can be recovered upon written request.

6. Section 6603 tax deposits are admitted assets to the extent the section 6603 tax deposit complies with SSAP No. 101 and this guidance. The reporting entity shall report section 6603 tax deposits as assets within the caption "Current Federal and Foreign Income Tax Recoverable and Interest thereon." The section 6603 tax deposit asset and any related tax liability shall be presented on a gross basis for statutory reporting purposes.

Calculating Nonadmission

7. The reporting entity shall expense amounts previously used to pay tax.

8. The reporting entity shall nonadmit:

a. amounts the Service has determined, or the reporting entity estimates it is probable the Service will determine, that collection of the tax from the reporting entity is in jeopardy for section 6603 tax deposit amounts in excess of the specifically established tax liability, or

b. any portion of the deposit that the reporting entity does not reasonably expect to be recovered in a subsequent accounting period for section 6603 tax deposit amounts in excess of specifically established tax liability.

9. The term “specifically established tax liability” is a liability, that for financial reporting purposes, the reporting entity has recognized relating to the IRS Section 6603 tax deposit. The reporting entity intends this “specifically established tax liability” to be settled by applying the section 6603 tax deposit. In calculating nonadmission discussed in the paragraph 8, the reporting entity shall deduct the specifically accrued tax liability prior to the determination of whether the remaining amounts should be nonadmitted.

10. To illustrate the nonadmission criteria, consider the following two situations:

a. IAOA insurer has a 6603 tax deposit of $100,000 and a federal income tax liability of $30,000 that IAOA intends to pay in the normal course of business. IAOA would not consider the tax liability when determining nonadmission of the section 6603 tax deposit. IAOA is not aware of any situations which would indicate that use of the deposit is in question and would admit the entire $100,000 tax deposit.

b. TAI insurer has a $110,000 section 6603 tax deposit and has been notified by its tax department that an adverse tax finding of $45,000 was probable, and may result in significant interest penalties. TAI recorded a “specifically established tax liability” of $45,000 and **intends** to use the section 6603 tax deposit to settle the $45,000 adverse tax finding. In determining the amount of the 6603 tax deposit to nonadmit, TAI would determine the amount in excess of the “specifically established tax liability, which is $65,000 ($110,000 – $45,000). This net amount of $65,000 is then evaluated for nonadmission, based on other relevant factors, if any. To continue the illustration, TAI became aware of an additional situation at the reporting date, which indicated that $10,000 of the section 6603 tax deposit is not reasonably expected to be recovered in a subsequent accounting period . As a result, TAI would nonadmit $10,000 of the tax deposit.

INT 06-12 Status

11. No further discussion is planned. The Working Group noted that *FIN 48: Accounting for Uncertainty in Income Tax, an interpretation of FASB Statement No. 109* (FIN 48) is pending review by the Statutory Accounting Principles (E) Working Group has the potential to impact the consensus in this Interpretation. The Working Group will consider if the interpretation requires updating after the review of FIN 48 is complete.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 06-13: EITF 01-2: Interpretations of APB Opinion No. 29

INT 06-13 Dates Discussed

September 10, 2006; December 10, 2006

INT 06-13 References

Current:
SSAP No. 40R—Real Estate Investments (SSAP No. 40R)
SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions (SSAP No. 95)

Superseded:
SSAP No. 77—Real Estate Sales – An Amendment to SSAP No. 40, Real Estate Investments (SSAP No. 77)

INT 06-13 Issue

1. The introduction to issues as described in *EITF 01-2: Interpretations of APB Opinion No. 29* is as follows:

> 1. The basic principle in Opinion 29 is that the accounting for nonmonetary transactions should be based on the fair values of the assets (or services) exchanged. The cost of a nonmonetary asset acquired in exchange for another nonmonetary asset is the fair value of the asset surrendered to obtain it, and a gain or loss for the difference between the carrying amount of the surrendered asset and its fair value should be recognized on the exchange. The fair value of the asset received should be used to measure the fair value of the asset surrendered (and the cost of the asset received) if it is more clearly evident than the fair value of the asset surrendered. Opinion 29 includes several modifications to that principle in circumstances in which (a) fair values of the assets exchanged are not readily determinable (paragraph 20.a. of Opinion 29), (b) the assets exchanged are products or properties held for sale in the same line of business to facilitate sales to customers other than the parties to the exchange (paragraph 20.b. of Opinion 29), (c) the assets exchanged are similar productive assets not held for sale in the ordinary course of business, [Note: See paragraph 44 of the STATUS section.] (d) the exchange involves an amount of monetary consideration (paragraph 22 of Opinion 29), and (e) the transaction represents a nonreciprocal transfer to owners (paragraph 23 of Opinion 29). Over the years, the Task Force has addressed several issues relating to the guidance in Opinion 29. The purpose of this Issue is to codify and reconcile the following Issues:
>
> *Issue No. 86-29, "Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value"* (paragraphs 4-6, and 18-19)
>
> *Issue No. 87-17, "Spinoffs or Other Distributions of Loans Receivable to Shareholders"* (paragraphs 28-29)
>
> *Issue No. 87-29, "Exchange of Real Estate Involving Boot"* (paragraphs 25-27)
>
> *Issue No. 89-7, "Exchange of Assets or Interest in a Subsidiary for a Noncontrolling Equity Interest in a New Entity"* (paragraphs 21-24)

Issue No. 96-2, "Impairment Recognition When a Nonmonetary Asset Is Exchanged or Is Distributed to Owners and Is Accounted for at the Asset's Recorded Amount" (paragraphs 33-39)

Issue No. 96-4, "Accounting for Reorganizations Involving a Non–Pro Rata Split-off of Certain Nonmonetary Assets to Owners" (paragraphs 30-32)

Issue No. 98-7, "Accounting for Exchanges of Similar Equity Method Investments" (paragraph 11)

Issue No. 00-5, "Determining Whether a Nonmonetary Transaction Is an Exchange of Similar Productive Assets" (paragraphs 2-3, 9-10, and 12-17).

The Task Force observed that the transition guidance for the above Issues is governed by the original consensuses on those Issues.

2. As described in paragraph 44 in the STATUS section of *EITF 01-2, FAS 153: Exchanges of Nonmonetary Assets, an amendment of APB Opinion No. 29* (FAS 153), was issued in December 2004 and eliminated the fair value measurement exception for nonmonetary exchanges of similar productive assets provided in APB 29 and replaces it with an exception from fair value measurement for nonmonetary exchanges that lack commercial substance. As a result, FAS 153 nullifies Issues 1(b), 1(c), 2-5, and 7 since those issues interpret the exception to fair value measurement for similar productive assets that was eliminated by FAS 153. FAS 153 was adopted with modification in *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions* (SSAP No. 95). *FAS 144: Accounting for the Impairment or Disposal of Long-Lived Assets*, also amended APB 29 and resolved issues 13(a) and 13(b) of EITF 01-2. FAS 144 was adopted with modification in *SSAP No. 90—Accounting for the Impairment or Disposal of Real Estate Investments* (SSAP No. 90). This Interpretation addresses the remaining issues of EITF 01-2.

3. The following EITF issues listed above were adopted, rejected or determined to be not applicable to statutory accounting principles in their entirety, as follows:

- *EITF Issue No. 86-29, "Nonmonetary Transactions: Magnitude of Boot and the Exceptions to the Use of Fair Value*" – adopted in *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions*

- *EITF Issue No. 87-17, "Spinoffs or Other Distributions of Loans Receivable to Shareholders"* – determined to be not applicable to statutory accounting principles

- *EITF Issue No. 87-29, "Exchange of Real Estate Involving Boot*" – adopted in *SSAP No. 40R—Real Estate Investments*

- *EITF Issue No. 89-7, "Exchange of Assets or Interest in a Subsidiary for a Noncontrolling Equity Interest in a New Entity"* – rejected in *SSAP No. 68—Business Combinations and Goodwill*

- *EITF Issue No. 96-4, "Accounting for Reorganizations Involving a Non-Pro Rata Split-off of Certain Nonmonetary Assets to Owners"* – rejected in *SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions*

4. As EITF 01-2 was adopted to codify or reconcile the issues included in paragraph 1 of this interpretation, each issue will be described and discussed in paragraphs 5-18 of this interpretation.

INT 06-13 Discussion

5. Issue 6 and guidance per EITF 01-2:

> *Issue 6—If a nonmonetary exchange is required to be accounted for at fair value, whether full or partial gain recognition is appropriate in a circumstance in which one entity (Entity A) transfers its ownership of either a controlled productive asset or assets or a controlled business to another entity (Entity B) in exchange for a noncontrolling ownership interest in that entity (Entity B).*
>
> 16. The Task Force reached a consensus on Issue 6 that if the fair value of the asset(s) given up (or of the ownership interest received if the fair value of that asset is more readily determinable) is less than its carrying value, that difference should be recognized as a loss. [Note: See STATUS section.] If the fair value of the asset(s) given up (or of the ownership interest received if that asset's fair value is more readily determinable) is greater than its carrying value, then (a) a gain in the amount of that difference should be recognized if the entity accounts for the ownership interest received using the cost method, or (b) a partial gain should be recognized if the entity accounts for the ownership interest received using the equity method. The partial gain should be calculated as the amount described in (a), above, less the portion of that gain represented by the economic interest (which may be different from the voting interest) retained. For example, if Entity A exchanges an asset with a carrying value of $1,000 and a fair value of $2,000 for a 30 percent economic interest in Entity B, Entity A should recognize a gain of $700 [($2,000 - $1,000) × 70%]. Thus, the amount recorded for the ownership interest received is partially based on its fair value at the exchange date and partially based on the carryover amount of the asset(s) surrendered.
>
> 17. The Task Force observed that paragraph 20 of Opinion 29 requires that the accounting for a nonmonetary transaction subject to Opinion 29 should not be based on the fair values of the assets transferred unless those fair values are determinable within reasonable limits.

6. The STATUS section of EITF 01-2 states the following relative to Issue 6:

> 45. Issue 6 addresses whether full or partial gain recognition is appropriate in circumstances in which an entity transfers its ownership of either a controlled productive asset (or assets) or a controlled business to another entity in exchange for a noncontrolling ownership interest in that entity. Statement 153 amends the scope of Opinion 29 to exclude a transfer of assets to an entity in exchange for an equity interest in that entity. Statement 153 also amends Statement 140 to remove the scope exception in Statement 140 for exchanges of equity method investments for similar productive assets. Accordingly, transfers of equity method investments in exchange for other assets should be accounted for in accordance with Statement 140. However, Opinion 29 (as amended by Statement 153) and Statement 140 do not provide guidance on the accounting for transfers of nonfinancial assets in exchange for other assets. Therefore, the guidance in Issue 6 should continue to be applied in circumstances in which an entity transfers a nonfinancial asset (or assets) to another entity in exchange for a noncontrolling ownership interest in that entity and the exchange is required to be accounted for at fair value.

7. The Working Group reached a consensus to adopt the EITF 01-2 for Issue 6 guidance believing the economic interest relates to the ownership interest of Entity B in the above issue. This may or may not be different from the voting interest or controlling interest of Entity B.

However, the GAAP guidance above for Issue 6 determines the proper accounting for the transactions between unrelated parties relative to the gain or loss on the nonmonetary transaction. This guidance establishes the cost basis for the ownership interest in Entity B to be recorded by Entity A. Subsequent to the transactions, existing guidance should apply for the ownership interest. For statutory purposes, the valuation of this ownership interest would then follow existing statutory guidance (e.g., *SSAP No. 30—Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)* for Common Stock, *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* for Joint Ventures, *SSAP No. 97—Investments in Subsidiary, Controlled, and Affiliated Entities, A Replacement of SSAP No. 88* for investments in SCA entities, etc.)

8. Issue 8 and guidance per EITF 01-2:

> **Exchanges Involving Monetary Consideration (Paragraph 22 of Opinion 29)**
>
> *Issue 8(a)—What level of monetary consideration in a nonmonetary exchange causes the transaction to be considered monetary in its entirety and, therefore, outside the scope of Opinion 29.*
>
> 19. The Task Force discussed an exchange of nonmonetary assets that would otherwise be based on recorded amounts but that also involves monetary consideration (boot). The Task Force reached a consensus that that transaction should be considered monetary (rather than nonmonetary) if the boot is significant, and agreed that "significant" should be defined as at least 25 percent of the fair value of the exchange. As a monetary transaction, both parties would record the exchange at fair value[1] (as discussed in Issue 8(b), below). If the boot in a transaction is less than 25 percent, the pro rata gain recognition guidance in paragraph 22 of Opinion 29 should be applied by the receiver of boot, and the payer of boot would not recognize a gain. The Task Force acknowledged that the ability to satisfactorily measure fair value is a prerequisite to the use of fair value.
>
> [1] For real estate transactions, see Issue 10.
>
> *Issue 8(b)—In a monetary exchange (required to be accounted for at fair value), whether "full or partial" gain recognition is appropriate if an entity transfers its ownership of a controlled asset, group of assets, or business to another entity in exchange for a noncontrolling ownership interest in the other entity.*
>
> 20. The Task Force reached a consensus on Issue 8(b) that the gain should be computed in a manner consistent with the consensus reached in Issue 6. The Task Force reached a consensus that application of the consensus on Issue 8(b) is required for exchange transactions committed to after April 19, 2001. A transaction is committed to if the parties to the transaction have signed a binding, written agreement that specifically sets forth the principal provisions of the transaction. If any of the principal provisions are yet to be negotiated, or are subsequently changed, such a preliminary agreement does not qualify as a commitment for purposes of this consensus.

9. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issues 8(a) and 8(b) without modification.

10. Issue 9 and guidance per EITF 01-2:

Issue 9—In the monetary exchange described below, whether the amount of gain recognized should exceed the amount that would be computed pursuant to the guidance for Issue 8(b).

21. An enterprise transfers its ownership of an individual asset (or assets) or its ownership interest in a subsidiary to a newly created entity in exchange for an ownership interest in that entity that will be accounted for by the equity method and monetary consideration. The monetary consideration received exceeds the fair value of the portion of the surrendered asset that has been sold in the exchange. The excess monetary consideration is funded by proceeds from nonrecourse financing within the newly created entity. Subsequent to the transfer, the enterprise does not control the entity. The specifics of the transaction are as follows:

- Company A owns equipment with a book basis of $100 and an appraised value of $400.
- Company B, previously unrelated to Company A, creates a new subsidiary, Company X, and transfers cash of $60 to Company X.
- Company A transfers the equipment to Company X in exchange for shares of Company X stock that represent a 40 percent ownership interest in Company X. Simultaneously, Company X borrows $300 with recourse to only the equipment and pays Company A $360 cash.

22. The Task Force reached a consensus that if the enterprise has no actual or implied commitment, financial or otherwise, to support the operations of the new entity in any manner, a gain of $260 should be recognized. The investor's basis in the new entity should be no less than zero. The gain calculation is illustrated as follows:

Fair value of interest in equipment sold ($400 × 60%)	$ 240
Less: Cost of interest in equipment sold ($100 × 60%)	(60)
	$ 180
Plus: Additional gain to the extent of the negative investment	80*
Total gain recognized	$ 260

* The additional gain is calculated as follows:

Cost of equipment	$100
Less: Cost of interest in equipment sold	(60)
Remaining cost	40
Less: Cash received in excess of 60% of the equipment's fair value	(120)
Negative investment	$ (80)

23. Task Force members noted that specific facts and circumstances may affect gain recognition and that it would be impractical for the Task Force to consider all possible variations of the basic transaction described above.

24. The SEC Observer emphasized that any gain recognition is heavily dependent on a careful analysis of specific facts and circumstances. Gain recognition would not be appropriate if a significant uncertainty exists regarding realization or the enterprise has an actual or implied commitment to support the operations of the new entity in any manner (see, for example, SAB 81).

11. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issue 9 without modification. The Working Group also noted the following facts are important to this consensus:

- The monetary consideration in the example is considered significant under the consensus of Issue 8(b), and as such, Issue 9 is considered a ***monetary* exchange**.
- The monetary consideration received by Entity A in the transaction **exceeds the fair value of the portion of the surrendered asset**.
- The excess monetary consideration is funded by proceeds from nonrecourse financing within Company X. The $300 borrowing with recourse described in the example explicitly states **the recourse is only to the equipment and is not related to Entity A**.
- Prior to the transaction, Entity A and Entity B are unrelated parties. In exchange for the equipment, **Entity A receives shares of Company X stock representing a 40 percent ownership interest**.

In the example above, the monetary consideration received exceeds the fair value of the portion of the surrendered asset that has been sold in the exchange. When this occurs, additional gain should be recognized to ensure the basis in the ownership interest is not less than zero.

12. Issue 10 and guidance per EITF 01-2:

> Exchanges of Real Estate Involving Monetary Consideration (Paragraph 22 of Opinion 29)
>
> 25. Statement 66 indicates that the accounting for exchanges of real estate is covered by Opinion 29 and not by Statement 66. However, as discussed above in Issue 8(a), the Task Force reached a consensus that an exchange of nonmonetary assets that would otherwise be based on recorded amounts under paragraph 21 of Opinion 29 but that involves boot should be considered a monetary (rather than nonmonetary) transaction if the boot is at least 25 percent of the fair value of the exchange. As a result, the Task Force reached a different consensus for exchanges of either (a) real estate held for sale in the ordinary course of business for real estate to be sold in the same line of business or (b) real estate not held for sale in the ordinary course of business for similar real estate when the boot is at least 25 percent of the fair value of the exchange. (Those types of exchanges are referred to in Issues 10(a) and 10(b) as exchanges of similar real estate.)
>
> *Issue 10(a)—Whether Statement 66 applies to an exchange of similar real estate that is not subject to Opinion 29 because the transaction involves enough boot for the exchange to be considered monetary under the consensus for Issue 8(a).*
>
> 26. The Task Force reached a consensus that a transaction involving an exchange of similar real estate that is considered a monetary transaction under Issue 8(a) because boot is at least 25 percent of the fair value of the exchange would be allocated between two components: a monetary portion and a nonmonetary portion. [Note: See STATUS section.] The allocation between the monetary and nonmonetary portions of the transaction should be based on their relative fair values at the time of the transaction. A Task Force member noted that Interpretation 43 provides guidance on when an asset is considered real estate.
>
> *Issue 10(b)—If applicable, how Statement 66 should be applied.*

27. The Task Force reached a consensus that for the receiver of boot, the monetary portion would be accounted for under Statement 66 as the equivalent of a sale of an interest in the underlying real estate, and the nonmonetary portion would be accounted for based on the recorded amount (after reduction, if appropriate, for an indicated impairment in value) of the nonmonetary asset relinquished pursuant to paragraph 21 of Opinion 29. [Note: See STATUS section.] For the payer of boot, the monetary portion would be accounted for as an acquisition of real estate, and the nonmonetary portion would be accounted for pursuant to paragraph 21 of Opinion 29. Following is an example of the application of this consensus:

Assumptions

- Party A transfers real estate with a fair value of $2,000,000 (Party A's net book value of $1,500,000) to Party B and receives $400,000 cash, a $400,000 note from Party B payable to Party A, and real estate with a fair value of $1,200,000 (Party B's net book value of $800,000).
- The initial investment requirement for full accrual profit recognition under Statement 66 is 20 percent.
- The terms of the note from Party B to Party A would satisfy the continuing investment provisions necessary for application of the full accrual method. The interest rate on the note from Party B is a market rate, and the note is considered fully collectible.
- The values of the real estate transferred by both parties are readily determinable and clearly realizable at the exchange date.
- Neither party has any continuing involvement with the real estate transferred to the other.

Computation of Allocation by Both Party A and Party B

Monetary Portion of Transaction:

Total monetary consideration divided by total fair value of exchange	$800,000 ÷ $2,000,000 = 40%

For this example, the monetary portion of the transaction is the exchange of $400,000 cash and a $400,000 note for real estate with a fair value of $800,000 ($2,000,000 x 40%).

Nonmonetary Portion of Transaction:

Fair value of real estate exchanged divided by total fair value of exchange	$1,200,000 ÷ $2,000,000 = 60%

For this example, the nonmonetary portion of the transaction is the exchange of real estate with a fair value of $1,200,000 for similar real estate with a fair value of $1,200,000 ($2,000,000 x 60%).

Accounting by Party A (the Receiver of Monetary Consideration)

The monetary portion of the transaction qualifies for full accrual profit recognition because the cash down payment of $400,000 and the $400,000 note meet the criteria in paragraphs 9-12 of Statement 66 for a buyer's initial and continuing investment when applied to the monetary portion of the transaction. Accordingly, a gain of $200,000

($800,000 total monetary consideration less $600,000 [$1,500,000 total net book value x 40%] pro rata portion of net book value) would be recorded at the date of sale.

The nonmonetary portion of the transaction does not qualify for gain recognition because the exchange involves similar real estate. The accounting basis of the new property equals $900,000 ($1,500,000 total net book value of the real estate exchanged less the $600,000 pro rata portion of net book value sold).

Accounting by Party B (the Payer of Monetary Consideration)

The monetary portion of the transaction represents an acquisition of real estate for the monetary consideration paid of $800,000.

The nonmonetary portion of the transaction does not qualify for gain recognition because the exchange involves similar real estate. The accounting basis of the new property equals $1,600,000 ($800,000 net book value of the real estate exchanged plus $800,000 total monetary consideration paid).

13. The STATUS section of EITF 01-2 states the following relative to Issues 10(a) and 10(b):

46. Issues 10(a) and 10(b) previously addressed circumstances in which an entity is involved in a real estate exchange that meet the following conditions: (1) the exchange includes boot that is at least 25 percent of the fair value of the exchange and (2) the exchange is either (a) real estate held for sale in the ordinary course of business for real estate to be sold in the same line of business or (b) real estate not held for sale in the ordinary course of business for similar real estate. Statement 153, however, eliminates the fair value measurement exception for nonmonetary exchanges of similar productive assets provided in Opinion 29 and replaces it with an exception from fair value measurement for nonmonetary exchanges that lack commercial substance. Therefore, Issues 10(a) and 10(b) address circumstances in which an entity is involved in a real estate exchange that meets the following conditions: (1) the exchange includes boot that is at least 25 percent of the fair value of the exchange and (2) the exchange meets one of the conditions set forth in paragraph 20 of Opinion 29.

14. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issues 10(a) and 10(b) with the modification to replace references to FAS 66: *Accounting for Sales of Real Estate* with references to *SSAP No. 40R—Real Estate Investments*. In addition, reporting entities should note that as a result of the issuance of FAS 153, Issues 10(a) and 10(b) address circumstances in which an entity is involved in a real estate exchange that meets the following conditions: (1) the exchange includes boot that is at least 25 percent of the fair value of the exchange and (2) the exchange meets one of the conditions set forth in paragraph 20 of Opinion 29.

15. Issue 11 and guidance per EITF 01-2:

Nonreciprocal Transfers to Owners (Paragraph 23 of Opinion 29)

Spinoffs or Other Distributions of Loans Receivable to Shareholders

28. An enterprise distributes loans receivable to its owners by forming a subsidiary, transferring those loans receivable to the subsidiary, and then distributing the stock of that subsidiary to shareholders of the parent.

Issue 11—Whether the enterprise should report the distribution at book value as a spinoff or at fair value as a dividend-in-kind if the book value of the loans receivable, which may be either the "recorded investment in the receivable" or the "carrying amount of the *receivable," is in excess of their fair value, and how the recipient should record the transaction.*

29. The Task Force reached a consensus that the distribution should be reported at fair value by the enterprise and the recipient. Task Force members noted that the transaction is not a spinoff because the subsidiary does not constitute a business.[4] Rather, the transaction should be considered a dividend-in-kind. Under paragraph 23 of Opinion 29, dividends-in-kind are nonreciprocal transfers of nonmonetary assets to owners that should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of distribution. On July 5, 1989, subsequent to the date of the consensus, the SEC staff issued SAB 82, which discusses accounting for transfers of nonperforming assets by financial institutions and disclosure of the impact of financial assistance from regulators. In discussing the value at which a transfer of nonperforming assets should be recorded by the transferor financial institution, SAB 82 makes reference to the Task Force consensus on Issue 10, that an enterprise that distributes loans to its owners should report such distribution at fair value.

[4] Issue 98-3 provides guidance on determining whether an asset group constitutes a business.

16. The Working Group reached a consensus to adopt the EITF 01-2 guidance with the modification to replace the reference to paragraph 23 of APB Opinion 29 with paragraph 12 of SSAP No. 95, the reference in footnote 4 to EITF Issue 98-3 shall be replaced with INT 00-26: *EITF 98-3: Determining Whether a Nonmonetary Transaction Involves Receipt of Productive Assets or of a Business*.

17. Issue 12 and guidance per EITF 01-2:

Accounting for Reorganizations Involving a Non–Pro Rata Split-off of Certain Nonmonetary Assets to Owners

30. Some believe that paragraph 23 of Opinion 29 requires that nonreciprocal transfers of nonmonetary assets to owners on a non-pro rata basis be accounted for at fair value, without regard to the nature of the nonmonetary assets distributed. Others believe that Opinion 29 requires historical cost accounting for corporate liquidations or reorganizations involving the distribution to owners of all or a significant segment of the business, whether in a spinoff, split-off, or split-up and whether or not the distribution is on a pro rata basis.

31. Although Opinion 29 does not define the term split-off, federal income tax law states that a split-off is a transaction in which a parent company exchanges its stock in a subsidiary for parent company stock held by its shareholders. For federal income tax purposes, the exchange of shares need not be pro rata to all shareholders, or even include all shareholders, in order to be considered a tax-free split-off.

Issue 12—Whether a non-pro rata split-off of all or a significant segment of a business in a corporate plan of reorganization should be accounted for at historical cost or at fair value.

32. The Task Force reached a consensus that a non-pro rata split-off of a segment of a business in a corporate plan of reorganization should be accounted for at fair value. The Task Force also reached a consensus that a split-off of a targeted business, distributed on a pro rata basis to the holders of the related targeted stock, should be accounted for at historical cost. The Task Force observed that if the targeted stock was created in contemplation of the subsequent split-off, the two steps (creation of the targeted stock

and the split-off) cannot be separated and should be viewed as one transaction with the split-off being accounted for at fair value.

18. The Working Group reached a consensus to adopt the EITF 01-2 guidance for Issue 12 with the modification to replace references to paragraph 23 of APB Opinion 29 with paragraph 12 of SSAP No. 95.

INT 06-13 Status

No further discussion is planned.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 07-01: Application of the Scientific (Constant Yield) Method in Situations of Reverse Amortization

INT 07-01 Dates Discussed

March 10, 2007; June 2, 2007

INT 07-01 References

Current:
SSAP No. 26—Bonds, excluding Loan-Backed and Structured Securities (SSAP No. 26)
SSAP No. 43R—Loan-Backed and Structured Securities (SSAP No. 43R)

Superseded:
SSAP No. 98—Treatment of Cash Flows When Quantifying Changes in Valuation and Impairments, an Amendment of SSAP No. 43—Loan-Backed and Structured Securities (SSAP No. 98)

INT 07-01 Issue

1. SSAP No. 26 and SSAP No. 43R both reference the use of the scientific or constant yield method of amortization of a premium or a discount. *SSAP No. 26—Bonds, Excluding Loan-Backed and Structured Securities* (SSAP No. 26) provides the following (bolding added for emphasis):

> **Amortized Cost**
>
> 6. **Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond.** Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion) shall be amortized to the call or maturity value/date which produces the lowest asset value (yield to worst).

SSAP No. 43R—Loan-Backed and Structured Securities (SSAP No. 43R) provides the following (bolding added for emphasis):

> **Amortization**
>
> 8. **Amortization of premium or discount shall be calculated using the scientific (constant yield) interest method** and shall be recorded as an adjustment to investment income. The interest method results in a constant effective yield equal to the prevailing rate at the time of purchase or at the time of subsequent adjustments to book value. The amortization period shall reflect estimates of the period over which repayment of principal of the loan-backed securities is expected to occur, not the stated maturity period.
>
> **Collection of All Contractual Cashflows is Probable**
>
> 12. The following guidance applies to loan-backed and structured securities for which it is probable that the investor will be able to collect all contractually required payments receivable. (Paragraphs 17-19 provide guidance for securities in which collection of all

contractual cash flows is not probable and paragraphs 20-24 provide guidance for beneficial interests.) Prepayments are a significant variable element in the cash flow of loan-backed securities because they affect the yield and determine the expected maturity against which the yield is evaluated. Falling interest rates generate faster prepayment of the mortgages underlying the security, shortening its duration. This causes the reporting entity to reinvest assets sooner than expected at potentially less advantageous rates. This is called prepayment risk. Extension risk is created by rising interest rates which slow repayment and can significantly lengthen the duration of the security. Differences in cash flows can also result from other changes in the cash flows from the underlying assets. If assets are delinquent or otherwise not generating cash flow, which should be reflected in the cash flow analysis through diminishing security cash flows, even if assets have not been liquidated and gain/losses have not been booked.

13. Changes in currently estimated cash flows, including the effect of prepayment assumptions, on loan-backed securities shall be reviewed periodically, at least quarterly. The prepayment rates of the underlying loans shall be used to determine prepayment assumptions. Prepayment assumptions shall be applied consistently across portfolios to all securities backed by similar collateral (similar with respect to coupon, issuer, and age of collateral). Reporting entities shall use consistent assumptions across portfolios for similar collateral within controlled affiliated groups. Since each reporting entity may have a unique method for determining the prepayment assumptions, it is impractical to set standard assumptions for the industry. Relevant sources and rationale used to determine each prepayment assumption shall be documented by the reporting entity.

14. Loan-backed securities shall be revalued using the currently estimated cash flows, including new prepayment assumptions, using either the prospective or retrospective adjustment methodologies, consistently applied by type of securities. However, if at any time during the holding period, the reporting entity determines it is no longer probable that they will collect all contractual cashflows, the reporting entity shall apply the accounting requirements in paragraphs 17-19.

15. The prospective approach recognizes, through the recalculation of the **effective yield** to be applied to future periods, the effects of all cash flows whose amounts differ from those estimated earlier and the effects and changes in projected cash flows. Under the prospective method, the recalculated effective yield will equate the carrying amount of the investment to the present value of the anticipated future cash flows. The recalculated yield is then used to accrue income on the investment balance for subsequent accounting periods. There are no accounting changes in the current period unless the security is determined to be other than temporarily impaired.

16. The retrospective methodology changes both the yield and the asset balance so that expected future cash flows produce a return on the investment equal to the return now expected over the life of the investment as measured from the date of acquisition. Under the retrospective method, the recalculated **effective yield** will equate the present value of the actual and anticipated cash flows with the original cost of the investment. The current balance is then increased or decreased to the amount that would have resulted had the revised yield been applied since inception, and investment income is correspondingly decreased or increased.

2. The following identifies three situations where, using a constant yield methodology for determining amortization or accretion, changes in amortized value move in the opposite direction of what is expected. That is, if a security is purchased at a premium, the constant yield methodology will, in certain cases, cause the amortized value to move to a discount during the life of the security. Conversely, if the security were purchased at a discount, the constant yield methodology will, in certain cases, cause the amortized value to move to a premium during the life of the security.

Accounting Issues:

3. The fundamental accounting questions are

Issue 1: When applying the constant yield method to loan-backed or structured securities, can amortized value be interpreted to represent the discounted cash flows?

Issue 2: Should a security purchased at a premium be allowed to move to a discount, or should a discount be allowed to move to a premium, if this occurs as a result of applying the scientific (constant yield) interest method."

Issue 3: On the subject of Parity (described in example 3), is it appropriate under statutory accounting guideline to "assume away" day delay and subsequently eliminate amortizing to a value less than par? If so, should a payment date assumption or a record date assumption be used?

4. Following are practical situations where a security purchased at a premium will have increases in amortized value, and where a security purchased at a discount will have decreases in amortized value. The question is should the scientific (constant yield) method be interpreted to allow these securities to be amortized as illustrated below.

Example 1

5. This first example examines a stepped coupon bond purchased at a discount. At time of acquisition the future interest rate adjustments are known, and so are taken into account in the yield calculation. This example illustrates how a (theoretical) stepped coupon bond, without a call schedule, could result in the amortized value changing from a discount to a premium.

Description: FEDERAL HOME LN MTG CORP MTN
Maturity: 03-18-2019
Int Type: Stepped Coupon not callable
03/18/2004 4.000%
03/18/2007 6.000%
03/18/2013 8.000%
Purchase Date: 3/18/2004
Purchase Price: 97.125
Based on this information, the effective annual yield at acquisition is: 6.3246%

6. The following illustrates the semiannual amortization schedule determined at time of acquisition. The amortized values represent the sum of the discounted future cash flows at each payment date. Based on the purchase price and cash flow assumptions, the semiannual yield is 3.1623%.

		Interest					
		Rate	Interest	Total			
Pay Date	Par Value	Annual	Payment	Payment	Income	Accr Disc	Amort Value
3/18/2004	1,000,000.00			(971,250.00)			971,250.00

9/18/2015	1,000,000.00	8.0000%	40,000.00	40,000.00	33,470.00	(6,530.00)	1,051,872.47
3/18/2016	1,000,000.00	8.0000%	40,000.00	40,000.00	33,263.50	(6,736.50)	1,045,135.97
9/18/2016	1,000,000.00	8.0000%	40,000.00	40,000.00	33,050.47	(6,949.53)	1,038,186.45
3/18/2017	1,000,000.00	8.0000%	40,000.00	40,000.00	32,830.71	(7,169.29)	1,031,017.16
9/18/2017	1,000,000.00	8.0000%	40,000.00	40,000.00	32,603.99	(7,396.01)	1,023,621.15
3/18/2018	1,000,000.00	8.0000%	40,000.00	40,000.00	32,370.11	(7,629.89)	1,015,991.26
9/18/2018	1,000,000.00	8.0000%	40,000.00	40,000.00	32,128.83	(7,871.17)	1,008,120.08
3/18/2019	1,000,000.00	8.0000%	40,000.00	1,040,000.00	31,879.92	(8,120.08)	1,000,000.00
Subtotal						28,750.00	

7. As can be seen from this schedule, the amortized value quickly changes from a discount situation to a premium situation. The question is should the accretion of the discount end when the discount is fully amortized, i.e. when Amortized Value = Par Value. In the above, this would occur somewhere between 3/18/05 and 9/18/05. Or, is it proper to report the amortized value as the sum of the discounted cash flows at a given point in time using the effective yield at acquisition? (Note: A prospective method is not applicable for this situation since the cash flows are known at time of acquisition, and those assumptions will not change over time.)

Example 2

8. The second situation explores a variable rate security using the Retrospective Method of Amortization. This example exemplifies the issue identified as "**Drift**." As variable interest rates are not known in advance, adjustments to yields must be made whenever a new interest rate becomes effective. Using the retrospective method, the effective yield is calculated based upon the purchase price, and the actual received and the projected future cash flows. For simplicity's

sake, a bond with a single principal payment at maturity is used, but similar results would occur if the security were any type of variable rate instrument.

9. The situation presented below shows the cash flow assumptions at purchase when there is only one known interest rate. Immediately following, are the effects of using a retrospective adjustment, once the second interest rate is known and applied.

Original Purchase Assumptions:	
Par value:	1,000,000.00
Price:	98.000
Cost:	980,000.00
Acq Date:	01/022006
Maturity Date:	12/15/2009
Interest rate:	2.000%
Pays:	Quarterly
Effective Annual Yield:	2.53326%
Qrtrly Yield:	.63332%

							Accretion	Amortized

10. Based on the purchase assumptions, the amortization schedule for this security is normal. The accretion of discount is a smooth curve, and the amortized value approaches par value at maturity. As previously indicated, the following shows the interest rate adjusted for the accrual period ending 3/15/08. The original purchase assumptions are as stated above. The interest payments from 3/15/06 through 12/15/07 are paid based on the 2.000% annual interest rate effective from issue date (12/15/05) through 12/14/07. For accrual period beginning 12/15/07, however, the interest rate adjusts to 3.500%. Using a retrospective methodology, the following amortization schedule results:

							Accretion	Amortized
Pay Date	Par Value	Int Rate	Int Recvd	Prin Recd	Total Cash	Income	Discount	Value
1/2/2006	1,000,000	2.00%	(944.44)		(980,944.44)			980,000.00
3/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	6,510.55	2,455.00	982,455.00
6/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,046.82	3,046.82	985,501.81
9/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,071.77	3,071.77	988,573.58
12/15/2006	1,000,000	2.00%	5,000.00	0.00	5,000.00	8,096.93	3,096.93	991,670.51

12/15/2009	1,000,000	3.50%	8,750.00	1,000,000.00	1,008,750.00	8,195.05	(553.54)	-

11. From this, it is apparent that the amortized value quickly breaks out of the cost / par range and becomes a premium situation. The book value for the periods prior to 12/15/07 would have been reported at the original amortized values as determined in the prior spreadsheet. On the 12/31/07 annual statement there would be a retrospective catch-up adjustment.

12. Because of the variability of cash flows, recalculating a yield based on the retrospective method and applying that yield to calculate an amortized value can cause a security to bust out of the cost / par range, and the amortization (accretion) to move in the "wrong direction." For variable rate, interest only, and principal only asset backed securities, the additional complication caused by day delay would also come into play.

Example 3

13. The third example represents a mortgage backed security purchased at a slight premium. This situation illustrates what is described as **"Parity."** American Banker Online describes parity as "The parity price at which the yield of a mortgage-backed bond equals its net coupon rate. Securities with parity amortize to a value less than 100.

14. Parity occurs because the accrual date, usually the last day of the month, is many days prior to the payment date, typically 15, or 25 days for a mortgage backed security, and up to 45, or 55 days (or longer) for a collateralized mortgage obligation. The following is a simplified example using a mortgage backed security. The assumption is that the security is purchased at a slight premium (price = 100.1000). Because of day delay, however, the parity price is not 100, but is approximately 99.90.

1/15/2006	40,982.21	-	-	176.35	93.92	37.55	*

* The last amortization calculation is an adjustment to bring book value to 0.

15. By looking at the amortization factors, which represent amortized value / remaining principal, it is evident that the security quickly goes from a premium situation to a discount situation between 5/15/2005 and 6/15/2005. Due to Parity, the security does not amortize to a value of 100, but to a slight discount.

16. In addressing the issue of parity for REMICs, the tax code allows for accruing interest and calculating Original Issue Discount (OID) on a payment date to payment date basis, thereby eliminating the discrepancy between the accrual periods and the payment dates. Another method of eliminating parity would be to use the accrual end date (record date) plus one as the assumed payment date. Both methods sync up the accrual period and the payment date, essentially eliminating day delay.

17. Is it appropriate under statutory accounting guideline to "assume away" day delay and subsequently eliminate amortizing to a value less than par? If so, should a payment date assumption or a record date assumption be used?

INT 07-01 Discussion

18. The Working Group came to the following consensuses:

Issue 1: When applying the constant yield method to loan-backed or structured securities, can amortized value be interpreted to represent the discounted cash flows?

19. The Working Group noted that in the case of loan-backed or asset-backed securities; the unamortized balance of an issue at any point in time will represent the present value of all future cash flows discounted to the present using the constant yield.

Issue 2: Should a security purchased at a premium be allowed to move to a discount, or should a discount be allowed to move to a premium, if this occurs as a result of applying the scientific (constant yield) interest method."

20. It has been noted that certain anomalies will exist with certain types of bonds, loan-backed and structured securities when applying the constant yield method. These anomalies can cause a premium to move to a discount, or a discount to move to a premium.

21. Some think that the value should be frozen once this occurs. However, both SSAP No. 26 and SSAP No. 43R are clear that the scientific (constant yield) interest method is required to be used when accreting/amortizing the discount/premium on a bond, loan-backed or structured security.

22. The Working Group noted that recording a discount or a premium and accreting/amortizing to par is consistent with a held to maturity approach that results in no gain or loss at maturity. Although it could be argued that freezing a discount or premium, or stopping at par at a particular point in time, would achieve the same result, this approach appears to ignore the fundamentals of the issue that have led to the anomalies. The Working Group noted that ignoring the facts of the issue in order to prevent the original premium or original discount from reversing is inappropriate, and that the above examples demonstrate that fact. Therefore, a security purchased at a premium is allowed to move to a discount, and that a discount is allowed to move to a premium, if this occurs as a result of applying a constant yield method.

Issue 3: On the subject of Parity (described in example 3), is it appropriate under statutory accounting guideline to "assume away" day delay and subsequently eliminate amortizing to a value less than par? If so, should a payment date assumption or a record date assumption be used?

23. It has been noted for mortgage backed securities; interest is often "earned" as of the end of the month but not paid until a later date. This delay known as the "day delay" is often 10-25 days depending on the contract. The yields as provided by "Bloomberg," are Security Industry Association (SIA) compliant yields, which do not "assume away 'day delay'", but produce amortization to a value of less than 100, as seen in the example. After discussion, the Working Group determined that the difference between amortizing to the earned record date or to the payment date for the securities described in issue 3 is typically immaterial. Therefore, the Working Group determined to continue to allow flexibility in amortization for the day delay.

24. The user of this interpretation should also note that amortization continues to apply the effective yield method in the above situations **provided that doing so does not conflict with other statutory requirements** in the SSAPs. For example, yield to worst is still a continuing requirement and other SVO requirements are still in effect, etc.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 08-05: EITF 02-11: Accounting for Reverse Spinoffs

INT 08-05 Dates Discussed

March 29, 2008; May 31, 2008

INT 08-05 References

Current:
SSAP No. 24—Discontinued Operations and Extraordinary Items (SSAP No. 24)
SSAP No. 95—Exchanges of Nonmonetary Assets, A Replacement of SSAP No. 28—Nonmonetary Transactions (SSAP No. 95)

INT 08-05 Issue

1. *EITF 02-11: Accounting for Reverse Spinoffs* (EITF 02-11) was issued in September 2002 to address whether to account for spinoffs as reverse spinoffs based on the substance, instead of the legal form, of such transactions. In a reverse spinoff, the legal spinnee should be treated as though it were the spinnor for accounting purposes. *(In spinoff transactions, the 'spinnor' is the entity transferring assets, whereas the term 'spinnee' refers to the new entity.)*

2. As noted within EITF 02-11:

> 1. An entity may desire to reorganize its operations in response to its business needs. For example, an entity (the "spinnor") may transfer assets into a new legal spun-off entity (the "spinnee") and distribute the shares of the spinnee to its shareholders, without the surrender by the shareholders of any stock of the spinnor. Such a transaction is commonly referred to as a "spinoff." Consider the following example:
>
>> Big Company owns and operates a mall and a retail store that occupies the anchor store position in that mall. The mall and the store are managed by two separate divisions. The shareholders of Big Company would like to split Big Company into two companies so that each can focus on its own operations. To achieve this, Big Company transfers the mall's assets and operations into a newly created subsidiary, Mall Company, and distributes the shares of Mall Company to its shareholders on a pro rata basis in a spinoff.
>
> 2. A spinoff allows an entity to be reorganized in a manner that allows it to meet the needs of its owners. However, there may be other benefits as well. If the spinoff qualifies as a nontaxable reorganization, the distribution results in no taxable gain being recognized by either the spinnor or its shareholders. Additionally, if the spinnee is subsequently sold by the shareholders, the double taxation that would have occurred if a company sold its subsidiary directly and distributed the proceeds to its shareholders is avoided.
>
> 3. The accounting guidance for spinoffs is provided in Opinion 29. Although the basic principle underlying Opinion 29 is that the accounting for nonmonetary transactions should be based on the fair values of the assets (or services) involved, it provides a modification to that basic principle for nonreciprocal transfers to owners (such as spinoffs). Opinion 29, paragraph 23 (as amended by Statement 144), states:
>
>> Accounting for the distribution of nonmonetary assets to owners of an enterprise in a spin-off or other form of reorganization or liquidation or in a plan that is in substance the rescission of a prior business combination should be based on the

> recorded amount (after reduction, if appropriate, for an indicated impairment of value) of the nonmonetary assets distributed. A prorata distribution to owners of an enterprise of shares of a subsidiary or other investee company that has been or is being consolidated or that has been or is being accounted for under the equity method is to be considered to be equivalent to a spin-off. Other nonreciprocal transfers of nonmonetary assets to owners should be accounted for at fair value if the fair value of the nonmonetary asset distributed is objectively measurable and would be clearly realizable to the distributing entity in an outright sale at or near the time of the distribution.

> 4. Accordingly, under Opinion 29, an entity's distribution of the shares of a wholly owned or consolidated subsidiary to its shareholders should be recorded based on the carrying value of the subsidiary. Regardless of whether the spun-off operations will be sold immediately after the spinoff, the transaction should not be accounted for as a sale of the accounting spinnee followed by a distribution of the proceeds.
>
> 5. In certain cases, the spinoff of a subsidiary to its shareholders is such that the legal form of the transaction does not match its substance. That is, in certain circumstances, the spinnee will be the continuing entity. The issue is whether to account for a spinoff as a reverse spinoff based on the substance instead of the legal form of the transaction. In a reverse spinoff, the legal spinnee should be treated as though it were the spinnor for accounting purposes (accounting spinnor).
>
> 6. Consider the following example:
>
> > Snack Food Company owns two subsidiaries—Ice Cream Subsidiary and Snack Subsidiary. Ice Cream Subsidiary is significantly larger and more profitable than Snack Subsidiary. The shareholders of Snack Food Company would like to continue the ice cream operations and dispose of the snack food operations. To facilitate this, Snack Food Company distributes the shares of Ice Cream Subsidiary to the shareholders thereby creating Ice Cream Company. The shareholders are then able to dispose of the operations of Snack Food Company (now solely comprising Snack Subsidiary operations) by selling the shares directly to a third party and, at the same time, retain ownership of the Ice Cream Company.
>
> Accounting for the above transaction based upon its legal form would present Snack Food Company as the spinnor with Ice Cream Company as the spinnee. However, in substance, Snack Food Company has disposed of Snack Subsidiary and continued its ice cream operations. The legal form of the spinoff may have been driven primarily by tax planning strategies. Accounting for the transaction based on its substance depicts Ice Cream Company as the accounting spinnor and Snack Food Company as the accounting spinnee.

3. Per EITF 02-11, paragraph 5, the issue is whether to account for a spinoff as a reverse spinoff based on the substance instead of the legal form of the transaction. In a reverse spinoff, the legal spinnee should be treated as though it were the spinnor for accounting purposes (accounting spinnor).

4. The FASB Emerging Issues Task Force reached the following consensus in paragraphs 7-8 of EITF 02-11:

> 7. The Task Force reached a consensus that reverse spinoff accounting is appropriate when treatment of the legal spinnee as the accounting spinnor results in the most accurate depiction of the substance of the transaction for shareholders and other users of the financial statements. The Task Force observed that the determination of

whether reverse spinoff accounting is appropriate is a matter of judgment that depends on an evaluation of all relevant facts and circumstances.
8. The Task Force reached a consensus that in determining whether reverse spinoff accounting is appropriate, a presumption should exist that a spinoff should be accounted for based on its legal form, in other words, that the legal spinnor is also the accounting spinnor. However, that presumption may be overcome. An evaluation of the following indicators should be considered in that regard. Nevertheless, no one indicator should be considered presumptive or determinative.

5. The FASB Emerging Issues Task Force identified the following indicators that a spinoff should be accounted for as a reverse spinoff in paragraph 8 of EITF 02-11:

- The size of the legal spinnor and the legal spinnee—All else being equal, in a reverse spinoff, the accounting spinnor (legal spinnee) is larger than the accounting spinnee (legal spinnor). The determination of which entity is larger is based on a comparison of the assets, revenues, and earnings of the two entities. There are no established "bright lines" that should be used to determine which entity is the larger of the two.

- The fair value of the legal spinnor and the legal spinnee—All else being equal, in a reverse spinoff, the fair value of the accounting spinnor (legal spinnee) is greater than that of the accounting spinnee (legal spinnor).

- Senior management—All else being equal, in a reverse spinoff, the accounting spinnor (legal spinnee) retains the senior management of the formerly combined entity. Senior management generally consists of the chairman of the board, chief executive officer, chief operating officer, chief financial officer, and those divisional heads reporting directly to them, or the executive committee if one exists.

- Length of time to be held—All else being equal, in a reverse spinoff, the accounting spinnor (legal spinnee) is held for a longer period than the accounting spinnee (legal spinnor). A proposed or approved plan of sale for one of the separate entities concurrent with the spinoff may identify that entity as the accounting spinnee.

INT 08-05 Discussion

6. The EITF consensus is that reverse spinoff accounting is appropriate when treatment of a legal spinnee as the accounting spinnor results in the most accurate depiction of the substance of the transaction for shareholders and other users of the financial statements. The Task Force observed that the determination of whether reverse spinoff accounting is appropriate is a matter of judgment that depends on an evaluation of all relevant facts and circumstances.

7. The Task Force consensus indicated that a presumption should exist that a spinoff should be accounted for based on its legal form (legal spinnor is the accounting spinnor); however that presumption can be overcome based on an evaluation of indicators that may suggest when a reverse spinoff exists (legal spinnee would be accounting spinnor).

8. In various instances within the statutory accounting guidelines, guidance is incorporated to promote accounting in accordance with the substance of transactions instead of their legal form. The Working Group reached a consensus to adopt EITF 02-11, indicating that reverse spinoff accounting is appropriate when treatment of a legal spinnee as the accounting spinnor results in the most accurate depiction of the substance of the transaction. In situations in which reverse spinoff accounting is judged to be most appropriate, this will result with the carrying value of the spinnee, instead of the spinnor, being utilized in determining the spinoff distribution to shareholders.

9. The following examples have been incorporated from EITF 02-11 to illustrate situations in which a spinoff should be accounted for in accordance with the legal form or as a reverse spinoff:

Example 1 - Retail Company, a retail store chain, has a wholly owned restaurant subsidiary. The retail and restaurant operations are operated independently with a small executive management team overseeing both. Since the two have unrelated operations, the shareholders believe that the two operations should be separated by way of a spinoff. They believe that this will allow those separate companies to pursue opportunities in their respective industries and maximize their individual value. In order to accomplish the spinoff, Retail Company creates a new legal entity, Restaurant Company, into which the assets and operations of the restaurant subsidiary are transferred. The shares of Restaurant Company are then distributed to the shareholders of Retail Company on a pro rata basis.

The executive management team of Retail Company will be divided between the two entities. A comparison of the two companies is presented below:

(In 000s)	Assets	Revenues	Net Income	Fair Value
Retail	$500	$410	$150	$675
Restaurant	$100	$ 75	$21	$170

Evaluation: Based on an analysis of the indicators in this example, the spinoff should be accounted for in accordance with its legal form. That is, the transaction should not be accounted for as a reverse spinoff. Retail Company should be designated as the accounting spinnor based on the first two indicators listed below.

- Retail Company has substantially larger operations than Restaurant Company.
- The fair value of Retail Company is greater than Restaurant Company.
- The management team is allocated between the two operations.
- There are no planned or likely disposals of either Retail Company or Restaurant Company.

The designation of Retail Company as the accounting spinnor will provide the most accurate depiction of the transaction to shareholders and other users of the financial statements because, in substance, Retail Company has spun off its Restaurant Company into a separate company.

Example 2 - Retail Company, a retail store chain, has a wholly owned restaurant subsidiary. The retail and restaurant operations are operated independently, with a small executive management team overseeing both. While the restaurant subsidiary has grown rapidly, the retail operations have deteriorated steadily due to increased competition. The shareholders believe that the two operations should be separated by way of a spinoff. Management intends to dispose of the retail operations. In order to accomplish the spinoff, Retail Company creates a new legal entity, Restaurant Company, into which the assets and operations of the restaurant subsidiary are transferred. The shares of Restaurant Company are then distributed to the shareholders of Retail Company on a pro rata basis.

The executive management team of the combined entity will be assigned primarily to Restaurant Company, as the intent is to dispose of Retail Company (now solely comprising the retail operations). A comparison of certain statistics of the two companies is presented below:

(In 000s)	Assets	Revenues	Net Income	Fair Value
Retail	$300	$210	$ 35	$375
Restaurant	$600	$450	$150	$700

Evaluation: Based on an analysis of the indicators in this example, the spinoff should be accounted for as a reverse spinoff. Restaurant Company, although the legal spinnee, should be designated as the accounting spinnor based on the following:

- Restaurant Company has substantially larger operations than Retail Company.
- The fair value of Restaurant Company is greater than that of Retail Company.
- The management team is primarily assigned to Restaurant Company.
- Management intends to dispose of Retail Company upon finalizing the spinoff.

The designation of Restaurant Company as the accounting spinnor will provide the most accurate depiction of the transaction to shareholders and other users of the financial statements, as, in substance, Retail Company has disposed of its retail operations and continued its restaurant operations.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 09-08: Accounting for Loans Received Under the Federal TALF Program

INT 09-08 Dates Discussed

September 21, 2009; December 5, 2009; March 3, 2012; August 31, 2012

INT 09-08 References

Current:
SSAP No. 64—Offsetting and Netting of Assets and Liabilities
SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (SSAP No. 103)

Superseded:
SSAP No. 91R—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities – Revised

INT 09-08 Issue

1. In November 2008, the Federal Reserve announced the "Term Asset-Backed Securities Lending Facility" (TALF) Program as a means to make credit available to consumers and small businesses on more favorable terms by facilitating the issuance of asset-backed securities (ABS) and improving the market conditions for eligible ABS. (Newly issued ABS backed by commercial mortgage loans (CMBS) are TALF eligible as of June 2009. Legacy CMBS, or securities created prior to January 2009 are eligible as of July 2009.)

2. Under the TALF program, loan proceeds will be disbursed to the borrower, contingent on receipt by the New York Federal Reserve's custodian bank (custodian) of the eligible collateral, an administrative fee, and margin, if applicable. As the loan is non-recourse, if the borrower does not repay the loan, the New York Federal Reserve Bank will enforce its rights in the collateral and sell the collateral to a special purpose vehicle (SPV) established specifically for the purpose of managing such assets.

3. Unless further extended, issuance of new TALF loans will cease in March 2010, except for CMBS which end in June 2010. (This is an extension from the original end date of December 31, 2009.)

4. The accounting issue is whether TALF loans received and the corresponding collateral provided by the reporting entity shall be reported net within the statutory financial statements.

INT 09-08 Discussion

5. Guidance is included within *SSAP No. 64—Offsetting and Netting Assets and Liabilities* (SSAP No. 64). This guidance indicates that assets and liabilities shall be reported net only when a valid right of setoff exists. Under paragraph 2 of SSAP No. 64, a valid right of setoff exists only when all of the following conditions are met:

a. Each of the two parties owes the other determinable amounts. An amount shall be considered determinable for purposes of this provision when it is reliably estimable by both parties to the agreement;

b. The reporting party has the right to setoff the amount owed with the amount owed by the other party;

c. The reporting party intends to setoff; and

d. The right of setoff is enforceable by law.

6. Guidance in SSAP No. 64, paragraph 3 indicates that assets and liabilities that meet the criteria for offset shall not be netted when prohibited by specific statements of statutory accounting principles. Paragraph 4 of SSAP No. 64 specifies that the netting of assets and liability for reporting purposes when no valid right of setoff exists shall be allowed only when provided for by specific statements of statutory accounting principles.

