

MEMORANDUM

To: Julie Moore, Secretary of the Agency of Natural Resources
From: Kari Dolan, Program Manager, DEC Clean Water Investment Program
Rebecca Ellis, DEC Senior Counsel for Governmental Affairs
Subject: DEC's Watershed Project Database - *Go List*
Date: April 24, 2017

Attached is an updated list of projects from the Vermont Department of Environmental Conservation's (DEC) Watershed Projects Database that are:

- Eligible for Capital Funds;
- Ready for design and/or construction;
- Necessary for compliance with federal and state water quality law;
- Prioritized for nutrient and sediment pollution abatement; and
- Sponsored by municipalities if the projects involve stormwater pollution control.

The attached "Go List" was generated from the Watershed Projects Database on 4/24/2017. These projects were identified through DEC's Tactical Basin Planning Process. The database is used to track progress and report to the public, the Legislature and the U.S. Environmental Protection Agency on the state's progress in meeting pollution reduction goals. Because the database is constantly growing, the "Go List" is only snapshot in time and will change each time it is printed out.

Sector	Project Type	Count
Stormwater	Stormwater Management – Construction	25
Stormwater	Stormwater Management – Design	95
Stormwater	Stormwater Management – Equipment	0
Roads	Roads: Stormwater Construction	41
Roads	Roads: Stormwater Design	20
Natural Resources	Natural Resources – Restoration Construction	3
Natural Resources	Natural Resources – Restoration Design	8
Natural Resources	Natural Resources – River Corridor Easement	7
Total		199

Vermont Department of Environmental Conservation (DEC)
Watershed Projects Data Base
Frequently Asked Questions
4/4/2017

DEC Watersheds Projects Data Base

1. What is the DEC Watershed Projects Data Base?

The DEC Watershed Projects Database stores projects and actions that are necessary for compliance with federal and state water quality law. DEC uses this data base to track and report on the State's progress in achieving its clean water goals.

To view the Watershed Project Data Base, visit:

<https://anrweb.vt.gov/DEC/IWIS/ARK/ProjectSearch.aspx>

2. What is the Go List?

The "Go List" is a subset of projects from the DEC Watershed Projects Data Base that are:

- Eligible for