7. In reviewing the criteria for setoff within SSAP No. 64, it would appear that the criteria within paragraph 2.a. of SSAP No. 64 is clearly met, as after the receipt of a TALF loan, the borrower and the New York Federal Reserve Bank would owe the other determinable amounts. Further, it would seem that the criteria in paragraph 2.d. of SSSAP No. 64 is also met, as if the reporting entity did not repay the loan, the New York Federal Reserve Bank has the ability to enforce its rights in the collateral and sell the collateral to a special purpose vehicle (SPV) established specifically for the purpose of managing such assets.

8. However, the conditions in paragraphs 2.b. and 2.c. of SSAP No. 64 are not considered to be met, and prohibit a net presentation. Paragraph 2.b. requires the reporting entity to have a right to setoff the amount owed. Although a default on the loan repayment will trigger an eventual setoff of the collateral and TALF loan, the ability to default on the loan is not considered a "right to setoff" by the reporting entity. Additionally, it is presumed that a reporting entity enters into these loans with the intention of repaying the loan and recapturing collateral. Thus, the provision of paragraph 2.c., which requires an intent of the reporting party to setoff, is also not met.

9. In considering whether a provision should be incorporated within a specific statutory accounting principle to permit netting, although no valid right of setoff exists, it is noted that guidance for collateral is included within *SSAP No. 103—Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* (SSAP No. 103). Pursuant to guidance within this SSAP, unless the transferor defaults on the secured contract, the transferor shall continue to carry the collateral as an asset. It is only after default that the reporting entity would remove the collateral as an asset, with a corresponding reduction to the liability. It is noted that a specific provision for TALF loans would be inconsistent with existing SSAP No. 103 guidance for the reporting of loans and collateral.

10. Pursuant to the existing statutory accounting guidance for offsetting and the reporting of collateral, the Working Group reached a consensus that loans received, and collateral provided, under the TALF program do not meet the SSAP No. 64 criteria for offset. Furthermore, no specific provision shall be established within statutory accounting principles that permit a net reporting presentation for transactions under the TALF program. Loans received and collateral provided under the TALF program shall be reported separately, on a gross basis, until time of default on the received loan. At time of default, the collateral claimed by the New York Federal Reserve Bank shall be removed from the reporting entity's balance sheet, with a corresponding reduction of the liability established for the TALF loan. For annual statement reporting, asset-backed securities provided as collateral under the TALF program shall continue to be reported in the same category as previously reported and would not be moved to the U.S. Government category. For example, Industrial and Misc. securities would continue to be reported in the industrial and miscellaneous category and not as government securities.

Interpretation of the Emerging Accounting Issues (E) Working Group

INT 13-03: Clarification of Surplus Deferral in SSAP No. 92 & SSAP No. 102

INT 13-03 Dates Discussed
November 20, 2013, and December 15, 2013

INT 13-03 References

Current:
SSAP No. 92—Accounting for Postretirement Benefits Other Than Pensions
SSAP No. 102—Accounting for Pensions

INT 13-03 Issue

1. In March 2012, the Statutory Accounting Principles (E) Working Group finalized SSAP No. 92 and SSAP No. 102 to adopt with modification GAAP guidance pertaining to pensions and postretirement benefit obligations other than pensions. As a result of the accounting guidance, and potential impact to surplus reflected in both SSAPs, the Working Group adopted transition guidance that allowed a surplus deferral for a period not to exceed ten years.

2. Per the surplus deferral provisions within the SSAPs, the deferral option was not intended to allow a surplus benefit to be recognized at initial transition for an unfunded plan. Additionally, the SSAPs required a minimum amount of the deferred liability to be subsequently recognized under the deferral option to cover the annual amortization of the "unrecognized items" into net periodic cost and prevent a surplus benefit.

3. The SSAPs also incorporated guidance to indicate that the reporting entities must recognize remaining transition liability to the extent that the plan reflects a prepaid benefit cost, with an example that if changes in circumstances resulted with the plan reflecting an overfunded status; the remaining transition liability must be recognized to the extent the plan is overfunded. Furthermore, the guidance indicated that if circumstances resulted with a subsequent gain attributed to the plan that would be recognized in earnings, the entity must recognize an additional amount of the remaining transition liability to offset the recognized gain.

4. Due to the current market environment resulting with increases in the fair value of plan assets and/or changes in discount rates that have reduced the projected obligations for pension and OPEB plans, questions have been received as to whether the reduction in pension or OPEB liabilities on the balance sheet, resulting in more favorable surplus positions related to the pension/OPEB plans, should be permitted when there are remaining unrecognized liabilities from the surplus deferral elected at transition of SSAP No. 92 and SSAP No. 102. These questions often refer to the current guidance in the SSAPs, which provide the example of a plan being in an overfunded state, or that the gain is recognized in earnings, as criteria for when an additional amount of the remaining transition liability is needed to offset the recognized gain. As the changes in fair value or discount rates (and other changes such as curtailments or settlements) may not result in an overfunded plan, and may not be recognized in earnings, there is uncertainty with regards to the application of the guidance.

5. The accounting issue is whether a surplus benefit was intended to result from pension/OPEB changes or activities when an unrecognized pension/OPEB transition liability continues to exist.

INT 13-03 Discussion

6. The Working Group reached a consensus that the existing explicit guidance highlighting the intent to prevent a surplus benefit reflects the original objective of the surplus deferral guidance in SSAP No. 92 and SSAP No. 102. As such, the guidance in SSAP No. 92 and SSAP No. 102 was not intended (on a net basis for each plan) to result in more favorable, subsequent surplus pension/OPEB positions when there are remaining unrecognized liabilities as a result of the reporting entity's initial election for surplus deferral.

7. In accordance with this consensus, if there is a plan curtailment, settlement, or other plan amendment resulting in a reduction of benefit obligations, or net benefit obligation gains due to revisions in assumptions (e.g., discount rates) or plan experience differing from assumptions, or plan asset gains due to the actual return on plan assets exceeding the expected return on plan assets, a corresponding amount of unrecognized liability from the surplus deferral shall be recognized. For this purpose, net gains, if any, are the net aggregation of all gains and losses (excluding plan amendments that increase benefit obligations) from factors such as those listed above, determined as of a measurement or remeasurement date. This shall occur regardless if the impact from the change results with the plan being in an overfunded state, or whether the gain is recognized in earnings. The Working Group agrees that the intent of the original guidance was to provide surplus relief from the immediate surplus impact from adopting SSAP No. 92 and SSAP No. 102, but that in no instances should changes (on a net basis for each plan) attributed to pension or OPEB plans result in more favorable, subsequent surplus positions when there are unrecognized liabilities remaining as a result of the reporting entity's initial election for surplus deferral.

NAIC

National Association of Insurance Commissioners

Accounting Practices and Procedures Manual

As of March 2015

Volume II

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting
Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

Consumer Information
Important answers to common questions about auto, home, health and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

Financial Regulation
Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

Legal
Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

Market Regulation
Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

NAIC Activities
NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

Special Studies
Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance-related topics.

Statistical Reports
Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

Supplementary Products
Guidance manuals, handbooks, surveys and research on a wide variety of issues.

Capital Markets & Investment Analysis
Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

White Papers
Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

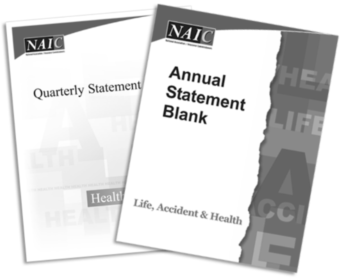
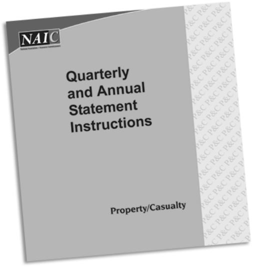
Companion Products

The following companion products provide additional information on the same or similar subject matter. Many customers who purchase the ***Accounting Practices and Procedures Manual*** also obtain one or more of the following products:



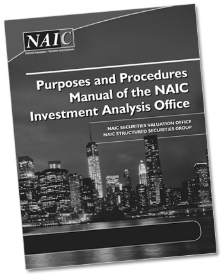
Annual and Quarterly Statement Blanks

To be used with its companion products, this publication provides the appropriate format for filing quarterly and annual statement data with the states and the NAIC. Proper use allows users to identify system changes that can improve the method in which data is first collected, and allows users to ascertain if their annual statement software vendor has also complied with NAIC requirements. Updated annually.



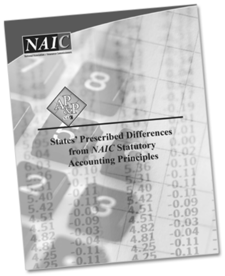
Annual and Quarterly Statement Instructions

Includes a summary of changes to the instructions for the following year. When used with its companion products, it allows for proper preparation of annual and quarterly statements, including all supplemental information that must also be filed to remain in compliance with NAIC mandates. Instructions provide guidance for completing the various pages of the statements when the line descriptions are not self-explanatory. Updated annually.



Purposes and Procedures Manual of the NAIC Securities Valuation Office

This publication is the primary source for insurers to comply with regulatory reporting requirements. Contains the NAIC's credit assessment methodologies and valuation policies, and takes precedence over other SVO publications covering a number of categories. Subscribers receive periodic email alerts relating to regulatory developments concerning securities. These alerts will be sent directly from the NAIC's Securities Valuation Office. Electronic format only. Updated biannually.



States' Prescribed Differences from NAIC Statutory Accounting Principles

The Accounting Practices and Procedures Manual presents a comprehensive basis of accounting that should be followed if not in conflict with state statutes and/or regulations. Should the domiciliary state set forth accounting guidance that differs from the AP&P Manual, disclosures of such must be made. This publication provides information regarding each state's prescribed differences from NAIC statutory accounting principles, including a citation to the respective state statute and/or regulation. Updated annually.

How to Order

☎ 816.783.8300 ✉ prodserv@naic.org http://store.naic.org

MAINTENANCE PROCESS

The Statutory Accounting Principles (E) Working Group maintains codified statutory accounting principles (SAP) by concluding on generally accepted accounting principles (GAAP) or addressing new statutory accounting issues. As items are adopted, updates to the Manual are posted to the password-protected website listed below.

Website: **www.naic.org/committees_e_app_manual_updates.htm**

User ID and password for updates to the Manual adopted after the NAIC Spring 2014 National Meeting through the Spring 2015 National Meeting:

User ID: **RECOGNITION** (enter exactly as presented – case sensitive)
Password: **2015STATUTORY** (enter exactly as presented – case sensitive)

Email Notification
Should you wish to be notified by the NAIC when the password-protected website is updated, visit the website listed above and follow the link to sign up for email notification of updates to the statutory accounting website. The NAIC will retain the database; therefore, if you were receiving notifications via email in 2014, there is no need to resubmit your request in 2015.

Password for updates adopted after the NAIC Spring 2015 National Meeting through the Spring 2016 National Meeting requires purchase of the 2016 Manual.

Access to new updates adopted after the NAIC Spring 2015 National Meeting will be included with the pre-purchase of the subsequent year's Manual (March 2016 publication). Purchasers of the 2016 Manual may enter the password-protected NAIC website and download updates finalized after the NAIC Spring 2015 National Meeting through the Spring 2016 National Meeting.

Ordering Information: You may pre-purchase the March 2016 *Accounting Practices and Procedures Manual* by contacting an NAIC representative at 816.783.8300, http://www.naic.org/store_home.htm or e-mail at prodserv@naic.org. The March 2016 *Accounting Practices and Procedures Manual* will be delivered in two parts, first the User ID and Password required to obtain access to the updates website, and then the Manual in March 2016. Please contact an NAIC representative as indicated above with any questions on this process.

DEDICATION

The *Accounting Practices and Procedures Manual* is dedicated to Norris Clark, California Department of Insurance (retired), Chair of the Codification of Statutory Accounting Principles Working Group, and its successors, the Statutory Accounting Principles and Emerging Accounting Issues (E) Working Groups from September 1994 through July 2004, and to Joseph Fritsch, New York Department of Financial Services (retired), Chair of the Statutory Accounting Principles (E) Working Group from 2004 through December 2012.

Your dedication, leadership, intelligence and passion were the driving forces behind the creation and continued development of the comprehensive statutory accounting and financial reporting model presented in this publication. Your contributions throughout the years are appreciated and will not be forgotten.

How to Use This Manual

The contents of this manual are arranged as follows:

Volume I:

- Table of Contents
- Summary of Changes
- Preamble
- Statements of Statutory Accounting Principles
- Index to the Statements of Statutory Accounting Principles
- Glossary
- Appendix A – Excerpts of NAIC Model Laws
- Appendix B – Interpretations of the Emerging Accounting Issues (E) Working Group

Volume II:

- Appendix C – Actuarial Guidelines
- Appendix D – GAAP Cross-Reference to SAP
- Appendix E – Issue Papers 1-75

Volume III:

- Appendix E – Issue Papers 76-150
- Appendix F – Policy Statements
- Appendix G – Implementation Guide for the Model Audit Rule
- Appendix H – Superseded SSAPs and Nullified Interpretations (This appendix is no longer included within the printed Manual but is still accessible within the AP&P Folio View CD-ROM and on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage, www.naic.org/committees_e_app_manual_updates.htm).

The arrangement of material as indicated above is included in the Table of Contents at the front of each Volume. A detailed Table of Contents also proceeds each section covering the material within.

Summary of Changes:

This section provides a summary of the changes that were made to the As of March 2014 version of the *Accounting Practices and Procedures Manual* to create the As of March 2015 version. This is divided into substantive revisions to statutory accounting principles, nonsubstantive revisions to statutory accounting principles, and revisions to the appendices included in the Manual. This is a key resource for users who are looking to identify changes from the prior edition.

Preamble:

Each and every user of the Manual should read this section. Many regulators consider this document one of the most important parts of the Manual as it provides the foundation for statutory accounting principles (SAP). Some of the significant topics covered in the Preamble include codification project background, statement of concepts, statutory hierarchy, materiality and disclosures.

Statements of Statutory Accounting Principles:

As indicated by the Statutory Hierarchy, the Statements of Statutory Accounting Principles (SSAPs) are the primary authoritative statutory accounting practices and procedures promulgated by the NAIC. These statements are the result of issue papers that have been exposed for public comment and finalized. Finalized issue papers are in Appendix E and ARE NOT authoritative. While it is not intended that there be any significant differences between an underlying issue paper and the resultant SSAP, if differences exist, the SSAP prevails and shall be considered definitive. Readers may use the NAIC website to keep abreast of substantive and nonsubstantive

changes to the SSAPs. Completely superseded SSAPs are no longer authoritative and have been removed from the printed Manual but are available for reference on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). The completely superseded SSAPs have been retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

The cover page of each SSAP contains a STATUS section that can affect the implementation of each SSAP. The STATUS section contains the following:

> TYPE OF ISSUE – SSAPs designated as Common Area apply to all insurers. Although the nomenclature or terms provided in the prescribed annual statement forms may vary among different types of insurers, only one set of nomenclature or terms may have been used in the SSAP. For example, the Statement of Income found in the Property and Casualty Annual Statement shall be considered as synonymous with the Summary of Operations found in the Life and Health Annual Statement.
>
> ISSUED – Date when the SSAP was adopted by the NAIC. SSAPs designated with Initial Draft were adopted by the NAIC Plenary in March 1998 as part of the Codification Project (SSAP Nos. 1-73). The date included for SSAP No. 74, and subsequent SSAPs, denotes when the Statutory Accounting Principles (E) Working Group adopted the SSAP.
>
> EFFECTIVE DATE – Date representing when the SSAP is effective. Many times there are additional details relative to the transition provided within the SSAP.
>
> AFFECTS/AFFECTED BY – A useful tool for tracking relationships between statements and interpretations is contained within these sections. The "affects" section is used when a SSAP substantively amends or supersedes previously issued SSAPs. Nullified INTs are also noted in this section. Readers are referenced to another SSAP in the "affected by" section if the SSAP has been substantively amended or superseded. Text within paragraphs substantively amended or superseded may also be "shaded" to notify readers that revised guidance is available.
>
> INTERPRETED BY – This section includes a reference to the applicable Interpretation (INT) of the Emerging Accounting Issues (E) Working Group contained within Appendix B of the Manual which provides interpretative guidance as a result of issues raised by users of the Manual or related GAAP guidance. INTs are generally effective when adopted. Readers should note that the Manual only contains the INTs finalized through December 2014 due to the fact that the Manual is published annually. Readers may use the NAIC website, as indicated on the inside front cover of the Manual, to keep abreast of recently issued INTs.

Refer to the Relevant Literature and Effective Date and Transition sections of the SSAP for details of substantive and nonsubstantive changes.

Appendix A – Excerpts of NAIC Model Laws:

In most cases, the source document for information included in Appendix A is an NAIC Model Regulation or Law. These Appendices are referenced by specific SSAPs and should only be used in context of the Appendix and the SSAP that references it.

Appendix B – Interpretations of the Emerging Accounting Issues (E) Working Group:

The Emerging Accounting Issues (E) Working Group (EAIWG) is responsible for responding to SAP questions that generally relate to application, interpretation and clarification. Appendix B includes the final interpretations of the EAIWG through December 2014. Once an INT is

finalized, the related SSAP will contain reference to the applicable INT. Interpretations that have been nullified are removed from the printed Manual and posted for reference on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). The nullified INTs are retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

Appendix C – Actuarial Guidelines:

The NAIC Life Actuarial (A) Task Force and Health Actuarial (B) Task Force have been asked on many occasions to assist a particular state insurance department in interpreting a statute dealing with an actuarial topic relative to an unusual policy form or situation not contemplated at the time of original drafting of a particular statute. The Life Actuarial (A) Task Force and Health Actuarial (B) Task Force, in developing interpretations or guidelines, must often consider the intent of the statute, the reasons for initially adopting the statute and the current situation. The Life Actuarial (A) Task Force and Health Actuarial (B) Task Force feel that for those situations which are sufficiently common to all states, the publishing of actuarial guidelines on these topics would be beneficial to the regulatory officials in each state and would promote uniformity in regulation which is beneficial to everyone. To this end, the Life Actuarial (A) Task Force and Health Actuarial (B) Task Force have developed certain actuarial guidelines and will continue to do so as the need arises. The guidelines are not intended to be viewed as statutory revisions but merely a guide to be used in applying a statute to a specific circumstance.

Appendix D – GAAP Cross-Reference to SAP:

As expressed in the Statement of Concepts, SAP utilizes the framework established by Generally Accepted Accounting Principles (GAAP). Appendix D includes GAAP pronouncements that have been considered in the development of SAP. This listing includes GAAP pronouncements issued through December 2014. This Appendix is a valuable and efficient tool for readers who are interested in the status of a particular GAAP pronouncement in the SAP model.

Appendix E – Issue Papers:

This section includes all of the issue papers associated with SSAPs adopted by the Statutory Accounting Principles (E) Working Group through December 2014. The issue papers are used as the first step in developing new SSAPs and contain a recommended conclusion, discussion and relevant literature section. Issue papers **DO NOT** constitute an authoritative level of statutory accounting, as supported by the statutory hierarchy, and should only be used as reference material. Nevertheless, issue papers are an important part of the Manual because they reference the history and discussion of the related SSAP. The "Relevant Statutory Accounting and GAAP Guidance" section of the issue paper contains excerpts of accounting guidance in place at the time the Statutory Accounting Principles (E) Working Group considered (but not necessarily adopted) when forming the conclusions reached in the resultant SSAP.

Appendix F – Policy Statements:

This section includes the NAIC Policy Statements applicable to SAP. These statements provide the basis by which SAP is maintained, documentation of the agenda process and other important issues that affect this manual.

Appendix G – Implementation Guide for Model Audit Rule:

This section includes the NAIC Implementation Guide for the Model Audit Law. This section is for informational purposes. The Implementation Guide should not be viewed as a requirement of complying with the *Accounting Practices and Procedures Manual.*

Appendix H – Completely Superseded SSAPs and Nullified Interpretations

In 2013, the Statutory Accounting Principles (E) Working Group adopted a proposal to remove completely superseded SSAPs and nullified interpretations (INTs) from the printed Manual and

include these items on the "Updates to the Accounting Practices and Procedures (AP&P) Manual" webpage (www.naic.org/committees_e_app_manual_updates.htm). By including on this password-protected updates page, all who annually subscribe to the printed *Accounting Practices and Procedures Manual* will continue to have access to the superseded and nullified guidance for historical purposes. The completely superseded SSAPs and nullified INTs have been retained in Appendix H – Superseded SSAPs and Nullified Interpretations within the AP&P Folio View CD-ROM.

How to Use this Manual …

... to account for a certain item under NAIC SAP

As the SSAPs represent the highest level of NAIC statutory authority, readers should begin their search there. The Index to SSAPs is a useful tool to identify which SSAP(s) address the issue. Once the pertinent SSAP has been identified, it can be used to locate other documents that may also address the issue. On the SSAP cover page, readers will be referred to other SSAPs if there have been substantive changes made to it or INTs if there have been interpretations of the SSAP. Within the body of the SSAP, readers may be referred to Appendix A or C for further guidance. There is a reference located at the end of each SSAP to issue paper(s) used in the development of the SSAP. The DISCUSSION section of the issue paper provides documentation supporting the conclusions reached in the SSAP. As supported by the statutory hierarchy, readers should only utilize the issue papers as support to the SSAP as they ARE NOT authoritative. The Statutory Hierarchy contains a detailed listing of levels of authoritative literature.

... to compare SAP to GAAP for a particular issue

Appendix D is an excellent reference for users who are interested in determining how SAP addresses an issue that has been adopted by GAAP. Appendix D provides a reference to the SSAP or INT that addresses a particular GAAP pronouncement. As indicated in the Preamble, users should not utilize GAAP until and unless adopted by the NAIC. Within the body of the applicable SSAP or INT, readers will find documentation as to the reason for adoption, rejection, or adoption with modification of a particular GAAP pronouncement.

... to identify the relationship between the Manual and State law

Once a reader has identified the accounting treatment for a particular transaction or issue within the Manual, one must consider the effect of state law. That is, the Manual is not intended to preempt states' legislative and regulatory authority. It is intended to establish a comprehensive basis of accounting recognized and adhered to if not in conflict with state statutes and/or regulations, or when the state statutes and/or regulations are silent. For instance, if a state prohibits the admission of goodwill, insurers domiciled in that state are required to nonadmit all goodwill instead of following the NAIC guidance contained within *SSAP No. 68—Business Combinations and Goodwill*. Insurers should refer to their state laws and regulations regarding deviations from this manual.

... to obtain updates to the latest published Manual

The Manual contains information as of December 2014. Please note that there will be modifications to the accounting pronouncements included in the Manual from year to year, as such guidance is subject to the maintenance process. To address this, the NAIC has a website dedicated to providing updates on the latest information impacting statutory accounting. A user must pre-order the As of March 2016 Manual in order to obtain access to the changes occurring during 2015 that are maintained within this password-protected website. Once access is granted, a user may enter the website and download an issue paper, statement of statutory accounting principles, appendix or interpretation that affects the Manual. This website also includes the latest minutes of the Statutory Accounting Principles (E) Working Group and Emerging Accounting Issues (E) Working Group. To learn more about how to obtain updates to the latest published Manual, refer to the Maintenance Process page, which precedes the Table of Contents.

... to learn how changes are made to the Manual and how to stay abreast of such changes

Appendix F contains several NAIC Policy Statements that document the process by which the Manual will be modified. It also outlines the process by which the Statutory Accounting Principles (E) Working Group and the Emerging Accounting Issues (E) Working Group will conduct their business. Readers are able to track the development of SAP by attending the national meetings of the working groups or through use of the NAIC website. Further details regarding the website can be found at www.naic.org.

... to contact the NAIC regarding questions about the Manual

The following NAIC staff may be contacted regarding questions about the Manual:

Summary of Changes to the *As of March 2014 Version* of the *Accounting Practices and Procedures Manual* included in the *As of March 2015 Version*

The following represents a summary of the changes that were made to the *As of March 2014* version of the *Accounting Practices and Procedures Manual* (Manual) to create the *As of March 2015* version.

The first section summarizes substantive revisions to statutory accounting principles. Substantive revisions introduce original or modified accounting principles. Substantive revisions can be reflected in an existing SSAP or a new SSAP. When substantive revisions are made to an existing SSAP, the front of the SSAP identifies the substantive changes and effective date of the substantive revisions. If substantive revisions in an existing SSAP are depicted by underlines (new language) and strikethroughs (removed language), this tracking will not be shown in subsequent manuals. Substantively revised SSAPs and new SSAPs usually refer to a corresponding issue paper that will reflect the substantive revisions for historical purposes. If language in an existing SSAP is superseded, the superseded language is shaded, with the reader referred to the new or substantively revised SSAP. SSAPs that are completely superseded and interpretations that are nullified are included in Appendix H.

The second section summarizes the nonsubstantive revisions to statutory accounting principles. Nonsubstantive changes are characterized as language clarifications which do not modify the original intent of a SSAP, or changes to reference material. Nonsubstantive changes are depicted by underlines (new language) and strikethroughs (removed language) and will not be shown as marked in subsequent manuals.

The third section summarizes any revisions to the appendices in the Manual.

1. Substantive Revisions – Statutory Accounting Principles		
Section	**Reference**	**Description**
SSAP No. 40R SSAP No. 48	2013-17	Revisions related to wholly-owned single real estate held in an LLC, which meets specific conditions, with an effective date of Jan. 1, 2015.
SSAP No. 106 SSAP No. 35R	2014-01 2014-13	New SSAP moves guidance on the Affordable Care Act Section 9010 from SSAP No. 35R and includes nonsubstantive edits to the disclosures.
SSAP No. 107 SSAP No. 35R	2014-12 2013-28	New SSAP addresses the risk-sharing provisions of the Affordable Care Act known as risk adjustment, reinsurance and risk corridors. With this adoption, the disclosures previously located within SSAP No. 35R are moved to this SSAP and INT 13-04 is nullified.
2. Nonsubstantive Revisions – Statutory Accounting Principles		
Section	**Reference**	**Description**
Preamble	2013-35	Revisions clarify that as of Sept. 15, 2009, AICPA SOPs will no longer be reviewed for statutory accounting.
SSAP No. 1 SSAP No. 4	2014-16	Revisions clarify the guidance for restricted assets.
SSAP No. 3 SSAP No. 68	2013-29	Revisions clarify that the disclosure exemption for mergers with shell entities does not change the Jan. 1 date to determine the cumulative effect in accounting principle.
SSAP No. 11	2014-07	Revisions identify the adoption of specific paragraphs from *Accounting Principles Board Opinion (APB) 12, Omnibus Opinion – 1967* and add guidance to reflect previously adopted GAAP, with minor technical edits.
SSAP No. 16R	2014-04	Revisions make the capitalization policy disclosure consistent with other SSAPs.

SSAP No. 19 SSAP No. 22	2014-05	Revisions adopt with modification *ASU 2014-05–Service Concession Arrangements* to clarify that service concession arrangements are not within the scope of SSAP No. 22 and shall not be recognized as property, plant or equipment in SSAP No. 19.
SSAP No. 26 SSAP No. 43R	2014-02	Revisions incorporate a new “structured note” disclosure and clarify that the guidance in SSAP No. 43R pertains to structured securities, not structured notes.
SSAP No. 35R	2013-28	Revisions include disclosures pertaining to the risk-sharing provisions of the Affordable Care Act programs (risk adjustment, reinsurance and risk corridors). These disclosures were subsequently moved to SSAP No. 107.
SSAP No. 55	2014-19	Revisions clarify that claims-related losses for extra contractual obligations and bad faith lawsuits are to be included in losses. Also, technical revisions related to prepaid adjustment expenses.
SSAP No. 56	2014-18	Revisions clarify the reporting of separate accounts disclosures.
SSAP No. 57	2014-06	Revisions to the disclosure requirements, with corresponding terminology revisions.
SSAP No. 86	2013-32	Revisions adopt *ASU 2013-10–Inclusion of the Fed Funds Effective Swap Rate (or Overnight Index Swap Rate) as a Benchmark Interest Rate for Hedge Accounting Purposes.* This ASU defines a benchmark interest rate and eliminates the restriction on different rates for similar hedges.
	2014-09	Revisions reject *ASU 2014-03–Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps—Simplified Hedge Accounting Approach (PCC)* as not applicable.
	2014-11	Revisions clarify the reporting of derivatives between Schedule DB and the balance sheet.
SSAP No. 92 SSAP No. 102	2013-37	Revisions adopt by reference *ASU 2011-09–Disclosures about an Employer’s Participation in a Multiemployer Plan* and incorporate limited additional disclosures for multiemployer plans.
SSAP No. 97	2013-31	Revisions add reference in Appendix B – Determining the Valuation Method, to the SSAP’s downstream holding company guidance.
SSAP No. 101	2014-20	Revisions clarify the RBC authorized control level used in the DTA calculation.
SSAP No. 104R	2014-17	Revisions adopt *ASU 2014-12–Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period* with an effective date of Jan. 1, 2016, with early adoption permitted.

3. Revisions to the Appendices

Section	Reference	Description
Appendix A	2014-21	Revisions incorporate changes to *Appendix A-010: Minimum Reserve Standards for Individual and Group Health Insurance Contracts* to allow the 2012 Group Long-Term Disability Table adopted by the Health Actuarial (B) Task Force with a Jan. 1, 2017, effective date and early adoption permitted.

Appendix B	2013-04 (EAIWG) 2014-12 (SAPWG) 2014-26 (SAPWG)	*INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act* was adopted to provide temporary guidance on the risk-sharing provisions. This INT was subsequently nullified by SSAP No. 107 and moved to Appendix H. Placement revisions move GAAP guidance identified as rejected from INT 99-00 into Issue Paper No. 99. INT 99-00 was nullified and moved to Appendix H.
Appendix C	2014-22	*Actuarial Guideline XLVII: Application of Company Experience in the Calculation of Claim Reserves Under the 2012 Group Long-Term Disability Valuation Table* has been added. *Actuarial Guideline XLVIII: Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued Under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (Model 830) has been added. Actuarial Interpretations 38 through 41 have been added to Appendix C2.
Appendix D	2013-35	Revisions update the appendix based on the consideration of GAAP through the statutory review process. These revisions are not tracked as changes. Additionally, revisions clarify that as of Sept. 15, 2009, AICPA SOPs will no longer be reviewed for statutory accounting.
Appendix E	2013-34 2014-03 2014-14 2013-35 2014-26 2014-08 2014-01 2014-13 2013-17 2014-12	Revisions reflect the rejection of the following GAAP guidance as not applicable to statutory accounting in *Issue Paper No. 99—Nonapplicable GAAP Pronouncements* (Issue Paper No. 99): • *ASU 2012-04–Technical Corrections and Improvements* • *ASU 2013-12–Definition of a Public Business Entity, An Addition to the Master Glossary* • *ASU 2014-10–Development Stage Entities* • *SOP 09-1–Performing Agreed-Upon Procedures Engagements That Address the Completeness, Accuracy, or Consistency of XBRL-Tagged Data* Placement revisions move GAAP guidance identified as rejected from INT 99-00 into Issue Paper No. 99. Additionally, revisions add reference of the original SSAP that corresponds with each issue paper, as well as the current authoritative SSAP guidance. The following issue papers were adopted or amended: • *Issue Paper No. 148—Affordable Care Act Section 9010 Assessment* • *Issue Paper No. 149—Wholly-Owned Single Real Estate Property in an LLC* • *Issue Paper No. 150—Accounting for the Risk-Sharing Provisions of the Affordable Care Act*
Appendix F	N/A	No revisions have been made to this appendix.
Appendix G	N/A	No revisions have been made to this appendix.
Appendix H	2014-26 2013-04 (EAIWG) 2014-12 (SAPWG)	Revisions add nullified INTs: • *INT 99-00: Compilation of Rejected EITFs* • *INT 13-04: Accounting for the Risk-Sharing Provisions of the Affordable Care Act*

Appendix C
Actuarial Guidelines

Introduction

The NAIC Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force, formerly known as the Life and Health Actuarial Task Force, have been asked on many occasions to assist a particular state insurance department in interpreting a statute dealing with an actuarial topic relative to an unusual policy form or situation not contemplated at the time of original drafting of a particular statute. The Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force, in developing an interpretation or guideline, must often consider the intent of the statute, the reasons for initially adopting the statute and the current situation. The Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force feel that for those situations which are sufficiently common to all states, that the publishing of actuarial guidelines on these topics would be beneficial to the regulatory officials in each state and would promote uniformity in regulation which is beneficial to everyone. To this end, the Life Actuarial (A) Task Force and the Health Actuarial (B) Task Force have developed certain actuarial guidelines and will continue to do so as the need arises. The guidelines are not intended to be viewed as statutory revisions but merely a guide to be used in applying a statute to a specific circumstance.

Actuarial Guideline I

INTERPRETATION OF THE STANDARD VALUATION LAW RESPECT TO THE VALUATION OF POLICIES WHOSE VALUATION NET PREMIUMS EXCEED THE ACTUAL GROSS PREMIUM COLLECTED

1. The purpose of this guideline (items 2 and 3 below) is to clarify the intent of the Standard Valuation Law.

2. The method of valuation promulgated by the model legislation adopted by the NAIC in December 1976 for the valuation of life insurance policies whose valuation net premiums exceeds the actual gross premiums collected is a change in method of reserve calculation and not a change in reserve standards.

3. For policies so valued the maximum permissible valuation interest rate and the applicable mortality basis specified is that in effect at the date of issue of such policies.

Actuarial Guideline II

RESERVE REQUIREMENTS WITH RESPECT TO INTEREST RATE GUIDELINES ON ACTIVE LIFE FUNDS HELD RELATIVE TO GROUP ANNUITY CONTRACTS

As part of the determination of the aggregate minimum group annuity reserves, a computation must be made of minimum reserves for deposit administration group annuity funds with interest rate guarantees including all such funds pertaining to possible purchase of group annuities whether such funds are held in a separate account or in a general account, whether shown as premiums, advance premiums, auxiliary funds, etc. and whether the liability is shown in Exhibit 8 or elsewhere. In making such computations, the procedure and minimum standards described below shall be applicable for the December 31 calendar year "y" valuation giving recognition to the dates deposits were made. Where appropriate and with the approval of the commissioner, recognition may be given to the extent and time of application of active life funds to purchase annuities, expense assessments against the funds, and excess of purchase price over minimum reserves. In no event shall the reserve be less than the transfer value, if any, of the fund. Approximate methods and averages may be employed with the approval of the commissioner.

To the extent that the application of these valuation procedures and standards would require a company to establish aggregate minimum reserves for group annuities and related funds in excess of reserves which it would not otherwise hold if these valuation procedures and standards did not apply, such company shall set up additional reserve liability shown in its general account or in a separate account, whether shown in Exhibit 8 or elsewhere.

The valuation procedures and standards specified in this guideline shall not be applicable to the extent that the valuation procedures and standards relating to reserves for deposit administration group annuity funds with interest rate guarantees (i.e., group annuity and guaranteed interest contracts) in the amendments to the Standard Valuation Law adopted by the National Association of Insurance Commissioners in December 1980, or in later NAIC amendments, have become applicable in a jurisdiction.

For funds receive:

(1) Prior to calendar year 1976, follow the procedure used at that time.

(2) In calendar year 1976 or later, follow the minimum standards described below:

(a) Contracts having no guaranteed interest rates in excess of 6% on future contributions to be received more than one year subsequent to the valuation date.

The minimum reserve shall be equal to the sum of the minimum reserves for funds attributable to contributions received in each calendar year.

Where V_y = Minimum reserve for funds attributable to contributes received in calendar year y.

V_y = $[C_y \times (1 + i_{gy})^n]/(1 + i_{py})^n$

C_y = Portion of guaranteed fund attributable to contributions received in calendar year y

i_{gy} = Interest rate guaranteed under the contract with respect to funds attributable to contributions received in calendar year y.

i_{py} = Lowest of:

(1) The net new money rate credited by the company on group annuity funds attributable to contributions received in calendar year y less .005; or

(2) i_{gy}; or

(3) i_{my}; where

(i) i_{my} = for calendar years y + 1 through y + 10, the values shown in the table of values of i_{my} distributed each year by the Central Office of the National Association of Insurance Commissioners;

(ii) i_{my} = for calendar years y + 11 and later, .060.

n = Number of guarantee years, and fractions thereof, remaining as of the December 31 valuation.

(b) Contracts having guaranteed interest rates in excess of 6% on future contributions to be received more than one year subsequent to the valuation date.

The same procedures as set forth under (a) above shall be used except that the deduction under (1) of i_{py} shall be .01 instead of .005 and i_{my} for calendar years y + 1 through y + 10 shall be reduced by .005.

Table of Values of i_{my}

(Effective for the December 31, 1977 Valuation)

Calendar Year y in Which Contributions Were Received	Value of i_{my} for Calendar Years y + 1 Through y + 10
1976	.089
1977	.087
1978	.081
1979	.084
1980	.100
1981	.124
1982	.145

Actuarial Guideline III

INTERPRETATION OF MINIMUM CASH SURRENDER BENEFIT UNDER STANDARD NONFORFEITURE LAW FOR INDIVIDUAL DEFERRED ANNUITIES

Section 6 of the model bill as written does not require that cash surrender benefits to be paid; but where they are paid, it requires that such cash surrender benefits grade into maturity value using an interest rate not more than one percent higher than the rate specified in the contract for accumulating net considerations. While this method will be suited for contracts having a sales load at issue, it may create a problem for contracts having surrender charges for cash surrender.

For contracts providing cash surrender values, the cash surrender value at maturity shall be at least equal to the minimum nonforfeiture amount at maturity as defined in Section 4. For purposes of calculating cash surrender values prior to maturity, the term “maturity value” in the Standard Nonforfeiture Law for Individual Deferred Annuities shall mean the cash surrender value at maturity.

Actuarial Guideline IV

ACTUARIAL INTERPRETATION REGARDING MINIMUM RESERVES FOR CERTAIN FORMS OF TERM LIFE INSURANCE

Scope

This interpretation recommended by the NAIC Technical Task Force to Review Valuation and Nonforfeiture Value Regulation deals only with term life insurance without cash values which the owner has the unilateral right to maintain in force until its stated expiry date, subject only to the payment of required premiums which vary (generally increasing on a per $1000 basis) during the term of the policy and under which premium rates are guaranteed to the stated final expiry. This interpretation applies only to such term plans valued on the 1958 CSO Mortality Table for the current term period.

Ten-year renewable term, five-year renewable term and one-year renewable term to a stated age with generally increasing premiums are titles commonly given to such policies, but this interpretation concerns itself with the actual coverage provided and is not controlled by the name given the coverage.

Background Information

Historically, reserves on one-year renewable term policies have consisted of a basic reserve for the current term period of one-half the cost of insurance for the current term period, plus a deficiency reserve, if any. The application of the Commissioners Reserve Valuation Method to determine basic reserves and deficiency reserves for such policies is subject to varying interpretations as noted in Walter O. Menge's paper, "Commissioners Reserve Valuation Method" written at the time of construction of the Standard Valuation Law.

> ...the adaptation of the commissioners reserve valuation method to fit policies for which the gross premium varies from year to year becomes a problem of generalization which, from a purely theoretical viewpoint, has an infinite number of possible solutions, some of which are practical and others of which are impractical.[1]

and

> For these reasons, it seems desirable not to formulate at this time any fixed rules for the valuation of these unusual types of policies and riders. The second paragraph of Section 4 of the Standard Valuation Law does not define the method of valuation of such contracts but requires that the method used, whatever it may be, must be consistent with that employed for uniform premium policies providing uniform insurance benefits, thus leaving open the possibility of a choice of several consistent methods.[2]

Acceptable Approaches

Two approaches to "consistent" reserves are suggested. The unitary policy approach considers such policies as variable premium policies up to the mandatory expiry date. Under this approach the valuation net premiums are a uniform percentage of gross premiums with the percentage fixed at issue date. If appropriate deficiency reserves are held, this approach has great appeal. However, it is susceptible to manipulation and illogical results. Reserves according to this approach should be acceptable only if the company can demonstrate that actual reserves, including deficiency reserves, for all renewable term business valued using this approach are of the same general magnitude as would occur using an approved method as defined below.

The other approach is to hold policy reserves for only the current period of years (not necessarily equal to the renewal period) during which the required premium per $1000 remains level, including deficiency reserves if appropriate. Additional reserves are established where net premiums, calculated on a basis which reflects current mortality, exceed gross premiums for future periods of level premiums. Although not speaking directly to valuation problems in this instance, the Hooker Committee report said:

> The question was raised whether a policy providing term insurance for several years, automatically followed by permanent insurance, should be considered as two separate policies for the purpose of the Act. In the Committee's opinion, the respective portions may be treated separately if the portion providing permanent insurance takes the Company's regular rate at the then attained age. The rated age provision in the law appears to cover this point. However, the Committee draws a distinction between policies providing purely term insurance followed by permanent insurance at the company's published rate at the attained age of conversion, and the policies providing for an initial premium such that the increased premium at a subsequent duration differs from that for a new policy at the attained age. The latter case obviously constitutes a single policy to which the formula should be applied at the outset[3]

The second sentence of the above quotation lends support to the approach of separating successive periods of level premiums.

Under this interpretation, an approved method is any method which produces reserves greater than or equal to the sum of policy reserves, including deficiency reserves, for the current period of level premiums calculated on the basis of the applicable mortality and interest standards and reserve method specified in the Standard Valuation Law plus additional reserves calculated according to the following applied uniformly to all such policies.

> The present value of the excess of test premiums for future periods of level premiums for which gross premiums are guaranteed over the respective gross premiums, such test premiums and present values being calculated on the Commissioners' 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors and 4 1/2 percent interest. For each plan of insurance with separate rates for smokers and nonsmokers an insurer may substitute the 1980 CSO Smoker and Nonsmoker Mortality Tables with Ten-Year Select Mortality Factors for the Commissioners' 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors.

In case a future gross premium exceeds the test premium, the excess shall be considered zero and not a negative amount. This is in accordance with the principle of anticipating no future profits but providing for all future losses.

Reinsured Business

If reinsurance is assumed under an agreement in which the reinsurer reserves the right to raise premiums to a level at least as great as the net valuation premiums, the reinsurer is not required to establish deficiency reserves or additional reserves, and the ceding company is not permitted to take credit for such reserves on the portion of the business which is required.

If a reinsurance agreement guarantees future reinsurance premiums, the reinsurer should establish deficiency reserves and additional reserves as required by this interpretation for the period for which reinsurance premiums are guaranteed, and the ceding company may take credit for such reserves against its deficiency and additional reserves on the portion of the business which is reinsured to the extent permitted by law.

Adequacy of Reserves

Although the above alternative is acceptable as meeting the intent of the Standard Valuation Law, this does not in any way relieve the certifying actuary of the insurance company from exercising his own best judgment with respect to the appropriate reserves. In particular, the actuary should consider term contracts of this nature when he states his opinion that aggregate reserves "make a good and sufficient provision for all unmatured obligations of the company guaranteed under the terms of its policies" and "include provision for all actuarial reserves and related statement items which ought to be established."[4]

Actuarial Guideline V

INTERPRETATION REGARDING ACCEPTABLE APPROXIMATIONS FOR CONTINUOUS FUNCTIONS

Text

For reserves and values using continuous functions:

(a) $$\overline{D}_x = \int_0^1 D_{x+t}\,dt$$

By assuming that D_{x+t} is linear for $0<t<1$

$\overline{D}_x = (D_x + D_{x+1})/2$.

By assuming that the deaths in the year of age x to x+1 are uniformly distributed over that year of age,

$\overline{D}_x = [(\delta\text{-}d)/\delta^2]D_x+[(i\text{-}\delta)/\delta^2]D_{x+1}$

where: $d = iv = i/(1+i)$

δ = force of interest

i = interest rate

(b) $$\overline{C}_x = \int_0^1 D_{x+t}\mu_{x+t}\,dt$$

By assuming that deaths in the year of age x to x+1 are uniformly distributed over that year of age,

$\overline{C}_x = (i/\delta)C_x$.

By assuming that the total deaths are concentrated at the middle of the year of age,

$\overline{C}_x = (1+i)^{1/2}C_x$ or $(1+i/2)C_x$.

Background Material

The actuarial mathematics used in calculating net premiums, reserves, and nonforfeiture values for life insurance policies was first developed using two basic assumptions. These basic assumptions are: (1) that all death benefits are payable at the end of the policy year of death and (2) that all gross premiums due under the policy are payable annually at the beginning of the policy year. Actuarial values which are calculated under these two basic assumptions are described as being calculated using curtate functions. For any specific mortality table and interest rate, all the necessary actuarial values are uniquely defined for a policy using curtate functions.

The Standard Valuation Law and the Standard Nonforfeiture Law define minimum reserves and minimum nonforfeiture values, respectively, for life insurance policies using curtate functions. These two model laws originated in the early 1940s when almost all insurance companies were using the two basic assumptions inherent in the curtate functions. However, the wording of the model laws does not prohibit insurance companies from using other assumptions if the resulting reserves and nonforfeiture values will always be at least as large as the minimum amounts defined in these laws.

Nowadays, many insurance companies do prefer to use alternative assumptions in computing the reserves and nonforfeiture values for their life insurance policies. These companies consider the alternative assumptions more appropriate for their policies. These alternative assumptions are: (1) that all death benefits are payable immediately upon death and (2) that all gross premiums due under the policy are payable continuously throughout the policy year.

Actuarial values which are calculated under both of the alternative assumptions, pertaining to death benefits and gross premiums, are described as being calculated using continuous functions. However, the underlying mathematics for continuous functions involves two integrals, representing the actuarial functions C_x and D_x, which must be approximated. In the past, there has been some disagreement among actuaries as to which approximations for the two integrals are the most suitable. Because of the use of different approximations for these two integrals, actuaries have obtained different numerical amounts for the necessary actuarial values using continuous functions even though these actuaries were working with the same mortality table and interest rate.

Some insurance companies prefer to calculate their reserves and nonforfeiture values assuming: (1) that death benefits are payable immediately upon death and (2) that all gross premiums due under the policy are payable annually at the beginning of the policy year. Thus, these companies are using the alternative assumption pertaining to death benefits and the basic assumption pertaining to gross premiums. The underlying mathematics for the combination of these two assumptions involves the integral C_x, which must be approximated. Thus, the use of these two assumptions together gives rise to essentially the same problem as using continuous functions.

Actuarial Guideline VI

INTERPRETATION REGARDING USE OF SINGLE LIFE OR JOINT LIFE MORTALITY TABLES 20 JUNE 1983

The Standard Valuation Law and the Standard Nonforfeiture Law for Life Insurance apply to policies which provide joint life insurance benefits as well as to policies which provide single life insurance benefits. References in these laws to plans such as "nineteen-year premium whole life" or "a whole life policy...with uniform premiums for the whole of life" are to be interpreted as references to such plans based on the same life status(es) as the policy for which minimum reserves or nonforfeiture benefits are being determined. For example, if the net level annual premium on the nineteen-year premium whole life plan is needed to calculate the minimum reserve for a policy which insures two lives and pays a death benefit at the first death, the premium is to be that for a policy which insures two lives and pays a benefit at the first death. The same principle would apply to a policy which insures only one life, or a policy which pays a benefit at the first death of more than two lives. The principle also applies to a policy that pays a benefit on the death of t-th life of n lives (t is greater than 1 but less than or equal to n).

Background Material

The great majority of life insurance policies provide single life insurance benefits. These policies identify one specific individual as the named insured. A death benefit under the basic policy is payable if this named insured dies while the policy is in force. Usually, there are no further gross premiums due on and after the death of this named insured. The basic policy may provide endowment benefits which are conditional on the survival of this named insured. The policy does not contain any provisions whereby the amount of the death benefits, endowment benefits or gross premiums are affected by the survival or nonsurvival of any other persons besides the insured, except possibly in the settlement option provisions or in the provisions of an attached term insurance rider which requires an extra premium.

In contrast to policies which provide single life insurance benefits, policies which provide joint life insurance benefits depend on the survival or nonsurvival of two or more named insureds. Until quite recently, virtually all policies which provided joint life insurance benefits were written on the whole life insurance plan. Such policies paid the face amount as a death benefit on the death of the first of the named insureds to die, provided that the policy was then in full force. No further gross premiums were due after the death, and the policy terminated upon payment of the death benefit.

Recently, there has been increasing interest in plans providing joint life insurance benefits, and insurance companies have developed a variety of new life insurance plans. For example, some policies provide for payment of a death benefit only on the death of the last to die of the named insureds.

The Standard Valuation Law and the Standard Nonforfeiture Law clearly apply to policies which provide joint life insurance benefits as well as to policies which provide single life insurance benefits. Both of these model laws define an "expense allowance" which is added to the present value of the future guaranteed insurance benefits under the policy, and which affects the modified premiums used for computing minimum reserves and the adjusted premiums used for computing minimum nonforfeiture values. A different amount of "expense allowance" is defined for nonforfeiture values than that defined for reserves, but the principle is much the same.

Insurance companies are allowed to select "expense allowances" for use in computing their reserves and nonforfeiture values up to the level of the "expense allowances" defined in these model laws. A higher "expense allowance" would produce reserves or nonforfeiture values which are less than the minimum defined in the model laws, and therefore state insurance departments cannot permit companies to use a higher amount as an "expense allowance."

The wording of these model laws is generally clear and precise in defining the "expense allowances" which are permitted for policies which provide single life benefits. However, the proper level of the "expense allowances" for policies providing joint life insurance benefits is not so clear. The "expense allowance" defined in the Standard Valuation Law depends on the modified net premium for a policy on the 20-payment whole life insurance plan, and the "expense allowance" defined in the Standard Nonforfeiture Law depends on the adjusted premium for a policy on the ordinary life plan.

Actuaries have had different opinions as to how to apply the joint life insurance mortality tables in order to obtain the modified net premium and the adjusted premium required by model laws, so as to calculate the "expense allowances" which are appropriate under those laws. The question has become increasingly important with the development of the new plans providing joint life insurance benefits.

Actuarial Guideline VII

INTERPRETATION REGARDING CALCULATION OF EQUIVALENT LEVEL AMOUNTS

Text

Pure endowments will not be considered in the determination of equivalent level amounts for valuation and nonforfeiture purposes.

Background Material

The "Background Material" section relating to the previous actuarial guideline went into some detail concerning the "expense allowances" defined in the Standard Valuation Law and the Standard Nonforfeiture Law. See Actuarial Guideline VI, "Interpretation Regarding Use of Joint Life Insurance Tables."

This Actuarial Guideline VII is also concerned with the level of these "expense allowances" defined in these model laws. The most common plans of life insurance provide a level face amount as the death benefit, during the period the policy is in full force. These plans do not provide for any benefit which is payable as a pure endowment. (A pure endowment benefit pays a specified amount of pure endowment to the policyholder if the insured is still alive on the specified maturity date and if the policy is still in full force on this maturity date.) However, policies which provide for a death benefit which varies with the duration and policies which provide one or more endowment benefits can be legally written in most states.

The Standard Valuation Law and the Standard Nonforfeiture Law do apply to such policies with varying death benefits or pure endowment benefits. In fact, the wording of the model laws shows that considerable thought was given to the treatment of these kinds of policies. In the case of both model laws, the present value of future guaranteed benefits under the policy clearly includes both the death benefits and the "expense allowances" defined under these model laws.

The Standard Nonforfeiture Law includes a paragraph which reads as follows:

> In the case of a policy providing an amount of insurance varying with duration of the policy, the equivalent uniform amount thereof for the purpose of this Section shall be deemed to be the uniform amount of insurance provided by an otherwise similar policy, containing the same endowment benefit or benefits, if any, issued at the same age and for the same term, the amount of which does not vary with duration and the benefits under which have the same present value at the date of issue as the benefits under the policy; provided, however, that in the case of a policy providing a varying amount of insurance issued on the life of a child under age ten, the equivalent uniform amount may be computed as though the amount of insurance provided by the policy prior to the attainment of age ten were the amount provided by such policy at age ten.

While the wording of the above paragraph is rather complex, the meaning seems to be actuarially precise. The paragraph defines an "equivalent uniform amount" which affects the "expense allowance" defined in the law. The phrase "containing the same endowment benefit or benefits, if any" effectively means that pure endowment benefits are to be ignored in computing this "equivalent uniform amount." This "equivalent uniform amount" or "equivalent level amount" becomes a sort of weighted average of the death benefits provided by the policy, an average which is not affected in any way by the pure endowment benefits which may be provided by the policy.

The Standard Valuation Law is not nearly so clear on this point. It contains wording as follows:

> Reserves according to the Commissioners Reserve Valuation Method for (1) life insurance policies providing for a varying amount of insurance----shall be calculated by a method consistent with the principles of the preceding paragraph-----.

(Note that the quoted wording refers back to the preceding paragraph in the Standard Valuation Law. It does not intend to refer to the paragraph quoted from the Standard Nonforfeiture Law.)

Most actuaries have interpreted the Standard Valuation Law so as to use an “equivalent level amount” which is not affected by any pure endowments included in the policy. They would then use this “equivalent level amount” to calculate the “expense allowance” defined in the model law. This “equivalent level amount” is also a weighted average of the death benefits provided by the policy, in the same fashion as the “equivalent uniform amount” used in applying the Standard Nonforfeiture Law. Some insurance companies use the same “equivalent level amount,” for the purpose of the Standard Valuation Law, as the “equivalent uniform amount” defined in the Standard Nonforfeiture Law. Other companies use a very similar calculation to obtain a special “equivalent level amount,” for the purpose of the Standard Valuation Law, based only on the death benefits provided on and after the first policy anniversary.

Some actuaries have felt that the wording of the Standard Valuation Law permits an alternate calculation of the “equivalent level amount” which would be affected by pure endowment benefits. Such an “equivalent level amount” would be used to calculate an “expense allowance” under the Standard Valuation Law, even though the “equivalent level amount” no longer has the character of a weighted average of the death benefits provided by the policy.

The inclusion of the pure endowment benefits in the calculation of the “equivalent level amount” would affect the level of the “expense allowance” defined in the Standard Valuation Law, and therefore, it would affect the level of the minimum reserves required by the policy. Typically, the denominator of the fraction used in calculating the “equivalent level amount” would remain the same, but the numerator of this fraction would be increased because of this inclusion. Thus, the “equivalent level amount” itself and the resulting “expense allowance” defined in the Standard Valuation Law would also be increased with the inclusion. The end result of the inclusion would be lower minimum reserves at every duration.

If the amounts and maturity dates of the new pure endowment benefits were carefully selected, a considerable degree of reduction in the reserve factors would probably be possible.

This actuarial guideline would expressly prohibit including the pure endowment benefits in determining the “equivalent level amount” for either valuation or nonforfeiture purposes. As explained under “Background,” the need for this actuarial guideline arises primarily for valuation purposes under the Standard Valuation Law. The wording of the Standard Nonforfeiture Law is sufficiently precise that this actuarial guideline is virtually a truism for the purpose of calculating nonforfeiture values.

The purpose of this actuarial guideline is to assist state insurance departments and insurance company actuaries by identifying a method of calculating “equivalent uniform amounts” and “expense allowances” which is not considered proper and which will not be accepted.

Actuarial Guideline VIII

THE VALUATION OF INDIVIDUAL SINGLE PREMIUM DEFERRED ANNUITIES

Text

With respect to those states which have enacted the 1976 amendments to the Standard Valuation Law; individual single premium deferred annuity reserves shall at least equal the greatest of any of the discounted values of all guaranteed future benefits including cash surrender values available after the date of valuation, such benefits discounted to the valuation date at the maximum permissible statutory interest rate. This method applies to all individual single premium deferred annuities which are subject to the provisions of the Standard Valuation Law in those states which have enacted the 1976 amendments. For those states which have not yet enacted the 1976 amendments this interpretation is a method of valuing individual single premium deferred annuities.

Actuarial Guideline IX

FORM CLASSIFICATION OF INDIVIDUAL SINGLE PREMIUM IMMEDIATE ANNUITIES FOR APPLICATION OF THE VALUATION AND NONFORFEITURE LAWS

Text

Solely for the purposes of the applicable Valuation and Nonforfeiture Laws, an individual single premium annuity shall be considered to be immediate, as opposed to deferred, provided:

1. The first annuity payment is due not more than thirteen months from the annuity issue date;

2. succeeding payments under the annuity, after the initial payment, are due at regular intervals no less frequently than annually;

3. in the case of a fixed benefit annuity, the total guaranteed payments due in any contract year are not greater than 115% of the total guaranteed payments due in the immediately preceding contract year. In the case of variable annuities and indexed annuities, the same characteristic would be required for the underlying pattern of payments, before adjustments which are made solely because of the performance of the separate account associated with a variable annuity or the changes in the associated index. (This characteristic is not intended to prevent or reduce any lawful nonguaranteed payments under the annuity which are in the nature of dividends or excess interest credits.)

Actuarial Guideline IX-A

USE OF SUBSTANDARD ANNUITY MORTALITY TABLES IN VALUING IMPAIRED LIVES UNDER STRUCTURED SETTLEMENTS

Text

The Standard Valuation Law permits modifications of annuity mortality tables. Solely for the purpose of valuing:

1. Periodic benefits arising from settlements of various forms of claims pertaining to court settlements or out of court settlements from tort actions, such as arising from accidents or medical malpractice;

2. Settlements involving similar action such as workers' compensation; or

3. Settlements of long term disability claims where a temporary or life annuity has been used in lieu of continuing disability payments.

A substandard annuity mortality table may be used where the annuitant (or measuring life) is the injured party and there are relevant hospital records, treating physicians' reports, and/or independent medical evaluations from those medical doctors that are or have been involved in the care of the injured party, that have been used during the underwriting process and have been retained in the underwriting file of the company as proof of the individual's impaired health and shortened longevity.

In such case the insurer may modify the statutory annuity mortality table or tables cited in Section 3a of the Standard Valuation Law or in any regulation promulgated pursuant to such section so as to reflect the longevity based on a medical doctor's written evaluation or records as indicated above. The table may be modified by a percentage of standard mortality or by a specified number of extra deaths or by a combination thereof, provided that the mortality table so adjusted produces reserves that are at least as great as the minimum reserves indicated below. The percentage extra mortality or the specified number of extra deaths may vary by duration. A rated up age with the standard annuity table which is approximately equivalent to the actual age on the substandard annuity table may be used only if the procedure is modified to produce reserves that at each duration are at least as great as the minimum reserves indicated below.

The fact that a company has held minimum reserves as herein described shall in no way relieve the actuary from considering whether such reserves are adequate.

Minimum Reserves

The minimum reserves for applicable annuity contracts are the reserves obtained by making a constant addition to the mortality rate of the otherwise applicable valuation mortality table such that the expectation of life on the adjusted valuation table is greater than or equal to the average of the expectations of life indicated by or obtained from information given by the company's medical directors or underwriters during the underwriting and pricing process. The constant addition to the mortality table herein described shall be made as of the issue date and, once determined, held constant for the period of time that the contract remains in force. The addition of a constant to the valuation mortality rate produces a gradually declining percentage extra mortality such that reserves will grade into standard reserves at the end of the standard valuation mortality table thereby making the reserve more conservative (closer to standard) each year that the annuitant or measuring life lives.

For annuitants (measuring lives) other than the injured person in such settlements, the actual age and a standard annuity mortality table specified in Section 3A of the Standard Valuation Law or in any subsequent regulation promulgated thereto or any modification of such table which produces reserves at least as high as those that would be produced under the standard table based on the actual age must be used.

For contracts not included in one of the three categories described in the first paragraph of the Guideline, standard reserves at the actual age shall be held.

Where an insurer uses a modified table with higher mortality rates or a rated age with an unmodified table for impaired lives under structured settlements, such insurer shall maintain records of actual to expected mortality to monitor the appropriateness of the substandard mortality.

Background

Structured settlements take their name from the fact that the settlements, which arise from tort action, including workers' compensation claims, are frequently structured to fit the circumstances of the injured party and/or the injured party's dependents. The injured party and/or dependents are apt to be much younger than normal retirement age such that the payments may well stretch out for 30, 40, and 50 years or more. Some payments are certain; others are contingent upon the measuring life being alive at the time of payment.

The volume of structured settlement business has boomed in recent years. Periodic and deferred payments have been encouraged and even mandated in some states as a means of controlling costs under malpractice claims and ensuring that the monies would be available in future years and not squandered as could happen with lump sum payments. Periodic and deferred payments may be a result of settlement of automobile claims, other accidents involving tort action, as well as workers' compensation claims and medical malpractice claims, where the individual(s) upon which the tort or other action was based may well be substandard.

At the time of the adoption of the NAIC 1980 revisions of the Standard Valuation Law (SVL), structured settlement business was relatively minor, and how to treat such business was not explicitly covered in the SVL.

The SVL allows for modification of the standard annuity mortality table specified in the minimum valuation standard. Any modification had traditionally been such as to result in higher reserves. If lower reserves were produced, it could render the minimum meaningless.

In case of structured settlements, the injured party may be highly substandard. If an insurance company had to set up reserves on a standard table, or on a basis that grades into standard mortality too rapidly, it could result in either an excessive price for the payments or it could result in such a level of surplus strain to the insurer. If the price reflects the actual expected mortality, that the coverage might not be offered at all. To encourage settlements involving periodic payments, it is recommended that, in the limited area involving the injured party, the table may be modified so as to reflect the expected mortality based on the relevant medical records, reports and/or evaluations described earlier.

Since this is an area with little experience, it is required that an insurer monitor the experience in order to be able to justify its choice of adjusted mortality assumption.

It is recognized that at issue the vast bulk of the liability normally pertains to payments that are certain and not contingent upon survival, since the vast majority of substandard contracts contain a certain period and most of the benefits either fall within that certain period or are guaranteed to be paid. It is also noted that the interest discount factor in the early durations is far more important than the mortality element. The selection of the interest discount factor is the subject of Guideline IX-B.

Because experience and methodology are still emerging for substandard annuities, it is expected that this whole subject will be reviewed again in the not too distant future, both as it applies to whether the criteria herein established for settlement annuities are too conservative and also whether or how it might be acceptable to apply similar standards to substandard non-settlement annuities.

Effective Date

Where the requirements of this Guideline produce higher reserves than those calculated by an insurer, such insurer may continue its present procedures for the 1989 year end valuation, but must comply with this Guideline for 1990 and later issues for the 1990 and later valuations and for all of its business by the 1993 year end valuation.

Actuarial Guideline IX-B

CLARIFICATION OF METHODS UNDER STANDARD VALUATION LAW FOR INDIVIDUAL SINGLE PREMIUM IMMEDIATE ANNUITIES, ANY DEFERRED PAYMENTS ASSOCIATED THEREWITH, SOME DEFERRED ANNUITIES, AND STRUCTURED SETTLEMENTS CONTRACTS

Text

1. Solely for the purpose of applying the Standard Valuation Law, an annuity shall be considered as a series of payments not less frequently than annually over five years or more wherein the payments in any one contract or calendar year (at the option of the insurer) do not exceed 115% of the payments in the immediately preceding contract or calendar year. An immediate annuity is an annuity wherein the first payment begins in thirteen months or less from issue and a deferred annuity is an annuity wherein the first payment begins more than thirteen months after issue. A series of payments over less than five years otherwise qualifying as an annuity shall be considered equivalent to a lump sum. Any payments in a year in excess of 115% of the prior year's payments may be considered as a lump sum or equivalent thereto or may be considered as part of a new annuity depending on the circumstances. Some contracts may consist of combinations of annuities and of lump sums.

2. Where the deferred income payments are guaranteed and there are no cash settlement options, the reserve shall be based on the present value of the income payments based on an appropriate annuity mortality table and the valuation rate of interest in accordance with the Standard Valuation Law based on the issue year method and a guarantee duration equal to the number of years from the date of issue to the date the first payment begins.

3. At the time benefit payments begin, whether under single premium immediate annuity contracts, supplementary contracts providing for annuity payments or deferred annuity contracts (with the first payment deferred more than thirteen months), the insurer may use the valuation interest rate for the calendar year in which (a) the deferred contract was issued or (b) the consideration was received or (c) the payments begin, but must apply such procedure elected in a consistent manner

4. Individual structured settlements vary considerably in payment pattern and duration. These contracts may provide for both level and/or increasing periodic payment schedules, as well as lump sum benefit payments. In valuing individual structured settlements, a split of all or a portion of the lump sum payments from the annuity payments may be appropriate. Such splits should be at the discretion of the valuation actuary. However, splits not in accordance with (5)(a) or (5)(b) and with (6)(a) below would require valuation in accordance with procedure (6)(b) or (6)(c) below.

5. For a block of single premium immediate annuities, deferred annuities without cash settlement options, structured settlement business with the annuity portion having no cash settlement options, or other contracts having some portion with periodic payments without cash settlement options, issued in a given calendar year, the calendar year valuation interest rate appropriate for single premium immediate annuities where the first payment begins in thirteen months or less after issue and for Plan Type A contracts without cash settlement options based on the date to first payment where the first payment begins more than thirteen months after issue may be used provided:

   a. The guaranteed payment under each contract in the block due in any contract or calendar year (at the option of the insurer) after the first is not greater than 115% of the guaranteed payment due in the immediately preceding contract or calendar year, and once payments begin such payments are not less frequent than annually and are payable over five years or more; or

b. The total guaranteed payments under all contracts combined included in the block due in any calendar year after the first are not greater than 110% of the total guaranteed payments due in the immediately preceding calendar year but only contracts having payments not less frequent than annually for at least five years shall be included.

The year to year comparison of benefits may be made before or after considering the effect of mortality or any certain period, but the actuary should be prepared to indicate which method is used.

6. If a block of immediate annuities, deferred annuities without cash settlement options, structured settlement contracts with the annuity portion having no cash settlement options, or other contracts having some portion with periodic payments without cash settlement options fails the test described in (5) above, then one of the following procedures must be used:

a. The block must be divided into components so that the contracts/payments satisfying the tests are included in one or more components and those not satisfying the tests are included in another component or other components. The Plan Type A valuation interest rate or rates may be used for the component or components which satisfies the test. The Plan Type A guarantee duration is the number of years from the date of issue or date of purchase to the date that the first annuity payment is due. The maximum valuation interest rate for any payment included in a component which does not satisfy the test shall be determined using the guarantee duration of the lump sum payment including installments over less than five years and on the assumption that the payment is made under a contract of Plan Type A. The Plan Type A guarantee duration of a lump sum payment is the number of years from the date of issue or date of purchase to the date that payment or the first installment payment is due. Year of issue valuation interest factors must be used. The actuary should be prepared to describe the components and justify the choice of valuation interest rate or rates for the component or components of the block which, if included, would cause the block to fail the test.

b. The reserves for each contract for each valuation year shall be the greater of the "level interest rate reserves" and of the "graded interest rate reserves." Graded interest rate reserve factors for each separate year of issue for all future payments of such year of issue, whether periodic or lump sum payments, shall be graded in a manner that produces reserves at least as great as the method described in the balance of this paragraph.

(i) Step one, calculate the present value of future benefits at issue for each contract using the appropriate level Plan Type A interest rate for contracts without cash settlement options for the guarantee duration corresponding to the number of years from the date of issue or date of purchase to the date that the first payment is due. Call this value PV (0), and call reserves at successive durations using the appropriate (level) Plan Type A interest rate "level interest rate reserves."

(ii) Step two, solve for "X percent" such that the present value of future benefits at issue for each contract is equal to PV (0) (calculated in Step one), using "X percent" as the valuation interest rate for the first twenty contract years after issue and thereafter the Type A interest rate for contracts without cash settlement options for guarantee durations of more than twenty years. However, "X percent" shall not be greater than 115% of the appropriate Type A interest rate in step one; where such limit is effective, the present value at issue will be greater than PV (0).

(iii) For each valuation year calculate "graded interest rate reserves" based on the assumption that the valuation interest rate during the first twenty contract years is "X percent" as calculated in step two and thereafter is the Plan Type A interest rate for contracts without cash settlement options for guarantee durations of more than twenty years.

(iv) In lieu of the individual contract valuation above, a group valuation may be made as for example on the assumption that all contracts issued during a given year are issued as a single contract on July 1, and once X% is determined for such year, it need not be redetermined; or

c. Any other method producing reserves at least as great as (a) or (b) and specifically approved by the Commissioner.

7. Where the requirements of this guideline produce higher reserves than those calculated by an insurer in good faith based on a more liberal interpretation, such insurer may continue its present procedures for the 1989 year end valuation but must comply with this guideline for 1990 and later issues for the 1990 and later year end valuations and for all its inforce, subject to the 1980 amendments to the NAIC Model Standard Valuation Law, by the 1993 year-end valuation.

8. The examiner should request that the insurer demonstrate that the assets are sufficient for the liabilities by cash flow projections of the supporting assets and the liabilities under various interest scenarios, in particular for declining interest rates.

9. The examiner should note that date of acquisition and the yields of the supporting assets and compare such with the date of issue of the structured settlements and the valuation interest rates. If such differ, the examiner may request a new valuation using the date of acquisition of the majority of the supporting assets as the date of issue of remaining payments. This is especially important where, for example, an insurer during 1986 exchanged high yielding assets originally acquired in 1982 for low yielding assets acquired in 1986. Also, many of the high yielding assets may have been called during 1986. Also, due to the long-term nature, often as many as 30, 40, and 50 years, the increasing nature of the payments and the lump sum payments, the value of future payments with a single fixed interest rate may actually increase after issue. The result is that there is a large reinvestment risk and large liabilities may exist after all the original supporting investments have matured and new investments acquired.

10. The procedures above are interim procedures pending a reconstitution of the valuation laws.

Background

Current Actuarial Guideline IX provides guidance for determining what is an immediate annuity but it does not advise how contracts failing to meet the test should be treated for valuation purposes. Three examples of failing contracts are: (1) annual payments increasing 120% each year, (2) level payments payable biannually, (3) level annual payments with extra lump sum payments equal to four times a regular annual payment payable every five years. These examples are not practical examples for annuity payments beginning at normal retirement ages such as 60, 65 or 70 under individual or group retirement programs, but combinations of irregular payments and increasing regular payments are practical under structured settlements.

At the time of the adoption of the NAIC 1980 revisions of the Standard Valuation Law, structured settlement business was relatively minor, and how to treat such business was not explicitly covered in the SVL. The volume of structured settlement business has boomed in recent years. Periodic and deferred payout was encouraged and even mandated in some states as a means of controlling costs under malpractice claims and ensuring that the monies would be available in future years and not squandered as could happen with lump sum payments. Periodic and deferred payments may result in settlement on automobile claims, other accidents involving tort action as well as medical malpractice claims and workers' compensation claims such that the individuals may well be substandard.

Where payments are contingent on the individual being alive, under a related guideline, substandard annuity mortality tables may be recognized for valuation based on a written evaluation of the injured individual's longevity by a medical doctor. For all other annuitants, substandard annuity mortality tables should not be recognized as such is contrary to the establishment of minimum reserves for such annuitants. However, the vast bulk of reserves for structured settlements is based on certain payments, such that the valuation interest rate is by far the more important factor. This guideline covers valuation procedures and valuation interest rates leaving application of substandard annuity mortality table to Guideline IX-A.

Structured settlements take their name from the fact that the settlements are frequently structured to fit the circumstances of the injured party and/or the injured party's dependents. The injured party and/or dependents are apt to be much younger than normal retirement age such that the payments may well stretch out for 30, 40, and 50 years or more. Lump sum payments may be scheduled to coincide with particular events such as college for dependent children.

The 1980 changes in the SVL initiated a set of valuation interest factors for each year of issue so as to roughly have the factor correspond to the investment rates at the time at which monies are received and invested. In 1980 the emphasis in the dynamic valuation interest rate was on the valuation interest rates for group guaranteed interest contracts (GIC). Group GIC's generally have had a guaranteed interest period of 5-10 years with a lump sum available at the end of the period. Any renewal of an interest guarantee and period is generally considered as a new issue for valuation purposes, whether the year of issue or the change in fund method is used.

Most retirement annuities under individual or group programs had level or slightly increasing payments with payments beginning at age 60, 65 or 70, such that for annuities in course of payments, there should be little reinvestment risk and reserves should decrease.

There is a large reinvestment risk in case of structured settlements. There is also a risk that the original assets may be called or exchanged for lower yielding assets.

Guideline IX-B would split up the contract and treat that portion of the payments meeting the test as an annuity and any excess payments separately for purposes of determining the appropriate valuation interest factors based on the duration to first payment of such excess. The guideline also offers a new dual interest procedure as an alternative to splitting the payments.

The guideline recognizes that the use of the statutory formulae with the rates determined based on the date of purchase may be inappropriate where the assets have been exchanged or acquired in later years. It is suggested that the examiner may wish to adjust the issue year for selection of the valuation interest factors so as to make them consistent with the date of investment.

It is recognized that these procedures for determining statutory formulae reserves are only temporary while the Special Committee on Valuation is developing a new statutory formula to go along with a valuation of liabilities based on the supporting assets and the actuary's best judgment to account for reasonable deviations.

Actuarial Guideline IX-C

USE OF SUBSTANDARD ANNUITY MORTALITY TABLES IN VALUING IMPAIRED LIVES UNDER INDIVIDUAL SINGLE PREMIUM IMMEDIATE ANNUITIES

The NAIC model Standard Valuation Law, Section 4a, A(2), permits modifications of annuity mortality tables approved by the commissioner. In states which have adopted this or similar Standard Valuation Law language, this guideline provides for modifications of annuity mortality tables solely for the purpose of valuing:

> Individual single premium immediate annuities not covered by Guideline IX-A, but for which medical records indicate the expectation of life has been reduced and for which the premium charged reflects such reduction,

a substandard annuity mortality table may be used where the annuitant (or measuring life) has relevant hospital records, treating physicians' reports, and/or independent medical evaluations from those medical doctors that have been used during the underwriting process and have been retained in the underwriting file of the company as proof of the individual's impaired health and shortened longevity. The medical assessment must support at least a 25% reduction in the expectation of life (based on either the current valuation table or the company’s pricing table, consistently applied) compared to a normally healthy individual at the same age and gender.

In such case the insurer may modify the statutory annuity mortality table or tables cited in Section 3a of the Standard Valuation Law or in any regulation promulgated pursuant to such section so as to reflect the longevity based on a medical doctor's written evaluation or records as indicated above. The table may be modified by a percentage of standard mortality or by a specified number of extra deaths or by a combination thereof, provided that the mortality table so adjusted produces reserves that are at least as great as the minimum reserves indicated below. The percentage extra mortality or the specified number of extra deaths may vary by duration. A rated up age with the standard annuity table which is approximately equivalent to the actual age on the substandard annuity table may be used only if the procedure is modified to produce reserves that at each duration are at least as great as the minimum reserves indicated below.

The fact that a company has held minimum reserves as herein described shall in no way relieve the actuary from considering whether such reserves are adequate.

Minimum Reserves

The minimum reserves for applicable annuity contracts are the reserves obtained by making a constant addition to the mortality rate of the otherwise applicable valuation mortality table. The amount of the constant addition is determined as follows:

1) Calculate the present value of future benefits at issue for each contract using a rated up age, the applicable valuation mortality table, and the appropriate level Plan Type A interest rate for contracts without cash settlement options. The rated up age must produce an expectation of life under this valuation mortality table whose percent reduction from the actual age expectation of life under this table is not greater than the percent reduction in the expectation of life, supported by the medical assessment above, which qualified the contract to utilize the mortality adjustments provided by this actuarial guideline.

2) Solve for the constant addition to the true age mortality rates such that the present value of future benefits at issue is equal to or greater than the present value obtained in 1). The base mortality table and the valuation interest rate shall be the same as used in 1).

The constant addition to the mortality table herein described shall be made as of the issue date and, once determined, held constant for the period of time that the contract remains in force. The addition of a constant to the valuation mortality rate produces a gradually declining percentage extra mortality such that reserves will grade into standard reserves at the end of the standard valuation mortality table thereby making the reserve more conservative (closer to standard) each year that the annuitant or measuring life lives.

Where an insurer uses a modified table with higher mortality rates or a rated age with an unmodified table for impaired lives under individual single premium immediate annuities, such insurer shall maintain records of actual to expected mortality to monitor the appropriateness of the substandard mortality. The appointed actuary must comment on the appropriateness of the substandard mortality and report any material deviations. Such comments and report should be provided in the actuarial memorandum which supports the annual actuarial opinion.

Background

Guideline IX-A provides a methodology to allow less than a standard reserve to be held at issue for certain kinds of pay-out annuities and for grading the reserve toward standard reserves over the remaining lifetime of the annuitant using the “constant extra death” method (CED). The longer the annuitant lives, the closer reserves get to standard reserves.

Guideline IX-A says, “Because experience and methodology are still emerging for substandard annuities, it is expected that this whole subject will be reviewed again in the not too distant future, both as it applies to whether the criteria herein established for settlement annuities are too conservative and also whether or how it might be acceptable to apply similar standards to substandard non-settlement annuities”.

It has now been almost 11 years since Guideline IX-A was adopted and it appears the industry has done a responsible job of underwriting and valuing substandard annuities covered by Guideline IX-A. Structured settlement mortality studies done by the Society of Actuaries bear this out. (See the 1995-1996 Reports of the Society of Actuaries, starting on page 395.)

Guideline IX-A has been successful in allowing structured settlements to be priced fairly and has benefited injured parties and society in general. There is no evidence that there has been any strain to insurance companies from under reserving due to Guideline IX-A.

For some time, a number of companies have had a significant and increasing opportunity to provide immediate annuities at less than a standard price to a growing number of potential clients not covered by Guideline IX-A. However, the potential price reductions that the industry can give consumers, perhaps 15% to 25% of the single premium on some cases, depending on the benefit stream desired, are greatly reduced because of the current requirement to hold standard reserves. The initial statutory strain (loss) on highly substandard cases can easily exceed 50% or 100% of the single premium, which requires a significantly increased price to the customer over what could be charged if less than standard reserves were permitted. With Guideline IX-A type reserves, the strain might be reduced to something closer to 10%.

The population is aging and the need for fairly priced single premium immediate annuity benefits is substantially increasing. Forcing companies to hold standard reserves results in many people being overcharged (for the extra cost of capital associated with the higher reserve) at a time in their life when they may have the greatest need.

Since this is an area with little experience, it is required that an insurer monitor the experience in order to be able to justify its choice of an adjusted mortality assumption. It is recognized that the initial liability pertains to a large extent to payments that are certain and not contingent upon survival. This is because the majority of non-settlement substandard contracts contain a certain period and most of the benefits fall within that certain period. It is also noted that the interest discount factor in the early durations is far more important than the mortality element. The selection of the interest discount factor is the subject of Guideline IX-B.

Because the standard annuity valuation table is an aggregate table, there is some concern that carving out the substandard lives may cause the table to be inadequate for the remaining lives. As a result, it is recommended that an individual life have a significant impairment before use of a substandard valuation table is allowed. For this purpose, significant has been defined as a medical condition that reduces the expectation of life of the individual by at least 25% compared to a normal, healthy life. The reasoning is that not very many lives that are significantly substandard (i.e. greater than a 25% reduction in the expectation of life) are contained in the underlying mortality of individual non-settlement annuity mortality tables. Thus, treating them separately will not diminish the adequacy of the standard table. For convenience, either the applicable individual annuity valuation table or the company's pricing table can be used to measure the change in the expectation of life.

A public policy issue was discussed wherein this actuarial guideline could be viewed as rewarding unhealthy behavior. However, this actuarial guideline would benefit others who were simply unfortunate to be in an impaired condition. It was noted that it would be difficult or impossible to carve out those with intentionally unhealthy behavior. Ultimately it was believed that this actuarial guideline provides for reasonable public policy to facilitate lower single premiums for substandard annuitants.

Effective Date

This Guideline will be effective for contracts issued on or after January 1, 2001.

Actuarial Guideline X

GUIDELINE FOR INTERPRETATION OF NAIC STANDARD NONFORFEITURE LAW FOR INDIVIDUAL DEFERRED ANNUITIES

Text

For contracts which provide cash surrender benefits, the NAIC Model Law prescribes a basis for determination of minimum cash surrender benefits. That law does not require that a company grant additional amounts in excess of the amounts guaranteed in the contract, either in the form of excess interest credits or otherwise. When such additional amounts have been credited to the contract, the question of how the Model Law applies to such amounts must be considered.

Under one interpretation the portion of the maturity values which would arise from such amounts may be discounted to the date of surrender at an interest rate 1% higher than the rate specified in the contract for accumulating such amounts. This interpretation would permit a surrender charge against such amounts on the same basis as the surrender charge which may be applied to the contractually guaranteed portion of the interest credited to the contract.

Under another interpretation such amounts could not be treated as providing a portion of the maturity value and, therefore, would be included in the phrase “any additional amounts credited by the company to the contract.” This interpretation would require that the cash surrender value be increased by 100% of the accrued value of such amounts.

By providing for a surrender charge to be made in determining the minimum cash surrender value, the Model Law enables a company to provide for recovery of all or part of any (1) excess first year expenses not yet recovered, and (2) potential investment losses at surrender. The reason for permitting surrender charges to be made against accumulated amounts of contractually guaranteed interest are equally valid reasons for permitting surrender charges against any non-guaranteed interest credited. If such surrender charges were not permitted, companies offering such contracts may be discouraged from crediting as much additional interest as they might if the additional interest were to contribute to the minimum cash surrender value in the same manner as do the interest amounts derived from the rates guaranteed in the contract.

In view of the above considerations, the following guidelines are recommended:

I. Treatment of Amounts of Excess Interest Credited to Deferred Annuity Contracts

The NAIC Standard Nonforfeiture Law for Individual Deferred Annuities shall be interpreted to permit the portion of the maturity value which would arise from the amounts of interest credited in excess of the minimum rates guaranteed in the contract to be discounted to the date of surrender at an interest rate 1% higher than the rate specified in the contract for accumulating such amounts, provided such excess interest is declared prior to the period for which it is to be effective, and provided such excess interest accrues over the effective period. Amounts of excess interest treated in accordance with the above interpretation shall not be included by the phrase “additional amounts credited by the company to the contract” in Section 6 of the Model Law.

II. Treatment of Dividends Credited to Deferred Annuity Contracts

No single rule can be given for the treatment of dividends credited to deferred annuity contracts. The contractual wording of the applicable dividend option must be taken into account together with the appropriate provisions of the NAIC Standard Nonforfeiture Law for Individual Deferred Annuities.

If the dividend option in effect provides that dividends be left on deposit at interest, without any further qualification, then the cash surrender value should be increased by the full accumulated amount. In this case, the phrase “increased by any additional amounts credited by the company to the contract” applies and no surrender charge may be made.

In other cases, the dividends may be added, directly or indirectly, to the contractual value and made subject to the surrender charge provision. This would be the case when dividends are applied to purchase additional paid-up benefits or applied as premiums.

Contracts may contain other provisions or variations of these provisions. In such cases, the terms of the contract and the provision of the NAIC Standard Nonforfeiture Law for Individual Deferred Annuities should be taken into account.

Actuarial Guideline XI

EFFECT OF AN EARLY ELECTION BY AN INSURANCE COMPANY OF AN OPERATIVE DATE UNDER SECTION 5-C OF THE STANDARD NONFORFEITURE LAW FOR LIFE INSURANCE

Section 5-C of the Standard Nonforfeiture Law for Life Insurance May be Made Operational for One or More Plans at a Time Provided That:

A. Sales are discontinued in this state on all like plans using rates and values generated by past requirements;

B. Sales are discontinued in all other states which have enacted the new legislation on all like plans using rates and values generated by past standards, provided the state of sale has allowed changes to 1980 requirements on a plan-by-plan basis;

C. Once the new law has been made operational for one plan, the new law shall be operational for all subsequent new plans of the same generic form to be marketed in this state unless the insurer can demonstrate to the Commissioner's satisfaction the need to continue the prior set of requirements;

"Like plans," as mentioned in Sections A and B, refers to plans with the same benefits, including cash values, and with the same premium paying period and pattern of premiums;

"Generic form," as mentioned in Section C, refers to generic groups, such as ordinary vs. group, term vs. permanent, flexible cash value vs. fixed cash value, separate account vs. fixed account.

Actuarial Guideline XII

INTERPRETATION REGARDING VALUATION AND NONFORFEITURE INTEREST RATES

ACTUARIAL GUIDELINE XII WAS WITHDRAWN ON MARCH 7, 1993

Actuarial Guideline XIII

GUIDELINE CONCERNING THE COMMISSIONERS' ANNUITY RESERVE VALUATION METHOD

Preamble

At its December 1976 meeting, the NAIC adopted the Commissioners' Annuity Reserve Valuation Method (CARVM) and incorporated it in its Model Standard Valuation Law. CARVM is now included in the laws of nearly all of the states. Differences in interpretation of CARVM have developed in practice, particularly on whether and under what conditions surrender charges may be taken into account in determining CARVM reserves. This guideline is intended to clarify which surrender charge factors may be taken into account and which are to be disregarded under CARVM.

Reserves according to CARVM depend in part upon the present values of "future guaranteed benefits, including guaranteed nonforfeiture benefits." It has always been recognized that this phrase, as used in the NAIC Model Standard Valuation Law, includes cash surrender values based on contractual guarantees after reduction for any contractual surrender charges available to the insurer. This is illustrated in the Proceedings. See *Proceedings of the National Association of Insurance Commissioners*, Vol. 1 (1977), 538-45.

Guideline

The phrase, "future guaranteed benefits, including guaranteed nonforfeiture benefits," as used in CARVM include the cash surrender values based on contractual guarantees after reduction for any surrender charges available under the contract.

In recent years, annuity contracts with contingent surrender charges have become more prevalent. For example, a contract may provide the option to surrender without surrender charge if the rate at which interest is credited falls below a specified rate, referred to in this guideline as the "bail-out" rate. Contingent surrender charges may not be available upon cash surrender at future contract anniversaries, and it is not consistent with the conservative nature of CARVM to reduce the value of future guaranteed benefits on account of such contingent surrender charges.

The value of future guaranteed benefits under CARVM may not be reduced by contingent surrender charges which may not be available upon cash surrender.

There may be some contracts with contingent surrender charges with bail-out rates which are so low that it would not be contrary to the conservative intent of CARVM to treat such surrender charges as available. The calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years, which is used in the Standard Valuation Law in connection with the definition of guaranteed duration for most annuities and guaranteed interest contracts, provides an appropriate measure for this purpose. Whether or not such surrender charges should be treated as available should be determined as of December 31, 1984 for contracts in force at the date and as of the date of issue for contracts subsequently issued.

For contracts issued on and after January 1, 1985, contingent surrender charges with bail-out rates less than or equal to the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years issued in the same year may be treated as available. For contracts issued prior to January 1, 1985, contingent surrender charges with bail-out rates less than or equal to 6.00% (the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years issued in 1984) may be treated as available.

There are some contracts with contingent surrender charges with bail-out rates which are a function of an external index whose future values are not known. Judgment is required to determine whether or not such surrender charges may be treated as available. Comparison to the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty years may be useful.

For contracts with contingent surrender charges with bail-out rates which are a function of an external index, a judgment as to the availability of the surrender charges may be made by comparing historical values of the function with corresponding values of the calendar year statutory valuation interest rate for life insurance with guarantee duration in excess of twenty years. If the values of the function have generally been less than or equal to the valuation rates, then the surrender charges may be treated as available.

For the purpose of this guideline, in the case of a variable annuity that offers the policyholder a choice of multiple investment options, a surrender charge that may be waived for all the accounts of the contract by reference to one or more of the accounts will be treated as a contingent surrender charge that may not be available upon cash surrender with respect to the entire contract. If no surrender charge is imposed on transfers among the accounts, and the surrender charge may be waived for one account, provided the formula for the availability of the waiver is set at the date of issuance, then the surrender charge will be treated as a contingent surrender charge that may not be available upon cash surrender with respect to the entire contract.

Since this guideline is intended to apply to all contracts in force that are subject to CARVM, its application may work an undue hardship on some insurers who have, on the basis of a good faith interpretation of CARVM, held reserves less than required by this guideline. In cases of severe hardship, state insurance commissioners may wish to permit insurers to conform on a gradual basis.

Actuarial Guideline XIV

SURVEILLANCE PROCEDURE FOR REVIEW OF THE ACTUARIAL OPINION FOR LIFE AND HEALTH INSURERS

To assist regulators in their responsibility for surveillance of life and health insurers, the NAIC adopts the following interim procedure for use of the Actuarial Opinion to be used until such time as model legislation and/or regulations are adopted and become effective.

1. The regulator should accept Actuarial Opinions only from qualified actuaries. The educational and experience standards established by the American Academy of Actuaries for this purpose offers evidence that an individual is so qualified.

2. The regulator should determine if an opinion is qualified in any respect, or omits items from the outline provided in the Instructions to the Blank. If so, a follow up with the actuary rendering the opinion as to the nature of the qualification or omission is appropriate if the opinion does not provide a satisfactory explanation.

3. The regulator should examine the circumstances where the actuary rendering the opinion differs from the prior actuary, and ascertain the reasons for the change. In some cases the regulator may wish to discuss the change with the current and prior actuaries.

4. The regulator should, if desired, obtain for reviews, documentation supporting the Actuarial Opinion. Except in matters of professional discipline, the regulator's use of these documents should be considered within the department's guidelines for confidential information.

5. The regulator may require that the actuary furnish an Actuarial Report supporting the Actuarial Opinion. The report should conform to the standards of the American Academy of Actuaries with respect to Actuarial Reports (Opinion 3 to the Guides to Professional Conduct). It should document the methodology and approach to assumptions used in making the opinions and, additionally, provide specific details in reference to items in 6 through 10 below if such details are required by the regulator.

6. In the Actuarial Report, the actuary providing the opinion should refer to the NAIC Insurance Regulatory Information System (IRIS) ratios, point out ratio values outside the prior year's range of usual values, and provide explanations for those which are significant.

7. In the Actuarial Report, the actuary providing the opinion should make specific reference to the extent to which the good and sufficient analysis considered all the unmatured obligations of the company, in aggregate, guaranteed under the terms of its policies. (Note: To the extent that the insurer declares guarantees more favorable than those in the policy, such declared guarantees shall be used in the calculation of all the unmatured obligations.)

8. In the Actuarial Report, the actuary providing the opinion should make specific reference as to whether the good and sufficient analysis, with respect to annuities and other products with benefits (guaranteed or non-guaranteed) sensitive to interest rates, considered future insurance and investment cash flows as they would emerge under a reasonable range of future interest rate scenarios, and, if so, what those considerations were.

9. In the Actuarial Report, the actuary providing the opinion should make specific reference as to whether the good and sufficient analysis considered the inter-relationships of assumptions with respect to guaranteed benefit payments, future expenses, policyowner dividends, and post-issue premium or benefit adjustments, especially among persistency, mortality, morbidity, inflation, and interest rates, and, if so, what those consideration were.

10. In the Actuarial Report, the actuary providing the opinion should document the extent to which the opinion is influenced by a continuing business assumption, and, if the impact is material, comment on the company's plan of operations with regard to this assumption as it affects assumed expenses and interest rates, and future reserve requirements.

11. A review of the documentation obtained in (4) above, undertaken or sponsored by the regulator, should:

    a. Be done by a qualified reviewer;

    b. Emphasize an examination of the appropriateness of the actuary's work process, methodology, and approach to assumptions.

12. If at any time during the review, the regulator requires more information deemed to be material to the development of the opinion, the company would be expected to comply with requests for such information.

Actuarial Guideline XV

ILLUSTRATIONS GUIDELINE FOR VARIABLE LIFE INSURANCE MODEL REGULATION

Any sales illustration shown or furnished in connection with the sale of variable life insurance must conform with the following requirements except that these requirements only apply to the variable portion of contracts with fixed and variable funding options. Item 9 specifically pertains to variable life insurance contracts offering both fixed and variable funding options.

1. The hypothetical interest rates used to illustrate accumulated policy values must be an annual effective gross rate after brokerage expenses and prior to any deduction for taxes, expenses and contract charges.

2. If illustrations of accumulated policy values are shown then for the highest interest rate used, one illustration must be based solely upon guarantees contained in the policy contract being illustrated. (For example, if the illustration includes the effect of mortality charges and administrative charges which are below the guaranteed maximums for such charges, an illustration must be prepared which involves the effect of the maximum charges.)

3. Except for illustrations contained in the prospectus, the pattern of premium payments used in an illustration should be the initial pattern requested by the proposed policyholder at inception or upon changes in face amount requested by the policyholder.

4. If the illustrated policy contract provides for a variety of investment options, the illustration may either use an asset charge which is reasonably representative or use the asset charge of a particular option. The illustration should clearly identify the asset charge and either label it "hypothetical" or identify the fund.

5. The illustration must disclose the transaction charges which will be levied against the contract because of transactions requested in accordance with rights and privileges specified in the policy contract. Any charge for the exercise of a right or privilege upon which the illustration is based must be reflected in the illustrated values. The nature of any other such charges must be disclosed in a clear statement accompanying such illustrations. (For example, a charge to switch from one investment option or death benefit option to another.)

6. A clear statement must be made following the Table of Illustrated Accumulated Policy Values that use of hypothetical investment results does not in any way represent actual results or suggest that such results will be achieved and must indicate that the policy values which actually arise will differ from those shown whenever the actual investment results differ from the hypothetical rates illustrated. Assumptions upon which illustrations are based must be clearly disclosed.

7. Any sales illustration to a prospective policyholder must reflect the policy being presented accurately. Misleading statements or captions or other misrepresentations are prohibited.

8. The requested sales illustration must be printed clearly and legibly on hard paper copy. An illustration displayed on a computer screen may be used in addition to, but not as a substitute for, hard paper copy.

9. In connection with variable life insurance contracts offering both fixed and variable funding options:

   a. An illustration of the variable funding option must comply with these guidelines;

b. If an illustration of the fixed funding option is shown, accumulated policy values must be shown on the basis of guaranteed rates. One or more additional rates may also be shown but such rates may not exceed current rates;

c. A summary illustration may be given in which results from comparable illustrated and hypothetical interest rates are combined. Such summary must cross-reference to the accompanying separate illustrations of the fixed and variable funding options.

10. Nothing herein shall prohibit the distribution to the prospective policyholder of illustrations in addition to those required by Article VII of the NAIC Model Variable Life Insurance Regulation provided that, except for Item 3 which shall only apply to required illustrations under Article VII, such additional illustrations comply with the standards set forth herein.

Actuarial Guideline XVI

CALCULATION OF CRVM RESERVES ON SELECT MORTALITY AND/OR SPLIT INTEREST

Text

When CRVM reserves are being calculated, it is necessary to determine the value of ${}_{19}P_{x+1}$. The Standard Valuation Law permits the use of Select Mortality Factors with the 1980 CSO Table. While the maximum valuation interest rate for any policy is level for all durations, the law permits the use of other interest rates as long as the resulting reserves are not less than those according to the minimum standard. Thus, it is possible to calculate reserves by the CRVM method using split interest rates, i.e., interest rates that are not the same at all durations.

When either Select Mortality Factors or split interest are involved, the “net level annual premium on the nineteen-year premium whole life plan” is the renewal net level premium for a 20-payment life valued on the full preliminary term basis. That is ${}_{19}P_{[x]+1}$ should be used instead of, for example, ${}_{19}P_{[x+1]}$.

Background Information:

The Report of the Society of Actuaries Committee on Specifications for Monetary Values - 1980 CSO Tables recommended this approach. This Report was accepted by the Board of Governors of the Society and forwarded to the NAIC early in 1984. This approach is logical because it is consistent with the calculation of the “net level annual premium equal to the present value, at the date of issue, of such benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per annum payable on the first and each subsequent anniversary of such policy on which a premium falls due.....” (See Section 4 of the Standard Valuation Law, emphasis added.)

Actuarial Guideline XVII

CALCULATION OF CRVM RESERVES WHEN DEATH BENEFITS ARE NOT LEVEL

Text

In the definition of the Commissioners' Reserve Valuation Method, the Standard Valuation Law (Section 4) refers to the "net level annual premium on the nineteen-year premium whole life plan for insurance of the same amount...." The law does not define "the same amount" for cases when death benefits are not level. For policies issued after the operative date of Section 5-c of the Standard Nonforfeiture Law for Life Insurance (Section 5-c provides for the use of the 1980 CSO Table, among other things) "the same amount" is to be taken as the renewal nine-year arithmetic average, i.e., the arithmetic average of the death benefit at the beginning of each of policy years 2 through 10, inclusive.

Background Information

The Report of the Society of Actuaries Committee recommended this approach. Walter O. Menge in his paper Commissioners Reserve Valuation Method, RAIA XXXV (see p 277ff, especially p 283), defined an "equivalent level renewal amount" which has been accepted and still is the appropriate function for policies issued before the operative date of Section 5-c of the Standard Nonforfeiture Law for Life Insurance. The Society Committee indicated that the strongest factor that weighed in its conclusion was the effect on reserves for such plans as jumping juvenile. Menge noted the similarity between his definition of "equivalent level renewal amount" and the definition of "equivalent uniform amount" in Section 5 of the Standard Nonforfeiture Law for Life Insurance. In the same way, the function prescribed above is consistent with the "average amount of insurance" in Section 5-c of the Standard Nonforfeiture Law for Life Insurance. A principal reason for the change in the Standard Nonforfeiture Law was to simplify calculations, and this guideline will also have that result.

Actuarial Guideline XVIII

CALCULATION OF CRVM RESERVES ON SEMI-CONTINUOUS, FULLY CONTINUOUS OR DISCOUNTED CONTINUOUS BASIS

Text

The Standard Valuation Law uses the “excess of (a) over (b)” in the definition of the modified net premiums in Section 4. If reserves are calculated on a basis other than curtate, i.e., using semi-continuous, fully continuous or discounted continuous functions, the excess of (a) over (b) may be calculated using the same basis (semi-continuous, etc.).

Background Information

The Report of the Society of Actuaries Committee recommended this approach. The excess of (a) over (b) is sometimes referred to as the initial expense allowance. Basing this expense allowance on curtate functions is conservative as this results in the smallest amount of expense allowance. Also, the expense allowance is the same regardless of which type of functions are used. On the other hand, the use of curtate functions when the basic calculation is based on other functions can result in complications in calculation. The difference in the resulting reserves does not justify the additional complication.

Actuarial Guideline XIX

1980 CSO MORTALITY TABLE WITH TEN-YEAR SELECT MORTALITY FACTORS

Text

The Standard Valuation Law and the Standard Nonforfeiture Law for Life Insurance make reference to the Commissioners' 1980 Standard Ordinary Mortality Table with Ten-Year Select Mortality Factors. The Ten-Year Select Mortality Factors referred to are those developed by the Society of Actuaries Special Committee to Recommend New Mortality tables for Valuation (see Report on p. 617ff and table of Ten-Year Select Mortality Factors on p. 669 of TSA XXXIII).

The NAIC model regulation regarding mortality tables independent of sex refers to certain specific tables which are blends of the male and female mortality rates of the 1980 CSO Table and specifies that these tables may be used with or without Ten-Year Select Mortality Factors. The Ten-Year Select Mortality Factors to be used with these blended tables are to be determined by use of the formula in the letter from Robert J. Johansen to Ted Becker reproduced on p. 457 of NAIC Proceedings 1984 Vol. I.

Background Information

The published report of a committee of the Society of Actuaries contains two sets of alternative select mortality factors. While that committee recommended that the alternative factors not be adopted, their publication has caused some confusion.

Actuarial Guideline XX

JOINT LIFE FUNCTIONS FOR 1980 CSO MORTALITY TABLE

Text

The tables of uniform seniority and the "Ultimate 1xx Tables" in Appendix 5 of the Report of the Society of Actuaries Committee on Specifications for Monetary Values - 1980 CSO Tables are acceptable for use in calculating reserves or nonforfeiture values for joint life policies on the 1980 CSO basis. These tables from Appendix 5 of the report are reproduced on the following pages of this Actuarial Guideline. These tables are numbered A5-1, A5-6 and A5-7 to coincide with the page numbers of those tables in Appendix 5 of the Society Committee report. (These are the only tables considered necessary for the purpose of this guideline.)

Other methods of calculating joint life functions may also be acceptable. In particular, it is acceptable to calculate "exact" joint life functions using published 1980 CSO mortality rates for the actual ages and genders of the lives to be insured.

1980 CSO and 1980 CET TABLES

A5-1

Tables showing the deduction to be made from the age of the older of two lives in order to obtain the equivalent equal ages. The equivalent equal ages are then used to enter tables of functions derived from tables based on one male and one female of the same age.

Actuarial Guideline XXI

CALCULATION OF CRVM RESERVES WHEN (B) IS GREATER THAN (A) AND SOME RULES FOR DETERMINATION OF (A)

Text

The Standard Valuation Law used the "excess of (a) over (b)" in the definition of the modified net premiums in Sec. 4. If the excess of (a) over (b) is negative, and the policy is issued on or after Jan. 1, 1987 the excess is to be taken as zero.

The Standard Valuation Law defines (a) as a net level premium, subject to a maximum. The net level premiums for the policy are a uniform percentage of the respective gross premiums such that the present value at issue of the net level premiums payable on and after the first anniversary is equal to the present value at issue of the benefits provided for by the policy after the first anniversary. The net level premium used in determining (a) is the net level premium payable on the first anniversary. The maximum for (a) is the net level premium on the 19-year premium whole life plan for a policy with level premiums issued at an age one year higher than the age at issue of the policy.

The value of (a) is to be calculated as defined in the Standard Valuation Law, even if the resulting reserves are not equal to reserves according to the full preliminary term method.

Background Information

The Report of the Society of Actuaries Committee on Specifications for Monetary Values—1980 CSO Tables recommended that a negative excess of (a) over (b) be taken as zero. Walter O. Menge in his paper Commissioners Reserve Valuation Method, RAIA XXXV (see pp. 260 and 261) pointed out the illogic of a negative excess of (a) over (b). A negative excess, if used, would result in CRVM reserves that are greater than net level premium reserves. This principle has been recognized since Menge wrote his paper, but some actuaries are not aware of the paper.

Defining the net level premiums as being a uniform percentage of the respective gross premiums is consistent with the definition in Menge's paper. Since the denominator of (a) is the present value of an annuity commencing on the first anniversary, the logical value for (a) is the net level premium (as defined) payable on the first anniversary.

In his paper, Menge indicates that CRVM reserves are equal to full preliminary term reserves unless the value of (a) is the maximum defined in the Standard Valuation Law, or unless the excess of (a) over (b) is negative. Menge does not appear to have considered the case where the gross premium for the first policy year does not equal the gross premium for the second policy year. For such policies a literal application of the Standard Valuation Law does not result in full preliminary term reserves.

Actuarial Guideline XXII

INTERPRETATION REGARDING NONFORFEITURE VALUES FOR POLICIES WITH INDETERMINATE PREMIUMS

Text

Indeterminate premium policies provide that premiums after issue will be determined by the insurer based on then current assumptions as to future experience. The policies also provide a schedule of maximum premiums which the premiums actually charged will not exceed.

The minimum nonforfeiture values for an indeterminate premium policy are the greater of those assuming that the gross premiums for the policy are (i) those according to the schedule of gross premiums based on current assumptions at issue and illustrated to prospective policyholders, or (ii) those according to the schedule of maximum gross premiums included in the policy:

Background Information

Indeterminate premium policies are a fairly recent development in life insurance. They can serve a legitimate function by enabling a nonparticipating policy to include a safety margin that need not be called upon unless it is needed. Indeterminate premiums are sometimes used to avoid deficiency reserve requirements. In general, regulators have not objected to this.

Section 6 of the Standard Nonforfeiture Law for Life Insurance refers to "any plan of life insurance which provides for future premium determination, the amounts of which are to be determined by the insurance company based on then estimates of future experience...." This is a direct reference to the types of life insurance policies commonly known as indeterminate premium plans (see "Detailed Analysis of Recommended Changes in the Standard Valuation Law and the Standard Nonforfeiture Law for Life Insurance; NAIC Proceedings - 1981 Vol. II, p. 831). The Standard Nonforfeiture Law for Life Insurance provides that minimum nonforfeiture values for such policies are to be computed by a method consistent with the principles of the Law as determined by regulations promulgated by the commissioner.

Section 5 and Section 5-c of the Standard Nonforfeiture Law for Life Insurance each provide that "the adjusted premiums for any policy shall be calculated on an annual basis and shall be....(a) uniform percentage of the respective premiums specified in the policy for each policy year..." Indeterminate premium policies provide for two amounts of premiums for each year: the actual premium to be charged and the maximum amount of the actual premium. This raises the question of which premium is to be used in setting adjusted premiums as a uniform percentage of the gross premiums.

The maximum premiums have the advantage that they are known at the time the policy is issued. However, use of maximum premiums to determine minimum values can lead to manipulation. A level premium whole life policy has a readily determined set of minimum values in accordance with the Standard Nonforfeiture Law for Life Insurance. If the policy has indeterminate premiums and the premiums illustrated to the customer (with proper disclosure of their indeterminate nature) are level for life, there should be no change in the minimum values. If the minimum values were determined by reference to the maximum premiums and not to the schedule of premiums on the current assumptions, introduction of maximum premiums that increase by duration would result in lower minimum values.

This guideline was written with policies other than universal life insurance in mind. However, it is possible to design a fixed premium universal life insurance policy to which this guideline would be applicable.

Actuarial Guideline XXIII

GUIDELINE CONCERNING VARIABLE LIFE INSURANCE SEPARATE ACCOUNT INVESTMENTS

A variable life insurance separate account shall be deemed to have sufficient net investment income and readily marketable assets to meet anticipated obligations under policies funded by the account, as required by [statutory reference for state], if, and only if, it can be demonstrated to the satisfaction of the Commissioner that the sum of the market value of readily marketable assets in the account at the date of valuation, plus the anticipated net investment income for the calendar year following the date of valuation exceeds by at least 15% the anticipated death benefits, surrenders, withdrawals and other such obligations payable from current account values during the same period. For the purposes of this demonstration, readily marketable assets means cash or those investments which have readily ascertainable market value and which can be marketed before the close of the next business day; net investment income excludes capital gains or losses; and the value of the anticipated death benefits, surrenders, withdrawals and other such obligations payable during the calendar year following the date of the valuation shall not be estimated at less than 10% of the market value of the account assets at the date of valuation.

If a variable life insurance separate account is divided into separate series, portfolios or other investment subdivisions, each series, portfolio or investment subdivision shall comply with this subsection.

Actuarial Guideline XXIV

GUIDELINES FOR VARIABLE LIFE NONFORFEITURE VALUES

Minimum cash surrender values for variable life insurance policies shall be determined separately for the basic policy and any benefits and riders for which premiums are paid separately. The methods pertain to a basic policy and any benefits and riders for which premiums are not paid separately.

Minimum cash surrender values for variable life polices may be determined using option B (Retrospective Method), C (Prospective Method), or D (Maximum Charge Method).

A. Definitions

(1) "Valuation Rate" as used in this guideline means the higher of the Assumed Investment Rate (AIR) or guaranteed interest rate included in the policy, if any, otherwise the highest valuation interest rate allowed under the Standard Nonforfeiture Law.

(2) "Net Cash Surrender Value" means the maximum amount payable to the policyowner upon surrender.

(3) "Cash Surrender Value" means the Net Cash Surrender Value plus any amounts outstanding as policy loans.

(4) "Policy Value" means the amount to which separately identified interest credits and or investment return and mortality, expense, or other charges are made under a variable life insurance policy.

(5) "Accumulation Rate" means the net investment return and/or any interest credits applied towards the policy value.

B. Retrospective Method

The minimum cash surrender value (before adjustment for indebtedness and dividend credits) available on a valuation date shall be equal to the value using the Accumulation Rate through that date of the premiums paid minus the accumulation through that date of (i) the benefit charges, (ii) the averaged administrative expense charges for the first policy year and any insurance-increase years, (iii) actual administrative expense charges for other years, (iv) initial and additional acquisition expense charges not exceeding the initial or additional expense allowances, respectively, (v) any service charges actually made (excluding charges for cash surrender or election of a paid-up nonforfeiture benefit) and (vi) any deductions made for partial withdrawals; all accumulations being at the Accumulation Rate at which changes in policy values have been made unconditionally to the policy (or has been made conditionally, but for which the conditions have since been met), and minus any unamortized unused initial and additional expense allowance.

Accumulation for the premiums and for all charges referred to in items (i)-(vi) above shall be based on the Accumulation Rate for the applicable account(s) from and to such dates as are consistent with the manner in which such Accumulation Rate is credited in determining the policy value.

The benefit charges shall include the charges made for mortality and any charges made for riders or supplementary benefits for which premiums are not paid separately. If benefit charges are substantially level by duration and develop low or no cash values, then the Commissioner shall have the right to require higher cash values unless the insurer provides adequate justification that the cash values are appropriate in relation to the policy's other characteristics.

The administrative expense charges shall include charges per premium payment, charges per dollar of premium paid, periodic charges per thousand dollars of insurance, periodic per policy charges, and any other charges permitted by the policy to be imposed without regard to the policyowner's request for services. The averaged administrative expense charges for any year shall be those which would have been imposed in the year if the charge rate or rates for each transaction or period within the year had been equal to the arithmetic average of the corresponding charge rates which the policy states will be imposed in policy years through twenty in determining the policy value.

The initial acquisition expense charges shall be the excess of the expense charges, other than service charges, actually made in the first policy year over the averaged administrative expense charges for that year. Additional acquisition expense charges shall be the excess of the expense charges, other than service charges, actually made in an insurance-increase year over the averaged administrative expense charges for that year. An insurance-increase year shall be the year beginning on the date of increase in the amount of insurance by policyowner request (or by the terms of the policy).

Service charges shall include charges permitted by the policy to be imposed as a result of a policyowner's request for a service by the insurer (such as the furnishing of future benefit illustrations) or of special transactions.

The initial expense allowance shall be the allowance provided by Items (ii), (iii), (iv) of Section 5, or by Items (ii) and (iii) of Section 5c(1), as applicable, of the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, for a fixed premium, fixed benefit endowment policy with a face amount equal to the initial face amount of the variable life insurance policy, with level premiums paid annually until the highest attained age at which a premium may be paid under the variable life insurance policy, and maturing on the latest date permitted under the policy, if any, otherwise at the highest age in the valuation mortality table. The unused initial expense allowance shall be the excess, if any, of the initial expense allowance over the initial acquisition expense charges as defined above.

If the amount of insurance is subsequently increased upon request of the policyowner (or by the terms of the policy), an additional expense allowance and an unused additional expense allowance shall be determined on a basis consistent with the above and with Section 5c(5) of the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, using the face amount and the latest maturity date permitted at that time under the policy.

The unamortized unused initial expense allowance during the policy year beginning on the policy anniversary at age x + t (where "x" is the issue age) shall be the unused initial expense allowance multiplied by $\ddot{a}_{x+t}/\ddot{a}_x$ where $\ddot{a}_{x+t}$ and $\ddot{a}_x$ are present value of an annuity of one per year payable on policy anniversaries beginning at ages x + t and x, respectively, and continuing until the highest attained age at which a premium may be paid under the policy, both on the morality guaranteed in the policy and the Valuation Rate for the policy. An unamortized unused additional expense allowance shall be the unused additional expense allowance multiplied by a similar ratio of annuities, with $\ddot{a}_x$ replaced by an annuity beginning on the date as of which the additional expense allowance was determined.

(Note: The drafters chose a whole life initial expense allowance for several reasons. Variable life insurance is generally considered a permanent life insurance plan and most companies encourage a premium level which will provide lifetime insurance protection. Every variable life insurance policy of which the drafters are aware has a "net level premium" that could be computed which would guarantee permanent protection using some suitable interest assumption. As a result, it is expected that most variable life insurance policies will be sold as permanent plans.

Traditional whole life insurance, which is accorded a permanent plan expense allowance by the Standard Nonforfeiture Law (SNFL), is much more flexible than is often realized. Premiums may be stopped with term coverage resulting, policy loans can result in "stop and go" premiums, or a vanishing premium arrangement can be effected, all without the permanent plan expense allowance being affected. The SNFL does not require cash values for many forms of term insurance. All other permanent plans develop an expense allowance greater than that for whole life insurance under the SNFL.

The alternative of basing the initial expense allowance on a policyowner's "planned premium" was considered but rejected as artificial and subject to substantial manipulation by agents and/or insurers.)

C. Prospective Method

The minimum cash surrender value (before adjustment for indebtedness and dividend credits) available on a date as of which interest is credited to the policy shall be equal to [(1) - (2) - (3) - (4)] where:

(1) is the present value of all future benefits;

(2) is the present value of future adjusted premiums. The adjusted premiums are calculated as described in Sections 5 and 5a or in Section 5c(1), as applicable, of the Standard Nonforfeiture Law for Life Insurance, as amended in 1980. If Section 5c(1) is applicable, the nonforfeiture net level premium is equal to the quantity PVFB/$\ddot{a}_x$, where PVFB is the present value of all benefits at issue assuming future premiums are paid by the policyowner and all guarantees contained in the policy or declared by the insurer, and using the Valuation Rate.

$\ddot{a}_x$ is the present value of an annuity of one per year payable on policy anniversaries beginning at age x and continuing until the highest attained age at which a premium may be paid under the policy.

(3) is the present value of any quantities analogous to the nonforfeiture net level premium which arise because of guarantees declared by the insurer after the issue date of the policy. $\ddot{a}_x$ shall be replaced by an annuity beginning on the date as of which the declaration became effective and payable until the end of the period covered by the declaration.

(4) is the sum of any quantities analogous to (2) which arise because of structural changes in the policy.

(Note: Structural changes are those changes which are separate from the automatic workings of the policy. Such changes usually would be initiated by the policyowner and include changes in the guaranteed benefits, changes in latest maturity date, or changes in allowable premium payment period.)

Future benefits are determined by (1) projecting the policy value, taking into account future premiums, if any, and using the guaranteed interest rate, if any; otherwise, the lesser of the AIR, if any, or the highest state approved nonforfeiture interest rate, and using the mortality, expense deductions, etc. contained in the policy or declared by the insurer; and (2) taking into account any benefits guaranteed in the policy or by declaration which do not depend on the policy value.

All present values shall be determined using (i) an interest rate (or rates) specified by the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, for policies issued in the same year and (ii) the mortality rates specified by the Standard Nonforfeiture Law for Life Insurance, as amended in 1980, for policies issued in the same year or contained in such other table as may be approved by the Commissioner for this purpose.

(Note: The types of quantities included in (3) are increased current interest rate credits guaranteed for a future period, decreased current mortality rate charges guaranteed for a future period, or decreased current expense charges guaranteed for a future period.)

D. Maximum Charge Method

(1) Definitions: Wherever used in this Section, the terms have the respective meanings set forth or indicated in this paragraph.

(a) Policy Value is equal to gross premiums paid (excluding separate identified premiums for riders or supplementary benefits which are not credited to policy value) plus net investment income (which may be positive or negative and may vary based on policy loans) less the following as specified in the policy: (i) administrative charges (which may be taken in part from premiums and in part from policy value), (ii) acquisition and other charges, (iii) deferred acquisition and other charges, (iv) benefit charges, (v) service charges, (vi) partial withdrawals, and (vii) partial surrender charges.

(b) Benefit Charges made to the Policy Value are mortality charges made for life insurance on the insured person or persons and any charge made for riders and supplementary benefits.

(c) Service Charges made to the Policy Value are charges for transactional costs such as partial withdrawals, reallocations of policy values and benefit illustrations. Transactional charges shall not be assessed unless specifically permitted by law or regulation for transactions made under mandatory policy provisions.

(d) Administrative Charges is a per policy charge made regularly to the Policy Value (or deducted from premiums on scheduled premium policies) for the cost of administration. This charge may not exceed $5.00 per month in 1986. In subsequent years the limit for any new or in force policy shall be the product of $5.00 and the ratio (not to exceed 2.00) of (1) the Consumer Price Index (for all urban households) for the September preceding the year for which the determination is being made to (2) the Consumer Price Index for September 1986. The Commissioner may allow a higher charge upon an insurer demonstrating a justification.

(e) Acquisition and Other Charges are deducted from gross premiums before they are credited to Policy Value and/or made to the Policy Value. They may be expressed as a percentage of premium or a dollar amount per $1,000 of insurance or a dollar amount per premium payment or a per policy charge (other than the Administrative Charge). They do not include charges made as a reduction in investment return. These charges may vary by premium size, policy size and by policy year.

(f) Excess First Year Acquisition and Other Charges shall be the maximum excess of (A) over (B) based on the assumption that any premium (other than a single premium) payable in the first policy year is also payable during the entire premium paying period. (A) is the Acquisition and Other Charge made in the first policy year and (B) is the arithmetic average of the corresponding charges which the policy states would be made in policy years two through twenty.

(g) Excess Acquisition and Other Charges for a Face Amount Increase shall be the maximum excess of (A) over (B) based on the assumption that the net level whole life annual premium for the increase (as defined in (j) below) applies throughout the remaining premium paying period. (A) is the Acquisition and Other Charge for the increase, and (B) is the arithmetic average of the corresponding charges which the policy states would be made in the nineteen policy years following the increase.

(h) Net Investment Return is the actual amount credited to Policy Value net of investment expenses and/or other charges made as a reduction in investment return.

(i) The net level whole life annual premium at issue is based on the assumption of level insurance and level annual premium for life, the mortality table rate used to calculate the maximum mortality charges and an interest rate based on the higher of 4% or that specified in the policy.

(j) The net level whole life annual premium for an increase in the face amount of insurance shall be determined as of the date of the increases as though such increase were a separate policy under (i) above. Only increases in the face amount requested by the policyowner and increases in the face amount pursuant to the terms of the policy (e.g. an option to purchase or a cost of living increase) shall give rise to such a premium and the associated Excess Acquisition and Other Charges for a Face Amount Increase. Increases for this purpose shall not include increases in face amount resulting from a change in the death benefit option or changes in death benefit pursuant to policy terms that do not affect the face amount. Increases for this purpose shall be reduced by the amounts of any earlier decrease by reason of a partial withdrawal, but not a decrease resulting from a change in the death benefit option.

(k) Surrender Charge is a deferred charge made to the Policy Value in the event of a full or partial surrender of the policy, reduction in the face amount of insurance or premium, or a lapse.

(l) Cash Surrender Value is the Policy Value less any Surrender Charge, before reduction for outstanding loans or other amounts due under the policy.

(m) Deferred Acquisition and Other Charges are Acquisition and Other Charges deducted from the Policy Value after the first policy year.

(2) Cash Surrender Values determined in accordance with this subparagraph shall meet minimum requirements.

(a) If Acquisition and Other Charges do not exceed the sum of:

(1) 90% of premiums received up to the net level whole life annual premium at issue (regardless of when received).

(2) 10% of all other premiums received.

(3) 90% of the net level whole life annual premium for increases in the face amount of insurance as defined in 1(j).

(4) $10 per $1,000 of initial face amount in the first policy year.

(5) $1 per $1,000 of face amount in subsequent policy years.

(6) $10 per $1,000 of any increase in the face amount of insurance other than an increase resulting from a change in the death benefit option. Increases

up to the amount of earlier decreases are included here but not in (3) above.

(7) $200 per policy in the first year.

(b) A surrender charge may be established provided that the initial surrender charge together with the actual Acquisition and Other Charges made in the first policy year (and on premiums up to the net level whole life annual premium if received after the first year) do not exceed the sum of (1), (2) in the first year, (4) and (7) in (a) above. Additional surrender charges may be established after issue in connection with an increase in face amount provided that any such additional surrender charge and any Acquisition and Other Charges made in connection with such increase do not exceed the sum of (3) and (6) in (a) above.

(c) A Deferred Acquisition and Other Charge may be charged against the Policy Value in any policy year after the first, such that the total of all such charges imposed to date plus the surrender charge for that year does not exceed the maximum initial surrender charge. The Deferred Acquisition and Other Charges in any one year may not exceed the maximum allowable surrender charge for that year. Similar Deferred Acquisition and Other Charges may be imposed with respect to an increase in face amount.

(d) The maximum allowable surrender charge for any year shall be the maximum initial surrender charge multiplied by $ä_{x+t}/ä_x$, where "x" is the issue age and "t" is the number of years since issue. Similar maximums shall be determined with respect to any additional surrender charges, with x and t based on the date of increase.

(Note: The minimum cash value methods B, C, or D are not intended to prohibit the current practice of allowing the imposition of additional surrender charges defined as follows. In the case of combination general account and separate account variable life products, additions or amounts derived from more favorable interest, mortality, and expense than those guaranteed in the policy on the general account fund and credited within 12 months prior to surrender may be subject to forfeiture upon surrender.)

E. Minimum Paid-Up Nonforfeiture Benefits

If a variable life insurance policy provides for the optional election of a paid-up nonforfeiture benefit, it shall be such that its present value shall be at least equal to the cash surrender value provided by the policy on the effective date of the election. The present value shall be based on mortality and interest standards at least as favorable to the policyowner as (1) the mortality and interest basis, if any, specified in the policy for determining the policy value, or (2) the mortality and interest standards permitted for paid-up nonforfeiture benefits by the Standard Nonforfeiture Law for Life Insurance, as amended in 1980. In lieu of the paid-up nonforfeiture benefit, the insurer may substitute, upon proper request not later than sixty days after the due date of the premium in default, an actuarially equivalent alternative paid-up nonforfeiture benefit which provides a greater amount or longer period of death benefits, or, if applicable, a greater amount or earlier payment of endowment benefits.

(Note: It is possible that policies will have secondary guarantees. Such guarantees should be taken into consideration when computing minimum paid-up nonforfeiture benefits.)

Ever since the adoption of the original Standard Nonforfeiture Law (SNFL) in 1942, provision has been made for nonforfeiture calculations on the basis of substandard mortality. (See Sections 5.5a. and 5c, Paragraph 8(e) of SNFL.)

While this provision has been used infrequently in the past, it is anticipated the substandard mortality will be more frequently utilized in variable life insurance, given its flexible nature, to reflect the mortality classification assigned to the policy by the insurer.

A charge may be made at the surrender of the policy provided that the result after the deduction of the charge is not less than the minimum cash surrender value required by this guideline.)

Actuarial Guideline XXV

CALCULATION OF MINIMUM RESERVES AND MINIMUM NONFORFEITURE VALUES FOR POLICIES WITH GUARANTEED INCREASING DEATH BENEFITS BASED ON AN INDEX

A. Valuation - Text

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum reserve at any time shall be based on the maximum valuation interest rate for the year of issue and an acceptable mortality table for life insurance statutory reserves and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%

2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%.

3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%.

4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%.

5. 1.0% For all other plans.

The term “annual and non-cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term “annual and cumulative maximum” refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

This guideline for valuation shall be effective immediately for policies issued on or after January 1, 1991.

B. Nonforfeiture – Text

The threshold amount shall be $10,000 until December 31, 2009. For years beginning after December 31, 2009, the threshold amount for a calendar year shall be the product of $10,000 and the ratio of 1) the index for June of the prior year to 2) 136.0 (the index as of June 30, 1991), rounded to the nearest $25. If this calculation would result in an increase in the threshold amount of less than $500, the unadjusted threshold amount from the prior year shall continue in effect for the next calendar year. In no calendar year shall the increase in threshold amount exceed 5% of the prior calendar year threshold amount.

The index used to determine the threshold amount for years beginning after December 31, 2009, shall be the Consumer Price Index for All Urban Consumers (CPI-U) as of June 30 of that year. If this index is no longer available, another index which, in the actuary's opinion, reflects the change in general consumer prices for the year should be substituted.

I. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD EXCEED THE THRESHOLD AMOUNT EVEN IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the value of the minimum nonforfeiture benefit at any time shall be based on the maximum nonforfeiture interest rate for the year of issue and an acceptable mortality table for life insurance nonforfeiture and based on the death benefit and premium pattern adjusted as provided in the policy by reasonable annual increases based on the index. The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. The assumption as to what is a reasonable annual increase in death benefits based on the index must not be less than the maximum valuation interest rate for the year of issue less:

1. 2.0% If the annual increase is limited to an annual and non-cumulative maximum of 0% through 5.0%.

2. 1.5% If the annual increase is limited to an annual and cumulative maximum of 0% through 5.0%.

3. 1.5% If the annual increase is limited to an annual and non-cumulative maximum of 5.01% through 10.0%.

4. 1.25% If the annual increase is limited to an annual and cumulative maximum of 5.01% through 10.0%.

5. 1.0% For all other plans.

The term "annual and non-cumulative maximum" refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index without carry forward of excess index increases.

The term "annual and cumulative maximum" refers to a maximum where each annual increase is limited to the lower of the maximum or the increase in the index with carry forward of excess index increases.

In no event shall the assumption as to an annual increase based on the index be less than 1.0%.

II. FOR POLICIES WHERE ANY DEATH BENEFIT FOR ANY POLICY YEAR WOULD NOT EXCEED THE THRESHOLD AMOUNT IN ABSENCE OF ANY ANNUAL INCREASES BASED ON THE INDEX

For a policy where premiums are fixed in amount at issue which provides for whole life insurance with the amount of death benefit adjusted periodically with the Consumer Price Index or another cost of living index, the unadjusted value of the minimum nonforfeiture benefit at any time shall be based on a level death benefit, an acceptable mortality table for life insurance nonforfeiture and a nonforfeiture interest rate equal to:

1. 4.5% If the annual increase based on the index is limited to a maximum of 0% through 5.0%.

2. 4.25% If the annual increase based on the index is limited to a maximum of 5.01% through 10.0%.

3. 4.0% For all other plans.

The present value of future benefits component shall be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit. If the policy provides for future premiums and such premiums are also adjusted periodically with the Consumer Price Index or another cost of living index, the present value of future premiums component shall likewise be further adjusted each year by the ratio of the then current amount of death benefit to the initially projected amount of death benefit.

For purposes of this guideline multiple policies on a single life shall be aggregated and only those policies aggregating not more than $10,000 (or the threshold amount[1] after December 31, 2009), shall be considered under B.II.

This guideline for nonforfeiture shall be effective immediately for policies issued on or after January 1, 1991.

BACKGROUND

A number of companies are marketing individual life insurance policies with guaranteed increasing death benefits tied in to a consumer price index or another cost of living index and are for low initial amounts of insurance sold through funeral directors to provide for burial expenses. Some of the policies provide for graded death benefits such as the return of premium with or without interest for the early policy years or for a fixed scheduled increase in death benefits prior to the operation of the index. In some cases there is a maximum on the increase for any year. The vast majority of such policies are single premium policies but some are annual premium policies (generally limited payment). The annual premium may or may not be subject to adjustment with the index.

Since the changes in the index are not known at issue, but from past experience, increases within a given range can be expected with a high probability, it is necessary to assume some increases and then to continually adjust the present value of future benefits component and, if appropriate, the present value of future premiums component in the reserve and nonforfeiture calculation.

Theoretically the same assumed increases in the death benefits should be used for both valuation and nonforfeiture. This guideline so provides for policies where the amount of death benefit in any given policy year would exceed $10,000 (or the threshold amount[1] after December 31, 2009), even if there were no increases based on the index. For practical purposes this may mean that such policies are not marketable for higher amounts as it is most likely that such policies will not qualify under the IRS Section

[1] In 2010, the actuarial guideline was modified to substitute a threshold amount for 10,000, such threshold being increased by the change in the CPI-U, the CPI for All Urban Consumers.

7702. The cash value accumulation test to qualify thereunder requires a minimum interest rate of 4% and an assumed level amount of death benefits.

In the case of policies for an initial amount of insurance of $5,000 or less, the IRS rules provide an exception to the prohibition of assuming increasing death benefits. However, since many of the policies for very low amounts of initial face amount of insurance would require relatively high expenses if underwritten, many of the policies are issued with simplified underwriting or on a guaranteed issue basis with lower amounts of death benefits in the early policy years, some of the resulting annual increases are such as would disqualify many of the policies for the exception. Therefore it is recommended that policies for low amounts of insurance be allowed to qualify under the cash value accumulation test by permitting the nonforfeiture values to be based on a level death benefit and 4% or higher interest and requiring such values to be updated as increases based on the index take place. The amount in this guideline is set at $10,000 (or the threshold amount[1] after December 31, 2009), to allow for future adjustments and for different patterns of benefits for low amounts.

For single premium policies, the value of nonforfeiture benefits based on a level death benefit and a net assumed nonforfeiture interest rate equal to the maximum nonforfeiture interest rate less an assumed increase based on the index and such factors then adjusted by the projected increases will approximate factors based on assumed increases and the maximum nonforfeiture interest rate. However, the net interest rate is likely to be less than 4%. Thus the procedure of assuming a level death benefit and a net assumed rate of not less than 4% for policies of low amounts of insurance is apt to produce lower cash values than the procedure for large amounts of insurance. Such lower values can be justified based upon the fact that the highly specialized market is prearranged funeral expenses for very small amounts of insurance per policy.

To emphasize the qualification with the IRS rules for the very low amounts of insurance, the nonforfeiture guideline for small amount policies is stated in terms of the net rate, a level death benefit and continual adjustment.

For solvency purposes, reserves should be conservative. The same rules apply for reserve regardless of the size of the policy. That is, lower reserves are not permitted for policies with very low amounts of insurance per policy.

Paragraph 5c(3) of the Model Standard Nonforfeiture Law states that unscheduled changes do not need to be taken into account until the time of the change. The changes guaranteed according to an index are a hybrid, i.e. the changes are scheduled but the amount of the change is not known until the index is determined. Thus the changes must be recognized at issue. This guideline is a hybrid with increases assumed at issue either explicitly or implicitly but with further adjustments made at the time the increase based on the index is determined.

Actuarial Guideline XXVI

June 3, 1989

ELECTION OF OPERATIVE DATES UNDER STANDARD VALUATION LAW AND STANDARD NONFORFEITURE LAW

Preamble

The model Standard Nonforfeiture Law for Life Insurance contains Section 5-C, which defines new mortality and interest rate components to be used as the minimum standard for nonforfeiture values for life insurance policies. The Commissioners 1980 Standard Ordinary Table, or that table with Ten-Year Select Factors, is identified in Section 5-C as the applicable mortality table component for ordinary life insurance policies (although there is a provision for other alternate mortality tables to be permitted by regulation). Section 5-C also incorporates "dynamic" interest rates, as the applicable interest rate component. In addition, Section 5-C contains a new and different formula to be used in computing the adjusted premiums that define minimum nonforfeiture values.

Section 5-C contains a mandatory operative date, but there is also language permitting companies to elect an early operative date under certain conditions.

The model Standard Valuation law contains a cross reference to operative date for Section 5-C of the Standard Nonforfeiture Law for Life Insurance. After such operative date, there are mortality and interest rate components defined for use as the minimum standard for computing reserves. The Commissioners 1980 Standard Ordinary Table, or that table with Ten-Year Select Factors, is identified as the applicable mortality table component for ordinary life insurance policies (although there is a provision for other alternate mortality tables to be permitted by regulation). "Dynamic" interest rates determine the applicable interest rate component, but a lower maximum interest rate is defined for reserves than for nonforfeiture values.

Generally, the applicable mortality rates are lower and the applicable interest rates higher after the operative date. Thus, the reserves defined under the minimum standard would be lower for policies issued on or after the operative date.

Text

Under no circumstances can an insurance company elect an operative date for the purpose of Section 5-C of the Standard Nonforfeiture Law for Life Insurance, if such operative date would be in a calendar year prior to the calendar year in which that company furnished written notice of election of an operative date under that law.

Background Material

The purpose of this actuarial guideline is to ensure consistency and provide guidance in the election of this operative date.

Historically, insurance companies have been allowed to elect early operative dates so as to pass along the benefits of improved mortality rates and current interest rates to policyholders who purchase new life insurance policies. These new policies would typically have lower nonforfeiture values and would require lower reserves, and net premiums would be lower also. The expectation is that the lower net premiums might allow the company to reconsider its gross premium rates for these new policies issued after the operative date, and in many cases to lower the new gross premium rates.

A second reason for allowing the election of an early operative date would be to allow insurance companies and state insurance departments more time to prepare and review new life insurance policies, which are to be introduced into them marketplace. If every life insurance policy had to be changed over on the same mandatory operative date, it would be a great burden on the resources of all the parties involved.

Actuarial Guideline XXVII

ACCELERATED BENEFITS

PURPOSE

This guideline is designed to cover the actuarial aspects of accelerated benefits. Three general categories of accelerated benefits are covered:

I) non-discounted acceleration of benefits

II) actuarially discounted acceleration of benefits

III) interest accrual approach to financing acceleration of benefits

In addition, there is a separate section to cover the special considerations for a policy lien approach, which is Section IV.

General considerations which apply to any method of determining accelerated benefits are given in Section V.

I. NON-DISCOUNTED ACCELERATION OF BENEFITS

A. Description

The type of plans considered in this subsection are those which provide for a defined event triggering one time acceleration of some or all of the death benefit of the base contract or rider, in such a way that every dollar of acceleration has a non-discounted matching reduction in the amount payable on death. These plans have been available in four forms, via

1. A contract integrating the acceleration feature with other, more traditional, features;

2. A rider attached to a regular contract at time of issue, to provide acceleration;

3. A rider, as in (2), but which may be attached to inforce contracts of the same company; or

4. A policy acting similar to the rider in (3) above, but for which the acceleration is applicable to inforce contract of other companies.

B. Reserves

1. Reserving Approach

Payment of benefits earlier than death itself is an early payment rather than a different payment. The basic reserve structure and requirements for regular life insurance need not be disturbed. Therefore, the CRVM methodology is acceptable, as is any other reserving methodology allowable for life insurance when determining the reserves needed for policies with an accelerated benefit or when determining the reserves for the accelerated benefit by itself.

2. General Consideration

A reserve formula should consider all relevant factors.

Approximations to develop a single decrement table which utilize all relevant factors except for voluntary termination rates are acceptable for policies and riders subject to this subsection provided it can be demonstrated that the approximations used produce essentially similar reserves, conservative reserves, or immaterial reserves. The calculations should take into account the reduction in life insurance benefits due to prior acceleration. However, in no event shall the reserves for the accelerated benefit and the life insurance benefit when taken together be less than the reserves for the life insurance benefit assuming no acceleration feature prior to payment of any accelerated benefits.

In the development and calculation of reserves for policies and riders subject to this subsection, due regard shall be given to the applicable policy provisions, marketing methods, administrative procedures and all other considerations which have an impact on projected claims costs, including, but not limited to the following:

a. Definition of acceleration events,

b. Premium waiver provision,

c. Marketing method,

d. Underwriting procedures,

e. Delay in eligibility for benefit,

f. Maximum benefit,

g. Optional nature of benefit, and/or

h. Guaranteed insurability options.

II. ACTUARIALLY DISCOUNTED ACCELERATION OF BENEFIT

A. Description

The products that are allowable under this type of approach generally provide for an acceleration of the death benefit payable under a life insurance policy, with an appropriate actuarial adjustment in the amount of money paid to the policyholder that represents the amount of money foregone by the Company by paying out the death benefit early. These products have no additional premium payable. This product can be made available at issue of the contract or after issue of the contract. It can either be a separate rider or part of the integrated policy. The interest rate or interest rate methodology used for discounting must be specified in the contract or rider or in the actuarial memorandum.

B. Reserves

The application of standard valuation law and CRVM reserves is appropriate for these policies. No additional reserves need be held as long as the actuary is convinced that the method used to discount the death benefit reflects sound actuarial principles.

If the actuary is convinced that the discounting procedure does not appropriately reflect these conditions, he or she should determine a reserve such that reserves are adequate for the life insurance benefits based on aggregates. There is nothing in this benefit design that changes that equation.

III. INTEREST ACCRUAL APPROACH TO FINANCING ACCELERATION OF BENEFITS

A. Description

Under this approach, the insurer accrues an interest charge on the accelerated benefit to account for lost investment income from the date of acceleration to the date of death. The interest may be accrued until death or may be required to be paid in cash periodically, or may be offset against the policy's remaining death benefit.

1. Alternative methods of including an interest accrual option:

   a. A benefit of this type may be provided either as an integral part of a life insurance policy or as a rider to a life insurance policy.

   b. If offered as a rider to a life insurance policy, such rider may be attached to either a new policy or to an existing policy.

2. Alternative Benefit Designs using this option: The rider or policy form should specify whether interest accruing on prior accelerated benefit payment needs to be paid in cash or whether additional accelerated benefit payments will be made to cover such interest accruals as they become due. Either approach is equally acceptable.

B. Interest Accrual Rate

1. The rider or policy form or the actuarial memorandum should specify the method used to determine the rate(s) of interest to be charged.

2. The specification of the method should be clear and unambiguous.

3. The method used for determining the interest rate should be included in the Actuarial memorandum.

C. Reserves

1. Prior to the occurrence of an event qualifying the policy for accelerated benefits, minimum statutory reserves for policies containing interest accrual provisions are the same as for policies with identical death benefits that do not contain interest accrued lien provisions, provided that the method of determining the interest rate to be charged, as specified in the rider or policy provisions or actuarial memorandum, results in an interest rate at least equal to the valuation interest rate applicable to the policy. If such is not the case, an extra reserve may be necessary on such policies, if it is determined that the aggregate reserves are not good and sufficient.

2. Following the occurrence of a qualifying event, accrued interest is an asset of the company for statutory reporting purposes. However, the valuation actuary should make certain that reserves in the aggregate are adequate to assure that such aggregate accrued interest is provided for. This will assure that such accrued

interest assets can be held as admitted assets. The insurer's valuation actuary may voluntarily increase the statutory reserve liability on each such policy in order to eliminate the need to non-admit a portion of the accrued interest policy lien or policy loan.

IV. BENEFIT PAYMENT LIENS

This section deals specifically with benefit payment liens and their effect on future policy premiums and benefits.

A. The presence of a lien against the policy does not require a pro-rata reduction in the policy premiums or other values.

B. Amount of lien computed as of the date of death may be deducted from the death benefit.

C. Access to non-forfeiture benefits upon surrender or through future policy loans may be restricted to any excess of the cash surrender value over the sum of any outstanding loans and the lien.

D. If the lien approach is used and RPU is available as a non-forfeiture benefit, the amount of RPU may be calculated as if no lien existed and the lien may continue to apply, provided that the lien continues to satisfy any percentage and dollar maximums and minimums specified in the contract. Alternatively, RPU may be made unavailable while the lien exists, provided an ETI benefit is available. Alternatively, the excess, if any, of the cash surrender value over the sum of outstanding loans and the lien may be applied in calculating the amount of the RPU, provided an ETI benefit is available. If the choice of methods is not left as an option to be the policyholder, the rider or policy form should specify which method will apply.

E. If the lien approach is used an ETI is available as a non-forfeiture benefit, the period of ETI may be calculated as if no lien existed and the lien may continue to apply, provided that the lien continues to satisfy any percentage and dollar maximums and minimums specified in the contract.

F. If the lien approach is used, any accelerated death benefit payment may first be applied toward repaying the portion of any outstanding policy loans which causes the sum of the accelerated death benefit and policy loans to exceed the cash value. Alternatively, outstanding policy loans may be retained and the lien that would otherwise be allowed may be reduced by any outstanding policy loans at the time of acceleration. If the choice of methods is not left as an option to the policyholder, the rider or policy form should specify which method will apply.

G. The rider or policy form accelerated benefit lien provisions may specify that the existence of a benefit lien will not prevent termination of the policy in accordance with the regular policy termination provisions.

H. If a policy terminates while subject to a lien, the insurer shall extinguish the lien without further recourse to the policyholder unless the policy or rider clearly indicates otherwise. In the event that the policy is reinstated, the lien may also be reinstated with interest accrued as if the policy had never terminated.

I. The policyholder should have the option of paying all or part of any premium or accrued interest that would be capitalized under the terms of the rider or policy provisions in cash, as well as the option of repaying all or part of any lien in cash, in order to prevent the lien from causing the policy to terminate.

V. GENERAL CONSIDERATIONS

The items below should be considered, where applicable, for all types of accelerated benefits:

A. The rider or policy form should specify whether any premium becoming due after the initial accelerated benefit payment is established needs to be paid in cash or whether additional accelerated benefit payment will be made to cover such premiums as they become due. Either approach is equally acceptable.

B. The rider or policy form may specify any percentage and dollar minimum and maximum payments that may be accelerated. Any dollar or percentage minimums or maximums is equally acceptable. If no maximum is specified, it will be assumed to be 100% of the death benefit.

C. The accelerated benefit may include a reasonable expense charge for administrative expenses and risks assumed by the company. If the available amount of the initial accelerated benefit is less than the maximum allowed, the rider or policy form should specify how such initial amount will be determined.

D. The rider or policy form should specify the actions required, if any, to prevent policy termination if premium or interest expected to be capitalized would result in a total accelerated benefit payment exceeding the percentage or dollar maximum amount specified in the rider or policy form. Any such excess may be required to be paid in cash within an appropriate grace period in order to prevent policy termination. The rider or policy form may also specify that future premiums or interest becoming due must be paid in cash. If not specifically addressed, the rider or policy should remain inforce and be administered with no change from the premium or interest requirement that existed immediately prior to the time at which the maximum was reached and the accelerated benefit would not be increased beyond the maximum specified in the rider or policy form.

E. The rider or policy form may specify whether the accelerated benefit provision would apply to the original base insurance policy death benefit or the current insurance policy death benefit. If not specifically addressed, the rider or policy form should be administered as if maximums are automatically increased, but not automatically decreased.

F. The rider or policy form may specify that an accelerated benefit is not available unless established prior to the policyholder's election of or lapse to ETI or RPU. If not specifically addressed, the rider or policy forms should be administered to provide an accelerated benefit after election of or lapse to ETI or RPU.

G. The rider or policy form may specify that an accelerated benefit is not available if the policy has an irrevocable beneficiary or is assigned when accelerated benefits are initially claimed. Alternatively, the irrevocable beneficiary or assignee must provide a signed acknowledgement of concurrence for payout. The rider or policy form may specify that the policy may not be assigned (except to the insurer) after an accelerated benefit has been paid.

Actuarial Guideline XXVIII

STATUTORY CLAIM RESERVES FOR GROUP LONG-TERM DISABILITY CONTRACTS WITH A SURVIVOR INCOME BENEFIT PROVISION

Background

Many of the major writers of group long-term disability income insurance have included survivor benefits in such contracts. Provisions related to the survivor benefit include minimum disability periods, benefit amounts defined in terms of a number of months of disability benefits and a specified percentage of the monthly disability benefit.

This benefit is sometimes overlooked in the valuation process or ignored as being trivial in amount.

Drafting Note: Please see the 1990 “Proceedings,” Vol. 2, Pages 995-999, and the 1991 “Proceedings,” Vol. 1B, Pages 1321-1328.

Text

Claim reserves for survivor income benefits contained in group long-term disability contracts must be established based on the design of the survivor income benefit including the minimum period of disability before the spouse of a disabled person becomes eligible for a survivor income benefit and the amount of the benefit. A suitable approximation to the sum of the reserves for the basic disability benefit and the reserve for the survivor income benefit can be calculated by computing the reserve for the basic disability at an interest rate less than the maximum valuation interest rate.

Before any approximation can be accepted, rigorous testing of the approximation to the combined reserves for both the basic disability claim and the survivor income benefit must be performed. Tests indicated that basic disability reserves and survivor income benefit based on a 12-month disability requirement and a maximum survivor income benefit duration of 24 months with a survivor income benefit of .667 of the disability income with all reserves based on a valuation interest rate of 5.5% can be adequately approximated by basic disability reserves alone but calculated at a 3.5% valuation interest rate.

Actuarial Guideline XXIX

GUIDELINE CONCERNING RESERVES OF COMPANIES IN REHABILITATION

Preamble

The life insurance and annuity contracts of life insurance companies can be restructured by court order in rehabilitation proceedings. The contract restructuring may take the form of reduction in account values and/or guaranteed interest crediting premiums. Typically, the court order imposes restrictions on surrender of the contract while the company is in rehabilitation. These restrictions can include bans on surrenders while a rehabilitation plan is being developed and temporary limitations on the cash that can be obtained upon surrender. These restrictions are intended to prevent *en masse* surrenders while the company faces liquidity problems.

Several issues have arisen as to the interpretation of the Standard Valuation Law in these circumstances. The issues relate to the interpretation of the Commissioners' Reserve Valuation Method (CRVM) and the Commissioners' Annuity Reserve Valuation Method (CRVM), the determination of the guaranteed nonforfeiture benefits provided in the restructured contract and identification of the issue date of the contract after restructuring.

The Standard Valuation Law does not specifically address minimum reserve requirements after a contract has been restructured by court order. The minimum reserve requirements should be interpreted in the context of court-ordered contract restructuring to result in the most appropriate reserves under the particular circumstances. In general, this should be left to the regulators to determine.

Guideline

The phrase "future guaranteed benefits, including guaranteed nonforfeiture benefits," as used in CARVM, includes the cash surrender values based on contractual guarantees after reduction for any surrender charges available under the contract. In general, the value of future guaranteed benefits under CARVM may not be reduced by contingent surrender charges which may not be available upon cash surrender. See *Guideline Covering the Commissioners' Annuity Reserve Valuation Method (CARVM) (1985).*

Whether or not a court-imposed temporary restriction on the availability of cash on surrender is taken into account under CARVM depends upon whether the rehabilitation plan specifies that the restriction is a reduction in the guaranteed nonforfeiture benefits in the restructured contracts. If the rehabilitation plan imposes a distinct temporary charge to ensure liquidity as opposed to changing common surrender charges that are historically used to determining nonforfeiture benefits, the temporary charges will not reduce guaranteed nonforfeiture benefits for purposes of CARVM.

A similar rule applies for purposes of reporting those reserves on life insurance contracts entitled "For surrender values in excess of reserves otherwise required."

For life insurance contracts, CRVM does not dictate that a particular method must be applied after a contract has been restructured. In the case of policies providing for a varying amount of insurance or requiring the payment of varying premiums, reserves are calculated by a method consistent with CRVM applicable to policies providing for a uniform amount of insurance and requiring the payment of uniform premiums.

A method consistent with CRVM adopted for purposes of a rehabilitation program should consider the valuation bases and expense allowance prior to restructuring as well as after restructuring. Depending upon the types of changes to the restructured contract, it may or may not be appropriate to take into account the guaranteed benefits and premium structure prior to restructuring.

The issue date for purposes of determining the applicable mortality tables and interest rates also depends on the circumstances. For example, it may be appropriate to treat annuity contracts as newly issued so that reserves are required to be recomputed using more current discount rates. However, in the same rehabilitation plan it may be inappropriate to treat a restructured level premium whole life contract as newly issued. Accordingly, whether a contract is treated as having a new issue date after contract restructuring depends upon the terms of the rehabilitation plan and the restructured contracts. In general, contracts are not treated as newly issued unless the rehabilitation plan or state filing for the restructured contracts so provides.

Similarly, the appropriate CRVM expense allowance will depend upon the terms and the intent of the restructuring and rehabilitation plan. Depending upon the types of changes to the restructured contract, it may be appropriate to carry forward an unamortized expense allowance based on original policy date. In other cases, a new unamortized expense allowance would be calculated as of the restructure date. In general, a new unamortized expense allowance is not calculated unless the rehabilitation plan or the state filing for the restructured contract so provides.

Actuarial Guideline XXX

GUIDELINE FOR THE APPLICATION OF PLAN TYPE TO GUARANTEED INTEREST CONTRACTS (GICS) WITH BENEFIT RESPONSIVE PAYMENT PROVISIONS USED TO FUND EMPLOYEE BENEFIT PLANS.

Background Material

Guaranteed Interest Contracts (GICs) that are used to fund employee benefit plans often times contain a provision that allows individual participants to voluntarily move funds on a book value basis to other investment opportunities. These contracts also allow for the withdrawal of funds on a book value basis to provide employee benefits such as a death benefit to a surviving beneficiary, disability benefits and benefits paid upon bona fide termination of employment. In the situations described above, the individual participant is to be distinguished from the policyholder. Typical contractual language is as follows:

1. Withdrawal for Redirection of Investments - Subject to the provisions of Subsection____above, the contract owner shall direct the withdrawal and transfer to the contract owner of the pro rata amounts from the accumulation accounts for the purpose of redirecting an employee investment to an equity fund in accordance with the provision of the Plan.

2. Withdrawal for Plan Benefit Payments - Subject to the provisions of Subsection____above, the contract owner shall direct the withdrawal and transfer to the contract owner of the pro rata amounts from the accumulation account due to distribution made to participants (or to their beneficiaries, in case of the participant's death) under the Plan.

Both examples of contractual language make reference to the "provisions of the Plan." Plan provisions reduce the disintermediation (C-3) risk, from the insurance company standpoint, associated with GICs. For example, plan provisions may restrict the opportunity for the 401 (k) plan participant to move funds from the GIC option to a competing "guarantee of principal" option within the plan.

The Standard Valuation Law utilizes a concept known as Plan Type to distinguish between different levels of voluntary withdrawal rights by policyholders. Voluntary withdrawal rights are contractual policyholder rights which may be exercised at the option of the policyholder and do not include such items as scheduled contractual payouts or payouts upon termination. The greater the level of voluntary withdrawal right afforded to the policyholder, the more conservative is the resulting valuation interest rate. Plan Types are designated in the Standard Valuation Law as with Plan Type A, Plan Type B or Plan Type C and are defined as follows:

1. Plan Type A is a plan under which the policyholder may not withdraw funds, or may withdraw funds at any time but only (a) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, (b) without such an adjustment but in installments over five years or more, or (c) as an immediate life annuity.

2. Plan Type B is a plan under which the policyholder may not withdraw funds before expiration of the interest rate guarantee, or may withdraw funds before such expiration but only (a) with an adjustment to reflect changes in interest rate or assets values since receipt of the funds by the insurance company, or (b) without such an adjustment but in installments over five years or more. At the end of the interest rate guarantee, funds may be withdrawn without such adjustment in a single sum or installments over less than five years.

3. Plan Type C is a plan under which the policyholder may withdraw funds before expiration of the interest rate guarantee in a single sum or installments over less than five years either (a) without adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (b) subject only to a fixed surrender charge stipulated in the contract as a percentage of the funds.

Text

For purposes of the application of the Standard Valuation Law to Guaranteed Interest Contracts (GICs) with benefit responsive provisions, the withdrawal of funds at book value for the purpose of redirecting or withdrawing an employee investment shall be considered a withdrawal by the policyholder unless the underlying plan or GIC contain written provisions which are designed to reduce the C-3 risk to the insurance company. As an example, a provision which meets this criteria would include both the following:

1. No direct transfer to competing funds, whether such funds are alternate funds of the insurance company or not. This provision prohibits direct transfer of funds from the GIC option to a competing plan option that offers either a guarantee of principal or to an option in which the risk of loss of principal is small such as a money market fund or short-term bond fund. Any transfer to such an option must first go through an non-competing plan option and reside there for at least 90 days or three months.

   and

2. For GICs that fund plan investment options where interest is allocated to plan participants based on how much of their account balance is in each particular interest rate "cell," participants are not allowed to redirect any of the balance they have in a GIC funding a particular cell to a competing fund until the GIC's maturity date.

In addition, the valuation actuary must be satisfied that the GIC provisions designed to reduce the C-3 risk are administered by the insurer in the designed manner.

This requirement may be fulfilled by obtaining from the appropriate insurance company officer a certificate of intent regarding the insurance company administration of the provisions.

In addition, the valuation actuary must periodically review the actual experience under the contract to verify the appropriateness of the Plan Type assumption with reference to this Guideline.

Actuarial Guideline XXXI

VALUATION ISSUES VS. POLICY FORM APPROVAL

Background

Occasionally, the NAIC Life and Health Actuarial Task Force addresses valuation (reserve) issues related to a policy form or benefit design that has not been accepted or approved by a particular state. The development of reserving methods or providing guidance concerning reserve questions for such policy forms is necessary because the annual statement filed in each state, including states for which a particular policy form has not been approved for use, must reflect appropriate reserve for all policy forms and associated benefits.

Text

The adoption of an Actuarial Guideline by the NAIC Life and Health Actuarial Task Force dealing with a reserve issue associated with a particular policy form or benefit does not represent an endorsement for the approval of the particular policy form or benefit.

Actuarial Guideline XXXII

RESERVE FOR IMMEDIATE PAYMENT OF CLAIMS

Background Material

Section 5 Reserve Valuation Method—Life Insurance and Endowment Benefits of the NAIC Standard Valuation Law refers to an annual premium in defining the commissioners reserve valuation method. However, it has been general practice to hold an additional reserve where fractional premiums are paid and any fractional premium not yet due in the policy year of death is waived and to hold a further additional reserve for the refund of any premium paid beyond the end of the month in the policy year of death. These additional reserves are called for in the Miscellaneous Section of Exhibit 8 of the annual statement. These additional reserves are generally included in the basic reserves where an insurer uses an assumption of continuous payment of premiums.

Although Section 7 of the NAIC Standard Nonforfeiture Law for Life Insurance explicitly permits in calculating nonforfeiture “the assumption that any death benefit is payable at the end of the policy year of death,” there is no similar explicit permission to use such assumption in the NAIC Standard Valuation Law. The annual statement instructions are silent on any adjustment. A long time ago some life insurance policies provided that claims would be paid at the end of the policy year of death. However, for many years many policies have provided that claims will be paid immediately upon satisfactory proof of death. In fact, some states require that interest shall accrue from date of death.

Many insurers have held a reserve for immediate payment of claims either by an adjustment to curtate reserves or by including provision therefore in the basic reserves calculated on a continuous payment of claims basis.

Text

RESERVES FOR IMMEDIATE PAYMENT OF CLAIMS

I. Reserves based on either fully continuous functions or on semi-continuous functions where the death portion reflects approximately one half of one year’s valuation rate of interest are considered as making appropriate provision for immediate payment of claims.

II. Where the basic reserves are based on curtate functions with no provision for immediate payment of claims:

1. For any policy where the contract calls for payment of death claims at the end of the policy year in which death occurs, no adjustment to curtate reserves need be made.

2. For any policy where the contract calls for payment of death claims immediately upon receipt of due proof of death of the insured, the death portion of curtate reserves shall be increased by one third of one year’s valuation rate of interest. (Approximations may be used to split the total curtate reserves into death portion and the pure endowment portion.)

3. For any policy where the contract provides for payment of interest on the death proceeds from date of death to date of payment, the death portion of curtate reserves shall be increased by one half of one year’s valuation rate of interest. (Approximations may be used to split the total curtate into the death portion.)

III. Where an insurer pays interest on death proceeds at an earlier point than as required by contract, it is appropriate that the statutory formula reflect such practice.

IV. Where the actual formula reserves are more conservative than minimum statutory formula reserves, an insurer using curtate functions without provision for immediate payment of claims must demonstrate compliance with minimum statutory formula reserves adjusted in accordance with II above.

V. This guideline shall apply to all new life insurance policies issued beginning January 1 following the date the guideline is adopted.

VI. The guideline shall be applicable to policies issued prior to the date the guideline is adopted with any additional reserve graded in as follows for the years following the date the guideline is adopted:

1. First year 20%
2. Second year 40%
3. Third year 60%
4. Fourth year 80%
5. Fifth and later years 100%

Actuarial Guideline XXXIII

DETERMINING CARVM RESERVES FOR ANNUITY CONTRACTS WITH ELECTIVE BENEFITS

Background Information

1. Introduction

   The Standard Valuation Law (SVL) defines the methods and assumptions which are to be used in determining minimum statutory formula reserves. This law establishes the standards for annuity contracts (which therefore includes any annuity riders or endorsements, and any or all components of which, such as premiums, benefits, contract charges, primary or secondary accumulation values or other components, either relating to annuity benefits provided by the contract or providing separate annuity benefits) and includes the criteria for the interest and mortality assumptions to be used in determining minimum formula contract reserves. The 1980 revisions to the SVL provide for the maximum statutory formula reserve interest rate to be determined through a dynamic formula in order to incorporate changes in economic conditions, liquidity needs and the risks inherent in certain types of contracts.

   The SVL defined methodology for annuity contracts, the commissioners annuity reserve valuation method (CARVM), requires that reserves be the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, provided for by such contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of such contracts, that become payable prior to the end of such respective contract year. Such reserves are established to adequately fund all guaranteed contract obligations, including those obligations which are optional to the contract owner and which may not have yet been elected.

   Industry practices and methods of reserving under CARVM for annuity contracts with multiple benefit streams have not been found to be consistent. These range from a low reserve equal to the cash surrender value to a reserve representing the greatest actuarial present value of the future benefit streams under all potential annuity or other nonforfeiture benefit election options using a conservative rate of interest.

   The major purpose of this Actuarial Guideline is to provide clarification and consistency in applying CARVM to annuities with multiple benefit streams. Some of the areas requiring clarification include: the valuation of annuitization benefits; the application of incidence rates in CARVM; the application of the integrated benefit stream approach in CARVM; how to determine valuation interest rates and mortality tables for multiple benefit streams; and certain practical considerations regarding multiple benefit streams.

2. Annuitization Benefits

   Varying forms of contracts provide that the cash value available to the contract owner is less than the amount available to purchase an annuitization option under the terms of the contract.

   For purposes of this Actuarial Guideline, "accumulation fund" is defined as the policy value which is used to purchase an annuity option under the terms of the contract.

   Frequently there are significant discontinuities in the reserves, both upward and downward, at the time a settlement option is elected, between the reserve held immediately prior to the settlement as compared to the reserve required for the greatest actuarial present value of the annuitization option elected.

One of the most significant reasons for discontinuities in the reserve patterns at the time of election is the difference in the SPIA valuation rate available at the time of election as compared to the valuation rate used based on the date of issue of the original SPDA contract. Another significant reason is the difference between the guaranteed purchase rate contained in the contract and used for reserve development as compared to the rate actually used to purchase the annuity option at the time of election.

3. Application of Incidence Rates in CARVM

Since CARVM was adopted, there has been an increase in the types of benefits offered under certain annuity contracts, including enhanced death benefits, nursing home benefits, and various partial withdrawal provisions. For some of these benefit types, the SVL is not explicit as to whether incidence tables prescribed under the SVL may be used to determine such benefits, versus requiring consideration of all contract owner options available under the contract, and choosing the set of incidence rates which produce the greatest present value.

4. Integrated Benefit Stream Approach

CARVM requires that reserves be based on the greatest present value of all potential future guaranteed benefits. For annuity contracts offering more than one type of potential benefit stream, the SVL is not explicit regarding whether or how blends of more than one type of benefit must be considered under CARVM.

Under the integrated benefit stream approach, any potential benefit stream must be considered, including blends reflecting the interaction of more than one type of benefit. Such potential benefit streams include all types of benefits for which the greatest present value concept is required. Additionally, adjustments must be made to all such potential benefit streams to reflect those benefit types for which prescribed incidence tables are required (e.g., death benefits).

For example, consider an annuity contract offering surrender, annuitization and death benefits. Potential benefit streams that would be considered include surrender streams, annuitization streams, and streams reflecting blends of surrender and annuitization benefits. All such streams would also be adjusted to reflect death benefits and to discount all benefits for survivorship (based on the mortality table prescribed in the SVL).

5. Valuation Interest Rates

For annuities offering more than one type of benefit, the SVL is not explicit as to how valuation interest rates should be determined. The SVL is also not explicit as to how valuation interest rates should be determined for certain types of benefits offered under annuity contracts, such as death and nursing home benefits.

Purpose

The purpose of this Actuarial Guideline is to codify the basic interpretation of CARVM and does not constitute a change of method or basis from any previously used method, by clarifying the assumptions and methodologies which will comply with the intent of the SVL. This Actuarial Guideline shall apply to all annuity contracts subject to CARVM, where any elective benefits (as defined below) are available to the contract owner under the terms of the contract. However, life or health insurance riders attached to an annuity contract, where all components of the rider (e.g., premiums, benefits, contract charges, accumulation values and other components) are separate and distinct from the components of the annuity contract, should be treated as a separate life or health insurance contract not subject to this Actuarial Guideline. While this Actuarial Guideline applies to all annuity contracts subject to CARVM, in the event an actuarial guideline or regulation dealing with reserves is developed for a specific annuity product design, the product specific actuarial guideline or regulation will take precedence over the Actuarial Guideline.

Definitions

1. Elective and Non-Elective Benefits in CARVM

   For purposes of determining reserves under CARVM, each benefit available under the annuity contract must be placed into one of the two categories defined as follows:

   Non-Elective Benefits: Benefits that are payable to contract owners or beneficiaries only after the occurrence of a contingent or scheduled event independent of a contract owner's election of an option specified in the contract, including (but not limited to) death benefits, accidental death benefits, disability benefits, nursing home benefits, and benefits payable under either a deferred or immediate annuity contract (with or without life contingencies), where no benefit options are available under the terms of the contract.

   Elective Benefits: Benefits that do not fall under the non-elective benefits category (i.e., benefit options that may be freely elected under the terms of the contract). Elective benefits include (but are not limited to) full surrenders, partial withdrawals, and full and partial annuitizations.

   In some cases it may not be clear whether some benefits are elective or non-elective. For example, some annuity contracts offer benefits which vary depending upon the age of retirement. In such cases, the Valuation Actuary should use judgment in making this determination, by considering factors such as the degree to which contract owner actions would be influenced by the availability of the benefit.

2. Elective and Non-Elective Incidence Rates in CARVM

   For non-elective benefits, incidence rates from tables prescribed by the SVL should be applied to determine the payment of non-elective benefits and to discount, for survivorship, all benefit payments included in an Integrated Benefit Stream, as defined below. If no incidence tables are prescribed by the SVL, then company or industry experience (with margins for conservatism) may be used, as appropriate. Annuity mortality tables prescribed by the SVL should be used to determine all mortality based benefits under the contract (including, but not limited to, annuitizations and death benefits) and to discount other types of benefit payments for survivorship.

   For elective benefits, incidence rates should not be based on tables reflecting past company experience, industry experience or other expectations. Instead, every potential guaranteed elective benefit stream required to be reserved by CARVM must be considered in the determination of integrated benefit streams as defined below. This is accomplished by considering trial sets of guaranteed elective benefit incidence rates, either through numerical testing or analytical means, to determine which trial set produces the "greatest present value" as described in Text paragraph 1 below. Theoretically, this means that all possible elective benefit incidence rates between 0% and 100% should be considered. However, in practice, such a greatest present value will typically occur by assuming an incidence rate of either 0% or 100%.

3. Integrated Benefit Stream

   An integrated benefit stream is one potential blend of guaranteed elective and non-elective benefits available under the contract, determined as the combination of A and B, where:

   A equals one potential stream of one or more types of guaranteed elective benefits available under the terms of the contract, based upon a chosen set of elective benefit incidence rates; and

   B equals the stream of all guaranteed non-elective benefits provided under the terms of the contract, recognizing the guaranteed elective benefit stream under consideration in A above, and the non-elective incidence rates defined in 2. above.

   Both A and B above should be discounted for survivorship, based on the non-elective incidence rates defined in 2. above.

Text

1. Greatest Present Value

   All guaranteed benefits potentially available under the terms of the contract must be considered in the valuation process and analysis and the ultimate policy reserve held must be sufficient to fund the greatest present value of all potential integrated benefit streams, reflecting all guaranteed elective and non-elective benefits available to the contract owner. Each integrated benefit stream available under the contract must be individually valued and the ultimate reserve established must be the greatest of the present values of these values, based on valuation interest rate(s) as defined in Section 3 below.

2. Examples of Integrated Benefit Streams That Must Be Considered

   A. Cash Value Streams

      One mandatory set of integrated benefit streams for a deferred annuity with cash settlement values which must always be considered is any possible blend of future guaranteed partial withdrawals and full surrenders available under the contract, as specified in the SVL, accumulated at the guaranteed credited interest rate(s) and discounted at the valuation rate(s) of interest defined in section 3 below, with appropriate recognition of all guaranteed non-elective benefits available under the contract.

   B. Annuitization Streams

      A second mandatory set of integrated benefit streams that must be considered is any possible blend of future guaranteed full or partial annuitization elections, as specified in the SVL, available to the contract owner at each election date required by CARVM, with appropriate recognition of all guaranteed non-elective benefits available under the terms of the contract. In determining the integrated benefit streams to value the annuitization option, the guaranteed purchase rates contained in the contract, as well as any other contract provisions, excluding any current purchase rates which may be applicable, are applied to the accumulation fund.

C. Other Elective Benefit Streams

In addition to the cash value and annuitization streams described above, all other possible guaranteed elective benefits available under the contract, including blends of more than one type of guaranteed elective benefit, must be considered in a manner consistent with the mandatory cash value and annuitization streams, with appropriate recognition of all guaranteed non-elective benefits available under the contract.

3. Determination of Valuation Interest Rates

Section 4b of the SVL determines valuation rates for an annuity contract based on the following Parameters:

A. The basis of valuation (issue year or change in fund);

B. Whether or not the annuity provides for cash settlement options;

C. Whether interest is guaranteed on premiums received more than 12 months following issue (or the valuation date for change in fund basis);

D. The guarantee duration; and

E. The Plan Type.

Parameters A, B and C above should be determined at a contract level. Additional requirements regarding the change in fund basis of valuation are set forth in Section 5 below. Parameters D and E should be determined at a benefit level, as set forth in Section 4 below.

Under a contract level determination, parameters are set based on the characteristics of the contract as a whole. Under a benefit level determination, parameters are set based on the characteristics of each benefit, resulting in potentially different valuation rates for each benefit type comprising the integrated benefit stream.

4. Determination of Guarantee Duration and Plan Type

Guarantee duration and Plan Type are based upon the specific characteristics of each individual benefit type that comprise the integrated benefit stream, as follows:

A. For portions of the integrated benefit stream attributable to full surrender and partial withdrawal benefits, the Plan Type should be based upon the withdrawal characteristics of the benefit, as stated in the contract. This may result in a Plan Type A, B or C under the 1980 amendments of the SVL. The guarantee duration is the number of years for which interest rates are guaranteed in excess of the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty (20) years.

B. For portions of the integrated benefit stream attributable to full and partial annuitization benefits, the determination of the valuation interest rate involves the use of the appropriate Plan Type and weighting factor as determined by the SVL, with the guarantee duration as the number of years from the original date of issue or date of purchase, to the date the annuitization is assumed to commence. If the underlying assumption is that the contract owner may withdraw funds only as an immediate life annuity or as installments over 5 years or more, this will generally result in a Plan Type A, under the 1980 amendments of the SVL, with the valuation interest rate changing as different assumed annuitization dates determine guarantee durations which will fall into different guarantee duration bands under the SVL. An assumed annuitization option which has a non-life contingent payout period of less than five (5) years shall be considered a Plan Type C, with the valuation interest rate changing as different assumed annuitization dates determine guarantee durations which will fall into different guarantee duration bands under the SVL.

C. For portions of the integrated benefit stream attributable to non-elective benefits, since the underlying assumption is that no withdrawal is permitted, Plan Type A should generally be used, with a guarantee duration determined as the number of years from issue or purchase to the date non-elective benefits may first be paid. In most cases, the guarantee duration should be less than five years, since non-elective benefit coverage usually begins immediately after issue, with benefits payable commencing in the first contract year.

For benefit types incorporating multiple payments, paragraphs 4(A), 4(B), and 4(C) above should be applied to each separate payment according to the withdrawal, annuitization, or non-elective benefit characteristics of the contract and payment provisions at the time each payment is to be made. If a portion of the integrated benefit stream is part of an immediate life annuity or a series of installments over five (5) years or more, but can be changed directly or indirectly by exercise of contract owner withdrawal options, then it would be inappropriate to apply paragraph 4(B) to that portion of the integrated benefit stream, since the contractholder may withdraw funds other than as a life annuity or in installments of five (5) years or more.

For example, a Guaranteed Lifetime Income Benefit (GLIB) is a guarantee to the owner of a fixed deferred annuity contract, whether traditional or indexed to an external referent such as an equity index, that the owner can have a defined income for life in an amount determined by formula, while the owner retains traditional rights (such as withdrawal) to the other values provided by the underlying deferred annuity and while such values continue to exist. Income benefits are typically deducted from one or more of the annuity's defined values to the extent such values remain positive. Once the GLIB is elected, the contract owner may have rights to stop and restart the income benefit and may also request full or partial surrender of any remaining annuity value, though doing so may negatively impact or eliminate subsequent guaranteed income benefits. Thus, applying 4(A) and 4(B) above, the GLIB benefit stream is seen to be composed of two portions to determine the Plan Type and guarantee duration, as follows:

> The first portion consists of the series of defined payments to the extent that the payments, or any fraction thereof, are withdrawals that reduce or deplete the annuity's defined values. Applying paragraph 4(A) to this portion would result in Plan Type A, Plan Type B, or Plan Type C, by following the definitions of such contained within the Standard Valuation Law and reflecting the specific contract provisions, especially with regard to withdrawal. Paragraph 4(A) would also apply to any residual withdrawals that can be made following election of the GLIB benefit.
>
> The second portion is a life annuity without option to take or receive additional amounts under the contract, and consists of the payments not included in the above portion. Applying paragraph 4(B), Plan Type A would generally apply to this segment with the guarantee duration determined using the period from contract issue to commencement of payments in this second portion.

5. Change in Fund Basis

As indicated by section 4b.C.(1)(c)(vi) of the SVL, a company may elect to value annuity contracts with cash settlement options on either an issue year basis or on a change in fund basis. Annuity contracts with no cash settlement options must be valued on an issue year basis. The issue year basis or change in fund basis should be determined for the contract as a whole, and thus must be consistently applied to all portions of all integrated benefit streams available under the annuity contract. The election of issue year or change in fund basis must be made at the issuance of the contract and must not change during the term of the contract without the prior written approval of the commissioner.

6. Purchase Rates

Contracts may provide, as contractual guarantees, the use of preferential purchase rates to those listed in the contract. As an example, a contract may provide that the company will offer, at the time of annuitization, the rates offered to new purchasers of immediate annuities if such rates will provide a higher annuity benefit than would result from the contractually guaranteed rates provided in the contract. This creates a contract guarantee which must be valued under CARVM. Ignoring this benefit in determining reserves will produce reserves less than the statutory formula reserves required under CARVM. Valuation of this benefit, however, is complicated by the fact that the company does not currently know what the exact rate will be at the time of the settlement election. In order to determine conservative statutory formula reserves, if use of future unknown rates are guaranteed, the company shall establish reserves not less than the contract's accumulation fund value, on the valuation date, reduced by an "expense allowance" not to exceed 7% of such fund. This section does not require the calculation of a reserve for the annuitization of business based upon current purchase rates pursuant to the "annuitization streams" described in Paragraph 2.B. above.

Likewise for contracts which provide for additional amounts during the payout period over those guaranteed at the commencement of the annuity payments, the reserve during the deferred period shall not be less than the contract's accumulation fund reduced by an expense allowance not to exceed 7% of such fund.

7. Practical Considerations

The major purpose of this Actuarial Guideline is to provide clarification and consistency in applying CARVM to annuities with multiple benefit streams. However, in practice there may be other acceptable methods of applying CARVM which are substantially consistent with the methods described in this Actuarial Guideline. Such methods may also be used, with prior regulatory approval.

Additionally, in applying this Actuarial Guideline there may theoretically be an infinite number of contract owner options that are possible under the contract. However, it may not be practical, possible or even appropriate to test every conceivable combination of potential integrated benefit streams theoretically available under the contract. This Actuarial Guideline requires that the actuary consider, not necessarily test, all potential integrated benefit streams to determine to what extent each contract owner option has a material impact on the reserve**.** In practice, the actuary may be able to eliminate some potential integrated benefit streams by analytical methods. The actuary may also be able to demonstrate the reserve adequacy of certain approximations. For example, in certain situations it may be shown that a CARVM reserve ignoring non-elective benefits, plus an "add-on" reserve for non-elective benefits, is a reasonable approximation for the theoretically correct CARVM reserve.

Effective Date

This guideline shall be effective on December 31, 1998, affecting all contracts issued on or after January 1, 1981. A company may request a grade-in period for contracts issued prior to December 31, 1998 from the domiciliary commissioner upon satisfactory demonstration that the method and level of current reserves held for such contracts are adequate in the aggregate. This phase-in will require establishment of no less than 33 1/3% of the additional reserves resulting from the application of this guideline on December 31, 1998, no less than 66 2/3% on December 31, 1999, and 100% by December 31, 2000.

Actuarial Guideline XXXIV

VARIABLE ANNUITY MINIMUM GUARANTEED DEATH BENEFIT RESERVES

This Actuarial Guideline was repealed effective Dec. 30, 2009.

I. Background

The purpose of this Actuarial Guideline is to interpret the standards for the valuation of reserves for Minimum Guaranteed Death Benefits (MGDBs) included in variable annuity contracts. This Guideline codifies the basic interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the assumptions and methodologies which will comply with the intent of the Standard Valuation Law (SVL).

For many years the industry has struggled with the issue of applying a uniform reserve standard to variable annuities in general, and to MGDBs in particular. Three regulatory sources are often looked to for guidance. First, the SVL requires that CARVM be based on the greatest present value of future guaranteed benefits. Second, Actuarial Guideline XXXIII requires that “each benefit stream available under the contract must be individually valued and the ultimate reserve established must be the greatest of the present values of these values.” Third, the NAIC model Variable Annuity Regulation (VAR) states that the “reserve liability for variable annuities shall be established pursuant to the requirements of the Standard Valuation Law in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.”

This Guideline interprets the standards for applying CARVM to MGDBs in variable annuity contracts, employing methods that recognize the variable nature of the benefits. It clarifies standards for developing integrated benefit streams, where MGDBs are integrated with other benefits such as surrenders and annuitizations. It also clarifies standards for determining the level of reserve to be held in the General Account.

This Guideline requires that MGDBs be projected by assuming an immediate drop in the values of the assets supporting the variable annuity contract, followed by a subsequent recovery at a net assumed return until the maturity of the contract. The projection should reflect the contractual definition of the MGDB and any contractual limitations, such as provisions that terminate the MGDB at a given age and those that restrict the MGDB to a given multiple of contract contributions. The immediate drops and assumed returns used in the projection vary by five asset classes in order to reflect the risk/return differentials inherent in each class.

This Guideline also interprets the mortality standards to be applied to projected MGDBs in the reserve calculation. As part of the study of mortality experience under variable annuities during the deferral period, the Society of Actuaries’ Task Force on Mortality Guarantees in Variable Products will be validating the appropriateness of this mortality standard and, if necessary, recommend an alternative course of action.

In addition, this Guideline clarifies standards for reserve methods for reinsurance transactions involving MGDBs. Unlike the annuity writer, the reinsurer may not be able to integrate the MGDB with other base contract benefits, since the reinsurer does not normally reinsure any aspects of the variable annuity other than the death benefit. The reinsurer and the direct writer do face identical fund performance risks, so it is appropriate that the reinsurer’s reserve method incorporate the same immediate drops and recoveries as the direct writer. Similarly, the reinsurer’s reserve method should include a future projection of MGDB levels, to appropriately assess future death benefit obligations. Furthermore, just as the direct writer’s reserve calculation should recognize the underlying asset charges, the reinsurer's reserve calculation should recognize reinsurance premiums.

Finally, there are some companies that have not applied CARVM in calculating variable annuity reserves. For example, some companies have held a reserve equal to the account value. Such companies may be able to demonstrate that their reserves meet or exceed the levels set by applying this Guideline, and that no additional MGDB reserves are required. Alternatively, other companies which have held a reserve equal to the cash surrender value may need to hold an additional MGDB reserve such that their total reserve is at least equal to the levels set by applying this Guideline. In these situations, the company must determine an appropriate allocation of the total reported reserve between the General and Separate Accounts.

II. Scope

This Guideline applies to variable annuity contracts which provide a Minimum Guaranteed Death Benefit that has the potential to exceed the account value, whether or not the MGDB exceeds the account value on the valuation date. This Guideline does not apply to group variable annuity contracts which are not subject to CARVM. Currently offered MGDBs falling under the scope of this guideline include, but are not limited to, provisions commonly referred to as Return of Premium, Roll-ups, Ratchets and Resets. However, the actuary should also exercise judgment in determining the applicability of this Guideline. For example, it may be inappropriate to utilize this Guideline for a contract with an MGDB where the associated net amount at risk (NAR) decreases when the underlying funds experience a drop in market value or a period of underperformance.

III. Definitions

"Reduced Account Value": The account value on the valuation date, reduced by the sum of the immediate drops for each asset class, as defined in Section IV.D.

"Projected Reduced Account Value": The Reduced Account Value, projected into the future using the Net Assumed Returns for each asset class, as defined in Section IV.D. The determination of the Projected Reduced Account Value need not reflect future partial withdrawals.

"Projected Net Amount at Risk": The projected death benefit resulting from the MGDB and the Projected Reduced Account Value, less the Projected Reduced Account Value.

"Projected Unreduced Account Value": The projected account value, without reduction for an immediate drop, projected using a return based on the valuation rate less appropriate asset based charges.

"Base Benefit Streams": The streams of projected benefits reflecting the Projected Unreduced Account Values and ignoring MGDBs.

"Integrated Benefit Stream": Streams which reflect the Base Benefit Streams discounted for survivorship and the MGDBs discounted for mortality.

"Calculation Period": The periods for which the Integrated Benefit Streams are projected in the Integrated Reserve calculation, consisting of successive periods, beginning with the remainder of the contract year following the valuation date and ending with the period from the valuation date to the maturity date of the contract.

IV. Text

A. General Methodology

The valuation of reserves for MGDBs involves two CARVM reserve calculations: a Separate Account Reserve and an Integrated Reserve. The Integrated Reserve represents the total reserve held by the company in support of the entire variable annuity contract. The additional reserve held for the MGDB, which equals the excess of the Integrated Reserve over the Separate Account Reserve, but not less than zero, is held in the General Account.

B. Separate Account Reserve Calculation

The Separate Account Reserve represents the reserve that would be held in the absence of the MGDB.

C. Integrated Reserve Calculation

The Integrated Reserve is a CARVM reserve determined using all contract benefits, including the MGDB. It equals the greatest present value, as specified in the SVL and the VAR, of future Integrated Benefit Streams available under the terms of the contract.

The integration of the MGDB with other contract benefits in the determination of future Integrated Benefit Streams is accomplished by combining three separate benefit streams A, B and C described below. These future Integrated Benefit Streams are determined over all Calculation Periods, and are discounted at the valuation interest rate (discussed further in Section IV.E.).

- A is the stream of Projected Net Amounts at Risk paid to those expected to die during the Calculation Period, based on valuation mortality (discussed further in Section IV.E.).

- B is the benefit stream of Projected Unreduced Account Values paid to those expected to die during the Calculation Period, based on valuation mortality.

- C is the Base Benefit Streams provided during the Calculation Period, and is discounted for survivorship based on valuation mortality.

The greatest present value occurs in the Calculation Period in which the present value of the future Integrated Benefit Streams is maximized (as opposed to the present values of A, B and C being individually maximized).

The Integrated Reserve is also subject to the asset adequacy analysis requirement in subsection G.

D. Immediate Drops and Assumed Returns

The Projected Net Amount at Risk described in Section IV.C. is determined by assuming an immediate drop in the supporting asset values, followed by a subsequent recovery based upon a net assumed return.

For example, the Reduced Account Value after the immediate drop would equal the account value on the valuation date, multiplied by (1 - Immediate Drop Percentage). The Projected Reduced Account Value “n” years later would equal the Reduced Account Value multiplied by (1 + Net Assumed Return)^n. The projection should continue until the maturity of the contract.

To determine the immediate drop and net assumed return, the Separate Account funds supporting the variable annuity contracts on the valuation date should be allocated to the five asset classes as follows:

- Equity Class
- Bond Class
- Balanced Class
- Money Market Class
- Specialty Class

Descriptions of these classes are contained in Appendix III. Since these descriptions are broad in nature, the ultimate determination of the appropriate fund classifications, for purposes of this Guideline, is the responsibility of the appointed actuary.

The Immediate Drop Percentages and Gross Assumed Returns for each asset class are shown in Appendix I. The Gross Assumed Returns shown do not include deductions for asset based charges. Each company should deduct its own asset based charges from those shown to obtain the Net Assumed Returns to be used in determining the Projected Reduced Account Values.

Many variable annuity contracts provide for various types of Fixed Account options, in which underlying guarantees, consistent with General Account annuities, are provided. The fixed account should be projected as a separate asset class, with an Immediate Drop Percentage equal to zero and a Net Assumed Return equal to the guaranteed rate(s).

The Immediate Drop for each contract is determined by taking the sum of the immediate drops for each asset class. The Net Assumed Return for each contract is determined by taking the weighted average of the Net Assumed Returns for each asset class, based upon the allocation of the total account value between the asset classes.

E. Valuation Mortality and Interest

The mortality basis used to discount projected death benefits is the 1994 Group Annuity Mortality Basic Table (1994 GAMB), increased by 10% for margins and contingencies, without projection. This table, referred to as the 1994 Variable Annuity MGDB Mortality Table, is shown in Appendix II.

The valuation interest rates used for both the Separate Account Reserve and the Integrated Reserve should be annuity valuation interest rates, consistent with those required in the SVL and the VAR.

F. Reinsurance Reserve

1. Reinsurance Ceded

For contracts which reinsure some or all of the MGDB, an Integrated Reserve net of reinsurance must be calculated. This reserve should be calculated as outlined in Section IV.C., with the Integrated Benefit Streams being modified to reflect both the payment of future reinsurance premiums and the recovery of future reinsured death benefits. This is accomplished by treating the future reinsurance premium as an additional benefit and reducing the MGDB in the benefit stream of the Integrated Reserve calculation by future reinsurance recoveries.

Similar to the formula demonstrated in Section IV.C., the determination of future Integrated Benefit Streams including the impact of reinsurance is accomplished by combining four separate benefit streams: A^r, B^r, C and D, described below. These future Integrated Benefit Streams are determined over all Calculation Periods, and are discounted at the valuation interest rate.

- A^r is the stream of Projected Net Amounts at Risk paid to those expected to die during the Calculation Period, based on valuation mortality. It is equal to benefit stream A defined in Section IV.C., reduced by future Projected Net Amounts at Risk reinsurance recoveries.

- B^r is the benefit stream of Projected Unreduced Account Values paid to those expected to die during the Calculation Period, based on valuation mortality. It is equal to benefit stream B defined in Section IV.C., reduced by future Projected Unreduced Account Values reinsurance recoveries.

- C is as defined in Section IV.C.

- D is the stream of future projected reinsurance gross premiums during the Calculation Period, determined using Projected Reduced Account Values and discounted for survivorship, using valuation mortality.

The greatest present value occurs in the Calculation Period in which the present value of the future Integrated Benefit Streams, net of reinsurance, is maximized. This Calculation Period does not necessarily have to be the same as the Calculation Period which maximizes the Integrated Benefit Streams before consideration of reinsurance.

The reinsurance reserve credit the ceding company is entitled to is equal to the difference between the Integrated Reserve before any consideration of reinsurance and the Integrated Reserve net of reinsurance. The Integrated Reserve net of reinsurance may be greater than the Integrated Reserve before any consideration of reinsurance (i.e., the reserve credit may be negative).

2. Reinsurance Assumed

The reserve for reinsurers assuming MGDB risk is the maximum difference, at each Calculation Period, between the present value of the reinsured death benefits and the present value of reinsurance premiums.

Referring to the formulas above, the reinsured death benefit is the difference between the combination of benefit streams A^r and B^r, and the combination of benefit streams A and B, while benefit stream D represents the stream of reinsurance premiums defined above (i.e., $A-A^r+B-B^r-D$). Each of these benefit streams is discounted using valuation mortality and interest assumptions consistent with those used by the ceding company.

The greatest present value occurs in the Calculation Period in which the difference between the present value of the reinsured death benefits and the present value of reinsurance premiums is maximized. This Calculation Period does not necessarily have to be the same as the Calculation Period which maximizes the Integrated Reserve, either before or after consideration of reinsurance.

G. Asset Adequacy Analysis Requirement

The Projected Reduced Account Value, and consequently, the Projected Net Amount at Risk need not reflect future partial withdrawals. There is also the possibility that other risks may not be reflected in the reserve calculations described above. Therefore, the appointed actuary shall perform a standalone asset adequacy analysis of the total reserve held for all of the contracts falling within the scope of this

Guideline. Such analysis shall be performed reflecting the assets supporting the total reserve held for the contracts and all benefits and guarantees associated with the variable annuity contracts, as well as all expenses and charges associated with the variable annuity contracts. The analysis shall be performed on an aggregate basis, consistent with the requirements of Section 6 of the NAIC Model Actuarial Opinion and Memorandum Regulation, including the requirement that the analysis conform to the Actuarial Standards of Practice as promulgated from time to time by the Actuarial Standards Board. However, no separate actuarial opinion is required by this Guideline. If such analysis reveals a reserve shortfall, the total reserves held for the contracts must be increased accordingly.

Where Minimum Guaranteed Death Benefits are reinsured, the asset adequacy analysis may reflect the reinsurance. However, if the inclusion of reinsurance would increase the Integrated Reserve, then reinsurance must be reflected in the asset adequacy analysis.

H. Effective Date

This Guideline affects all contracts issued on or after January 1, 1981. Where the application of this Guideline produces higher reserves than the company had otherwise established by their previously used interpretation, such company must comply with this Guideline effective December 31, 1998. However, such company may request a grade in period, of not to exceed three (3) years, from the domiciliary Commissioner upon satisfactory demonstration of the previous interpretation and that such delay of implementation will not cause a hazardous financial condition or potential harm to its policyholders.

APPENDIX I

Immediate Drop Percentages and Gross Assumed Returns

ASSET CLASS	IMMEDIATE DROP PERCENTAGE	GROSS ASSUMED RETURN
Equity	14.00%	14.00%
Bond	6.50%	9.50%
Balanced	9.00%	11.50%
Money Market	2.50%	6.50%
Specialty	9.00%	9.50%

APPENDIX III

Description of Asset Classes

Equity Class

Although equity funds have a broad range of investment objectives, all invest primarily in publicly traded securities, such as common stocks, preferred stocks and convertible securities. The choice of securities purchased by the portfolio manager will be guided by the fund objective (such as Growth of Capital or Income, or Approximating an Index), the capitalization of the companies issuing the stock (e.g., small, medium or large) or the target region (domestic U.S., Pacific Rim, Latin America, etc.). Although some equity funds maintain a general strategy, allowing a portfolio manager great latitude in purchase, other equity funds have become quite specific in their investment objectives. All equity funds, however are somewhere on the high end of the risk/return scale.

Bond Class

Investment objective is usually to provide a high level of income consistent with moderate fluctuations in principal value. The objective is accomplished through investments in fixed income securities, such as U.S. government securities, foreign government securities, or publicly traded debt securities issued by U.S. or foreign corporations. Since most bonds are assigned ratings by private Rating Agencies, the specific objectives of the funds are often described by the funds' tolerance for instruments at the various rating levels. Funds that focus predominantly on safety will tend to use more U.S. Government securities, while a fund that focuses predominantly on income may tend to use more lower investment grade instruments. All bond funds, however, are somewhere in the midrange of the risk/return scale.

Balanced Class

Investment objective is to seek a maximum total return over time, consistent with an emphasis on both capital appreciation and income. Typically, these funds will contain 50%-75% stocks, with the remaining assets invested in bonds and cash equivalents. However, balanced funds grant the portfolio manager the latitude to shift the asset allocation depending on a current analysis of market trends. Beside the term "Balanced," common terms for this fund type include "Total Return," "Adviser's" and "Asset Allocation."

Money Market Class

Investment objective is to achieve maximum current income consistent with liquidity and preservation of capital. These funds typically aim to maintain a stable net asset value of $1 per share. The assets contained in this fund typically have a stated maturity of less than thirteen months with an average maturity of less than 90 days. Common assets held include U.S. Government obligations, certificates of deposit, time deposits and commercial paper.

Specialty Class

Investment objective is to seek a maximum total return with an emphasis on long term capital appreciation, and sometimes current income. Typically, this fund type will invest most of its assets in common stocks or debt instruments of companies that operate within a specified industry. Commonly, specialty funds invest in utilities, natural resources and real estate, although there is a broad range of possible industries to choose from. The key difference between a specialty fund and an equity or bond fund is the targeted approach to investing. In a specialty fund, no effort is made to diversify outside the target industry.

Actuarial Guideline XXXV

THE APPLICATION OF THE COMMISSIONERS ANNUITY RESERVE METHOD TO EQUITY INDEXED ANNUITIES

Background

The purpose of this Actuarial Guideline is to interpret the standards for the valuation of reserves for equity indexed annuities. This Guideline codifies the interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the computational methodologies which will comply with the intent of the Standard Valuation Law (SVL).

Equity indexed deferred annuity products provide policyholders with a minimum guaranteed interest accumulation rate on a portion of all premium payments and a portion of the growth, if any, of an equity based index such as the S&P 500. While there is no “typical” equity indexed product, there are design features that are common to most products. Some of these features are a participation rate guaranteed for one or more years, a cap on the portion of the index growth that is credited to policyholders, and a policy term which defines a time period for which current guarantees are applicable.

Equity indexed immediate annuity products provide policyholders with a minimum guaranteed annuitization rate and an opportunity to receive larger periodic payments based on the growth, if any, in an equity index. The product design may include features such as a participation rate, cap or term.

While contract parameters such as participation rate and cap are guaranteed for a period of time, growth of the underlying index is not. Index growth may be positive or negative. This combination of guaranteed parameters and unknown equity index growth makes the application of CARVM to these products problematic.

CARVM defines minimum statutory reserves as “the greatest of the respective excesses of the present value, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, … over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of such contract, that become payable prior to the end of such respective contract year. The future guaranteed benefits shall be determined by using the mortality table, if any, and the interest rate, or rates, specified in such contracts for determining guaranteed benefits.”

In order that all insurers issuing equity indexed annuity products establish reserves for statutory reporting purposes that are consistent with CARVM minimum statutory formula reserves requirements, this actuarial guideline identifies a computational method that is deemed to be consistent with CARVM in situations when specific operational criteria called “Hedged as Required” criteria are met. In addition, two computational methods are defined that are deemed to be consistent with CARVM in the event the “Hedged as Required” criteria are not met.

Two forms of the “Hedged as Required” criteria are provided. The “basic” criteria are applicable when an insurer uses long dated options to hedge the equity risk embedded in an equity indexed annuity. The second set of criteria is applicable when an insurer uses an option replication strategy.

Scope

This Actuarial Guideline applies to all equity indexed annuity contracts, regardless of the date of issue, that are subject to CARVM.

Computational Methods

Computational methods deemed to be consistent with CARVM can be classified into two groups, Type 1 methods and Type 2 methods. The following computational method is considered a Type 1 method: the Enhanced Discounted Intrinsic Method (EDIM). Type 1 computational methods are deemed to be consistent with CARVM if the applicable "Hedged as Required" are met. The following methods are considered Type 2 methods: the Commissioners Annuity Reserve Method with Updated Market Values (CARVM with UMV) and the Market Value Reserve Method (MVRM). Also, an adaptation of the MVRM, known as the Black-Scholes Projection Method (BSPM), is recognized. For a complete description of these methods, please consult Attachment 1.

General Requirements on the Use of Certain Computational Methods

The MVRM and EDIM computational methods are both based on a future value. In the case of MVRM, a projected index is determined. The projected index is then used to determine end of term and interim benefit amounts. CARVM is applied to these benefit amounts. In the case of EDIM, the end of term guaranteed value (a future value) is used to determine an interest rate for calculating terminal reserves for the guaranteed benefits after the initial terminal reserve. Determination of the "term" is an essential component of both computational methods.

The EDIM, MVRM and the BSPM adaptation of the MVRM computational methods are considered acceptable interpretations of CARVM under the following conditions:

1. The policy form design features a single dominant benefit which is the most likely benefit to be provided under the policy form with the determination of the single dominant benefit based on a consideration of product features such as the pattern of guaranteed participation rates, surrender charges, vesting rates, spread deductions, and marketing/advertising material.

2. The point in time associated with the single dominant benefit most likely to be provided under the contract is used as the terminal point of the current term for purposes of applying the computational method and complying with the "Hedged as Required" criteria, if applicable.

3. The appointed actuary has demonstrated to the satisfaction of the regulatory officials in each state in which the insurer is required to submit a statutory financial statement, prior to the use of the MVRM or EDIM computational methods, that the requirements above have been met.

Variations from the MVRM and EDIM as described in Attachment 1, are not acceptable interpretations of CARVM. The BSPM is considered an acceptable adaptation of the MVRM.

Type 1 Methods

A Type 1 computational method is deemed to be consistent with CARVM if an insurer using the method complies with the applicable "Hedged as Required" criteria (Attachment 2) and provides a certification as to compliance with the criteria. The certification must be signed by the appointed actuary. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer does business.

For purposes of determining compliance with the "equivalence of characteristics" requirement in the "Hedged as Required" criteria, the current term of an equity indexed deferred annuity policy will be determined based on the requirements in the section captioned "General Requirements on Use of Certain Computational Methods." For purposes of applying a Type 1 computational method, the time horizon for present value calculations should be based on the current term of the policy based on the requirements in the section captioned "General Requirements on Use of Certain Computational Methods."

The Enhanced Discounted Intrinsic Method (EDIM) requires an initial reserve amount that is determined by methods that are not specifically included in the EDIM. For purposes of compliance with statutory minimum formula reserve requirements, the initial reserve under EDIM must be set at least equal to the initial reserve produced by either CARVM with UMV, or the MVRM with assumptions used to compute any necessary option market values reasonable as of the date of issue of the policy. The insurer must provide a certification (Attachment 3) as to the reasonableness of the assumptions.

Type 2 Methods

The use of Type 2 method is not conditioned upon the requirement to meet the "Hedged as Required" criteria. However, an insurer using a Type 2 method must provide a certification (Attachment 4) signed by the appointed actuary with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer does business. This certification deals with the assumptions underlying the option market values included in the calculation of reserves using a Type 2 method and the consistency in assumptions between these option market values and the statement value of any options owned by the insurer to support the equity indexed annuity business being valued.

For purposes of applying the MVRM and the BSPM recognized adaptation computational methods, the time horizon for present value calculations should be based on the requirements in the section captioned "General Requirements on Use of Certain Computational Methods."

Required Change in Method

In the event an insurer that is using a Type 1 computational method for a block of business fails to meet the applicable "Hedged as Required" criteria, the required actuarial certification must disclose this fact. If the reason for failing the "Hedged as Required" criteria is not corrected within one quarterly financial reporting of the initial disclosure of the failure in the actuarial certification, the insurer must use a Type 2 computational method for determining minimum statutory formula reserves for this block of business.

If at a later date, the insurer can demonstrate to the satisfaction of its domiciliary commissioner that it is meeting the applicable "Hedged as Required" criteria, the insurer may, with the approval of the domiciliary commissioner, resume using a Type 1 computational method. In addition, the insurer must notify the appropriate regulatory official in each state in which the insurer does business subject to the change in computational method.

Optional Change in Method

An insurer using either a Type 1 or Type 2 computational method for a block of business, may with the approval of its domiciliary commissioner and after notifying the appropriate regulatory official in all the other states in which the insurer writes this block of business, use a computational method of the other type. If the change in computational methods involves a change from a Type 2 computational method to a Type 1 computational method, the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the applicable "Hedged as Required" criteria.

Plan Type

The use of either a Type 1 computational method or a Type 2 computational method requires a determination of Plan Type for purposes of determining the maximum valuation interest rate. Design features unique to equity indexed annuities, such as an equity enhanced surrender values, vesting schedules, or participation rate, should not used to determine the Plan Type of a policy form. Only those design features specifically identified in Section 4b. Paragraph C of the NAIC Model SVL may be used to assign a Plan Type to a policy form.

The definition of Plan Type A and Plan Type B in the NAIC Model SVL includes the phrase “with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company...” The reference to “change in ... asset values” does not include changes in policy values due to changes in the equity index underlying the policy form.

Other Regulatory Requirements

The guidance provided in this Actuarial Guideline concerning statutory minimum formula reserves for equity indexed annuity products supersedes the valuation guidance in Sections 5 and 6 of the NAIC Interest-Indexed Annuity Contracts Model Regulation.

Asset Adequacy Testing of Reserves

To the extent required by law, regulation, or regulatory requirements, reserves established for equity indexed annuity policies must be tested for adequacy using appropriate methods and assumptions.

ATTACHMENT 1
Description of Computational Methods

CARVM-UMV

Step 1: For each duration and each benefit at which an index-based benefit is available, determine the market value of the appropriate call option. The appropriate call option is one that exactly hedges the floor of the benefit at that point in time. This means that the payoff of the call option should exactly equal the difference between the specific benefit available at that point in time (reflecting all relevant contract features) and the guaranteed floor of that benefit. The market value should be determined using an appropriate option pricing technique, such as Black-Scholes or a stochastic scenario method.

Step 2: The market value of all of the call options are projected forward at the appropriate valuation interest rate to the point in time at which the call option would expire. The valuation interest rate should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B.

Step 3: The future guaranteed benefits for each benefit at each time point are determined by adding the guaranteed floors of the benefit to the amounts determined in Step 2.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

MVRM

Step 1: Calculate the projected index value at the end of the “term” which would produce a benefit at the end of the “term” equal to the sum of (1) the contract guarantee at that time, and (2) the current market value of the call option(s) which would fully hedge the index-based benefit, accumulated at the appropriate valuation interest rate. This calculation should be performed assuming equal annual percentage increases in the index. The call options used are those with maturity dates coterminous with the setting of participation rates, spread, or any other method of determining index-based benefits. The valuation interest rate used to accumulate the call options should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B. Note that the “term” referred to above should be consistent with the “term” described in this Actuarial Guideline.

Step 2: From the current level of the index and the projected level of the index at the end of the term, calculate an implied compound constant growth rate of the index from the valuation date to the end of the term. Use this implied growth rate to project the level of the index at intermediate anniversaries.

Step 3: All annuity benefits can now be determined from the index levels.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

MVRM Using Black-Scholes Projection Method

This is an adaptation of the basic MVRM approach to accommodate products for which the participation rate, spread, or any other benefit determination method is redetermined during the term (particularly annually).

Step 1: Calculate the cost of a full hedging call option as a percentage of the account value for the period that the benefit determination is guaranteed, accumulate the percentage to the end of that period at the risk-free interest rate, and use the accumulated percentage cost as the projected growth rate of the account value during the period. Perform the same type of calculation for each successive period within the term, giving recognition to the benefit guarantees, forward interest rates, forward index volatility, and index dividend levels.

Step 2: Determine the index level which would provide the projected account level on each anniversary on the basis of the participation rate, spread, or other benefit determination method used.

Step 3: All annuity benefits can now be determined from the index levels.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

EDIM

Step 1: The Fixed Component at issue is the formula reserve produced by either CARVM-UMV or MVRM. The Fixed Component at the end of the term is the floor of the benefit actually being hedged.

Step 2: The intermediate values of the Fixed Component are found by solving for an interest rate that would accumulate the initial value to the ending value. For example, assume you purchase options assuming that 90% of policyholders will surrender at maturity, and that 10% of policyholders will annuitize at maturity. The Fixed Component is the sum of (1) 90% of the Fixed Component that grows to the floor of the surrender benefit; and (2) 10% of the Fixed Component that grows to the floor of the annuitization benefit.

Step 3: The Equity Component is equal to the discounted intrinsic value of the options. The discounted intrinsic value of the options is found by taking the intrinsic value at the valuation date, and discounting at the valuation rate for the number of years from the valuation date to the end of the term. The valuation interest rate used to discount the intrinsic value of the call options should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B.

Step 4: The reserve is the sum of a Fixed Component and an Equity Component.

ATTACHMENT 2
Hedged as Required Criteria

In order to use a Type 1 computational method, the appointed actuary needs to certify quarterly that it meets either the “Basic” or “Option Replication” criteria.

Basic

1. Required equivalence of characteristics between the option contracts held and the options imbedded in the products with respect to specific contract features such as: Index, averaging features, option type, strike price, term, etc.

2. The amount of hedge purchased, at or near the contract issuance, must be greater than or equal to a Specified Percentage of the product’s account value, at contract issuance. The Specified Percentage varies by the length of the option guarantee (some annual ratchet products may have a term of several years, but the participation rates are only guaranteed for one year, so the “term” for this purpose is 1 year), and allows the company to assume no more than 3% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. For example, for a five-year point-to-point product, the Specified Percentage would be: SP% = (1 - .03) ^ 5 = 86%.

3. The Company must have a specific plan for hedging risks associated with interim death benefits, early surrenders, etc.

4. The Company must have a system in place that is used to monitor the effectiveness of the company’s hedging strategy.

5. The Company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge.

Option Replication

1. Required equivalence of characteristics between the target of an option replication strategy employed, and the options imbedded in the liabilities with respect to specific contract features such as: index, averaging features, option type, strike price, term, etc.

2. At the end of each quarter, the notional amount of the target of the option replication strategy must be greater than or equal to the sum of the Specified Percentages of each contract's account value. The Specified Percentage varies by the length of the remaining option guarantee (some annual ratchet products may have a term of several years, but the participation rates are only guaranteed for one year, so the “term” for this purpose is 1 year), and allows the company to assume no more than 3% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. For example, if a point-to-point contract has five years remaining, the Specified Percentage for that contract would be: SP% = $(1 - .03)^5$ = 86%. Appropriate assumptions for non-elective decrements such as mortality may be added to the assumption for elective decrements.

3. The company must have a specific plan for hedging risks associated with interim death benefits, early surrenders, etc.

4. The Company must have system in place that is used to monitor the effectiveness of the company’s hedging strategy.

5. The Company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge. The maximum tolerance test and compliance evaluation test must meet the following minimum requirements. The compliance evaluation criteria will be a retrospective correlation test performed at least on a weekly basis.

The Company will compare the change in the market value, from the beginning of the calendar quarter, of the hedge portfolio with the change in the market value of the options embedded in the liability portfolio. The maximum dollar amount of difference permitted between these two changes is10% of the beginning of period market value of the options embedded in the liabilities. If the difference exceeds this limit, the following steps must be taken:

- If for a second time during a quarter the dollar amount of difference exceeds 10% of the beginning of period market value of the options embedded in the liabilities, but is less than 25% of the beginning of period market value of the options embedded in the liabilities, the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy.

- If at any of the weekly intervals, the difference between the two changes exceeds 25% of the beginning of period market value of the options embedded in the liabilities, the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CARVM-UMV.

- If at any point in time during the quarter the difference between the two changes exceeds 35% of the beginning of period market value of options embedded in the liabilities, the insurer is deemed to be out of compliance with the "Hedged as Required" criteria, and the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CARVM-UMV.

Drafting Note: The requirements discussed above deal with the situation in which the actual hedge underperforms relative to the expected hedge performance. The ability of an insurer to over-hedge may be constrained by other components of a state’s regulatory framework including the state’s investment article and regulations concerning the use of derivative instruments. For purposes of this Drafting Note, over-hedged means that at a particular point in time, the hedge portfolio exceeds the portfolio of liabilities being hedged. If over-hedged, the excess hedging instruments are excluded from the measurements required in Item 5 of the Hedged as Required Criteria.

ATTACHMENT 3
Reasonableness of Assumptions Certification

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The certification must be signed by the appointed actuary.

I, (state name and professional designation), am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity options used in the determination of the initial statutory reserves under the Enhanced Discounted Intrinsic Method for all equity indexed deferred annuity products issued or reinsured by (company name) and reported in the statutory financial statement as of (the date of valuation). The assumptions used to determine such option market values are reasonable in light of the relevant economic conditions prevalent at the time of issue of each policy valued using the Enhanced Discounted Intrinsic Method.

____

(Name of actuary)

____

(Signature of actuary)

____

(Date of certification)

ATTACHMENT 4
Reasonableness and Consistency of Assumptions Certification

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The certification must be signed by the appointed actuary.

I, (state name and professional designation), am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity options used in the determination of statutory reserves for all equity indexed annuity products issued or reinsured by (company name) insurance company and reported in the statutory financial statement as of (the date of valuation). The assumptions used to determine such option market values are:

1. reasonable in light of current relevant economic conditions as of the date of valuation, and

2. are consistent with the comparable assumptions used to determine the statement value of any derivative instruments used to hedge the equity indexed based obligations embedded in the equity indexed annuities subject to this certification

Actuarial Guideline XXXVI

THE APPLICATION OF THE COMMISSIONERS RESERVE VALUATION METHOD TO EQUITY INDEXED LIFE INSURANCE POLICIES

Background

The purpose of this Actuarial Guideline is to clarify statutory and regulatory requirements for the valuation of reserves for equity indexed universal life insurance policies. This Guideline codifies the interpretation of the Commissioners Reserve Valuation Method (CRVM) by clarifying the computational methodologies that are deemed to comply with the intent of the Standard Valuation Law (SVL) and the Universal Life Insurance Model Regulation. These methodologies will be deemed to be consistent with CRVM.

Equity indexed universal life insurance policies include interest credits that are a combination of a guaranteed interest rate and an interest rate based on a percentage of the increase in an equity index, such as the S&P 500. Currently, there are only a few products in the market and the product designs have been straightforward. As new product designs emerge, this Actuarial Guideline may have to be revised.

In order that all insurers issuing equity indexed universal life insurance policies establish reserves for statutory reporting purposes that are consistent with CRVM minimum statutory formula reserves, this Actuarial Guideline identifies a computational method deemed to be consistent when specific operational criteria called "Hedged as Required" criteria are met. In addition, two other computational methods are defined that are deemed to be consistent with CRVM in the event the "Hedged as Required" criteria are not met.

Scope

This Actuarial Guideline applies to all equity indexed universal life insurance policies, regardless of the date of issue, that are subject to CRVM and would otherwise be subject to the reserve requirements under the Universal Life Insurance Model Regulation.

Definitions

Appointed Actuary. The appointed actuary, for purposes of this guideline, is the actuary appointed by the company's board of directors to provide opinions in accordance with Standard Valuation Law and the model Actuarial Opinion and Memorandum regulation.

Credited. Index-based benefits will be considered to be credited when they are added to the fund and treated in the same manner as other interest credits to the fund.

Term. An index-based benefit crediting period.

Computational Methods

Computational methods deemed to be consistent with CRVM can be classified into three groups, Type 1 methods, Type 2a methods and Type 2 methods. The following computational method is considered a Type 1 method: the Implied Guarantee Rate Method (IGRM). Type 1 computational methods are deemed to be consistent with CRVM only if the "Hedged as Required" criteria are met. The following is considered a Type 2a method: the Commissioners Reserve Valuation Method with Updated Average Market Value (CRVM with UAMV). The following is considered a Type 2 method: the Commissioners Reserve Valuation Method with Updated Market Value (CRVM with UMV). For a complete description of these methods, consult Attachment 1.

The minimum reserve for equity indexed life insurance policies is the statutory reserve calculated under the Universal Life Insurance Model Regulation for an identical policy with no guaranteed index-based benefits. If the reserve produced by Type 1, Type 2a or Type 2, as appropriate, is greater than the minimum reserve, then that Type 1, Type 2a or Type 2 reserve is the minimum reserve.

Type 1 Methods

A Type 1 computational method is deemed to be consistent with CRVM if an insurer using the method complies with the "Hedged as Required" Criteria (Attachment 2) and provides a certification (Attachment 3) as to compliance with the criteria. The appointed actuary must sign the certification. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business.

For purposes of determining compliance with the "equivalence of characteristics" requirement in the "Hedged as Required" criteria, the current term of an equity indexed universal life insurance policy is one year or less. This should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

The IGRM computational method is deemed to be consistent with CRVM under the following conditions:

1. The implied guaranteed rate for terms after the first, determined at issue using the method of Attachment 1, paragraph 3 of the IGRM method, is less than or equal to the appropriate maximum valuation interest rate.

2. Index-based benefit terms cannot be greater than one year. This should be interpreted consistently when a separate index- based benefit guarantee is made on each premium received.

3. The appointed actuary has demonstrated at time of filing or in conjunction with a change to a Type 1 Method, to the satisfaction of the regulatory officials in each state in which the insurer writes or reinsures equity indexed universal life insurance business, prior to the use of the IGRM that the requirements in (1) and (2) above have been met.

Type 2a Methods

A Type 2a computational method is deemed to be consistent with CRVM if an insurer using the method complies with Type 2a Prerequisite Criteria below, and provides Reasonableness and Consistency of Assumptions Certification (Attachment 4). The appointed actuary must sign the certification. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business.

Type 2a Prerequisite Criteria are as follows:

1. At issue, the policy satisfies (a) or (b) as follows:

   (a) The implied guaranteed rate for terms after the first, determined at issue using the method of Attachment 1, paragraph 3 of the CRVM with UAMV method, is less than or equal to the appropriate maximum valuation interest rate; or

   (b) Policies with identical renewal guarantees issued in three of the past five years would have satisfied condition 1 for the Type 1 method.

2. Index-based benefit terms cannot be greater than one year. This should be interpreted consistently when a separate index- based benefit guarantee is made on each premium received.

3. The appointed actuary has demonstrated at time of filing or in conjunction with a change to a Type 2a Method, to the satisfaction of the regulatory officials in each state in which the insurer writes or reinsures equity indexed universal life insurance business, prior to the use of the CRVM with UAMV that the requirements in (1) and (2) above have been met.

Type 2 Methods

The use of a Type 2 method is not conditioned upon the requirement to meet the "Hedged as Required" criteria or the Type 2a Prerequisite Criteria. However, an insurer using a Type 2 method must provide a certification (Attachment 5) signed by the appointed actuary with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business. This certification deals with the assumptions underlying the option market values included in the calculation of reserves using a Type 2 method and the consistency in assumptions between these option market values and the statement value of any options owned by the insurer to support the equity indexed universal life insurance business being valued.

Required Change in Method

In the event an insurer that is using a Type 1 computational method for a block of business fails to meet the applicable "Hedged as Required" criteria, the required actuarial certification must disclose this fact. If the reason for failing the "Hedged as Required" criteria is not corrected within one quarterly financial reporting period of the initial disclosure of the failure in the actuarial certification, the insurer must choose to use a Type 2a or a Type 2 computational method for determining minimum statutory formula reserves for this block of business.

If, at a later date, the insurer can demonstrate to the satisfaction of its domiciliary commissioner that it is meeting the applicable "Hedged as Required" criteria, the insurer may, with the approval of the domiciliary commissioner, resume using a Type 1 computational method. In addition, the insurer must notify the appropriate regulatory official in each state in which the insurer does business subject to the change in computational method.

Optional Change in Method

An insurer using either a Type 1, Type 2a or Type 2 computational method for a block of business may, with the approval of its domiciliary commissioner and after notifying the appropriate regulatory official in all the other states in which the insurer writes this block of business, use a computational method of another type. If the change in computational methods involves a change from a Type 2 or Type 2a computational method to a Type 1 computational method the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the applicable "Hedged as Required" criteria. If the change in computational methods involves a change from a Type 2 computational method to a Type 2a or Type 1 computational method, the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the "Type 2a Prerequisite Criteria" or the requirements specified in the section captioned "Type 1 Methods."

Asset Adequacy Testing of Reserves

To the extent required by law, regulation, or regulatory requirements, reserves established for equity indexed life policies must be tested for adequacy using appropriate methods and assumptions.

Attachment 1
Description of Computational Methods

Implied Guaranteed Rate Method (IGRM)

To use this computational method, companies must satisfy the "Hedged as Required" criteria, which are set out in Attachment 2. On the asset side, options will be held in accordance with the rules of the NAIC Accounting and Procedures Manual.

The following describes how the IGRM works:

1. Issue date calculations:

   Calculate an implied guaranteed rate, determined at issue, for the period of the initial term equal to: (a) the guaranteed interest rate for the period of the initial term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost, determined at issue, is the option cost, which will provide the index-based benefit in excess of any other interest rate guarantee for the initial term, accumulated to the end of the term at the appropriate maximum valuation rate. The option cost should be as of the issue date.

   Calculate an implied guaranteed rate, determined at issue, for the terms after the first. The implied guaranteed rates for terms after the first term will be based on historical moving average option costs according to (3) below.

   Using the Universal Life Insurance Model Regulation, with the guaranteed interest rates equal to the implied guaranteed rates, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

   Calculate the implied guaranteed rate for the current term based on the current term's index-based benefit and the option cost at the start of the current term that will provide the indexed benefit, in excess of any other interest rate guarantee, for the current term. The method of calculating the current term implied guaranteed rate is the same as for calculating the rate for the initial term. The implied guaranteed rate for terms after the current is not recalculated as long as neither the interest rate guarantees nor the index-based benefit guarantee have changed. (If guarantees have improved, then the new implied guaranteed rates for future terms will be based on option costs determined at issue according to (3) below.)

   Continue the calculation of the reserve according to the Universal Life Insurance Model Regulation. Use the recalculated current term implied guaranteed rate and the implied guaranteed rate for future terms, as determined according to (3) below, when computing future guaranteed benefits at the valuation date. Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

   In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

   Calculate an implied guaranteed rate, determined at issue, for the terms after the current term equal to: (a) the guaranteed interest rate for the period of the term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost is the historical moving average cost of the option whose term begins at the beginning of the term, which will provide the index-based benefit in excess of any other interest rate guarantee for the term, accumulated for the length of the term at the appropriate maximum valuation rate.

   The historical moving average cost of the option will be calculated based on the averages over the sixty months previous to the calendar year of issue of each of the following items: (a) 3% plus the annualized daily actual index volatility as the estimated implied volatility for a one year European At-The-Money option, e.g. if the average index volatility is 15%, the implied volatility for the base case option cost is 18%; (b) index dividend rate; and (c) risk free rate. The base case cost is for a one year European At-The–Money option and must be adjusted to the characteristics of the policy.

   In those states that require, by regulation, that the policy valuation interest rates not exceed the "minimum guaranteed interest rate" in the policy, the "minimum guaranteed interest rate" for IGRM is the implied guaranteed rate.

Commissioners Reserve Valuation Method Updated Average Market Value (CRVM with UAMV)

To use this computational method, companies must satisfy the Type 2a Prerequisite Criteria. On the asset side, options will be held in accordance with the rules of the NAIC Accounting and Procedures Manual. Similarly, reinsurance reserve credit will be in accordance with the rules of the NAIC Accounting and Procedures Manual.

The following describes how the CRVM with UAMV works:

1. Issue date calculations:

   Calculate an implied guaranteed rate, determined at issue, for the period of the initial term equal to: (a) the guaranteed interest rate for the period of the initial term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost, determined at issue, is the option cost that will provide the index-based benefit in excess of any other interest rate guarantee for the initial term, accumulated to the end of the term at the appropriate maximum valuation rate. The option cost should be as of the issue date.

   Calculate an implied guaranteed rate, determined at issue, for the terms after the first. The implied guaranteed rates for terms after the first term will be based on historical moving average option costs according to (3) below.

   Using the Universal Life Insurance Model Regulation, with the guaranteed interest rates equal to the implied guaranteed rates, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

   When calculating the present value of future guaranteed policy benefits at the valuation date by projecting a fund equal to the greater of the Guaranteed Maturity Fund or the policy value, this fund should be projected to the end of the current term at the guaranteed interest rate and added to the accumulated option cost for the current term. The option cost should be determined as of the valuation date.

The option should provide for the index-based benefit in excess of any other interest rate guarantee for the current term based on a fund equal to the greater of the Guaranteed Maturity Fund or the policy value. The option cost should be accumulated to the end of the current term at the appropriate maximum valuation rate in accordance with the SVL.

This combined amount should then be projected forward using the implied guaranteed rates for future terms, as determined according to (3) below.

The implied guaranteed rates for terms after the current are recalculated on the valuation date. The implied guaranteed rates for future terms will be based on historical moving average option costs on the valuation date according to (3) below.

Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

Calculate an implied guaranteed rate, determined either at issue or at a valuation date, for the terms after the current term equal to: (a) the guaranteed interest rate for the period of the term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost is the historical moving average cost of the option whose term begins at the beginning of the term, which will provide the index-based benefit in excess of any other interest rate guarantee for the term, accumulated for the length of the term at the appropriate maximum valuation rate.

The historical moving average cost of the option will be set equal to the option cost calculated based on the averages of each of the following items over the sixty months previous to the calendar year of the determination date: (a) 3% plus the annualized daily actual index volatility as the estimated implied volatility for a one year European At-The-Money option, e.g. if the average index volatility is 15%, the implied volatility for the base case option cost is 18%; (b) index dividend rate; and (c) risk free rate. The base case cost is for a one year European At-The–Money option and must be adjusted to the characteristics of the policy.

In those states that require, by regulation, that the policy valuation interest rates not exceed the "minimum guaranteed interest rate" in the policy, the "minimum guaranteed interest rate" for CRVM with UAMV is the implied guaranteed rate.

CRVM with Updated Market Value (UMV) Method

CRVM with UMV applies the Universal Life Insurance Model Regulation to equity indexed life insurance policies using the following methods:

1. Issue date calculations:

When calculating the present value of future guaranteed policy benefits at issue by projecting fund values, the fund should be projected to the end of the initial term at the guaranteed interest rate and added to the accumulated option cost for the initial term. This combined amount should then be projected forward, using the policy guarantees to determine future death and endowment benefits. The option should provide for the indexed benefit in excess of any other interest rate guarantee for the initial term. The option cost should be as of the issue date. The option cost should be accumulated to the end of the initial term at the appropriate maximum valuation rate in accordance with the SVL. Any index-based benefit guarantees beyond the initial term should be determined as described in (3) below.

Using this method of determining the present value of future guaranteed benefits, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

When calculating the present value of future guaranteed policy benefits at the valuation date by projecting a fund equal to the greater of the Guaranteed Maturity Fund or the policy value, this fund should be projected to the end of the current term at the guaranteed interest rate and added to the accumulated option cost for the current term. The option cost should be determined as of the valuation date. This combined amount should then be projected forward, using the policy guarantees to determine future death and endowment benefits. The option should provide for the index-based benefit in excess of any other interest rate guarantee for the current term, based on a fund equal to the greater of the Guaranteed Maturity Fund or the policy value. The option cost should be accumulated to the end of the current term at the appropriate maximum valuation rate in accordance with the SVL. Any index-based benefit guarantees beyond the current term should be treated as described in (3) below. Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

At the time of calculation, fund values projected to the end of the current term should be further projected to the end of the next term at the guaranteed interest rate. This should be added to the accumulated option cost for that term. This should be done successively for each subsequent term, using the appropriate option cost for each term. The option for each term should provide for the index-based benefit in excess of any other interest rate guarantee for the term. The cost for each option should recognize the current relevant economic condition on the calculation date and be priced as if the term began on that date. The option cost for each future term should be accumulated to the end of the term at the appropriate maximum valuation rate in accordance with the SVL.

Attachment 2
Hedged as Required Criteria - Life Products

In order to use a Type 1 computational method, the appointed actuary needs to certify quarterly that it meets either the "Basic" or "Option Replication" criteria.

Basic

1. Required equivalence of characteristics between the option policies held and the options embedded in the policies for the current term with respect to specific policy features such as: index; averaging features; option type; strike price; term; etc.

2. The amount of hedge owned must substantially cover the greater of the account value or reserve. "Substantially" is measured by the guarantees in the specific policy (some policies may have longer term guarantees than others), and allows the company to assume no more than 6% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. Benefit decrements due to charges in the policy should be taken into account in the same way as they are in the indexed interest formula in the policy (i.e., if indexed interest is credited on an average fund value, then it is the projected average fund value on each policy which should be hedged.)

3. The company must have a specific plan for hedging risks associated with death benefits, early surrenders, unexpected premium payment patterns, and other potentialities. This plan must be available at issue and updated at every valuation date, or as often as the valuation actuary requirements may warrant.

4. The company must have a system in place that is used to monitor the effectiveness of its hedging strategy.

5. The company must have a stated maximum tolerance for differences between expected performance of the hedge and the actual results of the hedge.

Option Replication

1. Required equivalence of characteristics between the target of an option replication strategy employed and the options imbedded in the liabilities for the current term with respect to specific policy features such as: index; averaging features; option type; strike price; term; etc.

2. At the end of each quarter, the notional amount of the target of the option replication strategy must substantially cover the greater of the account value or reserve. "Substantially" is measured by the guarantees in the specific policy (some policies may have longer term guarantees than others), and allows the company to assume no more than 6% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. Benefit decrements due to charges in the policy should be taken into account in the same way as they are in the indexed interest formula in the policy, (i.e., if indexed interest is credited on an average fund value, then it is the projected average fund value on each policy which should be hedged.)

3. The company must have a specific plan for hedging risks associated with death benefits, early surrenders, unexpected premium payment patterns and other potentialities. This plan must be available at issue and updated at every valuation date, or as often as the valuation actuary requirements may warrant.

4. The company must have a system in place that is used to monitor the effectiveness of the company's hedging strategy.

5. The company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge. The maximum tolerance test and compliance evaluation test must meet the following minimum requirements. The compliance evaluation criterion will be a retrospective correlation test performed at least on a weekly basis. The company will compare the change in the market value, from the beginning of the calendar quarter, of the hedge portfolio with the change in the market value of the target of the option replication strategy. The maximum dollar amount of difference permitted between these two changes is10% of the beginning of period market value of the target of the option replication strategy. If the difference exceeds this limit, the following steps must be taken:

    ♦ If for a second time during a quarter the dollar amount of difference exceeds 10% of the beginning of period market value of the target of the option replication strategy, but is less than 25% of the beginning of period market value of the target of the option replication strategy, the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy.

    ♦ If at any of the weekly intervals the difference between the two changes exceeds 25% of the beginning of period market value of the target of the option replication strategy, the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on CRVM with UMV, or CRVM with UAMV if the conditions for that method are satisfied.

    ♦ If at any point in time during the quarter the difference between the two changes exceeds 35% of the beginning of period market value of target of the option replication strategy, the insurer is deemed to be out of compliance with the “Hedged as Required” criteria, and the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CRVM with UMV, or CRVM with UAVM if the conditions for that method are satisfied.

The requirements discussed above deal with the situation in which the actual hedge underperforms relative to the expected hedge performance. The ability of an insurer to over-hedge may be constrained by other components of a state’s regulatory framework including the state’s investment article and regulations concerning the use of derivative instruments. For purposes of this Guideline, over-hedged mean that at a particular point in time, the hedge portfolio exceeds the portfolio of liabilities being hedged. If over-hedged, the excess hedging instruments are excluded from the measurements required in Item 5 of the Hedged as Required Criteria.

Attachment 3
Reasonableness of Assumptions Certification
for Implied Guaranteed Rate Method

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The appointed actuary must sign the certification.

I, (state name and professional designation) am the appointed actuary for (company name). The company meets the Hedged as Required criteria for policies reserved under the Implied Guarantee Rate Method. I have reviewed the assumptions underlying the values assigned to all equity index options used in the determination of the implied guaranteed rate used in the calculation of reserves under the Implied Guaranteed Rate Method for all equity indexed universal life insurance policies issued or reinsured by (company name) and reported in the statutory financial statement as of (the date of valuation).

The assumptions at the start of the current term used to determine such option values for the current term are:

1. Reasonable in light of current relevant economic conditions at the start of the current term; and
2. Consistent with the comparable assumptions used to determine the statement of value of any derivative instruments as of the valuation date used to hedge the equity index-based obligations embedded in the equity indexed life policies subject to this certification.

The assumptions at issue used to determine equity index option values for terms subsequent to the current term are:

1. Determined in accordance with the Implied Guaranteed Rate Method
2. Based on quantitative data for the base case option (1-year European At-The-Money) of 3% plus ___._% average annualized daily actual volatility over the 60 months previous to the calendar year of issue.
3. Reasonably adjusted to reflect the following variances from the base case due to benefit design and capital market reasons (all material adjustments should be listed)
   a. skew adjustments

   b. ________________(to be described by appointed actuary)

4. Reliant on the following source(s) for assumptions not prescribed by this Actuarial Guideline:
   a. ________________(to be described by appointed actuary)

____

(Name of actuary)

____

(Signature of actuary)

____

(Date of certification)

Attachment 4
Reasonableness and Consistency of Assumptions Certification for Commissioners Reserve Valuation Method with Updated Average Market Value

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The appointed actuary must sign the certification.

> I, (state name and professional designation) am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity index options used in the determination of statutory reserves using a Type 2a computational method for all equity indexed universal life insurance policies issued or reinsured by (company name) insurance company and reported in the statutory financial statement as of (the date of valuation).
>
> The assumptions used to determine such option values for the current term are:
>
> 1. Reasonable in light of current relevant economic conditions as of the date of valuation; and
> 2. Consistent with the comparable assumptions used to determine the statement of value of any derivative instruments as of the valuation date used to hedge the equity index-based obligations embedded in the equity indexed life policies subject to this certification.
>
> The assumptions used to determine equity index option values for terms subsequent to the current term are:
>
> 1. Determined in accordance with the Commissioners Reserve Valuation Method with Updated Average Market Value
> 2. Based on quantitative data for the base case option (1-year European At-The-Money) of 3% plus ___._% 60 -month moving average annualized daily actual volatility
> 3. Reasonably adjusted to reflect the following variances from the base case due to benefit design and capital market reasons (all material adjustments should be listed)
>   a. skew adjustments
>
>   b. _______________(to be described by appointed actuary)
> 4. Reliant on the following source(s) for assumptions not prescribed by this Actuarial Guideline:

Actuarial Guideline XXXVII

VARIABLE LIFE INSURANCE RESERVES FOR GUARANTEED MINIMUM DEATH BENEFITS

Background

This guideline's primary focus is to clarify the appropriate projection assumptions and methodologies used to determine statutory reserve liabilities for Guaranteed Minimum Death Benefits (GMDBs) offered with variable life insurance products.

For many years, insurance companies have not applied uniform reserve standards to variable life insurance policies in general, and to GMDBs in particular. Four regulatory sources are often looked to for guidance. First, the Standard Valuation Law (SVL) requires that CRVM be based on the present value of future guaranteed benefits. Second, the Variable Life Insurance Model Regulation as revised in 1983 and again in 1989 states "Reserve liabilities for variable life insurance policies shall be established under [SVL] in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees." Third is the Universal Life Insurance Model Regulation and most recently the Valuation of Life Insurance Policies Model Regulation.

GMDBs are common features of variable life products. Recently, reserve methods for universal life secondary guarantees have been clarified in the Valuation of Life Insurance Policies Model Regulation. These secondary guarantees are similar to GMDBs offered with variable life policies. A Guaranteed Minimum Death Benefit is any guarantee which provides death benefit protection which would not otherwise be provided in the absence of such a guaranteed benefit or provision. An example of a GMDB is a policy in which death benefits continue in-force even if the policy value is zero. This benefit may be contingent on additional qualifications being met, such as cumulative premiums meeting some limit.

Additional examples of GMDBs are provided below. This list is not intended to include all types of GMDBs.

- A Minimum Death Benefit Provision or No Lapse provision where death benefits are guaranteed to remain in-force for a period of time even if the policy value is not greater than zero subject only to certain conditions being met such as cumulative premiums meeting a minimum amount, or if a theoretical policy value is sufficient to meet a minimum amount.

- Death Benefits that are guaranteed to be at least as large as the original face amount, regardless of investment performance which might generate negative Paid Up Additions on a traditional fixed premium variable life insurance policy.

The Variable Life Insurance Model Regulation defines the reserve methodology for variable life policies. However, currently two versions of the model regulation exist and this results in inconsistent treatment by state. These two versions include the 1983 revisions and the 1989 revisions to the model regulation. Many states have not passed either revision and therefore require direct interpretation of SVL. In practice, companies have interpreted these regulations inconsistently with regard to assumptions and/or application to current products available today. The 1983 version of the regulation treats flexible premium policies differently than scheduled premium policies. The 1983 version of the regulation did not anticipate the types of GMDBs available today which require contingent conditions to be met to maintain a death benefit guarantee, for instance specified premiums must be paid. Thus, confusion exists with regard to which valuation method is appropriate. The 1989 version makes no distinction between the scheduled premium and flexible premium policies.

This Guideline codifies the basic interpretation of reserve liabilities for variable life GMDBs by clarifying the projection assumptions and methodologies that comply with the SVL. Minimum valuation standards that may be used to determine this reserve and are not specifically addressed in this guideline are defined by SVL and other applicable state regulations. This guideline focuses on the methodology of the 1989 revisions to interpret SVL, as we believe the 1989 revision more appropriately considers the types of products and GMDBs available today.

Interpretations of both the 1983 and 1989 versions reflect the comments made in the December 1972 report which concluded that an acceptable GMDB reserve system should have the following characteristics:

1. The GMDB reserve should be held in the general account of the company so that it will be backed by the general assets of the company, most of which are debt obligations valued at amortized cost and, therefore, are of a fixed dollar nature. It would not be proper to hold the GMDB reserve in the separate account, assuming the reserve is not supported by fixed dollar assets but by assets that are moving in the opposite direction from the risk, i.e. value moving downward while the risk increases and vice versa.

2. The GMDB reserve should be adequate to cover the GMDB death claims for the next year in all but the most extreme circumstances so that the regulatory authorities can be assured the company will not run into financial trouble from this source before the next annual statement is filed.

3. The GMDB reserve should react slowly but steadily through an extended period of poor investment experience of the separate account.

4. The GMDB reserve should not cause unnecessary fluctuations in surplus by increasing too rapidly in a sharp market downswing. Also, the reserve should not decrease too rapidly in a sharp market upswing after a period of poor market performance.

This guideline maintains the four principles above in interpreting the Standard Valuation Law as it relates to variable life business and the methods defined in both the 1983 and 1989 versions of the Variable Life Insurance Model Regulation.

Reserve methodologies which recognize the variable nature of GMDB are defined in the Variable Life Insurance Model Regulation and include a One-Year Term reserve recognizing a 1/3 drop in separate account assets, the Attained Age Level Reserve (AALR) methodology and in the 1983 version, a methodology for flexible premium policies. Reserves for GMDBs are held in the general account.

This guideline recognizes the following principles when determining appropriate reserves for GMDB.

- Determine the guaranteed death benefits which are not valued in the basic policy reserves.

- Establish a reserve for these benefits over the period of time in which revenue is collected to pay for such benefits; however, no greater than the period of time these guaranteed benefits are provided.

- Collected revenue should not be de-minimus in order to reduce the reserve.

- The reserve established is in addition to basic reserves

This guideline interprets the standards for applying these methodologies. This guideline also interprets the projection assumptions to be applied to determine excess guaranteed death benefits. The guideline clarifies the use of the AALR methodology for flexible premium variable life policies with contingent

GMDB benefit structures similar to specified premium contracts. This guideline is based on the belief that the 1983 revisions did not anticipate these types of GMDB benefits on flexible premium contracts. Thus, it makes sense to interpret the 1983 revisions for these types of GMDB benefits by applying the AALR methodology when there is a contingent GMDB structure. For flexible premium plans with other types of GMDBs, the flexible premium language of the 1983 revision is used where applicable.

The AALR methodology, along with the one-year term reserve is generally consistent with the principles above in that additional reserves are established in recognition of all death benefit guarantees not reflected in basic reserves. If multiple guarantees exist all guarantees must be valued and the greatest additional reserve is held. Consecutive GMDBs are treated as a single guarantee. These reserves are funded over the period of time GMDB Revenue will be collected through either policy charges or premiums, however, not to exceed the GMDB benefit period. The AALR methodology funds any GMDB Revenue deficiency over the period of time the Revenue is collected, however, no longer than the end of the guarantee period.

GMDB reserves are held in addition to basic reserves unless the appointed actuary provides satisfactory documentation to the state of domicile insurance department stating why such reserves are redundant. For example, for traditional variable life product designs where reserves are generally determined on a tabular basis and use an assumed interest rate (AIR), if basic reserves are determined based on at least the guaranteed face amount, (i.e. ignoring any negative additions) then the guaranteed death benefit is fully reflected in the basic reserves; therefore, an additional GMDB reserve is redundant. Neither this guideline nor the 1989 amendments specifically address traditional variable life product designs, nor does this guideline specifically exclude these designs from its scope.

An additional purpose of this guideline is to emphasize the impact of Sections 3A(3) and 3A(4) in the Valuation of Life Insurance Policies Model Regulation (“XXX”) relative to reserving for variable life and variable universal life products.

Scope

The guideline applies to all variable life insurance contracts to which the Standard Valuation Law applies and which provide Guaranteed Minimum Death Benefits (GMDBs) either explicitly or implicitly.

Definitions

Attained age level reserve (AALR): The AALR is a methodology described in the 1983 and 1989 revisions to the Variable Life Insurance Model Regulation.

Catch-up provision: A Catch-up provision is a provision in the policy that gives the policyholder the right to catch up on any contingent requirements in order to maintain the GMDB.

Guaranteed Period: The guaranteed period is the period of time over which a GMDB is guaranteed regardless of the basic guarantees in the policy. A policy may have multiple guaranteed periods and GMDBs.

Guaranteed Minimum Death Benefit (GMDB): A Guaranteed Minimum Death Benefit (GMDB) is any guarantee which provides continued death benefit protection which would not otherwise be provided in the absence of such a guaranteed benefit or provision. A policy may have multiple GMDBs.

One-Year Term (OYT) reserve: The OYT reserve covers a period of no more than one year following a 1/3–asset drop. This reserve is fully described in the 1989 revision to the Variable Life Insurance Model Regulation. This guideline clarifies the methodology and the assumptions used to determine OYT reserves.

Policy Value: Policy value means, as of the valuation date, the greater of (a) zero and (b) the amount to which separately identified interest credits and/or investment return and mortality, expense, or other charges are made under a variable life insurance policy. Subsequent to the valuation date, "policy value" means the amount determined in accordance with the procedures specified in this guideline.

Projection Assumptions: The Projection Assumptions are used to determine guaranteed death benefits. This projection of policy values uses the following assumptions:

1. Cost of insurance rates are equal to the minimum valuation mortality.

2. The GMDB is assumed to be in effect for the maximum period of the GMDB. All minimum requirements necessary to maintain the GMDB in force subsequent to the valuation date are assumed to be met at the latest point in time sufficient to maintain the GMDB through its maximum period. Contingent requirements, if any, required to reinstate or catch-up as of the valuation date are assumed to occur on the valuation date. If the GMDB would continue in effect subsequent to the valuation date with no additional actions required, contingent requirements are assumed not to resume until the latest point in time which would prevent the termination of the GMDB.

3. The general account policy values and separate account policy values are projected at the valuation interest rate. The assumed investment rate, if any, is used when determining the OYT reserve.

4. The guaranteed period covered is determined assuming all contingent requirements are met.

5. Policy options and benefits are assumed to continue unchanged as of the valuation date. Examples include fixed and variable account allocation and the death benefit option.

6. The projection of policy values is made for the entire guarantee period, regardless of whether projected policy values are positive or negative at any point in the projection. Any negative policy value would be set to zero.

The policy value is projected forward from the valuation date with valuation interest rate credits, any payments required to maintain the guarantee and valuation mortality charges (and no other credits or charges). The Guideline stipulates that "A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero," and "Any negative policy value would be set to zero." An AALR need not be established for a VUL policy to provide for any period during which there would be a death benefit in the absence of the guarantee, since this benefit would be provided for by the policy's basic reserve. This means that for an AALR to develop, the mortality charges must exceed the required payments plus interest credits by enough to reduce the policy value to zero during the guarantee period. Surrender charges are not relevant to this determination.

GMDB Revenue: GMDB Revenue is policy charges or premium, either implicit or explicit. These charges or premiums may or may not be explicitly stated to cover GMDB benefits. An example of an implicit premium is a positive premium necessary to maintain a target policy value in order to maintain benefits.

Term cost: Term costs are based on the guaranteed minimum death benefits in excess of the death benefits that would be provided in absence of such guarantee based on a projection of policy values using the Projection Assumptions defined above. These costs are then discounted to the valuation date. The term costs are based on minimum valuation mortality standards and a discount rate not to exceed the maximum valuation interest rate.

1/3-Asset Drop: A 1/3 reduction in separate account assets that is used in the calculation of the one-year term reserve. This 1/3 drop is not applied to fixed account assets.

Text

1. Basic Reserves:

Basic Reserves include the reserve held for death benefits provided in the absence of a GMDB. Reserve liabilities for variable life insurance policies shall be established consistent with the methodologies described in the Standard Valuation Law and in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees. Reserve methods described in the Variable Life Insurance Model Regulation and the Universal Life Insurance Model Regulation may be appropriately utilized to determine reserve liabilities such that application of these methods is consistent with the principles of the Standard Valuation Law.

2. Guaranteed Minimum Death Benefit Reserves:

Additional reserves are required to provide for liabilities of GMDB provisions which provide benefits that would not be provided in the absence of the guarantee. In measuring these liabilities, the basic reserve provides for death benefits which occur in the absence of the guarantee. GMDB reserves provide for the contingency of death occurring when the guaranteed minimum death benefit exceeds the death benefit that would be paid in absence of the guarantee. A consistent reserve methodology should be used regardless of whether a contract has scheduled premiums or flexible premiums.

When a contract provides multiple GMDBs and/or multiple guarantee periods, a reserve is established based on the guaranteed period which produces the greatest reserve as of the valuation date. Consecutive GMDBs are treated as a single guarantee period. The reserve methodology reflects all potential guarantee periods assuming that contingent requirements are met such as: contingent premiums paid, Catch-up Provisions or any pre-funding of contingent requirements.

For a policy under the 1989 revisions or a flexible premium policy with contingent GMDBs similar to a specified premium contract under the 1983 revision, the GMDB reserve equals the greater of (1) and (2) where (1) equals "the aggregate total of term costs" (OYT) which covers a period of no more than one year following a 1/3-Asset Drop, and (2) equals the AALR as described below.

For a flexible premium policy under the 1983 revisions not covered above, (where the GMDB guarantee is not contingent on any policyholder requirement), reserve liabilities for any guaranteed minimum death benefit shall be maintained in the general account of the insurer and shall be not less than the aggregate total of the term costs, if any, covering the period provided for in the guarantee not otherwise provided for by the reserves held in the separate account assuming a 1/3-asset drop, projected at the valuation interest rate.

a) One Year Term Reserves (OYT):

This reserve component equals the "aggregate total of term costs", if any, covering a period of one full year from the valuation date, or, if less, covering the period of time death benefits are provided which are not otherwise provided for by the basic reserves. This reserve assumes any contingent requirements to maintain the GMDB are met by reflecting any Catch-up Provisions or any pre-funding of contingent requirements.

"Aggregate total term costs" equals the present value of guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee, if any, prior to the end of one full year or the end of the guaranteed period if sooner. A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero. Death benefits are determined by projecting the policy value following a 1/3 -Asset Drop and using the Projection Assumptions defined above. Present values are determined using valuation mortality rates and the maximum valuation interest rate.

b) Attained Age Level Reserves (AALR):

This reserve component allows for funding GMDBs over no longer than the guaranteed period. This reserve assumes contingent requirements are met to maintain the GMDB and reflect any prepaid contingent requirements or Catch-up provisions. A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero. This reserve component exists until no later than the end of the guarantee period if, on any prior valuation date, projected policy values resulted in guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee. To the extent long term favorable investment performance results in redundant reserves, the valuation actuary may request permission from the state of domicile insurance department to release all or a portion of the redundant GMDB reserves. This projection of policy value is based on the Projection Assumptions defined above and does not incorporate a 1/3-Asset Drop.

The AALR reserve component shall not be less than zero and shall equal the "residue," as described in paragraph (1) below, of the prior year's AALR on the contract, with any such "residue," increased or decreased by a "payment" computed on an attained age basis as described in paragraph (2) below.

(1) The "residue" of the prior year's AALR on each variable life insurance contract shall not be less than zero and shall be determined by adding interest at the maximum valuation interest rate to such prior year's reserve, deducting the tabular claims based on the "excess", if any, of the guaranteed minimum death benefit over the death benefit that would be payable in absence of such guarantee, and dividing the result by the tabular probability of survival. Hence, tabular costs are only deducted for years where, in the absence of the guarantee, coverage would be less than the guaranteed coverage.

(2) The "payment" used to increase or decrease the "residue" above shall be computed so that the present value of a level payment of that amount each year over the future period for which GMDB Revenue will be collected under the contract is equal to (A) minus (B) minus (C), where, (A) is the present value of future guaranteed minimum death benefits. The future guaranteed minimum death benefits are the projected future death benefits including the GMDB. (B) is the present value of the projected future death benefits that would be payable in the absence of the GMDB. The guaranteed benefit for (A) and (B) should be calculated for the life of the policy. Both (A) and (B) are calculated based on the Projection Assumptions. (C) is any "residue," as described in paragraph (1) above, of the prior year's AALR on such variable contract. Minimum standards of valuation mortality assumptions and maximum valuation interest rates are used to determine present values and net level payments. The period of time in which GMDB Revenue will be collected is limited to the period of time policy values are sufficient to collect policy charges or the period of time contingent requirements will be paid to maintain the GMDB. In no event will the time period be greater than the time to the end of the guarantee period. It should also be noted that the "payment" may be negative resulting in the reserve running off over the remaining guarantee period.

c) Other Flexible Premium Policies under the 1983 revisions not included above:

The present value of potential guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee is determined by using minimum standards of valuation mortality assumptions and maximum valuation interest rates.

3. Issues:

Sections 3A(3) and 3A(4) of "XXX" state the following:

3A(3): This regulation shall not apply to any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

3A(4): This regulation shall not apply to any variable universal life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

The language of these sections is clear. The reserving for variable life and variable universal life is in no way affected by the provisions of "XXX." In particular, the 19-year select factors and the "X" factor are not applicable to the calculation of reserves for variable life and variable universal life products.

Effective Date

This guideline affects all variable life insurance contracts issued. Where the application of this Guideline produces higher reserves than the company had otherwise established by their previously used interpretation, such company must comply with this guideline effective December 31, 2001. However, such company may request a grade in period, not to exceed three (3) years, from the domiciliary Commissioner upon satisfactory demonstration of the previous interpretation and that such delay of implementation will not cause a hazardous financial condition or potential harm to its policyholders.

Retroactive application of the guideline to in-force policies to develop the current residue portion of the AALR will generally not be feasible. Therefore, the residue as of 12/31/2000 should be set equal to the greater of the amount established by the company under its current method or $0 if the company did not previously calculate an AALR.

Actuarial Guideline XXXVIII

THE APPLICATION OF THE VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION

Introduction

The revised version of the *Valuation of Life Insurance Policies Model Regulation* (Model #830) was adopted by the NAIC in March 1999. Since that date, some questions have been raised regarding whether and how Model #830 applies to various product designs. The purpose of this guideline is to provide direction as to the application of Model #830 to such products. Specifically, this guideline provides examples of various policy features that constitute "guarantees" and gives directions on how to reserve for these guarantees in accordance with Model #830.

Obviously, new policy designs will emerge subsequent to the development of this document. No statute, regulation, or guideline can anticipate every future product design, and common sense and professional responsibility are needed to assure compliance with both the letter and the spirit of the law. While Model #830 is a complex regulation, its intent is clear: reserves need to be established for the guarantees provided by a policy. Policy designs which are created to simply disguise those guarantees or exploit a perceived loophole must be reserved in a manner similar to more typical designs with similar guarantees.

Text

The following product designs have been brought to the attention of the NAIC Life Actuarial (A) Task Force. The list below specifies reserving approaches which the Task Force regards as being most consistent with the letter and spirit of Model #830. However, the specified reserving approaches should be modified as needed to comply with the intent of this guideline that similar reserves be established for policy designs that contain similar guarantees.

1. An initial level premium rate is guaranteed for 10 years followed by increased guaranteed premiums for an additional 20 years. However, the company cannot increase premiums after year 10 (i.e., the initial premium continues to be charged) unless some specified event occurs.

   The initial reserve segment is 30 years. Since the contract contains provisions that limit the company's ability to increase premiums, then the initial premium should be treated as guaranteed for the entire 30-year period. It would be contrary to the conservative nature of statutory accounting to treat this policy the same as one in which the ability to raise premiums is unrestricted.

2. A term policy has an illustrated level premium for 30 years, the first 10 of which are guaranteed. Additionally, there is a refund option which provides that a specified refund will be paid if the premium ever increases. The refund must be requested within a limited time (e.g., 30 days) of receiving notice of the increase. Coverage terminates if the option is exercised.

   This example differs from the one above in that there is no specified event that has to occur in order for the company to impose a premium increase; however, the company must provide an additional benefit to the policyholder if it exercises this right. Thus the company does not have an unrestricted right to impose an increase after 10 years. If the contract contains provisions that require that additional benefits be provided to the policyholder in the event of a premium increase, even if these benefits are lost if not claimed within a stated time frame, then the initial premiums should be treated as guaranteed for the entire 30 year period. It would be contrary to the conservative nature of statutory accounting to treat this policy the same as one in which the ability to raise premiums does not require that additional benefits be provided. Therefore, the initial segment for this policy is 30 years.

3. An initial level premium rate is guaranteed for 10 years followed by increased guaranteed premiums for an additional 20 years. However, after year 10 the policyholder is protected against premiums being increased above the initial level, with the protection provided by a second company through either reinsurance, a second policy issued to the consumer, or an agreement between the companies.

   The combined reserves of the direct writer and the second company should be no less than the amount which the direct writer would hold if (a) there were no second company and (b) the initial reserve segment were 30 years. If this condition is not met, reserve credits for the direct writer should be disallowed. The reserve held by the direct writer should be based on the initial level premium being guaranteed for 30 years.

4. A product has relatively high gross premiums but with a guaranteed dividend or guaranteed refund schedule, or by some other means guarantees a low net cost to the policyholder.

   The net amount of premium (i.e., gross premium less dividends or refunds) should be used in the reserve calculation. That represents the amount the insured actually pays for coverage.

   For products reinsured on either a coinsurance or modified coinsurance basis, the reinsurer's reserve calculation should also be based on the net premium (i.e., gross premiums less dividends or refunds guaranteed to be paid to the policyholder).

5. a) A re-entry term product has an initial rate guarantee for 10 years, with loose or non-existent re-entry underwriting, allowing the policyholder to re-enter for an additional 20 years at specified favorable rates.

   b) A universal life policy has provisions such that, if the UL policy lapses prior to the 10th policy anniversary because the actual accumulation value (or cash value, depending on design) falls below zero but stipulated premiums have been paid, a substitute policy is guaranteed to be issued providing the same amount of insurance coverage at the same stipulated premium for the remainder of the 10-year period plus an additional 20 years.

   The reentry periods and premiums should be treated as a continuation of the initial guarantees for reserve calculation purposes. The initial reserve segment applicable to the original policy should be 30 years if the stipulated premium for the substitute policy is not high enough to trigger a new reserve segment. When the substitute policy is issued, reserves should be determined as if the coverage had been issued at the issue age and issue date of the original policy. Effectively, the company has guaranteed coverage for 30 years at the time the initial policy is issued, and the reserves established should reflect that guarantee.

6. A reinsurance treaty provides for 30 years of level premiums on a current scale but directly guarantees those premiums for only the first 10 years. However, if the reinsurer increases the premiums after 10 years, the reinsurer agrees to increase the expense allowance such that the net payments (premium minus allowance) by the direct writer remains unchanged.

   Relative to the reinsurer's reserve calculation, the initial reserve segment should be 30 years and the valuation premium should be level over that period. In this instance, the additional "expense allowance" has no relationship to the expenses actually incurred by the direct writer in administering the reinsured policies. Although a bona fide expense allowance would typically not be considered in determining the valuation premiums and reserve segments, in this instance the additional "expense allowance" has no relationship to the expenses actually incurred by the direct writer in administering the reinsured policies."

7. A universal life policy has a cumulative "premium catch-up provision" in which the coverage is guaranteed to remain in force as long as a stipulated premium is paid each year, and if the insured is paying less than is required to maintain the guarantee, there is an unlimited right to make up past premium deficiencies.

Model #830 requires that "when a policy contains more than one secondary guarantee, the minimum reserve shall be the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees." Since secondary guarantees with "catch-up" provisions are capable of being reinstated up to the end of the secondary guarantee period, they constitute "unexpired secondary guarantees" which must be incorporated into the calculation of "the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees."

The basic and deficiency reserves for a secondary guarantee with a catch-up provision should be computed as if the stipulated premium requirement had been met. The basic reserve shall be reduced by the product of (a) the "catch-up amount," if any, which would be required on the valuation date and (b) the ratio of the "initial" (i.e., before adjustment) basic reserve to the sum of the "initial" basic and deficiency reserves. In no event shall the "reduced" basic reserve be reduced below zero. The deficiency reserve shall be reduced by the product of (a) the "catch-up amount," if any, which would be required on the valuation date and (b) the ratio of the "initial" deficiency reserve to the sum of the "initial" basic and deficiency reserves. In no event shall the "reduced" deficiency reserve be reduced below zero.

If a universal life policy with a "premium catch up provision" has a shadow account below the level necessary to maintain the secondary guarantee, then the reserve for the secondary guarantee shall be valued according to this example. The basic and deficiency reserves, before deduction for the catch-up amount, shall be calculated as specified in Section 8A, Section 8B, Section 8C or Section 8E, as applicable.

8A. For policies and certificates issued prior to July 1, 2005: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the "specified premiums" are the minimum gross premiums derived in "Step One."

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, a determination should be made of the single payment necessary at the valuation date to fully fund the remaining secondary guarantee assuming that the minimum gross premiums have been paid, up through the valuation date, during the secondary guarantee period. The result from "Step Three" should be divided by this number.

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830.

Sixth, the "net amount of additional premiums" is determined by multiplying the ratio from "Step Four" by the difference between the net single premium from "Step Five" and the basic and deficiency reserve, if any, computed in "Step Two."

Seventh, a "reduced deficiency reserve" should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from "Step Four," but not less than zero. This "reduced deficiency reserve" is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from "Step Five," and (2) the amount of the excess from "Step Six" plus the basic reserve and the deficiency reserve, if any, computed in "Step Two." Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) are those calculated in Step Two, and no further calculation is required.

Ninth, an "increased basic reserve" should be computed by subtracting the "reduced deficiency reserve" in "Step Seven" from the reserve computed in "Step Eight." This "increased basic reserve" is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

8B. For policies and certificates issued on or after July 1, 2005 and on or prior to December 31, 2006: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the "specified premiums" are the minimum gross premiums derived in "Step One." Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term "fully fund the guarantee" should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term "remainder of the secondary guarantee period" should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves.

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, as of the valuation date for the policy being valued, for policies utilizing shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For policies with no shadow accounts but which specify cumulative premium requirements, determine the amount of the cumulative premiums paid in excess of the cumulative premium requirements that would result in no future premium requirements to fully fund the guarantee; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee). For any policy for which the secondary guarantee can not be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. The amount determined above for this step is to then be divided by one minus a 7% premium load allowance (0.93). The result from "Step Three" should be divided by this number, with the resulting ratio capped at 1. The ratio is intended to measure the level of prefunding for a secondary guarantee which is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount of the premium load allowance as defined in this step. As used here, "assumptions" include any factor or value, whether assumed or known, which is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at a level approximately equal to the current industry average.]

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830.

Sixth, the "net amount of additional premiums" is determined by multiplying the ratio from "Step Four" by the difference between the net single premium from "Step Five" and the basic and deficiency reserve, if any, computed in "Step Two."

Seventh, a "reduced deficiency reserve" should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from "Step Four," but not less than zero. This "reduced deficiency reserve" is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from "Step Five," and (2) the amount of the excess from "Step Six" plus the basic reserve and the deficiency reserve, if any, computed in "Step Two." Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves. However, if no future premiums are required to support the guarantee period being valued, there is no reduction for surrender charges. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) of Model #830 are those calculated in Step Two, and no further calculation is required.

Ninth, an "increased basic reserve" should be computed by subtracting the "reduced deficiency reserve" in "Step Seven" from the reserve computed in "Step Eight." This "increased basic reserve" is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

8C. For all policies and certificates issued on or after January 1, 2007 and on or prior to December 31, 2012: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the "specified premiums" are the minimum gross premiums derived in "Step One." Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term "fully fund the guarantee" should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term "remainder of the secondary guarantee period" should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves. Additionally, for purposes of applying Sections 7B and 7C of Model #830, a lapse rate of no more than 2% per year for the first 5 years, followed by no more than 1% per year to the policy anniversary specified in the following table based on issue age, and 0% per year thereafter may be used. If the duration in the table is less than 5, then a lapse rate of no more than 2% per year may be used through that duration, and 0% per year thereafter.

Issue Age	Duration
0-50	30th policy anniversary
51-60	Policy anniversary age 80
61-70	20th policy anniversary
71-89	Policy anniversary age 90
90 and over	No lapse

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, as of the valuation date for the policy being valued, for policies utilizing shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For policies with no shadow accounts but which specify cumulative premium requirements, determine the amount of the cumulative premiums paid in excess of the cumulative premium requirements that would result in no future premium requirements to fully fund the guarantee; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee). For any policy for which the secondary guarantee can not be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. The amount determined above for this step is to then be divided by one minus a 7% premium load allowance (0.93). The result from "Step Three" should be divided by this number, with the resulting ratio capped at 1. The ratio is intended to measure the level of prefunding for a secondary guarantee which is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount of the premium load allowance as defined in this step. As used here, "assumptions" include any factor or value, whether assumed or known, which is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at a level approximately equal to the current industry average.]

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830. For purposes of calculating the net single premium, a lapse rate subject to the same criteria as the lapse rate used in applying Step 2 of 8C above may be used.

Sixth, the "net amount of additional premiums" is determined by multiplying the ratio from "Step Four" by the difference between the net single premium from "Step Five" and the basic and deficiency reserve, if any, computed in "Step Two."

Seventh, a "reduced deficiency reserve" should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from "Step Four," but not less than zero. This "reduced deficiency reserve" is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from "Step Five," and (2) the amount of the excess from "Step Six" plus the basic reserve and the deficiency reserve, if any, computed in "Step Two." Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) of Model #830 are those calculated in Step Two, and no further calculation is required.

Ninth, an "increased basic reserve" should be computed by subtracting the "reduced deficiency reserve" in "Step Seven" from the reserve computed in "Step Eight." This "increased basic reserve" is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

Business reserved pursuant to Section 8C must be supported by an asset adequacy analysis specific to this business. This asset adequacy analysis must be performed pursuant to the requirements of Section 3 of the Standard Valuation Law. Reserves required by Section 8C shall be increased by any additional reserves required by the asset adequacy analysis.

8D. This Section 8D applies to policies and certificates (1) issued on and after July 1, 2005, (2) issued prior to January 1, 2013, and (3) in force on December 31, 2012, or on any valuation date thereafter: Under a universal life policy with a secondary guarantee, the coverage is guaranteed to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

Notwithstanding the requirements of any of the other sections of this Actuarial Guideline (and in addition to any testing that may be required under Section 8C), this Section 8D describes the reserving requirements with respect to universal life with secondary guarantee products, with or without a shadow account, with multiple sets of interest rate or other credits, or multiple sets of cost of insurance, expense, or other charges that may become applicable to the calculation of the secondary guarantee measures in any one policy year. This Section 8D does not apply if the minimum gross premiums for the policies are determined by applying the set of charges and credits that produces the lowest premiums, regardless of the imposition of constraints, contingencies, or conditions that would otherwise limit the application of those credits and charges. The requirements of this Section 8D apply to a company on December 31, 2012, and on any subsequent valuation date if (1) on the applicable date, the in force face amount (direct plus assumed) of universal life insurance to which this Section 8D would otherwise apply exceeds 2% of the company's face amount of individual permanent life insurance in force, or (2) on the applicable date, the company's face amount of insurance in force subject to this Section 8D exceeds $1,000,000,000 (one billion dollars). Any company otherwise meeting these criteria may seek an exemption to the requirements under this Section 8D by filing an exemption request with its state of domicile, which will provide a copy of the request to the NAIC Financial Analysis (E) Working Group (FAWG). If the state of domicile agrees with the exemption request, then the requirements of this Section 8D do not apply to such company, provided FAWG does not conclude that the exemption would allow the company to use a reserving methodology that is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

a. Primary Reserve Methodology

The company's aggregate gross reserve before reinsurance for the business subject to this Section 8D to be reported in the December 31, 2012, and subsequent annual statutory financial statements of the company will be the aggregate reserve under 1 below, plus any excess of the aggregate reserve determined as defined in 2 below, over 1:

1. The basic and deficiency reserve as of the valuation date determined by the company according to the reserve methodology and assumptions used by the company for the statutorily-reported reserve for the business subject to this Section 8D as of December 31, 2011.

2. The reserve amount as of the valuation date determined according to the same requirements for determining the deterministic reserve in the version of the valuation manual specified under Section 11 of the *Standard Valuation Law* (Model #820) and adopted by NAIC Life Insurance and Annuities (A) Committee on August 17, 2012, or in any version subsequently adopted by the NAIC as of the July 1 preceding the valuation date (Valuation Manual), but with the two modifications identified below, determined as follows:

   a) First, future year-by-year cash flows for the block of business subject to this Section 8D are projected as of the valuation date. In making this projection:

      (I) the projected net investment earnings from the starting assets shall be the lesser of (i) the actual portfolio net investment returns and (ii) net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds.

      (II) the projected net investment rate for the reinvestment assets shall be the lesser of (i) the average over a period of 12 months, ending on the June 30 prior to the valuation date, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody's Investor Services, Inc. and (ii) 7% per annum.

b) Second, future year-by-year net investment returns are determined from the cash flows generated in Section 8D(a)(2)(a).

c) Third, the reserve for the policies is computed using the year-by-year net investment returns determined in Section 8D(a)(2)(b) to discount the cash flows applicable to those policies.

The company may calculate the reserves as of any December 31 as of a date no earlier than three months before that December 31 valuation date, using relevant company data, provided an appropriate method is used to adjust those reserves to the valuation date.

If the aggregate reserve determined pursuant to the second calculation above exceeds the aggregate reserve determined pursuant to the first calculation, the additional reserve to be held is deemed to be required pursuant to Model #820, Section 3 and Section 6, which provide for an analysis of reserves pursuant to an asset adequacy analysis with margins for moderately adverse assumptions. Any such excess shall be allocated to each policy in proportion to the Step 1 reserve for that policy.

b. Alternative Reserve Methodology

The requirements of subsection a. above shall not apply to a company that holds a total gross reserve amount, before reinsurance, for the business subject to this Section 8D at least equal to the total reserve determined in accordance with the November 1, 2011 Life Actuarial (A) Task Force Statement on Actuarial Guideline XXXVIII, except that for purposes of determining any deficiency reserves under Model #830, using mortality and lapse assumptions according to the same requirements for determining the deterministic reserve in the Valuation Manual.

c. Documentation and Reporting

Under the direction of one or more qualified actuaries, the company shall prepare a stand-alone Actuarial Memorandum covering the reserve analysis performed on the business described in this Section 8D in compliance with Section 7 of the *Actuarial Opinion and Memorandum Regulation* (Model #822) to document the assumptions, analyses and results of the reserve calculations described above. The Actuarial Memorandum shall be prepared regardless of whether the company used the Primary Reserve Methodology described in Section 8D(a) or the Alternative Reserve Methodology described in Section 8D(b). Documentation in the submitted Actuarial Memorandum must be sufficient for another actuary qualified in the same practice area to evaluate the assumptions, analyses and results, and to enable regulatory review and verification that the assumptions, analyses and results satisfy the requirements described above, as they relate to the company. In the event that the Valuation Manual is incomplete or unclear as to any matter, the actuary preparing the Actuarial Memorandum shall use his or her best judgment in applying the requirements of the Valuation Manual and shall document his or her decisions in the Actuarial Memorandum. For any business subject to this Section 8D that has been ceded by the company, the Actuarial Memorandum shall provide a listing of the assuming companies with face amount, reserve credit taken, and form of reinsurance for such business. The Actuarial Memorandum shall be submitted to the state of domicile of the company by the April 30 following the valuation date. The state of domicile shall provide a copy of the Actuarial Memorandum to FAWG and, upon request, to any other state in which the company is licensed.

For those companies that used the Primary Reserve Methodology described above, the Actuarial Memorandum shall also provide with respect to the business subject to this Section 8D a description of the simplifications, approximations and modeling efficiency (aggregation) techniques used to calculate the reserve amount set forth in Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)) and a clear indication that, upon request, information may be obtained that is adequate to permit the audit of any subgroup of the aggregated reserve amounts to ensure that the total of the seriatim (policy-by-policy) reserve calculations produces a reserve not materially different than the aggregated reserve amount determined pursuant to Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)).

Along with the filing of the Actuarial Memorandum pertaining to the December 31, 2012 valuation date, those companies using the Primary Reserve Methodology above shall also submit a report to its state of domicile indicating what the gross reserve before reinsurance for the business subject to this Section 8D would be as of December 31, 2012 if the reserve had been determined pursuant to the methodology and experience assumptions used to determine the reserve set forth in Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)), except using a net reinvestment return rate assumption not greater than the maximum valuation interest rate for the year of issue of each policy set forth in Model #820. The company shall include in this report what its (i) total adjusted capital and (ii) company action level risk based capital would be if the company held the reserve calculated pursuant to this methodology rather than the reserve actually reported for the applicable business in the annual statement submitted by the company to the NAIC. The report described in this paragraph will be provided by the company to the state of domicile, which will forward a copy to FAWG. Upon request, the state of domicile will also forward a copy of this report to any other state in which the company is licensed. The state of domicile, FAWG, and any other state receiving the report will treat it as containing confidential information. The report is to be provided for informational purposes only, and it is to be considered and used as one additional piece of information to be evaluated in the context of the company's overall financial position.

The domestic state will perform a review of the Actuarial Memorandum in consultation with FAWG to ensure the company's reserve calculations have been performed according to the requirements of this Section 8D.

If:

- the company reports in its financial statements the reserve level required above, adjusted for any phase-in period approved by the company's state of domicile, and
- the company complies with any applicable phase-in period made by the state of domicile with respect to such additional reserves, and
- FAWG agrees with the state of domicile's decisions,

FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is appropriate in relation to the benefits and the pattern of premiums for the plans covered. If FAWG does not agree with the state of domicile's decisions, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

8E. For policies and certificates issued on or after January 1, 2013: For a universal life policy that guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

Step 1: The first step is to derive the minimum gross premiums for the policy or certificate (to be determined at issue). Except as indicated for policies and certificates described in Method I Policy Design #3 (described below), the minimum premiums so derived must satisfy the secondary guarantee requirement. Model #830, Section 7A(4) does not apply in determining the minimum gross premiums for policies and certificates described in this Section 8E.

I) Methodology for determining the minimum gross premiums for certain designs ("Method I").

1. Policy Design #1: For a policy containing a secondary guarantee that uses a shadow account with a single set of charges and credits, the minimum gross premium for any policy year is the premium that, when paid into a policy with a zero shadow account value at the beginning of the policy year, produces a zero shadow account value at the end of the policy year, using the guaranteed shadow account charges and credits (e.g., interest credited rate, mortality charges, premium loads and expense charges) specified under the secondary guarantee.

2. Policy Design #2: For a policy that compares paid accumulated premiums to minimum required accumulated premiums (cumulative premium policy), with both accumulations based on a single set of charges and credits specified under the secondary guarantee, the minimum gross premium for any policy year is the premium that, when paid into a policy for which the accumulated premiums equals the minimum required accumulated premiums at the beginning of the policy year, results in the paid accumulated premiums being equal to the minimum required accumulated premiums at the end of the policy year.

3. Policy Design #3: If, for any policy year, a shadow account secondary guarantee, a cumulative premium secondary guarantee design, or other secondary guarantee design, provides for multiple sets of charges and/or credits, then the minimum gross premiums shall be determined by applying the set of charges and credits in that policy year that produces the lowest premiums, ignoring the constraint that such minimum premiums satisfy the secondary guarantee requirement and ignoring any contingencies or conditions that would otherwise limit the application of those charges and credits.

Notwithstanding the language in the approaches described above, the guaranteed (including conditionally guaranteed) policy credits for each year shall be limited as to magnitude in order for minimum gross premiums to be determined consistent with any of the policy designs above. The limitations must be met at the time of each product filing and also when guaranteed credits or charges for each such product are revised. For this purpose, policy credits based on the interest or accumulation rates in the policy shall not exceed the "Index" (defined in the next sentence) plus 3% per annum. The Index used to establish the limitation as to magnitude shall be either (i) the monthly average of the composite yield on seasoned corporate bonds as published by Moody's Investors Service, Inc., for the month immediately preceding the date of the Actuarial Opinion required under this Section 8E and described below, or (ii) the monthly average over a period of twelve months, ending on the June 30 preceding the date of the Actuarial Opinion required below, of the composite yield on seasoned corporate bonds, as published by Moody's Investors Service, Inc. The averaging period chosen by the company must be elected at time of product filing and consistently used for that product thereafter even if guaranteed credits or charges are subsequently revised for that product.

II) Methodology for determining the minimum gross premiums for other designs ("Method II").

Unless otherwise provided in this Section 8E, the minimum gross premiums shall be the lowest schedule of premiums that keep the policy in force over the life of the secondary guarantee period and that produce the greatest deficiency reserve at issue. If deficiency reserves produced at issue are all zero, then the smallest absolute value of the difference between "quantity A" set forth in Model #830, Section 5B, over the basic reserve shall be considered the greatest deficiency reserve. For purposes of this Step 1, in deriving the deficiency reserve associated with a particular schedule of gross premiums, the X factors used shall be set equal to 1 for all durations, issue ages, and risk classes.

For policies that use a shadow account, and for cumulative premium policies, the schedule of premiums that keep the policy in force over the life of the secondary guarantee period and that produce the greatest deficiency reserve at issue shall be determined assuming the following premium-paying patterns for premiums actually paid under the policy:

- Level premiums for the life of the secondary guarantee but not beyond the duration that premiums may be paid under the policy, and
- Increasing premiums over the life of the secondary guarantee (including any resulting reserve segments created), but not beyond the durations that premiums may be paid under the policy, and
- Combinations of the above premium patterns including higher initial premiums for funding levels to have access to better charges and credits with combinations of level and increasing premium patterns thereafter.

For all policies and certificates subject to this Step 1 of Method II of this Section 8E, the company shall also perform a good faith high-level analytical review of the product design with respect to the premium payment patterns to be expected with respect to that design. The review should consider whether there are situations whereby the product design is likely to elicit a pattern of premium payments that, if paid, would provide the insured with access to lower charges and/or higher credits than those that would apply assuming the premium paying patterns required to be tested under this Section 8E and thereby result in the need for a deficiency reserve significantly in excess of that determined using the schedules of minimum gross premiums determined pursuant to the premium payment patterns required to be tested under this Section 8E. To the extent identified, the company shall use such other premium payment patterns it determines are likely to result in the need for a greater deficiency reserve than implied by the premium payment patterns required to be tested under this Section 8E in determining the schedule of minimum gross premiums and related deficiency reserve. In performing this analytic review, the company shall consider payment patterns which keep the policy in force over the lifetime of the secondary guarantee.

Step 2: For purposes of applying Section 7B and Section 7C of Model #830, the “specified premiums” are the minimum gross premiums derived in Step 1. Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term “fully fund the guarantee” should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term “remainder of the secondary guarantee period” should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves. Additionally, for purposes of applying Section 7B and Section 7C of Model #830, the lapse rate used shall be no more than 2% per year for the first 5 years, followed by no more than 1% per year to the policy anniversary specified in the following table based on issue age, and 0% per year thereafter. If the duration in the table is less than 5, then a lapse rate of no more than 2% per year may be used through that duration, and 0% per year thereafter.

Issue Age	Duration
0-50	30th policy anniversary
51-60	Policy anniversary age 80
61-70	20th policy anniversary
71-89	Policy anniversary age 90
90 and over	No lapse

Step 3: A determination should be made of the amount of actual premium payments greater than or less than the minimum gross premiums. For policies using shadow accounts and qualifying under one of the Policy Designs of Method I, this will be the amount of the shadow account. For policies using shadow accounts whose minimum gross premium is determined under Method II, this will be the amount of the shadow account minus the amount that would be in the shadow account if the minimum gross premiums used to calculate basic and deficiency reserves in Step 2 were paid. This result may be negative. For cumulative premium policies whose minimum gross premiums are determined under Method I, this excess will be the amount of cumulative premiums paid over the cumulative premium requirements. For cumulative premium policies whose minimum gross premiums are determined under Method II, this excess will be the amount of the cumulative premiums paid minus the cumulative premium using the minimum gross premiums used to calculate basic and deficiency reserves in Step 2. This result may be negative. The cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Step 4: As of the valuation date for the policy being valued, for policies using shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For cumulative premium policies, determine the minimum amount of the cumulative premiums required to fully fund the guarantee less the cumulative premium requirements. For any policy for which the secondary guarantee cannot be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. For shadow account policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is positive then the amount determined above for this step is reduced by any positive shadow account based on minimum gross premiums. For cumulative premium policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is positive then the amount determined above for this step is reduced by the excess of cumulative premiums, assuming minimum gross premiums are paid, over the cumulative premium requirements. For shadow account policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is negative then the amount determined above for this step is replaced by the amount of the shadow account based on the minimum gross premiums. For cumulative premium policies, if the minimum gross premiums are determined by Method II and the Step 3 amount is negative then the amount determined above for this step is replaced by the excess of cumulative premiums, assuming minimum gross premiums are paid, over the cumulative premium requirements.

The amount determined above for this step is then divided by one minus a 7% premium load allowance (0.93).

The result from Step 3 should be divided by the number above, with the resulting ratio capped at 1 and no less than (-1). The ratio is intended to measure the level of prefunding for a secondary guarantee and is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount of the premium load allowance as defined in this step. As used here, “assumptions” include any factor or value, whether assumed or known, that is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at this 7% level, which is approximately equal to the current industry average.]

Step 5: Compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830. For purposes of calculating the net single premium, a lapse rate subject to the same criteria as the lapse rate used in applying Step 2 may be used.

Step 6: If the amount in Step 3 is positive the “net amount of additional premiums” is determined by multiplying the ratio from Step 4 by the difference between the net single premium from Step 5 and the basic and deficiency reserve, if any, computed in Step 2.

If the amount in Step 3 is negative, the “net amount of additional premiums” is determined by multiplying the ratio from Step 4 by the basic reserves, if any, computed in Step 2. This result will be negative or zero. Subtract the deficiency reserve calculated in Step 2 from this result and then add the following amount, depending on whether the policy is a shadow account policy or a cumulative premium policy:

a) If a shadow account policy add the following:
The deficiency reserve at issue calculated using X factors associated with the premium paying pattern used in determining the greatest deficiency reserve in Method II, Step 1, multiplied by one minus the ratio of the amount of the shadow account divided by minimum amount in the shadow account that would fully fund the guarantee. This amount in Step 6(a) is not to be less than zero.

b) If a cumulative premium policy add the following:
The deficiency reserve at issue calculated using X factors associated with the premium paying pattern used in determining the greatest deficiency reserve in Method II, Step 1, multiplied by one minus the ratio of the amount of cumulative premiums paid divided by the minimum amount of cumulative premiums required to fully fund the guarantee. This amount in Step 6(b) is not to be less than zero.

Step 7: A “reduced deficiency reserve” shall be computed by multiplying the deficiency reserve, if any, by one minus the ratio (such ratio not to be set less than zero) from Step 4; this final amount also not to be set less than zero. This “reduced deficiency reserve” is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Step 8: The reserve used for purposes of Model #830, Section 7D(1), is as follows.

a) Take the lesser of:
1) the “net amount of additional premiums” from Step 6 plus the basic reserve and the deficiency reserve, if any, computed in Step 2, and
2) the net single premium from Step 5.

b) Reduce the result in Step 8(a) by the applicable policy surrender charges (i.e., the account value less the cash surrender value). Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves.

c) Calculate the reserve floor:
1) If the result in Step 3 is negative, then the reserve floor shall equal the sum of the Step 2 basic and deficiency reserves and the amount from Step 6.
2) If the result in Step 3 is not negative, then the reserve floor shall equal the sum of the Step 2 basic and deficiency reserves without any adjustment.

The reserve to be used for purposes of Model #830, Section 7D(1) is the greater of the resulting amount from Step 8(b) above and the reserve floor.

Step 9: An "increased basic reserve" shall be computed by subtracting the "reduced deficiency reserve" in Step 7 from the reserve computed in Step 8. This "increased basic reserve" is the basic reserve to be used for purposes of Model #830, Section 7D(1).

Actuarial Opinion and Company Representation Requirements

If a company uses one of the Policy Design methodologies described above in Method I of this Section 8E to determine the minimum gross premiums in Step 1, the company shall submit to its state of domicile at the time of filing/approval of a new product, or by December 31, 2012, for current products that will be issued in 2013 or thereafter, and at any time when rates and/or charges are changed, an Actuarial Opinion signed by the Appointed Actuary and a Representation of the Company signed by a Senior Officer of the company regarding the applicable policy form(s) that states:

Actuarial Opinion

"I, (name and professional designation), am the appointed actuary for (company name). I have examined the actuarial assumptions and actuarial methods used in determining the reserves described herein, and, in my opinion: (1) the product referenced herein meets the definition of Policy Design # ___ described in Method I in Section 8E of Actuarial Guideline XXXVIII (AG 38); (2) notwithstanding the language in Policy Design # ___, the guaranteed (including conditionally guaranteed) policy credits in the product available for any year do not exceed the "Index" defined in Method I in Section 8E of AG 38 plus 3% per annum; and (3) the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy."

(Name of actuary, printed or typed)
(Signature of actuary)
(Date signed)

Company Representation

"(company name) hereby represents: (1) that the product referenced herein meets the definition of Policy Design # ___ described in Method I in Section 8E of Actuarial Guideline XXXVIII (AG 38); (2) notwithstanding the language in Policy Design # ___, the guaranteed (including conditionally guaranteed) policy credits in the product available for any year do not exceed the "Index" defined in Method I in Section 8E of AG 38 plus 3% per annum; and (3) the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy."

(Name of company Officer, printed or typed)
(Signature of company Officer)
(Date signed)

The state of domicile shall provide a copy of the Actuarial Opinion and the Company Representation to FAWG and, upon request, to any state in which the company plans to issue the policy that is the subject of the Actuarial Opinion and Company Representation.

Policy Design

If a company develops reserves based on Method II of this Section 8E, the company shall submit a report from its Appointed Actuary prior to issuing policies on that form to its state of domicile, which will provide a copy to FAWG and (upon request) to any state in which the company plans to issue the product, that briefly describes the analytical review performed, the company's conclusions following the analytical review, and whether any additional premium payment patterns other than those required by this Section 8E were tested as a result of the review. If FAWG agrees with the state of domicile's decisions with respect to the company's Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is appropriate in relation to the benefits and the pattern of premiums for the plans covered. If FAWG does not agree with the state of domicile's decisions with respect to the company's Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

Effective Date

With the exception of Steps 3 through Step 9 of Section 8A and all of Section 8B, Section 8C, Section 8D and Section 8E, the scope of this guideline shall be inclusive of policies issued on and after the earlier of a state's adoption of the revised Model #830 (adopted by the NAIC in March 1999) or the statutory accounting practices and procedures as set forth in the NAIC *Accounting Practices and Procedures Manual*. All of Section 8A, Section 8B, Section 8C, Section 8D and Section 8E shall be applicable to policies and certificates issued on or after the later of the date of a state's adoption of the revised Model #830 and January 1, 2003, subject to the dates and/or applicable scope specified in Section 8A, Section 8B, Section 8C, Section 8D and Section 8E.

Actuarial Guideline XXXIX

RESERVES FOR VARIABLE ANNUITIES WITH GUARANTEED LIVING BENEFITS

I. Background

The purpose of this Actuarial Guideline (Guideline) is to interpret the standards for the valuation of reserves for guaranteed living benefits included in variable deferred and immediate annuity contracts (VAGLBs). This Guideline provides an interpretation of the National Association of Insurance Commissioners' (NAIC) Model Standard Valuation Law (SVL) for VAGLBs and is intended to be temporary.

The methodology does not specifically address how "base variable annuity reserves" (i.e., reserves for variable annuity contracts calculated by ignoring VAGLBs) should be calculated. Rather, it only addresses the calculation of reserves for VAGLBs to be held in the General Account.

In addition, this Guideline interprets the standards for the valuation of reserves when the VAGLB risk is reinsured.

II. Scope

This Guideline applies to variable deferred and immediate annuity contracts that provide one or more guaranteed living benefits. This Guideline does not apply to those group annuity contracts that are not subject to the Commissioners' Annuities Reserve Valuation Method (CARVM).

VAGLB designs falling under the scope of this Guideline include, but are not limited to, currently offered provisions commonly referred to as Guaranteed Minimum Accumulation Benefits (GMABs), Guaranteed Minimum Income Benefits (GMIBs), Guaranteed Minimum Withdrawal Benefits (GMWBs), and Guaranteed Payout Annuity Floors (GPAFs).

III. Text

A. Aggregate Reserves for Contracts with VAGLBs

The Aggregate Reserves for Contracts with VAGLBs are the total reserves held by the company in support of the variable annuity contracts with VAGLBs, and equals the sum of 1 and 2, where:

1. equals the aggregate reserves for the variable annuity contracts ignoring both the future revenues and benefits from the VAGLBs and after comparison to the cash value of the contracts. For the purpose of determining future revenues and benefits for VAGLBs, a charge should be imputed in the event that there are no explicit VAGLB charges.

   and

2. equals the VAGLB reserve, determined as the sum of the aggregate VAGLB charges from the date of issue to the valuation date for VAGLB benefits in-force (i.e., contracts still in-force and still eligible for the VAGLB), the sum reduced by 2.5% each calendar quarter beginning January 1, 2008 and subject to the asset adequacy analysis requirement in subsection C (i.e., each quarter the prior quarter VAGLB result is multiplied by 0.975 then the VAGLB charges from the quarter are added to the product). In the event that there are no explicit VAGLB charges, a charge should be imputed.

The VAGLB reserve must be held in the General Account. (This is in addition to any amounts in item 1 that are required to be held in the General Account).

B. Reserve for Ceded and Assumed Reinsurance

If all or a portion of the VAGLB risk is reinsured on a proportional basis, the ceding company is entitled to a corresponding proportional reinsurance reserve credit based on the VAGLB reserve held before consideration of reinsurance.

Adjustments may need to be made to the reserve credit taken by ceding companies where the underlying reinsurance treaty contains non-proportional elements.

For companies where VAGLB risk is assumed, the aggregate VAGLB reserves for contracts with VAGLBs will be the sum of a) the aggregate direct VAGLB charges in proportion to the amount of reinsurance from the issue date of the contract to the effective date of the reinsurance contract and b) gross reinsurance premiums from the effective date of the reinsurance contract to the valuation date for VAGLB benefits in force (i.e. contracts still in force and eligible for the VAGLB) and subject to the asset adequacy analysis requirement in subsection C.

C. Asset Adequacy Analysis Requirement

The appointed actuary must perform a standalone asset adequacy analysis of the VAGLB reserve. If such analysis reveals a reserve shortfall, VAGLB reserves must be increased. Such analysis shall be performed reflecting the following:

1. all VAGLB benefits and expenses,

2. all VAGLB charges, and

3. the assets supporting the VAGLB reserves.

The analysis shall be performed on an aggregate basis for all contracts with VAGLBs, consistent with the requirements of the NAIC Model Actuarial Opinion and Memorandum Regulation, including the requirement that the analysis conform to the Actuarial Standards of Practice as promulgated from time to time by the Actuarial Standards Board. However, no separate actuarial opinion is required by this Actuarial Guideline.

Where the VAGLB is reinsured, the asset adequacy analysis may reflect the reinsurance. However, if the inclusion of reinsurance in the asset adequacy analysis would increase the VAGLB reserve, then reinsurance must be reflected in the analysis.

IV. Applicability

This Guideline is effective December 31, 2002 and affects all contracts issued on or after January 1, 1981.

Since the requirements of this Guideline are intended to be temporary, this Guideline is in effect until no later than December 30, 2009.

Actuarial Guideline XL

GUIDELINE FOR VALUATION RATE OF INTEREST FOR FUNDING AGREEMENTS AND GUARANTEED INTEREST CONTRACTS (GICS) WITH BAIL-OUT PROVISIONS

PURPOSE

The purpose of this Guideline is to interpret the Standard Valuation Law (SVL) for assignment of appropriate valuation interest rates to risks embedded in bail-out provisions under Funding Agreements and Guaranteed Interest Contracts.

BACKGROUND

Funding Agreements (FAs) and other types of Guaranteed Interest Contracts (GICs) typically issued to tax-exempt municipal bonds, money market funds and securities lending funds, often contain bail-out provisions that allow the contractholders to get their money back at full book value. Such provisions may be triggered by the credit rating downgrade of the issuer below a given level or may be at a given period’s notice to the contractholder, e.g. 7, 30, 90 or 180 days’ notice. The contract language for these provisions may be as follows:

1. In the event that the investment provider (i.e. the insurance company) is downgraded below *A-/A3* by S & P and/or Moody’s respectively, the contract holder has the right to terminate the contract and receive the remaining principal and accrued interest without penalty. [In most cases the issuer has the alternate option to provide a replacement contract or post collateral or do a credit wrap.]

2. Each party has the right to terminate the contract before maturity by giving the other at least *7/30/90 or 180-days* notice in writing. At such termination the principal and accrued interest is payable with no penalty.

Contracts with downgrade provision

The bulk of the contracts issued with a downgrade provision are fixed rate FAs or GICs issued in connection with tax-exempt municipal bonds. These contracts can be short-term or long-term. Short-term contracts typically have an average life of around one-year, and are intended for municipal bond funds for construction, acquisition, housing, tax revenue anticipation notes (TRANS), etc. In these types of funds the cash-flow projections are provided when the case is underwritten, but there may be variability in the actual withdrawals. Any outstanding principal and interest is payable at maturity.

Long-term contracts are issued in connection with the debt service reserve (DSR) or the float fund of the bond issue, and mature at the same time as the bonds, which can be as long as 30 years. The float fund takes in deposits, and pays out the half-yearly interest and principal (if any is due) on the bonds. It runs to near zero about twice a year, after each half-yearly coupon payment. The DSR is a contingent fund for a rainy day to prevent a missed coupon or principal payment on the bond. The DSR has a single deposit that is typically 10% of the bond issue.

Contracts with put provision

FAs or GICs with put provisions are generally issued to money market funds subject to Rule 2a-7 of the Investment Company Act. Rule 2a-7 provides guidelines on liquidity, requiring funds available at book value subject to certain notification periods. Additionally, these contracts usually have downgrade provisions. Even if the downgrade provision is not in the contract, it can be assumed that the put will be exercised on downgrade, since a certain level of credit is also a Rule 2a-7 requirement.

Typically, these FAs or GICs guarantee a floating rate of interest linked to an index like LIBOR, which is paid out and reset periodically. Most contracts have fixed maturity dates when the principal is returned. Generally the FAs or GICs are the higher yielding assets of the money market funds, and therefore puts are not expected to be exercised.

Risks

Both the downgrade and the put provisions present liquidity or concentration type of risks to the issuer, i.e. if a critical event occurs, a substantial part of the whole block of business is likely to be liquidated. Sufficient asset liquidity, prudent A/L management, cash flow testing, hedging strategies, etc. can mitigate these risks. Also, companies generally have contractual provisions providing alternative options.

Downgrade provision:
The main risk here is that, upon downgrade to the trigger level, a company may have to realize its assets at a market loss in order to pay out at book. If the downgrade happens in a falling interest rate environment there is no risk of a market loss as the underlying assets are likely to be at a higher market value. On the other hand if the downgrade occurs in a rising interest rate environment, market value losses would occur when the company sells assets to pay out liabilities at book value.

Companies have written provisions in their contracts that provide alternate options to paying at book value in a rising interest rate environment:

“Novation/Assignment” option: The novation/assignment option allows the company to transfer its liabilities to another funding agreement provider that meets the credit rating requirements of the contractholder. In a rising interest rate environment, the new provider should be willing to pay a “premium” to assume a liability crediting a below market interest rate. In a perfectly efficient market this “premium” should precisely offset the market value loss upon the sale of the asset. In practice, however, it is less likely that the “premium” would fully offset the market value loss since:

- The new provider may view the liability risk somewhat differently
- The new provider may try and take advantage of the situation of the downgraded company
- There may be a large volume of these types of contracts in the market, etc.

However, the “premium” payable by the new provider could provide a substantial offset against the market value loss incurred by the downgraded company.

“Collateralization” option: This option allows the company to post assets as collateral for the benefit of the contractholder, as an alternative to payment at book value. The collateral posted would have to meet the credit requirements of the contractholder, which could be government or agency securities. Usually the collateral posted is required to have a cushion, typically ranging from 102% to 105%.

Upon trigger of the downgrade provision, the company would need to have suitable assets in its portfolio that are available for use as collateral, and also acceptable to the contractholder. In addition, there will be administrative and custodial expenses/fees of establishing and monitoring collateral levels. In some states there may also be legal restrictions on encumbering assets that back policyholder claims.

If the downgraded company can overcome the above constraints, then collateralization is another alternative of maintaining the contract and not having to pay out at book value.

“Credit Wrap” option: Under this arrangement the contract is issued out of a separate account which is guaranteed by a financial guarantee insurer. Effectively, the credit rating of the guarantor passes through to meet the credit requirement of the FA or GIC. [A number of FAs or GICs requiring a higher credit rating are currently being written in this way.]

The contract being wrapped has to meet certain criteria before the financial guarantee insurers are willing to wrap. Generally, the guarantor would also require higher credit rated securities in the separate account, which could be government or agency, and would require these in the 102% to 105% range. There will also be administrative and custodial expenses of establishing and monitoring the separate account in addition to the wrap fee payable to the mono-line insurer.

Although at significant cost, this option does provide the downgraded company a viable alternative to paying out at book value.

Put provision:
The put provision is not tied to a particular event but can contractually be exercised by giving the required days' notice. It has been argued that this provision is there to meet the Rule 2a-7 liquidity requirements and in practice is unlikely to be exercised, particularly since the FAs or GICs are one of the higher yielding assets of the money market portfolio. However, it is a contractual option and if, for example, the issuer were in financial difficulties, it will be exercised. Past experience suggests this is the case.

The put provision therefore presents a liquidity or concentration risk similar to that of downgrade——it is likely to be exercised in bulk upon happening of a critical event. Similar considerations apply, i.e. in a rising interest rate environment market value losses would occur when the company sells assets to pay out liabilities at book value.

Reserves

For reserving the Standard Valuation Law applies. However, when the SVL was enacted, these types of bail-out provisions did not exist, and were therefore not addressed explicitly. The purpose of this Guideline is to interpret the SVL for assignment of appropriate valuation interest rates to risks embedded in these bail-out provisions.

Other Actuarial Guidelines have provided similar interpretations. For example, Guideline XIII addresses interest bailout provisions under annuity contracts, Guideline XXX provides for participant directed withdrawal provisions under GICs, and Guideline XXXIII covers the elective and non-elective benefits under individual annuity contracts.

Plan Types

The SVL utilizes a concept known as Plan Type, which was designed to distinguish between the various levels of disintermediation risks—the greater the disintermediation risk for a company, the more conservative is the resulting valuation rate. Plan Types designated in the model SVL are defined as follows:

Plan Type A: At any time policyholder may withdraw funds only (l) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without such adjustment but in installments over five years or more, or (3) as an immediate life annuity, or (4) no withdrawal permitted.

Plan Type B: Before expiration of the interest rate guarantee, policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without such adjustment but in installments over five years or more, or (3) no withdrawal permitted. At the end of interest rate guarantee, funds may be withdrawn without an adjustment in a single sum or installments over less than five years.

Plan Type C: Policyholder may withdraw funds before expiration of interest rate guarantee in a single sum or installments over less than five years either (1) without adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) subject only to a fixed surrender charge stipulated in the contract as a percentage of the fund.

TEXT

For the purpose of the application of the Standard Valuation Law to FAs and GICs, the annuities and GIC valuation interest rates are to be used. The bailout provisions described above shall be treated as a withdrawal by the policyholder at book value, and the underlying contracts shall be classified as Plan Type C.

However, for contracts containing written provisions that allow the insurance company alternate options to paying out at book value, the valuation actuary may use a valuation rate of interest higher than Type C. In no event may the valuation interest rate be greater than that applicable to similar contracts with no put or bailout provisions. If a provision requires over-collateralization and/or use of high credit quality assets, this should be adequately reflected in the reserves.

If a higher interest rate than Type C is used, the valuation actuary must be satisfied and be able to demonstrate that the written provisions substantially reduce the liquidity risk. In addition, the valuation actuary must be satisfied, and should periodically review, that there are other risk management measures in place to reduce the liquidity or concentration risk, taking into consideration at least the following:

Readily liquidated assets at nil or minimal market-value loss
Cash-flow testing results
Standby lines of credit available and other liquidity facilities established
Hedges in place with liquidity options
High credit quality assets available for use as collateral.

Actuarial Guideline XLI

PROJECTION OF GUARANTEED NONFORFEITURE BENEFITS UNDER CARVM

I. Background

The following is an excerpt from the October 21, 2003, Report of the American Academy of Actuaries' Life Valuation Subcommittee:

> Annuity SNFL Impact on Reserves
>
> Per the Standard Valuation Law, Commissioner's Annuity Reserve Valuation Method (CARVM) is:
>
> "the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, *including guaranteed nonforfeiture benefits*, provided for by the contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of the contract, that become payable prior to the end of the respective contract year."
>
> Historically the guaranteed nonforfeiture benefit calculation has been determined at issue (e.g. 90 percent of premiums accumulated at three percent interest). The recent change to the Standard Nonforfeiture Law for Individual Deferred Annuities has changed this.
>
> Nonforfeiture Rate
>
> The new Standard Nonforfeiture Law for Individual Deferred Annuities has changed the nonforfeiture rate from being static to being dynamic. Under the old law, the nonforfeiture interest rate was three percent. The revised law bases the nonforfeiture rate on the five-year Constant Maturity Treasury Rate less 125 basis points (bps). The nonforfeiture rate is subject to a minimum of one percent and a maximum of three percent. Additional enhancements include the ability to reset the nonforfeiture rate at a date predetermined in the contract and allowing an additional reduction (offset) for Equity Indexed Annuities.
>
> The nonforfeiture rate can be reset at a date predetermined in the contract (e.g. five years from issue) and based on a formula specified in the contract. The same requirements applicable to the initial rate apply to the re-determined rate.
>
> The revised law allows an additional offset to the nonforfeiture rate for contracts that provide substantive participation in an equity indexed benefit. This offset ranges from 0 bps to 100 bps.
>
> The ability to re-determine the nonforfeiture rate and that the EIA offset may be reevaluated in the future raises some issues with the CARVM calculation.
>
> In doing a CARVM projection, what should be the assumed interest rate? Should the option depend on whether there are re-determination provisions? Should the option depend on whether the product relies on an equity indexed offset?

The Report further states:

> The minimum guaranteed interest rate in the contract might be different than the minimum nonforfeiture rate. To the extent that the guaranteed values in the contract are always greater than the minimum nonforfeiture benefits, then the nonforfeiture values do not come into play.

This Guideline specifies how to determine the nonforfeiture interest rate used in determining the minimum nonforfeiture benefits guaranteed under the contract. As noted in the Report, the minimum nonforfeiture benefits may be less the guaranteed values otherwise provided by the contract. Where this is the case, the higher guaranteed values are used in the CARVM calculation, and "the nonforfeiture values do not come into play."

It should also be noted that requirements for projecting guarantees exist in other regulations and guidelines, such as the specifications in Actuarial Guideline XXXV ("The Application of the Commissioners Annuity Reserve Method to Equity Indexed Annuities") for projecting equity-indexed guarantees. The specifications of this Guideline are in addition to any other requirements.

II. Scope

This Guideline applies to contracts subject to CARVM and the Standard Nonforfeiture Law for Individual Deferred Annuities ("SNLIDA").

III. Text

The following assumptions shall be made on the valuation date for purposes of determining the future nonforfeiture interest rate when this rate is not known in advance. For purposes of (B) below, "NI" shall refer to the nonforfeiture interest rate, "VI" shall refer to the valuation interest rate, and "CNI" shall refer to the current nonforfeiture interest rate which will be adjusted for any future durations pursuant to "A" below.

A. For the period of time during which the additional EIA offset is not known, the additional offset shall be zero.

B. For the period of time during which the nonforfeiture interest rate is not known,
NI = min [max {VI, CNI}, 3%]

If the redetermination of the nonforfeiture interest rate is based on changes to the value of the underlying index (this will be the five-year Constant Maturity Treasure Rate in the case of the nonforfeiture interest rate), then for purposes of this Guideline it shall be assumed that such rate is not known as of the first date on which the rate may be subject to redetermination.

IV. Applicability

This Guideline is effective December 31, 2006 and affects all contracts issued on or after January 1, 1981.

Actuarial Guideline XLII

THE APPLICATION OF THE MODEL REGULATION PERMITTING THE RECOGNITION OF PREFERRED MORTALITY TABLES FOR USE IN DETERMINING MINIMUM RESERVE LIABILITIES

1. Purpose

The purpose of this Guideline is to provide rules and guidance to appointed actuaries in the selection of the proper set of mortality rates when a company chooses to use the 2001 CSO Preferred Class Structure Mortality Table authorized under the Model Regulation Permitting The Recognition of Preferred Mortality Tables for use in Determining Minimum Reserve Liabilities (herein after called the "Model"). All terms in this guideline specifically defined in the regulation will have the same definition as specified by the regulation.

2. Effective Date and Scope

The 2001 CSO Preferred Class Structure Mortality Table is available for valuation purposes for individual life policy forms (and certain group life products sold to individuals by certificate with premium rates guaranteed from issue for at least two years), issued on or after 1/1/2007, or, if later, the effective date of the state's actual regulation based on the Model.

3. Definitions

A. "Anticipated mortality" means the appointed actuary's assumption about the mortality to be experienced in the future on a group of insured lives.

B. "Appointed actuary" means any individual who is appointed or retained in accordance with the requirements set forth in the Actuarial Opinion and Memorandum Regulation.

C. "Basic reserves" means reserves calculated in accordance with Section 5 of the Standard Valuation Law.

D. "Class" means a group of policies under one or more plans of insurance that has similar anticipated mortality, as grouped together by the insurer.

E. "Credibility" means a measure of the predictive value in a given application that the appointed actuary attaches to a particular body of data (predictive is used here in the statistical sense and not in the sense of predicting the future).

F. "Deficiency reserves" means the excess over basic reserves, if any, of minimum reserves established in accordance with Section 8 of the Standard Valuation Law.

G. "Full credibility" means the level at which a particular body of data is assigned full predictive value based on a selected confidence interval.

H. "Preferred class certification" means the certification required by Section 5 of the Model.

I. "Underwriting-based justification" means the incorporation of underwriting criteria for use in setting the anticipated mortality assumption.

J. "Underwriting class" means the insurer's designation of insureds into a particular premium rate structure, e.g. super preferred, preferred, or standard

4. Selection of Table within the 2001 CSO Preferred Class Structure Mortality Table

Section 5 of the Model contains the requirements governing the set of mortality rates to be used for the purpose of calculating reserves based on the 2001 CSO Preferred Class Structure Mortality Table. The election of the 2001 CSO Preferred Class Structure Mortality Table is on a policy form and calendar year of issue basis, although once a calendar year cohort of policy forms is placed on the 2001 CSO Preferred Class Mortality Structure Table basis, it may not subsequently revert back to the standard 2001 CSO basis without the approval of the commissioner. This would be considered a basis change for annual statement reporting purposes. For those calendar years of issue in which a company opts to use the 2001 CSO Preferred Class Structure Mortality Table, it must use the entire 2001 CSO Preferred Class Structure Mortality Table for the chosen policy forms, i.e. a company may not use the preferred classes from the 2001 CSO Preferred Class Structure Mortality Table and use the Standard 2001 CSO Mortality Table for the non-preferred class(es). Additionally, if the company sells two similar policy forms in the same market the appointed actuary must use the same version of the table for both forms and may not use the 2001 CSO Preferred Class Structure Mortality Table on one and the Standard 2001 CSO Mortality Table on the other. A characteristic of this two-form scenario is that preferred lives would be attracted to one form and non-preferred lives would be attracted to the other.

The Model contains a requirement that at the time of election and annually thereafter, except for business valued under the Residual Standard Nonsmoker Table or the Residual Standard Smoker Table, the appointed actuary shall certify that the following tests of sufficiency were passed:

a. For each class, the present value of death benefits over the next ten years after the valuation date using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

b. For each class, the present value of death benefits over the future life of the contracts using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

In the event that the class does not contain any policies with expiry dates ten or more years into the future, the sufficiency test based on the present value over the future life of the contracts shall be the only test required.

In order to choose the proper set of mortality rates within the 2001 CSO Preferred Class Structure Mortality Table and to develop the preferred class certification, the following considerations shall be made:

A. Creation of Classes

The appointed actuary should consider the composition and characteristics of the policies issued under a plan of insurance in determining the appropriate classes that will be applicable under that plan. The policies that comprise classes generally have similar underwriting or mortality experience characteristics. When classes are similar across various plans of insurance, these classes may be combined into a single aggregate class. The appointed actuary shall not combine classes that are expected to have dissimilar anticipated mortality as a means to produce reserves that are materially lower than those developed if the classes were not combined.

The appointed actuary should consider the presence of reinsurance in creating classes. Anticipated mortality should be assessed and classes should be created on a gross basis. To the extent that anticipated mortality on reinsurance ceded or assumed is materially different from that on direct business, the appointed actuary should consider creating separate classes to properly reflect the anticipated mortality.

If, due to differences in actual experience by policy form and underwriting class, groupings of classes are changed from those used in the prior actuarial certifications, the change and the effect of the change shall be disclosed to the commissioner in the actuarial certification.

Separate classes may be established for a single policy form if there are significant anticipated mortality differences for different cohorts of insured lives, such as age groups or policy sizes. For instance, if a company has different underwriting thresholds for policies with face amounts of $1 million or more, it may be appropriate to have a class for policies with face amounts of less than $1 million and a separate class for policies of $1 million or more.

B. Deriving Anticipated Mortality

i. If relevant company experience for a particular class is available and has full credibility, the appointed actuary shall use that experience as the basis for deriving anticipated mortality.

ii. In situations where relevant company experience for a particular class is available but does not have full credibility, the appointed actuary shall derive the anticipated mortality by blending the relevant company experience for the class with actual relevant, credible experience and past trends in experience of other similar types of business, either in the same company, in other companies (including reinsurance companies), or from other sources, generally in that order of preference provided that the appointed actuary supplies underwriting-based justification. The blending process shall be based on a credibility methodology that is recognized by the actuarial profession as acceptable practice as provided for in published transactions and scientific journals.

iii. In situations where relevant company experience for a particular class is not available (e.g. a new product), the appointed actuary may derive the anticipated mortality using actual relevant credible experience and past trends in experience of other similar types of business either in the same company, in other companies (including reinsurance companies), or from other sources, generally in that order of preference, provided that the appointed actuary supplies underwriting-based justification.

iv. Underwriting-based justification shall include an analysis of the relationship between the underwriting-based criteria for the class where no experience data is available or does not have full credibility and the underwriting-based criteria that underlie the actual relevant credible experience data.

v. If no sufficient underwriting-based or experienced-based justification is made to derive anticipated mortality for a class, the company shall not use the 2001 CSO Preferred Class Structure Mortality Table for valuation.

C. Periodic Assessment of Anticipated Mortality

The appointed actuary shall annually review relevant emerging experience and underwriting methods for the purpose of assessing the appropriateness of anticipated mortality for each class and, in aggregate, for all classes combined. If the results of statistical or other testing indicate that previously anticipated mortality for a given class is inappropriate, then the appointed actuary shall set a new anticipated mortality assumption for the class. After analyzing the appropriateness of the anticipated mortality for each class, the appointed actuary shall analyze the appropriateness of the anticipated mortality assumptions at the aggregate level. If the analysis at the aggregate level indicates that aggregate anticipated mortality is inadequate, then the appointed actuary shall adjust the anticipated mortality assumption for one or more of the classes until the appointed actuary is satisfied that the anticipated mortality assumptions are adequate at the aggregate level.

D. Tests of Sufficiency

After the anticipated mortality is established, each class must be tested for sufficiency. If a class fails any required sufficiency test, the class must be re-valued using a different set of mortality rates from the 2001 CSO Preferred Class Structure Mortality Table. A company must choose a set of mortality rates under which all required tests of sufficiency can be passed.

E. Calculation of Present Value

When a class is tested for sufficiency, the calculation of the present value of death benefits shall be based on a projection of death benefits, without the effect of lapse, at the valuation interest rate used to determine basic reserves for the class. If the class contains policies with several valuation interest rates, the lowest valuation interest rate used to determine the base reserves for any policy within the class shall be used for that class.

F. Right of Commissioner to Change the Table Used by the Company

The commissioner may require a company to change the mortality table if it is determined by the commissioner that inadequate justification of anticipated mortality is provided by the company.

5. Communications and Disclosures

The appointed actuary shall provide to the commissioner an annual certification that, as of the valuation date, the anticipated mortality experience of each Class of business (other than Residual Standard Class) meets the criteria of 4(a) and 4(b) above. Additionally, the appointed actuary shall prepare an annual report in support of the certification. The report shall include the following items:

A. The certification that the report supports;

B. The specified plans of insurance for which the company has elected to use the Preferred Class Structure Table, briefly describing each plan and the amount of in force business (count, face amount, and reserves) on each plan on the valuation date;

C. Compliance with the certification criteria;

D. Description of sources of information used as a basis for determining anticipated mortality;

E. Analysis performed to evaluate the credibility of relevant historical company experience when establishing anticipated mortality for each Class;

F. Analysis performed to evaluate the relationship between the underwriting-based criteria and the anticipated mortality established in each class.

G. Statistical or other quantitative analyses performed in assessing the continued appropriateness of the anticipated mortality assumption for each Class and for all Classes in aggregate, and a summary of changes made as a result of the analyses;

H. Anticipated Mortality, without recognition of mortality improvement beyond the date of valuation, for each Class and for all Classes in aggregate;

I. For each Class, the ratio of Anticipated Mortality to the mortality rates in the Valuation Basic Table corresponding to the set of valuation mortality rates being used for that Class;

J. Any changes made in the approach or parameters applied to the statistical analyses or tests performed compared to those performed at the last annual valuation; and,

K. Disclosure of the financial impact of any change in the chosen set of valuation mortality rates

Drafting Note: Annual actuarial opinions, certifications and reports for the use of "X" factors have been required since the implementation of the NAIC's Valuation of Life Insurance Model Regulation. The work and analysis to be performed for Preferred Class Certification is very similar to the requirements for the use of the "X" factors and the appointed actuary may combine the selection and analysis of "X" factors and the selection and analysis of 2001 CSO Preferred Class Structure Mortality Table into one actuarial opinion, certification and annual experience report, if the appointed actuary wishes to do so.

6. Other Items of Note

A. If a class of business is assigned to a different set of mortality rates within the 2001 CSO Preferred Class Structure Mortality Table (either a higher or lower level of mortality rates) from that used in the prior valuation, the change is not considered a basis change, and the reserve change must be accounted for in the calculation of gain from operations.

B. Multiple underwriting classes on a policy form can be mapped into the same set of mortality rates within the 2001 CSO Preferred Class Structure Mortality Table, if, in aggregate, the underwriting classes can be shown to have anticipated mortality no greater than the valuation basic table underlying the set of mortality rates selected.

C. If a company chooses to use the 2001 CSO Preferred Class Structure Mortality Table for basic reserves, the same table must be the basis for the calculation of deficiency reserves.

Section I) Background

The purpose of this Actuarial Guideline (Guideline) is to interpret the standards for the valuation of reserves for variable annuity and other contracts involving certain guaranteed benefits similar to those offered with variable annuities. The Guideline codifies the basic interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the assumptions and methodologies that will comply with the intent of the Standard Valuation Law (SVL). It also applies similar assumptions and methodologies to contracts that contain characteristics similar to those described in the scope, but that are not directly subject to CARVM.

For many years regulators and the industry have struggled with the issue of applying a uniform reserve standard to these contracts and in particular some of the guaranteed benefits referenced above. Current approaches make assumptions about product design, contractholder behavior and economic relationships and conditions. The economic volatility seen over the last few decades, combined with an increase in the complexity of these products, have made attempts to use these approaches for measuring economic-related risk less successful.

The Guideline addresses these issues by including an approach that applies principles of asset adequacy analysis directly to the risks associated with these products and guarantees.

The NAIC is currently using a similar approach to calculate risk-based capital (RBC) for similar contracts (i.e., the C-3 Phase II project). The methodology in the Guideline is based on that approach, and the intent of the Guideline is to, where possible, facilitate a framework whereby companies may determine both reserve and RBC in a consistent calculation.

In developing the Guideline, two regulatory sources were looked to for guidance. First, the SVL requires that CARVM be based on the greatest present value of future guaranteed benefits. Second, the NAIC Model Variable Annuity Regulation (VAR) states that the “reserve liability for variable annuities shall be established pursuant to the requirements of the Standard Valuation Law in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.”

The Guideline requires that reserves for contracts falling within its scope be based on a minimum floor determined using a standard scenario (referred to as the Standard Scenario Amount) plus the excess over this minimum floor, if any, of a reserve calculated using a projection of the assets and estimated liabilities supporting these contracts over a broad range of stochastically generated projection scenarios and using prudent estimate assumptions (referred to as the Conditional Tail Expectation Amount). Within each of these scenarios, the greatest of the present values of accumulated losses ignoring Federal Income Tax is determined. The assumed fund performance for these scenarios must meet the mandated calibration standards contained in the Guideline. The reserve calculated using projections is based on a Conditional Tail Expectation measure of the results for each scenario.

Conditional Tail Expectation (CTE) is a statistical risk measure that provides enhanced information about the tail of a distribution above that provided by the traditional use of percentiles. Instead of only identifying a value at a particular percentile and thus ignoring the possibility of extremely large values in the tail, CTE recognizes a portion of the tail by providing the average over all values in the tail beyond the CTE percentile. Thus where the tail of the distribution of losses approximates that of a standard normal distribution, CTE (70) will approximate the 88th percentile; where the tail is "fatter" than that of a standard normal distribution, CTE (70) will exceed the 88th percentile; and where the tail is not as "fat" as a standard normal distribution, CTE (70) will be lower than the 88th percentile. Therefore, for distributions with "fat tails" from low probability, high impact events, such as those covered by the Guideline, the use of CTE will provide a more revealing measure than use of a single percentile requirement.

For certain products (e.g., variable annuities with Guaranteed Minimum Death Benefits only), a company can use an Alternative Methodology in place of the modeling approach outlined above to determine the Conditional Tail Expectation Amount.

The projection methodology used to calculate the Conditional Tail Expectation Amount, as well as the approach used to develop the Alternative Methodology, is based on the following set of principles. These principles should be followed when applying the methodology in the Guideline and analyzing the resulting reserves.[1]

> **Principle 1.** The objective of the approach used to determine the Conditional Tail Expectation Amount is to quantify the amount of statutory reserves needed by the company to be able to meet contractual obligations in light of the risks to which the company is exposed.
>
> **Principle 2.** The calculation of the Conditional Tail Expectation Amount is based on the results derived from an analysis of asset and liability cash flows produced by the application of a stochastic cash flow model to equity return and interest rate scenarios. For each scenario the greatest present value of accumulated surplus deficiency is calculated. The analysis reflects Prudent Estimate (see the definition of Prudent Estimate in Section III) assumptions for deterministic variables and is performed in aggregate (subject to limitations related to contractual provisions)[2] to allow the natural offset of risks within a given scenario. The methodology utilizes a projected total statutory balance sheet approach by including all projected income, benefit and expense items related to the business in the model and sets the Conditional Tail Expectation Amount at a degree of confidence using the conditional tail expectation measure applied to the set

[1] Note the following when considering these principles:
  a. The principles should be considered in their entirety.
  b. The Guideline requires companies to meet these principles with respect to only those contracts that fall within the scope of the Guideline and are inforce as of the valuation date to which the requirements are applied.

[2] Examples where full aggregation between contracts may not be possible include experience rated group contracts and the operation of reinsurance treaties.

of scenario specific greatest present values of accumulated statutory deficiencies that is deemed to be reasonably conservative over the span of economic cycles.

Principle 3. The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the actuary's confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually,[3] the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the Conditional Tail Expectation Amount at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the Conditional Tail Expectation Amount, the actuary should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Principle 4. While a stochastic cash flow model attempts to include all real world risks relevant to the objective of the stochastic cash flow model and relationships among the risks, it will still contain limitations because it is only a model. The calculation of the Conditional Tail Expectation Amount is based on the results derived from the application of the stochastic cash flow model to scenarios while the actual statutory reserve needs of the company arise from the risks to which the company is (or will be) exposed in reality. Any disconnect between the model and reality should be reflected in setting Prudent Estimate assumptions to the extent not addressed by other means.

Principle 5. Neither a cash flow scenario model, nor a method based on factors calibrated to the results of a cash flow scenario model, can completely quantify a company's exposure to risk. A model attempts to represent reality, but will always remain an approximation thereto and hence uncertainty in future experience is an important consideration when determining the Conditional Tail Expectation Amount. Therefore, the use of assumptions, methods, models, risk management strategies (e.g., hedging), derivative instruments, structured investments or any other risk transfer arrangements (such as reinsurance) that serve solely to reduce the calculated Conditional Tail Expectation Amount without also reducing risk on scenarios similar to those used in the actual cash flow modeling are inconsistent with these principles. The use of assumptions and risk management strategies should be appropriate to the business and not merely constructed to exploit 'foreknowledge' of the components of the required methodology.

The methodology prescribed in the Guideline is applied to a company's entire portfolio of variable annuities (whether or not they contain guaranteed benefits), as well as other affected products that contain guaranteed benefits. Current guaranteed benefits include Guaranteed Minimum Death Benefits, Guaranteed Minimum Accumulation Benefits, Guaranteed Minimum Income Benefits, Guaranteed Minimum Withdrawal Benefits, Guaranteed Lifetime Withdrawal Benefits, and Guaranteed Payout Annuity Floors. It is also expected that the methodology in the Guideline will be applied to future variations on these designs and to new guarantee designs.

Since statutory reporting requires companies to report reserves prior to reinsurance, the Guideline clarifies standards for adjusting the various components of the reserve so that the reserve may be reported both prior to and net of reinsurance.

The Guideline also requires an allocation of the total reported reserve between the General and Separate Accounts and prescribes a method for doing this allocation.

[3] The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Appendix 9 provides the requirements and guidance for setting contractholder behavior and includes alternatives to this framework if the actuary is unable to fully apply this principle.

Actuarial certification of the work done to calculate reserves is required by the Guideline. A qualified actuary (referred to throughout the Guideline as "the actuary") shall certify that the work has been done in a way that meets all applicable Actuarial Standards of Practice.

For more details on the development of these requirements, including the development of the calibration criteria, see the American Academy of Actuaries recommendation on C-3 Phase II risk-based capital.

This Guideline and its Appendices require the actuary to make various determinations, verifications and certifications. The company shall provide the actuary with the necessary information sufficient to permit the actuary to fulfill the responsibilities set forth in this Guideline and its Appendices and responsibilities arising from applicable Actuarial Standards of Practice, including ASOP No. 23, *Data Quality*.

The risks reflected in the calculation of reserves under this Guideline arise from actual or potential events or activities which are both:

a) Directly related to the contracts falling under the scope of this Guideline or their supporting assets; and
b) Capable of materially affecting the reserve.

Categories and examples of risks reflected in the reserve calculations include but are not necessarily limited to:

a) Asset Risks
   (i) Separate Account fund performance;
   (ii) Credit risks (e.g., default or rating downgrades);
   (iii) Commercial mortgage loan rollover rates (roll-over of bullet loans);
   (iv) Uncertainty in the timing or duration of asset cash flows (e.g., shortening (prepayment risk) and lengthening (extension risk));
   (v) Performance of equities, real estate, and Schedule BA assets;
   (vi) Call risk on callable assets;
   (vii) Risk associated with hedge instrument (includes basis, gap, price, parameter estimation risks, and variation in assumptions); and
   (viii) Currency risk.
b) Liability Risks
   (i) Reinsurer default, impairment or rating downgrade known to have occurred before or on the valuation date;
   (ii) Mortality/longevity, persistency/lapse, partial withdrawal and premium payment risks;
   (iii) Utilization risk associated with guaranteed living benefits;
   (iv) Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted;
   (v) Annuitization risks; and
   (vi) Additional premium dump-ins (high interest rate guarantees in low interest rate environments);
c) Combination Risks
   (i) Risks modeled in the company's risk assessment processes that are related to the contracts, as described above;
   (ii) Disintermediation risk (including such risk related to payment of surrender or partial withdrawal benefits); and
   (iii) Risks associated with Revenue Sharing Income.

The risks not necessarily reflected in the calculation of reserves under this Guideline are:

a) Those not reflected in the determination of Risk-Based Capital; and

b) Those reflected in the determination of Risk-Based Capital but arising from obligations of the company not directly related to the contracts falling under the scope of this Guideline, or their supporting assets, as described above.

Categories and examples of risks not reflected in the reserve calculations include but are not necessarily limited to:

a) Asset Risks
   Liquidity risks associated with a "run on the bank."

b) Liability Risks
   (i) Reinsurer default, impairment or rating downgrade occurring after the valuation date;
   (ii) Catastrophic events (e.g., epidemics or terrorist events);
   (iii) Major breakthroughs in life extension technology that have not yet fundamentally altered recently observed mortality experience; and
   (iv) Significant future reserve increases as an unfavorable scenario is realized.

c) General Business Risks
   (i) Deterioration of reputation;
   (ii) Future changes in anticipated experience (reparameterization in the case of stochastic processes) which would be triggered if and when adverse modeled outcomes were to actually occur;
   (iii) Poor management performance;
   (iv) The expense risks associated with fluctuating amounts of new business;
   (v) Risks associated with future economic viability of the company;
   (vi) Moral hazards; and
   (vii) Fraud and theft.

Section II) Scope

A) The Guideline applies to contracts, whether directly written or assumed through reinsurance, falling into any of the following categories:

1) Variable deferred annuity contracts subject to the Commissioner's Annuity Reserve Valuation Method (CARVM), whether or not such contracts contain Guaranteed Minimum Death Benefits (GMDBs), or Variable Annuity Guaranteed Living Benefits (VAGLBs);

2) Variable immediate annuity contracts, whether or not such contracts contain GMDBs or VAGLBs;

3) Group annuity contracts that are not subject to CARVM, but contain guarantees similar in nature[4] to GMDBs, VAGLBs, or any combination thereof; and

4) All other products that contain guarantees similar in nature to GMDBs or VAGLBs, even if the insurer does not offer the mutual funds or variable funds to which these guarantees relate, where there is no other explicit reserve requirement.[5]

[4] The term "similar in nature," as used in sections II)A)3) and II)A)4) is intended to capture both current products and benefits as well as product and benefit designs that may emerge in the future. Examples of the currently known designs are listed in footnote #5 below. Any product or benefit design that does not clearly fit the Scope should be evaluated on a case-by-case basis taking into consideration factors that include, but are not limited to, the nature of the guarantees, the definitions of GMDB and VAGLB in sections III)A)1) and III)A)2) and whether the contractual amounts paid in the absence of the guarantee are based on the investment performance of a market-value fund or market-value index (whether or not part of the company's separate account).

If such a benefit is offered as part of a contract that has an explicit reserve requirement and that benefit does not currently have an explicit reserve requirement:

a) The Guideline shall be applied to the benefit on a standalone basis (i.e., for purposes of the reserve calculation, the benefit shall be treated as a separate contract);

b) The reserve for the underlying contract is determined according to the explicit reserve requirement; and

c) The reserve held for the contract shall be the sum of a) and b).

B) The Guideline does not apply to contracts falling under the scope of the NAIC Model Modified Guaranteed Annuity Regulation (MGAs); however, it does apply to contracts listed above that include one or more subaccounts containing features similar in nature to those contained in MGAs (e.g., market value adjustments).

C) Separate account products that guarantee an index and do not offer GMDBs or VAGLBs are excluded from the scope of the Guideline.

Section III) Definitions

A) Definitions of Benefit Guarantees

1) Guaranteed Minimum Death Benefit (GMDB). A GMDB is a guaranteed benefit providing, or resulting in the provision that, an amount payable on the death of a contractholder, annuitant, participant, or insured will be increased and/or will be at least a minimum amount. Only such guarantees having the potential to produce a contractual total amount payable on death that exceeds the account value, or in the case of an annuity providing income payments, an amount payable on death other than continuation of any guaranteed income payments, are included in this definition. GMDBs that are based on a portion of the excess of the account value over the net of premiums paid less partial withdrawals made (e.g., an Earnings Enhanced Death Benefit) are also included in this definition.

2) Variable Annuity Guaranteed Living Benefit (VAGLB). A VAGLB is a guaranteed benefit providing, or resulting in the provision that, one or more guaranteed benefit amounts payable or accruing to a living contractholder or living annuitant, under contractually specified conditions (e.g., at the end of a specified waiting period, upon annuitization, or upon withdrawal of premium over a period of time), will increase contractual benefits should the contract value referenced by the guarantee (e.g., account value) fall below a given level or fail to achieve certain performance levels. Only such guarantees having the potential to provide benefits with a present value as of the benefit commencement date that exceeds the contract value referenced by the guarantee are included in this definition. Payout annuities without minimum payout or performance guarantees are neither considered to contain nor to be VAGLBs.

3) Guaranteed Minimum Income Benefit (GMIB). A GMIB is a VAGLB design for which the benefit is contingent on annuitization of a variable deferred annuity or similar contract. The benefit is typically expressed as a contractholder option, on one or more

[5] For example, a group life contract that wraps a GMDB around a mutual fund would generally fall under the scope of the Guideline since there is not an explicit reserve requirement for this type of group life contract. However, for an individual variable life contract with a GMDB and a benefit similar in nature to a VAGLB, the Guideline would generally apply only to the VAGLB-type benefit, since there is an explicit reserve requirement that applies to the variable life contract and the GMDB.

option dates, to have a minimum amount applied to provide periodic income using a specified purchase basis.

4) Guaranteed Payout Annuity Floor (GPAF). A GPAF is a VAGLB design guaranteeing that one or more of the periodic payments under a variable immediate annuity will not be less than a minimum amount.

B) Definitions of Reserve Methodology Terminology

1) Scenario. A scenario consists of a set of asset growth rates and investment returns from which assets and liabilities supporting a set of contracts may be determined for each year of a projection.

2) Cash Surrender Value. For purposes of the Guideline, the Cash Surrender Value for a contract is the amount available to the contractholder upon surrender of the contract. Generally, it is equal to the account value less any applicable surrender charges, where the surrender charge reflects the availability of any free partial surrender options. For contracts where all or a portion of the amount available to the contractholder upon surrender is subject to a market value adjustment, however, the Cash Surrender Value shall reflect the market value adjustment consistent with the required treatment of the underlying assets. That is, the Cash Surrender Value shall reflect any market value adjustments where the underlying assets are reported at market value, but shall not reflect any market value adjustments where the underlying assets are reported at book value.

3) Scenario Greatest Present Value. For a given scenario, the Scenario Greatest Present Value is the sum of:

a) The greatest of the present values, as of the projection start date, of the projected Accumulated Deficiencies for the scenario; and

b) The Starting Asset Amount, as defined below.

4) Conditional Tail Expectation Amount. The Conditional Tail Expectation Amount is equal to the numerical average of the 30 percent largest values of the Scenario Greatest Present Values.

5) Working Reserve. The Working Reserve is the assumed reserve used in the projections of Accumulated Deficiencies supporting the calculation of the Scenario Greatest Present Values. At any point in the projections, including at the start of the projection, the Working Reserve shall equal the projected Cash Surrender Value.

For a variable payout annuity without a Cash Surrender Value, the Working Reserve shall equal the present value, at the valuation interest rate and the valuation mortality table specified for such a product by the Standard Valuation Law of future income payments projected using a return based on the valuation interest rate less appropriate asset based charges. For annuitizations that occur during the projection, the valuation interest rate as of the current valuation date may be used in determining the Working Reserve. Alternatively, if an integrated model of equity returns and interest rates is used, a future estimate of valuation interest rates may be incorporated into the Working Reserve.

For contracts not covered above, the actuary shall determine the Working Reserve in a manner that is consistent with the above requirements.

6) Accumulated Deficiency. Accumulated Deficiency is an amount measured as of the end of a projection year and equals the projected Working Reserve less the amount of projected assets, both as of the end of the projection year. Accumulated Deficiencies may be positive or negative.[6]

7) Starting Asset Amount. The Starting Asset Amount equals the value of the assets at the start of the projection, as defined in section A1.4)A) of Appendix 1.

8) Prudent Estimate. The deterministic assumptions to be used for projections are to be the actuary's Prudent Estimate. This means that they are to be set at the conservative end of the actuary's confidence interval as to the true underlying probabilities for the parameter(s) in question, based on the availability of relevant experience and its degree of credibility.

A Prudent Estimate assumption is developed by applying a margin for uncertainty to the "Anticipated Experience" assumption. The margin for uncertainty shall provide for estimation error and margins for adverse deviation. The resulting Prudent Estimate assumption shall be reasonably conservative over the span of economic cycles and over a plausible range of expected experience, in recognition of the Principles described in Section I. "Anticipated Experience" would typically be the actuary's reasonable estimate of future experience for a risk factor given all available, relevant information pertaining to the contingencies being valued. Recognizing that assumptions are simply assertions of future unknown experience, the margin should be directly related to uncertainty in the underlying risk factor. The greater the uncertainty, the larger the margin. Each margin should serve to increase the Aggregate Reserve that would otherwise be held in its absence (i.e., using only the Anticipated Experience assumption).

For example, assumptions for circumstances that have never been observed require more margins for error than those for which abundant and relevant experience data are available.

This means that valuation assumptions not stochastically modeled are to be consistent with the stated Principles in Section I, be based on any relevant and credible experience that is available, and should be set to produce, in concert with other Prudent Estimate assumptions, a Conditional Tail Expectation Amount that is consistent with the stated CTE level.

The actuary shall follow the principles discussed in Appendices 9 and 10 in determining Prudent Estimate assumptions.

9) Gross Wealth Ratio. The Gross Wealth Ratio is the cumulative return for the indicated time period and percentile (e.g., 1.0 indicates that the index is at its original level).

10) Clearly Defined Hedging Strategy. The designation of Clearly Defined Hedging Strategy applies to strategies undertaken by a company to manage risks through the future purchase or sale of hedging instruments and the opening and closing of hedging positions. In order to qualify as a Clearly Defined Hedging Strategy, the strategy must meet the principles outlined in the Background section of the Guideline (particularly Principle 5) and shall, at a minimum, identify:

a) The specific risks being hedged (e.g., delta, rho, vega, etc.),

[6] Note that a positive Accumulated Deficiency means that there is a cumulative loss and a negative Accumulated Deficiency means that there is a cumulative gain.

b) The hedge objectives,
c) The risks not being hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.),
d) The financial instruments that will be used to hedge the risks,
e) The hedge trading rules including the permitted tolerances from hedging objectives,
f) The metric(s) for measuring hedging effectiveness,
g) The criteria that will be used to measure effectiveness,
h) The frequency of measuring hedging effectiveness,
i) The conditions under which hedging will not take place, and
j) The person or persons responsible for implementing the hedging strategy.

The hedge strategy may be dynamic, static, or a combination thereof.

It is important to note that strategies involving the offsetting of the risks associated with variable annuity guarantees with other products outside of the scope of the Guideline (e.g., equity-indexed annuities) do not currently qualify as a Clearly Defined Hedging Strategy under the Guideline.

11) Revenue Sharing. Revenue Sharing, for purposes of the Guideline, means any arrangement or understanding by which an entity responsible for providing investment or other types of services makes payments to the company (or to one of its affiliates). Such payments are typically in exchange for administrative services provided by the company (or its affiliate), such as marketing, distribution and recordkeeping. Only payments that are attributable to charges or fees taken from the underlying variable funds or mutual funds supporting the contracts that fall under the scope of the Guideline shall be included in the definition of Revenue Sharing.

12) Domiciliary Commissioner. For purposes of the Guideline, this term refers to the chief insurance regulatory official of the state of domicile of the company.

13) Aggregate Reserve. The minimum reserve requirement as of the valuation date for the contracts falling within the scope of the Guideline.

14) 1994 Variable Annuity MGDB Mortality Table. This mortality table is shown in Appendix 11.

Section IV) Definition of General Reserve Methodology

A) General Description. The Aggregate Reserve for contracts falling within the scope of the Guideline shall equal the Conditional Tail Expectation Amount but not less than the Standard Scenario Amount, where the Aggregate Reserve is calculated as the Standard Scenario Amount plus the excess, if any, of the Conditional Tail Expectation Amount over the Standard Scenario Amount.

B) Impact of Reinsurance Ceded. Where reinsurance is ceded for all or a portion of the contracts, both components in the above general description (and thus the Aggregate Reserve) shall be determined net of any reinsurance treaties that meet the statutory requirements that would allow the treaty to be accounted for as reinsurance.

An Aggregate Reserve before reinsurance shall also be calculated if needed for regulatory reporting or other purposes, using methods described in Appendix 2.

C) The Standard Scenario Amount. The Standard Scenario Amount is the aggregate of the reserves determined by applying the Standard Scenario method to each of the contracts falling within the scope of the Guideline. The Standard Scenario method is outlined in Appendix 3.

D) The Conditional Tail Expectation Amount. The Conditional Tail Expectation Amount shall be determined based on a projection of the contracts falling within the scope of the Guideline, and the assets supporting these contracts, over a broad range of stochastically generated projection scenarios and using Prudent Estimate assumptions.

The stochastically generated projection scenarios shall meet the Scenario Calibration Criteria described in Appendix 5.

The Conditional Tail Expectation Amount may be determined in aggregate for all contracts falling within the scope of the Guideline (i.e., a single grouping). At the option of the company, it may be determined by applying the methodology outlined below to sub-groupings of contracts, in which case, the Conditional Tail Expectation Amount shall equal the sum of the amounts computed for each such sub-grouping.

The Conditional Tail Expectation Amount shall be determined using the following steps:

1) For each scenario, projected aggregate Accumulated Deficiencies are determined at the start of the projection (i.e., "time 0") and at the end of each projection year as the sum of the Accumulated Deficiencies for each contract grouping.

2) The Scenario Greatest Present Value is determined for each scenario based on the sum of the aggregate Accumulated Deficiencies[7] and aggregate Starting Asset Amounts for the contracts for which the Aggregate Reserve is being computed.

3) The Scenario Greatest Present Values for all scenarios are then ranked from smallest to largest and the Conditional Tail Expectation Amount is the average of the largest 30 percent of these ranked values.

The projections shall be performed in accordance with Appendix 1. The actuary shall document the assumptions and procedures used for the projections and summarize the results obtained as described in Appendix 2 and Appendix 8.

E) Alternative Methodology. For variable deferred annuity contracts that contain either no guaranteed benefits or only GMDBs (i.e., no VAGLBs), the Conditional Tail Expectation Amount may be determined using the Alternative Methodology described in Appendix 4 rather than using the approach described in subsection D) above. However, in the event the approach described in subsection D) has been used in prior valuations the Alternative Methodology may not be used without approval from the Domiciliary Commissioner.

The Conditional Tail Expectation Amount for the group of contracts to which the Alternative Methodology is applied shall not be less than the aggregate Cash Surrender Value of those contracts.

The actuary shall document the assumptions and procedures used for the Alternative Methodology and summarize the results obtained as described in Appendix 2 and Appendix 8.

[7] The Scenario Greatest Present Value is therefore based on the greatest projected Accumulated Deficiency, in aggregate, for all contracts for which the Aggregate Reserve is computed hereunder, rather than based on the sum of the greatest projected Accumulated Deficiency for each grouping of contracts.

F) Allocation of Results to Contracts. The Aggregate Reserve shall be allocated to the contracts falling within the scope of the Guideline using the method outlined in Appendix 6.

G) Reserve as of January 1, 2009. The reserve as of January 1, 2009 shall be the sum of the reserves from the asset adequacy analysis requirements in Actuarial Guideline XXXIV and Actuarial Guideline XXXIX.

Section V) Effective Date

The Guideline affects all contracts issued on or after January 1, 1981, effective December 31, 2009. Where the application of the Guideline produces higher reserves than the company had otherwise established by their previously used interpretation, such company may request a grade-in period, not to exceed three (3) years, from the Domiciliary Commissioner upon satisfactory demonstration of the previous interpretation and that such delay of implementation will not cause a hazardous financial condition or potential harm to its policyholders. The grading shall be done only on the reserves on the contracts in-force as of December 31, 2009. The reserves under the old basis and new basis shall be compared each year - 2/3 of the difference shall be subtracted from the reserve under the new basis in 2009 and 1/3 of the difference shall be subtracted from the reserve under the new basis in 2010.

APPENDIX 1 - Determination of Conditional Tail Expectation Amount Based on Projections

A1.1) Projection of Accumulated Deficiencies

A) General Description of Projection. The projection of Accumulated Deficiencies shall be made ignoring Federal Income Tax and reflect the dynamics of the expected cash flows for the entire group of contracts, reflecting all product features, including the guarantees provided under the contracts. Insurance company expenses (including overhead and investment expense), fund expenses, contractual fees and charges, revenue sharing income received by the company (net of applicable expenses) and cash flows associated with any reinsurance or hedging instruments are to be reflected on a basis consistent with the requirements herein. Cash flows from any fixed account options shall also be included. Any market value adjustment assessed on projected withdrawals or surrenders shall also be included (whether or not the Cash Surrender Value reflects market value adjustments). Throughout the projection, where estimates are used, such estimates shall be on a Prudent Estimate basis.

Federal Income Tax shall not be included in the projection of Accumulated Deficiencies.

B) Grouping of Variable Funds and Subaccounts. The portion of the Starting Asset Amount held in the Separate Account represented by the variable funds and the corresponding account values may be grouped for modeling using an approach that recognizes the investment guidelines and objectives of the funds. In assigning each variable fund and the variable subaccounts to a grouping for projection purposes, the fundamental characteristics of the fund shall be reflected and the parameters shall have the appropriate relationship to the required calibration points of the S&P 500. The grouping shall reflect characteristics of the efficient frontier (i.e., returns generally cannot be increased without assuming additional risk).

An appropriate proxy for each variable subaccount shall be designed in order to develop the investment return paths. The development of the scenarios for the proxy funds is a fundamental step in the modeling and can have a significant impact on results. As such, the actuary must map each variable account to an appropriately crafted proxy fund normally expressed as a linear combination of recognized market indices (or sub-indices).

C) Grouping of Contracts. Projections may be performed for each contract inforce on the date of valuation or by grouping contracts into representative cells of model plans using all characteristics and criteria having a material impact on the size of the reserve. Grouping shall be the responsibility of the actuary but may not be done in a manner that intentionally understates the resulting reserve.

D) Modeling of Hedges. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline shall be included in the projections. If the company is following a Clearly Defined Hedging Strategy and the hedging strategy meets the requirements of Appendix 7, the projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of that strategy.

To the degree either the currently held hedge positions or the hedge positions expected to be held in the future introduce basis, gap, price, or assumption risk, a suitable reduction for effectiveness of hedges shall be made. The actuary is responsible for verifying compliance with a Clearly Defined Hedging Strategy and the requirements in Appendix 7 for all hedge instruments included in the projections.

While hedging strategies may change over time, any change in hedging strategy shall be documented and include an effective date of the change in strategy.

The use of products not falling under the scope of the Guideline (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of Accumulated Deficiencies.

These requirements do not supersede any statutes, laws, or regulations of any state or jurisdiction related to the use of derivative instruments for hedging purposes and should not be used in determining whether a company is permitted to use such instruments in any state or jurisdiction.

Upon request of the company's domiciliary commissioner and for information purposes to show the effect of including future hedge positions in the projections, the company shall show the results of performing an additional set of projections reflecting only the hedges currently held by the company in support of the contracts falling under the scope of the Guideline. Because this additional set of projections excludes some or all of the derivative instruments, the investment strategy used may not be the same as that used in the determination of the Conditional Tail Expectation Amount.

E) Revenue Sharing.

1) Projections of Accumulated Deficiencies may include income from projected future Revenue Sharing, as defined in Section III) net of applicable projected expenses ("Net Revenue Sharing Income") if the following requirements are met:

a) The Net Revenue Sharing Income is received[8] by the company,[9]

b) Signed contractual agreement or agreements are in place as of the valuation date and support the current payment of the Net Revenue Sharing Income; and

c) The Net Revenue Sharing Income is not already accounted for directly or indirectly as a company asset.

2) The amount of Net Revenue Sharing Income to be used shall reflect the actuary's assessment of factors that include but are not limited to the following (not all of these factors will necessarily be present in all situations):

a) The terms and limitations of the agreement(s), including anticipated revenue, associated expenses and any contingent payments incurred or made by either the company or the entity providing the Net Revenue Sharing as part of the agreement(s);

b) The relationship between the company and the entity providing the Net Revenue Sharing Income that might affect the likelihood of payment and the level of expenses;

c) The benefits and risks to both the company and the entity paying the Net Revenue Sharing Income of continuing the arrangement.

[8] For purposes of this section, Net Revenue Sharing Income is considered to be received by the company if it is paid directly to the company through a contractual agreement with either the entity providing the Net Revenue Sharing Income or an affiliated company that receives the Net Revenue Sharing Income. Net Revenue Sharing Income would also be considered to be received, if it is paid to a subsidiary that is owned by the company and if 100% of the statutory income from that subsidiary is reported as statutory income of the company. In this case the actuary needs to assess the likelihood that future Net Revenue Sharing Income is reduced due to the reported statutory income of the subsidiary being less than future Net Revenue Sharing Income received.

[9] As in other sections of the Guideline, the term "the company" is used exclusively as a reference to the insurance company writing the business falling under the scope of the Guideline. The term "entity providing the Net Revenue Sharing Income" is self-explanatory and is used consistently in this subsection.

d) The likelihood that the company will collect the Net Revenue Sharing Income during the term(s) of the agreement(s) and the likelihood of continuing to receive future revenue after the agreement(s) has ended;

e) The ability of the company to replace the services provided to it by the entity providing the Net Revenue Sharing Income or to provide the services itself, along with the likelihood that the replaced or provided services will cost more to provide; and

f) The ability of the entity providing the Net Revenue Sharing Income to replace the services provided to it by the company or to provide the services itself, along with the likelihood that the replaced or provided services will cost more to provide.

3) The amount of projected Net Revenue Sharing Income shall also reflect a margin (which decreases the assumed Net Revenue Sharing Income) directly related to the uncertainty of the revenue. The greater the uncertainty, the larger the margin. Such uncertainty is driven by many factors including the potential for changes in the securities laws and regulations, mutual fund board responsibilities and actions, and industry trends. Since it is prudent to assume that uncertainty increases over time, a larger margin shall be applied as time that has elapsed in the projection increases.

4) All expenses required or assumed to be incurred by the company in conjunction with the arrangement providing the Net Revenue Sharing Income, as well as any expenses assumed to be incurred by the company in conjunction with the assumed replacement of the services provided to it (as discussed in subsection 2)e) above) shall be included in the projections as a company expense under the requirements of section A1.1)A). In addition, expenses incurred by either the entity providing the Net Revenue Sharing Income or an affiliate of the company shall be included in the applicable expenses discussed in section A1.1)A) and A1.1)E)1) that reduce the Net Revenue Sharing Income.

5) The actuary is responsible for reviewing the revenue sharing agreements, verifying compliance with these requirements, and documenting the rationale for any source of Net Revenue Sharing Income used in the projections.

6) The amount of Net Revenue Sharing Income assumed in a given scenario shall not exceed the sum of a) and b), where:

a) Is the contractually guaranteed Net Revenue Sharing Income projected under the scenario, and

b) Is the actuary's estimate of non-contractually guaranteed Net Revenue Sharing Income before reflecting any margins for uncertainty multiplied by the following factors:

(i) 1.0 in the first projection year;
(ii) 0.9 in the second projection year;
(iii) 0.8 in the third projection year;
(iv) 0.7 in the fourth projection year;
(v) 0.6 in the fifth projection year;
(vi) 0.5 in the sixth and all subsequent projection years. The resulting amount of non-contractually guaranteed Net Revenue Sharing Income after application of this factor shall not exceed 0.25% per year on separate account assets in the sixth and all subsequent projection years.

F) Length of Projections. Projections of Accumulated Deficiencies shall be run for as many future years as needed so that no materially greater reserve value would result from longer projection periods.

G) AVR/IMR. The AVR and the IMR shall be handled consistently with the treatment in the company's cash flow testing.

A1.2) Determination of Scenario Greatest Present Values

A) Scenario Greatest Present Values. For a given scenario, the Scenario Greatest Present Value is the sum of:

1) The greatest present value, as of the projection start date, of the projected Accumulated Deficiencies defined in Section III)B)6); and

2) The Starting Asset Amount.

B) Discount Rates. In determining the Scenario Greatest Present Values, Accumulated Deficiencies shall be discounted using the same interest rates at which positive cash flows are invested, as determined in section A1.4)D). Such interest rates shall be reduced to reflect expected credit losses. Note that the interest rates used do not include a reduction for Federal Income Taxes.

A1.3) Projection Scenarios

A) Minimum Required Scenarios. The number of scenarios for which projected greatest present values of Accumulated Deficiencies shall be computed shall be the responsibility of the actuary and shall be considered to be sufficient if any resulting understatement in total reserves, as compared with that resulting from running additional scenarios, is not material.

B) Scenario Calibration Criteria. Returns for the groupings of variable funds shall be determined on a stochastic basis such that the resulting distribution of the Gross Wealth Ratios of the scenarios meets the Scenario Calibration Criteria specified in Appendix 5.

A1.4) Projection Assets

A) Starting Asset Amount. For the projections of Accumulated Deficiencies, the value of assets at the start of the projection shall be set equal to the approximate value of statutory reserves at the start of the projection. Assets shall be valued consistently with their annual statement values. The amount of such asset values shall equal the sum of the following items, all as of the start of the projection:

1) All of the Separate Account assets supporting the contracts;

2) An amount of assets held in the General Account equal to the approximate value of statutory reserves as of the start of the projections less the amount in 1), above.

In many instances the initial General Account assets may be negative, resulting in a projected interest expense. General Account assets chosen for use as described above shall be selected on a consistent basis from one reserve valuation hereunder to the next.

Any hedge assets meeting the requirements described in section A1.1)D) shall be reflected in the projections and included with other General Account assets under item 2) above. To the extent the sum of the value of such hedge assets and the value of assets in item 1) above is greater than the approximate value of statutory reserves as of the start of the projections, then item 2) above may include enough negative General Account assets or cash such that the sum of items 1) and 2) above equals the approximate value of statutory reserves as of the start of the projections.[10]

The actuary shall document which assets were used as of the start of the projection, the approach used to determine which assets were chosen and shall verify that the value of the assets equals the approximate value of statutory reserves at the start of the projection.

B) Valuation of Projected Assets. For purposes of determining the projected Accumulated Deficiencies, the value of projected assets shall be determined in a manner consistent with their value at the start of the projection. For assets assumed to be purchased during a projection, the value shall be determined in a manner consistent with the value of assets at the start of the projection that have similar investment characteristics.

C) Separate Account Assets. For purposes of determining the Starting Asset Amounts in subsection A) and the valuation of projected assets in subsection B), assets held in a Separate Account shall be summarized into asset categories determined by the actuary as discussed in section A1.1)B).

D) General Account Assets. General Account assets shall be projected, net of projected defaults, using assumed investment returns consistent with their book value and expected to be realized in future periods as of the date of valuation. Initial assets that mature during the projection and positive cash flows projected for future periods shall be invested at interest rates, which, at the option of the actuary, are one of the following:

1) The forward interest rates implied by the swap curve[11] in effect as of the valuation date,

2) The 200 interest rate scenarios available as prescribed for Phase I, C-3 Risk Based Capital calculation, coupled with the Separate Account return scenarios by mating them up with the first 200 such scenarios and repeating this process until all Separate Account return scenarios have been mated with a Phase I scenario, or

3) Interest rates developed for this purpose from a stochastic model that integrates the development of interest rates and the Separate Account returns.

When the option described in 1) above (the forward interest rates implied by the swap curve) is used, an amount shall be subtracted from the interest rates to reflect the current market expectations about future interest rates using the process described in section A1.5)A).

The actuary may switch from 1) to 2), from 1) to 3) or from 2) to 3) from one valuation date to the next, but may not switch in the other direction without approval from the Domiciliary Commissioner.

A1.5) Projection of Annuitization Benefits (including GMIBs)

A) Assumed Annuitization Purchase Rates at Election. For purposes of projecting annuitization benefits (including annuitizations stemming from the election of a GMIB), the projected annuitization purchase rates shall be determined assuming that market interest rates available at the time of election are the interest rates used to project General Account Assets, as determined in

[10] Further elaboration on potential practices with regard to this issue may be included in a practice note.

[11] The swap curve is based on the Federal Reserve H.15 interest swap rates. The rates are for a Fixed Rate Payer in return for receiving three month LIBOR. One place where these rates can be found is http://www.federalreserve.gov/releases/h15/default.htm.

A1.4)D). However, where the interest rates used to project General Account Assets are based upon the forward interest rates implied by the swap curve in effect as of the valuation date (i.e., the option described in section A1.4)D)1) is used, herein referred to as a point estimate), the margin between the cost to purchase an annuity using the guaranteed purchase basis and the cost using the interest rates prevailing at the time of annuitization shall be adjusted as discussed below.

If a point estimate is being used, it is important that the margin assumed reflects the current market expectations about future interest rates at the time of annuitization, as described more fully below, and a downward adjustment to the interest rate assumed in the purchase rate basis. The latter adjustment is necessary since a greater proportion of contractholders will select an annuitization benefit when it is worth more than the cash surrender value then when it is not. As a practical matter, this effect can be approximated by using an interest rate assumption in the purchase rate basis that is 0.30 percent below that implied by the forward swap curve, as described below.

To calculate market expectations of future interest rates, the par or current coupon swap curve is used (documented daily in Federal Reserve H.15 with some interpolation needed). Deriving the expected rate curve from this swap curve at a future date involves the following steps:

1) Calculate the implied zero-coupon rates. This is a well documented “bootstrap” process. For this process we use the equation $100=C^n * (v + v^2 + \ldots +v^n) + 100v^n$ where the “v^t” terms are used to stand for the discount factors applicable to cash flows 1,2,…n years hence and C^n is the n-year swap rate. Each of these discount factors are based on the forward curve and therefore are based on different rates, however (i.e. “v^2” does not equal v times v). Given the one year swap rate, one can solve for v. Given v and the two year swap rate one can then back into v^2, and so on.

2) Convert the zero coupon rates to one year forward rates by calculating the discount factor needed to get from v^{t-1} to v^t.

3) Develop the expected rate curve.

This recognizes that, for example, the five-year forward one-year rate is not the rate the market expects on one year instruments five years from now. The reason is that as the bond gets shorter the “risk premium” in the rate diminishes. This is sometimes characterized as “rolling down” the yield curve. Table A shows the historic average risk premium at various durations. From this table, one can see that to get the rate the market expects a 1 year swap to have five years from now; one must subtract the risk premium associated with six year rates (.95%) and add back that associated with 1 year rates (.50%). This results in a net reduction of .45%.

Table A: Risk Premium by Duration

Duration	Risk Premium	Duration	Risk Premium
1	0.500%	6	0.950%
2	0.750%	7	1.000%
3	0.750%	8	1.100%
4	0.850%	9+	1.150%
5	0.900%		

The Exhibit below combines the three steps. Columns A through D convert the swap curve to the implied forward rate for each future payment date. Columns E through H remove the current risk premium, add the risk premium t years in the future (the Exhibit shows the rate curve five years in the future), and uses that to get the discount factors to apply to the 1 year, 2 year,…5 year cash flows 5 years from now.

Exhibit: Derivation of discount rates expected in the future

	A	B	C	D	E	F	G	H
1 2 3	Projection Years	Swap Curve Rate	PV of Zero Coupon	Forward 1 Year Rate	Risk Premium	Risk Premium 5 Years Out	Expected Forward Rate In Five Years	PV of Zero Coupon In 5 Years
4	1	2.57%	0.97494	2.5700%	0.50000%			
5	2	3.07%	0.94118	3.5879%	0.75000%			
6	3	3.44%	0.90302	4.2251%	0.75000%			
7	4	3.74%	0.86231	4.7208%	0.85000%			
8	5	3.97%	0.82124	5.0010%	0.90000%			
9	6	4.17%	0.77972	5.3249%	0.95000%	0.50000%	4.8749%	0.95352
10	7	4.34%	0.73868	5.5557%	1.00000%	0.75000%	5.3057%	0.90547
11	8	4.48%	0.69894	5.6860%	1.10000%	0.75000%	5.3360%	0.85961
12	9	4.60%	0.66050	5.8209%	1.15000%	0.85000%	5.5209%	0.81463
13	10	4.71%	0.62303	6.0131%	1.15000%	0.90000%	5.7631%	0.77024
14	Cell formulas for Projection Year 10:		=(1-B13*SUM(C4:C12))/(1+B13)	=C12/C13-1		=E8	=D13-E13+F13	=H12/(1+G13)

Where interest rates are projected stochastically using an integrated model, although one would "expect" the interest rate n years hence to be that implied for an appropriate duration asset by the forward swap curve as described above, there is a steadily widening confidence interval about that point estimate with increasing time until the annuitization date. The "expected margin" in the purchase rate is less than that produced by the point estimate based on the expected rate, since a greater proportion of contractholders will have an annuitization benefit whose worth is in excess of cash surrender value when margins are low than when margins are high. As a practical matter, this effect can be approximated by using a purchase rate margin based on an earnings rate .30 percent below that implied by the forward swap curve. If a stochastic model of interest rates is used instead of a point estimate then no such adjustment is needed.

B) Projected Election of Guaranteed Minimum Income Benefit and other Annuitization Options. For contracts projected to elect annuitization options (including annuitizations stemming from the election of a GMIB), the projections may assume one of the following at the actuary's option:

1) The contract is treated as if surrendered at an amount equal to the statutory reserve that would be required at such time for the payout annuity benefits, or

2) The contract is assumed to stay inforce, the projected periodic payments are paid, and the Working Reserve is equal to one of the following:
   a) The statutory reserve required for the payout annuity, if it is a fixed payout annuity, or
   b) If it is a variable payout annuity, the Working Reserve for a variable payout annuity as defined in Section III)B)5).

If the projected payout annuity is a variable payout annuity containing a floor guarantee (such as a GPAF) under a specified contractual option, only option 2) above shall be used.

Where mortality improvement is used to project future annuitization purchase rates, as discussed in A) above, mortality improvement shall also be reflected on a consistent basis in either the determination of the reserve in 1) above or the projection of the periodic payments in 2) above.

A1.6) Relationship to Risk Based Capital Requirements

A) The Guideline anticipates that the projections described herein may be used for the determination of Risk Based Capital (the "RBC requirements") for some or all of the contracts falling within the scope of the Guideline. There are several differences between the requirements of the Guideline and the RBC requirements, and among them are two major differences. First, the Conditional Tail Expectation level is different (CTE (70) for the Guideline and CTE (90) for the RBC requirements). Second, the projections described in the Guideline are performed on a basis that ignores Federal Income Tax. That is, under the Guideline, the Accumulated Deficiencies do not include projected Federal Income Tax and the interest rates used to discount the Scenario Greatest Present Value (i.e., the interest rates determined in section A1.4)D)) contain no reduction for Federal Income Tax. Under the RBC requirements, the projections do include projected Federal Income Tax and the discount interest rates used in the RBC requirement do contain a reduction for Federal Income Tax.

B) To further aid the understanding of the Guideline and any instructions relating to the RBC requirement, it is important to note the equivalence in meaning between the following terms, subject to the differences noted above:

1) The amount that is added to the Starting Asset Amount in Section III)B)6) of the Guideline is similar to the Additional Asset Requirement referenced in the RBC requirement.

2) The Conditional Tail Expectation Amount referenced in the Guideline is similar to the Total Asset Requirement referenced in the RBC requirement.

A1.7) Compliance with Actuarial Standards of Practice (ASOPs)

When determining the Conditional Tail Expectation Amount using projections, the analysis shall conform to the Actuarial Standards of Practice as promulgated from time to time by the Actuarial Standards Board.

A1.8) Compliance with Principles

When determining the Conditional Tail Expectation Amount using projections, any interpretation and application of the requirements of the Guideline shall follow the principles discussed in the Section I) Background.

APPENDIX 2 - Reinsurance and Statutory Reporting Issues

A2.1) Treatment of Reinsurance Ceded in the Aggregate Reserve

A) Aggregate Reserve Net of and Prior to Reinsurance Ceded. As noted in Section IV)B), the Aggregate Reserve is determined net of reinsurance ceded. Therefore, it is necessary to determine the components needed to determine the Aggregate Reserve (i.e., the Standard Scenario Amount, and either the Conditional Tail Expectation Amount determined using projections or the Conditional Tail Expectation Amount determined using the Alternative Methodology) on a net of reinsurance basis. In addition, as noted in Section IV)B), it may be necessary to determine the Aggregate Reserve determined on a "direct" basis, or prior to reflection of reinsurance ceded. Where this is needed, each of these components shall be determined prior to reinsurance. Sections B) through D) below discuss methods necessary to determine these components on both a "net of reinsurance" and a "prior to reinsurance" basis. Note that due allowance for reasonable approximations may be used where appropriate.

B) Conditional Tail Expectation Amount Determined using Projections. In order to determine the Aggregate Reserve net of reinsurance ceded, Accumulated Deficiencies, Scenario Greatest Present Values, and the resulting Conditional Tail Expectation Amount shall be determined reflecting the effects of reinsurance treaties that meet the statutory requirements that would allow the treaty to be accounted for as reinsurance within the projections. This involves including, where appropriate, all anticipated reinsurance premiums or other costs and all reinsurance recoveries, where both premiums and recoveries are determined by recognizing any limitations in the reinsurance treaties, such as caps on recoveries or floors on premiums.

In order to determine the Conditional Tail Expectation Amount prior to reinsurance ceded, Accumulated Deficiencies, Scenario Greatest Present Values, and the resulting Conditional Tail Expectation Amount shall be determined ignoring the effects of reinsurance within the projections. One acceptable approach involves a projection based on the same Starting Asset Amount as for the Aggregate Reserve net of reinsurance and by ignoring, where appropriate, all anticipated reinsurance premiums or other costs and all reinsurance recoveries in the projections.

C) Conditional Tail Expectation Amount Determined using the Alternative Methodology. If a company chooses to use the Alternative Methodology, as allowed in Section IV)E), it is important to note that the methodology produces reserves on a prior to reinsurance ceded basis. Therefore, where reinsurance is ceded, the Alternative Methodology must be modified to reflect the reinsurance costs and reinsurance recoveries under the reinsurance treaties in the determination of the Aggregate Reserve net of reinsurance. In addition, the Alternative Methodology, unadjusted for reinsurance, shall be applied to the contracts falling under the scope of the Guideline to determine the Aggregate Reserve prior to reinsurance.

D) Standard Scenario Amount. Where reinsurance is ceded, the Standard Scenario Amount shall be calculated as described in Appendix 3 to reflect the reinsurance costs and reinsurance recoveries under the reinsurance treaties. If it is necessary, the Standard Scenario Amount shall be calculated prior to reinsurance ceded using the methods described in Appendix 3, but ignoring the effects of the reinsurance ceded.

A.2.2) Aggregate Reserve to be held in the General Account

The amount of the reserve held in the General Account shall not be less than the excess of the Aggregate Reserve over the sum of the Basic Reserve, as defined in section A3.2), attributable to the variable portion of all such contracts.

A.2.3) Actuarial Certification and Memorandum

A) Actuarial Certification. Actuarial Certification of the work done to determine the Aggregate Reserve shall be required. The actuary shall certify that the work performed has been done in a way that substantially complies with all applicable Actuarial Standards of Practice. The scope of this certification does not include an opinion on the adequacy of the Aggregate Reserve,[12] the company's surplus or the company's future financial condition. The actuary shall also note any material change in the model or assumptions from that used previously and the estimated impact of such changes.

Appendix 8 contains more information on the contents of the required Actuarial Certification.

B) Required Memorandum. An actuarial memorandum shall be constructed documenting the methodology and assumptions upon which the Aggregate Reserve is determined. The memorandum shall also include sensitivity tests that the actuary feels appropriate, given the composition of the company's block of business (i.e., identifying the key assumptions that, if changed, produce the largest changes in the Aggregate Reserve). This memorandum shall have the same confidential status as the actuarial memorandum supporting the actuarial opinion[13] and shall be available to regulators upon request.

Appendix 8 contains more information on the contents of the required memorandum.

C) Conditional Tail Expectation Amount Determined using the Alternative Methodology. Where the Alternative Methodology is used, there is no need to discuss the underlying assumptions and model in the required memorandum. Certification that expense, revenue, fund mapping, and product parameters have been properly reflected, however, shall be required.

Appendix 8 contains more information on the contents of the required Actuarial Certification and memorandum.

D) Material Changes. If there is a material change in results due to a change in assumptions from the previous year, the memorandum shall include a discussion of such change in assumptions and an estimate of the impact it has on the results.

[12] The adequacy of total company reserves, which includes the Aggregate Reserve, is addressed in the company's Actuarial Opinion as required by the NAIC Model Actuarial Opinion and Memorandum Regulation.

[13] This is consistent with Section 3D(8) of the Standard Valuation Law, which states: "Except as provided in Paragraphs (12), (13) and (14), documents, materials or other information in the possession or control of the Department of Insurance that are a memorandum in support of the opinion, and any other material provided by the company to the commissioner in connection with the memorandum, shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner's official duties."

APPENDIX 3 - Standard Scenario Requirements

A3.1) Overview

A) Application to Determine Reserves. A Standard Scenario Reserve shall be determined for each of the contracts falling under the scope of the Guideline by applying section A3.3). This includes those contracts to which the Alternative Methodology is applied.

The Standard Scenario Reserve for a contract with guaranteed living benefits or guaranteed death benefits is based on a projection of the account value based on specified returns for supporting assets equal to the account value. An initial drop is applied to the supporting assets and account value on the valuation date. Subsequently, account values are projected at specified rates earned by the supporting assets less contract and fund charges. The assumptions for the projection of account values and margins are prescribed in section A3.3)C). For any contract with guarantees the Standard Scenario Reserve includes the greatest present value of the benefit payments in excess of account values applied over the present value of revenue produced by the margins.

B) The Standard Scenario Amount

1) The Standard Scenario Amount is defined in Section IV)C) of this Guideline as the aggregate of the reserves determined by applying the Standard Scenario Method to each of the contracts falling under the scope of the Guideline. Except as provided in subsection A3.3)B)1), the Standard Scenario Amount equals the sum over all contracts of the Standard Scenario Reserve determined for each contract as of the statement date as described in A3.1)B)2).

2) The Standard Scenario Method requires the Standard Scenario Amount to not be less than the sum over all contracts of the Standard Scenario Reserve determined for the contract as of the statement date as described in section A3.3), where the Discount Rate is equal to *DR*, which is defined as the valuation interest rate specified by the Standard Valuation Law for annuities valued on an issue year basis, using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years. The presence of guarantees of interest on future premiums and/or cash settlement options is to be determined using the terms of the contracts.

C) Illustrative Application of the Standard Scenario to a Projection or Model Office. If the Conditional Tail Expectation Amount is determined based on a projection of an inforce prior to the statement date and/or by the use of a model office, which is a grouping of contracts into representative cells, then additional determinations of A3.1)B)2) shall be performed on the prior inforce and/or model office. The calculations are for illustrative purposes to assist in validating the reasonableness of the projection and/or the model office.

The following table identifies the illustrative additional determinations required by this section using the Discount Rate, *DR*, as defined in A3.1)B)2). The additional determinations required are based on how the Conditional Tail Expectation projection or Alternative Methodology is applied. For completeness, the table also includes the determinations required by section A3.1)B)2).

1) Run A in the table is required for all companies by section A3.1)B)2). No additional determinations are required if a company's stochastic or alternative methodology result is calculated on individual contracts as of the statement date.

2) A company that uses a model office as of the statement date to determine its stochastic or alternative methodology result must provide an additional determination for the model office based on the Discount Rate *DR*, run B.

3) A company that uses a contract by contract listing of a prior inforce to determine its stochastic or alternative methodology with result PS and then projects requirements to the statement date with result S must provide an additional determination for the prior inforce based on the Discount Rate *DR*, run C.

4) A company that uses a model office of a prior inforce to determine its stochastic or alternative methodology requirements with result PM and then projects requirements to the statement date with result S must provide an additional determination for the prior model office based on the Discount Rate *DR*, run D.

Standard Scenario Run	Guideline Variations	Validation Measures	
		Model Office Projection	Projection of Prior Inforce
A. Valuation on the statement date on inforce contracts with discount rate *DR*	None	None	None
B. Valuation on the statement date on the model office with discount rate *DR*	If not material to model office validation	A/B compare to 1.00	None
C. Valuation on a prior inforce date on prior inforce contracts with discount rate *DR*	If not material to projection validation	None	A/C - S/PS compare to 0
D. Valuation on a prior inforce date on a model office with discount rate *DR*	If not material to model office or projection validation.	(A/D – S/PM) compare to 0	

Modification of the requirements in section A3.3) when applied to a prior inforce or a model office is permitted if such modification facilitates validating the projection of inforce or the model office. All such modifications should be documented.

A3.2) Basic and Basic Adjusted Reserve - Application of Actuarial Guideline XXXIII

A) The Basic Reserve for a given contract shall be determined by applying statutory statement valuation requirements applicable immediately prior to adoption of the Guideline to the contract ignoring any guaranteed death benefits in excess of account values or guaranteed living benefits applying proceeds in excess of account values.

B) The calculation of the Basic Reserve shall assume a return on separate account assets based on the year of issue statutory valuation rate less appropriate asset based charges, including charges for any guaranteed death benefits or guaranteed living benefits. It shall also assume a return for any fixed separate account and general account options equal to the rates guaranteed under the contract.

C) The Basic Reserve shall be no less than the Cash Surrender Value on the valuation date, as defined in Section III)B) of the Guideline.

D) The Basic Adjusted Reserve shall be that determined based on A3.2)A) and A3.2)B) except in A3.2)A) free partial withdrawal provisions shall be disregarded when determining surrender charges in applying the statutory statement valuation requirement prior to adoption of the Guideline. Section A3.2)C) shall not apply to the Basic Adjusted Reserve.

A3.3) Standard Scenario Reserve - Application of the Standard Scenario Method

A) General. Where not inconsistent with the guidance given here, the process and methods used to determine the Standard Scenario Reserve under the Standard Scenario Method shall be the same as required in the calculation of the Conditional Tail Expectation Amount as described in Section IV) of the Guideline. Any additional assumptions needed to determine the Standard Scenario Reserve shall be explicitly documented.

B) Results for the Standard Scenario Method. For each contract, the Standard Scenario Reserve is the reserve based on 1) or 2) where:

1) For contracts without any guaranteed benefits, as defined in Section III)A) of the Guideline and where not subsequently disapproved by the Domiciliary Commissioner, the Standard Scenario Reserve is the Basic Reserve described in section A3.2)A), A3.2)B) and A3.2)C).

2) For all other contracts the Standard Scenario Reserve is equal to the greater of Cash Surrender Value on the valuation date, as defined in Section III)B) of the Guideline, and the quantity a) + b) - c), where:

a) Is the Basic Adjusted Reserve calculated for the contract, as described in section A3.2)D);

b) Is the greater of zero and the greatest present value at the Discount Rate measured as of the end of each projection year of the negative of the Accumulated Net Revenue described below using the assumptions described in A3.3)C). The Accumulated Net Revenue at the end of a projection year is equal to (i) + (ii) - (iii), where:

(i) Is the Accumulated Net Revenue at the end of the prior projection year accumulated at the Discount Rate to the end of the current projection year; the Accumulated Net Revenue at the beginning of the projection (i.e., time 0) is zero;

(ii) Are the margins generated during the projection year on account values accumulated at the Discount Rate to the end of the projection year (the factors and assumptions to be used in calculating the margins and account values are in A3.3)C)); and

(iii) Are the contract benefits in excess of account values applied, Individual reinsurance premiums and Individual reinsurance benefits payable or receivable during the projection year accumulated at the Discount Rate to the end of the projection year. Individual reinsurance is defined in A3.3)C)2).

c) Is the contract's allocation of the value of hedges and Aggregate reinsurance as described in section A3.3)D). Aggregate reinsurance is defined in section A3.3)C)2).

No reinsurance shall be considered in the Standard Scenario Amount if such reinsurance does not meet the statutory requirements that would allow the treaty to be accounted for as reinsurance. The actuary shall determine the projected reinsurance premiums and benefits reflecting all treaty limitations and assuming any options in the treaty to the other party are exercised to decrease the value of reinsurance to the reporting company (e.g., options to increase premiums or terminate coverage). The positive value of any reinsurance treaty that is not guaranteed to the insurer or its successor shall be excluded from the value of reinsurance. The commissioner may require the exclusion of a reinsurance treaty or any portion of a reinsurance treaty if the terms of the reinsurance) treaty or the portion required to be excluded serves solely to reduce the calculated

Standard Scenario Reserve without also reducing risk on scenarios similar to those used to determine the Conditional Tail Expectation Reserve. Any reinsurance reflected in the Standard Scenario Reserve shall be appropriate to the business and not merely constructed to exploit 'foreknowledge' of the components of the Standard Scenario Method.

C) Assumptions for use in paragraph A3.3)B)2)b) for Accumulated Net Revenue and Account Values.

1) Account Value Return Assumptions. The bases for return assumptions on assets supporting the Account Value are shown in Table I. The "Initial" returns shall be applied to the account value supported by each asset class on the valuation date as immediate drops, resulting in the Account Value at time 0. The "Year 1," "Years 2 – 5," and "Year 6+" returns for the equity, bond and balanced classes are gross annual effective rates of return and are used (along with other decrements and/or increases) to produce the Account Value as of the end of each projection interval. For purposes of this section, money market funds supporting Account Value shall be considered part of the Bond class.

The Fixed Fund rate is the greater of the minimum rate guaranteed in the contract or 4% but not greater than the current rates being credited to Fixed Funds on the valuation date.

Account Values shall be projected using the appropriate gross rates from Table I for equity, bond and balanced classes applied to the supporting assets less all fund and contract charges according to the provisions of the funds and contract and applying the Fixed funds rate from Table I as if it were the resulting net rate after deduction for fund or contract charges.

The annual margins on Account Value are defined as follows:

a) During the Surrender Charge Amortization Period, as determined following the step outlined in section A3.3)E) below:
   (i) 0.20% of Account Value; plus
   (ii) Any Net Revenue Sharing Income, as defined in section A1.1)E), that is contractually guaranteed to the insurer and its liquidator, receiver, and statutory successor; plus
   (iii) For all of the guaranteed living benefits of a given contract combined,[14] the greater of:
      - 0.20% of Account Value; or
      - Explicit and optional contract charges for guaranteed living benefits; plus
   (iv) For all guaranteed death benefits of a given contract combined,[15] the greater of:
      - 0.20% of Account Value; or
      - Explicit and optional contract charges for guaranteed death benefits.

b) After the Surrender Charge Amortization Period:

[14] This excludes any guaranteed living benefit that is added to the contract simply for the purpose of increasing the revenue allowed under this section.

[15] This excludes any guaranteed death benefit that is added to the contract simply for the purpose of increasing the revenue allowed under this section.

The amount determined in a) above; plus 50% of the excess, if any, of all contract charges (excluding Net Revenue Sharing Income) over the sum of a)(i) , a)(iii) and a)(iv) above.

However, on fixed funds after the surrender charge period, a margin of up to the amount in a) above plus .4% may be used.

Table I

	Initial	Year 1	Years 2 – 5	Year 6+
Equity Class	-13.5%	0%	4.0%	5.50%
Bond Class	0%	0%	4.85%	4.85%
Balanced Class	-8.1%	0%	4.34%	5.24%
Fixed Separate Accounts and General Account (net)	0%	Fixed Fund Rate	Fixed Fund Rate	Fixed Fund Rate

2) Reinsurance Credit. Individual reinsurance is defined as reinsurance where the total premiums for and benefits of the reinsurance can be determined by applying the terms of the reinsurance to each contract covered without reference to the premiums or benefits of any other contract covered and summing the results over all contracts covered. Reinsurance that is not Individual is Aggregate.

Individual reinsurance premiums projected to be payable on ceded risk and receivable on assumed risk shall be included in the Projected Net Revenue. Similarly, Individual reinsurance benefits projected to be receivable on ceded risk and payable on assumed risk shall be included in the Projected Net Revenue. No Aggregate reinsurance shall be included in Projected Net Revenue.

3) Lapses, Partial Withdrawals, and In-The-Moneyness. Partial withdrawals elected as guaranteed living benefits, see A3.3)C)7), or required contractually (e.g., a contract operating under an automatic withdrawal provision on the valuation date) are to be deducted from the Account Value in each projection interval consistent with the projection frequency used, as described in A3.3)C)6), and according to the terms of the contract. No other partial withdrawals, including free partial withdrawals, are to be deducted from Account Value. All lapse rates should be applied as full contract surrenders.

For purposes of determining the dynamic lapse assumptions shown in Table II below, a guaranteed living benefit is in the money (ITM) for any projection interval if the Account Value at the beginning of the projection interval is less than the Current Value of the guaranteed living benefit (as defined below) also at the beginning of that projection interval.

The Current Value of the guaranteed living benefit at the beginning of any projection interval is either the amount of the current lump sum payment (if exercisable) or the present value of future lump sum or income payments. More specific guidance is provided below. For the purpose of determining the present value, the discount rate shall be equal *DR* as defined in A3.1)B)2). If future living benefit payments are life contingent (i.e., either the right of future exercise or the right to future income benefits expires with the death of the annuitant or the owner), then the company shall determine the present value of such payments using the mortality table specified in A3.3)C)5).

If a guaranteed living benefit is exercisable (withdrawal can start or, in the case of a GMWB, has begun) at the beginning of the projection interval, then the Current Value of the guaranteed living benefit shall be determined assuming immediate or continued exercise of that benefit.

If a guaranteed living benefit is not exercisable (e.g., due to minimum age or duration requirements) at the beginning of that projection interval, then the Current Value of the guaranteed living benefit shall be determined assuming exercise of the guaranteed living benefit at the earliest possible future projection interval. If the right to exercise the guaranteed living benefit is contingent on the survival of the annuitant or the owner, then the Current Value of the guaranteed living benefit shall assume survival to the date of exercise using the mortality table specified in A3.3)C)5).

Determination of the Current Value of a guaranteed living benefit that is exercisable or payable at a future projection interval shall take account of any guaranteed growth in the basis for the guarantee (e.g., where the basis grows according to an index or an interest rate).

For a GMWB, the Current Value shall be determined assuming the earliest penalty-free withdrawal of guaranteed benefits after withdrawals begin and by applying the constraints of any applicable maximum or minimum withdrawal provisions. If the GMWB is currently exercisable and the right to future GMWB payments is contingent upon the survival of the annuitant or owner, then the Current Value shall assume survival using the mortality table specified in A3.3)C)5). After a GMWB that has payments that are contingent upon the survival of the annuitant or owner has commenced, then the Current Value shall assume survival using the Annuity 2000 Mortality Table.

For an unexercised GMIB, the Current Value shall be determined assuming the option with a reserve closest to the reserve for a 10 year certain and life option. The reserve values and the value of the GMIB on the assumed date of exercise shall be determined using the discount rate *DR* specified in A3.1)B)2) and for life contingent payments, the Annuity 2000 Mortality Table. The Current Value of an unexercised GMIB, however, shall be set equal to the Account Value if the contractholder can receive higher income payments on the assumed date of exercise by electing the same option under the normal settlement option provisions of the contract.

For the purpose of applying the lapse assumptions specified in Table II below or contractholder elections rates specified in A3.3)C)7), the contract shall be considered "out of the money" (OTM) for a projection interval if the Current Value of the guaranteed living benefit at the beginning of the projection interval is less than or equal to the Account Value at the beginning of the same projection interval. If the Current Value of the guaranteed living benefit at the beginning of the projection interval is greater than the Account Value also at the beginning of the projection interval, the contract shall be considered 'in the money' (ITM) and the percent ITM shall equal:

100 * ((Current Value of the guaranteed living benefit /Account Value) - 1)

If a contract has multiple living benefit guarantees then the guarantee having the largest Current Value shall be used to determine the percent in the money.

Table II - Lapse Assumptions

	During Surrender Charge Period	After Surrender Charge Period		
Death Benefit Only Contracts	5%	10%		
All Guaranteed Living Benefits OTM	5%	10%		
		ITM < 10%	10%<=ITM< 20%	20%<=ITM
Any Guaranteed Minimum Accumulation Benefit ITM	2%	2%	0%	0%
Any Other Guaranteed Living Benefits ITM	3%	7%	5%	2%

4) Account Transfers and Future Deposits. No transfers between funds shall be assumed in the projection used to the determine the greatest present value amount required under section A3.3)B)2)b) unless required by the contract (e.g., transfers from a dollar cost averaging fund or contractual rights given to the insurer to implement a contractually specified portfolio insurance management strategy or a contract operating under an automatic re-balancing option). When transfers must be modeled, to the extent not inconsistent with contract language, the allocation of transfers to funds must be in proportion to the contract's current allocation to funds.

Margins generated during a projection interval on funds supporting account value are transferred to the Accumulation of Net Revenue and are subsequently accumulated at the Discount Rate. Assets for each class supporting account values are to be reduced in proportion to the amount held in each asset classes at the time of transfer of margins or any portion of Account Value applied to the payment of benefits.

No future deposits to Account Value shall be assumed unless required by the terms of the contract to prevent contract or guaranteed benefit lapse, in which case they must be modeled. When future deposits must be modeled, to the extent not inconsistent with contract language, the allocation of the deposit to funds must be in proportion to the contract's current allocation to such funds.

5) Mortality. Mortality at 70% of the 1994 Variable Annuity MGDB Mortality Tables (1994 MGDB tables) through age 85 increasing by 1% each year to 100% of the 1994 MGDB tables at age 115 shall be assumed in the projection used to the determine the greatest present value amount required under section A3.3)B)2)b).

6) Projection Frequency. The projection used to determine the greatest present value amount required under section A3.3)B)2)b) shall be calculated using an annual or more frequent time step, such as quarterly. For time steps more frequent than annual, assets supporting Account Values at the start of a year may be retained in such funds until year-end (i.e., margin earned during the year will earn the fund rates instead of the Discount Rate until year end) or removed after each time step. However, the same approach shall be applied for all years. Similarly, projected benefits, lapses, elections and other contractholder activity can be assumed to occur annually or at the end of each time step, but the approach shall be consistent for all years.

7) Contractholder Election Rates. Contractholder election rates for exercisable ITM guaranteed living benefits other than GMWBs shall be 5% per annum in every projection interval where the living benefit is less than 10% ITM, 15% per annum in every projection interval where the living benefit is 10% or more ITM and less than 20% ITM, and 25% per annum in every projection interval where the living benefit is more than 20% ITM. In addition, the election rate for an exercisable ITM guaranteed living benefit shall be 100% at the last model duration to elect such benefit. This 100% election rate shall be used when a Guaranteed Minimum Accumulation Benefit is at the earliest date that the benefit is exercisable and in-the-money. However, the contractholder election rate for any exercisable ITM guaranteed living benefit shall be zero if exercise would cause the extinction of a guaranteed living benefit having a larger Current Value. For this purpose, GMDBs are not benefits subject to election.

For guaranteed minimum withdrawal benefits, a partial withdrawal, if allowed by contract provisions, equal to the applicable percentage in Table III applied to the contract's maximum allowable partial withdrawal shall be assumed. However, if the contract's minimum allowable partial withdrawal exceeds the partial withdrawal from applying the rate in Table III to the contract's maximum allowable partial withdrawal, then the contract's minimum allowable partial withdrawal shall be assumed.

Table III - Guaranteed Withdrawal Assumptions

	Attained Age less than 50	Attained Age 50 to 59	Attained Age 60 or Greater
Withdrawals do not reduce other elective Guarantees that are in the money	50%	75%	100%
Withdrawals reduce elective Guarantees that are in the money	25%	50%	75%

8) Indices. If an interest index is required to determine projected benefits or reinsurance obligations, the index must assume interest rates have not changed since the last reported rates before the valuation date. If an equity index is required the index shall be consistent with the last reported index before the valuation date, the initial drop in equity returns and the subsequent equity returns in the standard scenario projection. The sources of information and how they are used to determine the indexes shall be documented and, to the extent possible, consistent from year to year.

D) Assumptions for use in Section A3.3)B)2)c).

1) The Value of Aggregate Reinsurance. The value of Aggregate reinsurance shall be calculated separately from the Accumulated Net Revenue. The value of Aggregate reinsurance is the discounted value, using the statutory valuation rate described in the following paragraph, of the excess of (a) the projected benefit payments from the reinsurance; over (b) the projected gross reinsurance premiums, where (a) and (b) are determined under the assumptions described in section A3.3)C) for all applicable contracts in aggregate.

In order for the value of the Aggregate reinsurance to be consistent with the underlying Standard Scenario reserve, the discount rate shall be a weighted average of the valuation rates (*DR*) of the contracts that are supported by the Aggregate reinsurance treaty. The weights used to determine this discount rate shall be reasonably related to the risks that are being covered by the Aggregate reinsurance (e.g., account value or values of guaranteed benefits) and shall be applied consistently from year to year. If an appropriate method to determine this discount rate does not exist, the value of the Aggregate reinsurance shall be determined using the statutory valuation rate in effect on the valuation date for annuities valued on an issue year basis using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years, determined assuming there are cash settlement options but no interest guarantees on future premiums.

2) The Value of Approved Hedges. The value of approved hedges shall be calculated separately from the Accumulated Net Revenue. The value of approved hedges is the difference between: a) the discounted value at the 1-year CMT[16] as of the valuation date of the pre-tax cash flows from the approved hedges; less b) their statement values on the valuation date.

To be an approved hedge for purposes of the Standard Scenario Reserve, a derivative or other investment has to be an actual asset held by the company on the valuation date, be used as a hedge supporting the contracts falling under the scope of the Guideline, and comply with any statutes, laws, or regulations (including applicable documentation requirements) of the domiciliary state or jurisdiction related to the use of derivative instruments.

The Domiciliary Commissioner may require the exclusion of any portion of the value of approved hedges upon a finding that the company's documentation, controls, measurement, execution of strategy or historical results are not adequate to support a future expectation of risk reduction commensurate with the value of approved hedges.

The cash flow projection for approved hedges that expire in less than one year from the valuation date should be based on holding the hedges to their expiration. For hedges with an expiration of more than 1 year, the value of hedges should be based on liquidation of the hedges one year from the valuation date. Where applicable, the liquidation value of hedges shall be consistent with the assumed returns in the Standard Scenario from the start of the projection to the date of liquidation, Black-Scholes pricing, a risk free rate equal to the 5-year CMT as of the valuation date and the annual volatility implicit as of the valuation date in the statement value of the hedges when the statement value of hedges are valued with Black-Scholes pricing and a risk-free rate equal to the 5-year CMT as of the valuation date.[17]

There is no credit in the Standard Scenario for dynamic hedging beyond the credit that results from hedges actually held on the valuation date.

3) Allocation of the Value of Hedges and the Value of Aggregate Reinsurance. The value of approved hedges and Aggregate reinsurance shall be allocated to the contracts which are supported by the applicable Aggregate reinsurance agreements and approved hedges. A

[16] For purposes of this Appendix, the term CMT refers to the nominal yields on actively traded non-inflation-indexed issues adjusted to constant maturities, as released daily by the Federal Reserve Board. As of this writing, the current and historical one-year rates may be found at http://www.federalreserve.gov/releases/h15/data/Business_day/H15_TCMNOM_Y1.txt and the current and historical five-year rates may be found at http://www.federalreserve.gov/releases/h15/data/Business_day/H15_TCMNOM_Y5.txt.

[17] Conceptually, the item being hedged, the contract guarantees, and the approved hedges are accounted for at the average present value of the worst 30% of all scenarios, the tail scenarios for a CTE (70) measure. However, the statement value of approved hedges is at market. Therefore, the standard scenario value of approved hedges is a proxy of the adjustment needed to move approved hedges from a market value to a tail value.

contract's allocation shall be the lesser of the amount in A3.3)B)2)b) for the contract or the product of a) and b) where:

a) Is the sum of the value of the applicable approved hedges plus the value of the applicable Aggregate reinsurance for all contracts supported by the same hedges and/or the Aggregate reinsurance agreement; and

b) Is the ratio of the amount in A3.3)B)2)b) for the contract to the sum of the amount in A3.3)B)2)b) for all contracts supported by the same hedges and/or the Aggregate reinsurance agreement.

4) Retention of components. For the seriatim Standard Scenario Reserve on the statement date under each of Sections A3.1)B)1) and A3.1)B)2), the actuary should have available to the Commissioner the following values for each contract:

a) The Standard Scenario Reserve prior to adjustment under paragraph A3.3)D)3)

b) The Standard Scenario Reserve net of the adjustment in A3.3)D)3).

E) Determination of the Surrender Charge Amortization Period to be used in section A3.3)C)1)a) and b).

The purpose of the Surrender Charge Amortization Period is to help determine how much of the surrender charge is amortized in the Basic Adjusted Reserve portion of the Standard Scenario Amount and how much needs to be amortized in the Accumulated Net Revenue portion. Once determined, the Surrender Charge Amortization Period determines the duration over which the lower level of margins, as described in A3.3)C)1)a), is used. After that duration, the higher level of margins, as described in A3.3)C)1)b), is used.

A separate Surrender Charge Amortization Period is determined for each contract and is based on amounts determined in the calculation of the Basic Adjusted Reserve for that contract. A key component of the calculation is the amount of the surrender charge that is not amortized in the Basic Adjusted Reserve calculation for that contract. This is represented by the difference between the account value and the cash surrender value projected within the Basic Adjusted Reserve calculation for the contract.

The Surrender Charge Amortization Period for a given contract is determined by following the steps:

1) Measure the duration of the greatest present value used in the Basic Adjusted Reserve. The Basic Adjusted Reserve is determined for a contract by taking the greatest present value of a stream of projected benefits. The benefit stream that determines the greatest present value typically includes an "ultimate" event (e.g., 100% surrender, 100% annuitization, or maturity). The "BAR Duration" is the length of time between the valuation date and the projected "ultimate" event.

2) Determine the amount of the surrender charge not amortized in the Basic Adjusted Reserve. The surrender charge not amortized in the Basic Adjusted Reserve is the difference between the projected account value and the projected cash surrender value at the BAR Duration (i.e., at the time of that projected "ultimate" event). This value for a given contract shall not be less than zero.

3) Determine the Surrender Charge Amortization Period before rounding. This equals a) time b) plus c), where:

a) Equals the ratio of the amount determined in step 2 to the Account Value on the valuation date;
b) Equals 100; and
c) Equals the BAR Duration determined in step 1.

4) Determine the Surrender Charge Amortization Period for the contract. This is the amount determined in step 3, rounded to the nearest number that represents a projection duration, taking into account the projection frequency described in A3.3)C)6). For example, step 3 produces a value of 2.15 and the projection frequency is quarterly, the Surrender Charge Amortization Period for the contract is 2.25.

APPENDIX 4 - Alternative Methodology

A4.1) General Methodology

A) General Methodology Description. For variable deferred annuity contracts that either contain no guaranteed benefits or only GMDBs[18] (i.e., no VAGLBs), the Conditional Tail Expectation Amount may be determined by using the method outlined below rather than by using the approach described in Section IV)D) (i.e., based on projections), provided the approach described in Section IV)D) has not been used in prior valuations or else approval has been obtained from the Domiciliary Commissioner.

The Conditional Tail Expectation Amount determined using the Alternative Methodology for a group of contracts with GMDBs shall be determined as the sum of amounts obtained by applying factors to each contract inforce as of a valuation date and adding this to the contract's Cash Surrender Value.[19] The resulting Conditional Tail Expectation Amount shall not be less than the Cash Surrender Value in aggregate for the group of contracts to which the Alternative Methodology is applied.

The Conditional Tail Expectation Amount determined using the Alternative Methodology for a group of contracts that contain no guaranteed benefits[20] shall be determined using an application of Actuarial Guideline XXXIII, as described below.

For purposes of performing the Alternative Methodology, materially similar contracts within the group may be combined together into subgroups to facilitate application of the factors. Specifically, all contracts comprising a "subgroup" must display substantially similar characteristics for those attributes expected to affect reserves (e.g., definition of guaranteed benefits, attained age, contract duration, years-to-maturity, market-to-guaranteed value, asset mix, etc.). Grouping shall be the responsibility of the actuary but may not be done in a manner that intentionally understates the resulting reserve.

B) Definitions of Terms Used in this Appendix.

1) Annualized Account Charge Differential. This term is the charge as percentage account value (revenue for the company) minus the expense as percentage of account value.

2) Asset Exposure. Asset Exposure refers to the greatest possible loss to the insurance company from the value of assets underlying general or separate account contracts falling to zero.

3) Benchmark. Benchmarks have similar risk characteristics to the entity (e.g., asset class, index, or fund) to be modeled.

4) Deterministic Calculations. In a Deterministic Calculation, a given event (e.g., asset returns going up by 7% then down by 5%) is assumed to occur with certainty. In a stochastic calculation, events are assigned probabilities.

5) Foreign Securities. Securities issued by entities outside the United States and Canada.

[18] This includes "earnings enhanced death benefits," as discussed in Section III)A)1).

[19] The amount that is added to a contract's Cash Surrender Value may be negative, zero or positive, thus resulting in a reserve for a given contract that could be less than, equal to, or greater than, the Cash Surrender Value.

[20] The term "contracts that contain no guaranteed benefits" means that there are no guaranteed benefits at any time during the life of the contract (past, present or future).

6) Grouped Fund Holdings. Grouped Fund Holdings relate to guarantees that apply across multiple deposits or for an entire contract instead of on a deposit-by-deposit basis.

7) Guaranteed Value. The Guaranteed Value is the benefit base or a substitute for the account value (if greater than the account value) in the calculation of living benefits or death benefits. The methodology for setting the Guaranteed Value is defined in the variable annuity contract.

8) High-Yield Bonds. High-Yield Bonds are below investment grade, with NAIC designations (if assigned) of 3, 4, 5, or 6. Compared to investment grade bonds, these bonds have higher risk of loss due to credit events. Funds containing securities predominately containing securities that are not NAIC designated as 1 or 2 (or similar agency ratings) are considered to be High-Yield.

9) Investment Grade Fixed Income Securities. Securities with NAIC designations of 1 or 2 are Investment Grade. Funds containing securities predominately with NAIC designations of 1 or 2 or with similar agency ratings are considered to be Investment Grade.

10) Liquid Securities. These securities can be sold and converted into cash at a price close to its true value in a short period of time.

11) Margin Offset. Margin Offset is the portion of charges plus any Revenue Sharing allowed under section A1.1)E) available to fund claims and amortization of the unamortized surrender charges allowance.

12) Multi-Point Linear Interpolation. This methodology is documented in mathematical literature and calculates factors based on multiple attributes categorized with discrete values where the attributes' actual values may be between the discrete values.

13) Model Office. A Model Office converts many contracts with similar features into one contract with specific features for modeling purposes.

14) Pre-Packaged Scenarios. The Pre-Packaged Scenarios are the year-by-year asset returns that may be used (but are not mandated) in projections related to the alternative methodology. These scenarios are available on an American Academy of Actuaries website.

15) Quota-Share Reinsurance. In this type of reinsurance treaty, the same proportion is ceded on all cessions. The reinsurer assumes a set percentage of risk for the same percentage of the premium, minus an allowance for the ceding company's expenses.

16) Resets. A Reset benefit results in a future minimum guaranteed benefit being set equal to the contract's account value at previous set date(s) after contract inception.

17) Risk Mitigation Strategy. A Risk Mitigation Strategy is a device to reduce the probability and/or impact of a risk below an acceptable threshold.

18) Risk Profile. Risk Profile in the Guideline relates to the prescribed asset class categorized by the volatility of returns associated with that class.

19) Risk Transfer Arrangements. A Risk Transfer Arrangement shifts risk exposures (e.g., the responsibility to pay at least a portion of future contingent claims) away from the original insurer.

20) Roll-Up. A Roll-Up benefit results in the guaranteed value associated with a minimum contractual guarantee increasing at a contractually defined interest rate.

21) Volatility. Volatility refers to the annualized standard deviation of asset returns.

C) Contract-by-Contract Application for Contracts that Contain No Guaranteed Living or Death Benefits. The Alternative Methodology reserve for each contract that contains no guaranteed living or death benefits shall be determined by applying Actuarial Guideline XXXIII. The application shall assume a return on separate account assets equal to the year of issue valuation interest rate less appropriate asset based charges. It shall also assume a return for any fixed separate account and general account options equal to the rates guaranteed under the contract.

The reserve for such contracts shall be no less than the Cash Surrender Value on the valuation date, as defined in Section III)B).

D) Contract-by-Contract Application for Contracts that Contain GMDBs only. For each contract, factors are used to determine a dollar amount, equal to $R\times\left(CA+FE\right)+GC$ (as described below), that is to be added to that contract's Cash Surrender Value as of the valuation date. The dollar amount to be added for any given contract may be negative, zero, or positive. The factors that are applied to each contract shall reflect the following attributes as of the valuation date:

1) The contractual features of the variable annuity product,

2) The actual issue age, period since issue, attained age, years-to-maturity, and gender applicable to the contract,

3) The account value and composition by type of underlying variable or fixed fund,

4) Any surrender charges,

5) The GMDB and the type of adjustment made to the GMDB for partial withdrawals (e.g., proportional or dollar-for-dollar adjustment), and

6) Expenses to be incurred and revenues to be received by the company as estimated on a Prudent Estimate basis as described in Section III)B)8) and complying with the requirements for Revenue Sharing as described in section A1.1)E).

E) Factor Components. Factors shall be applied to determine each of the following components.[21]

CA = Provision for amortization of the unamortized surrender charges calculated by the insurer based on each contract's surrender charge schedule, using prescribed assumptions, except that lapse rates shall be based on the insurer's Prudent Estimate, but with no provision for Federal Income Taxes or mortality;

FE = Provision for fixed dollar expenses less fixed dollar revenue calculated using prescribed assumptions, the contract's actual expense charges, the insurer's anticipated

[21] Material to assist in the calculation of the components is available on the American Academy of Actuaries' website, at http://www.actuary.org/life/phase2.asp.

actual expenses and lapse rates, both estimated on a Prudent Estimate basis, and with no provision for Federal Income Taxes or mortality;
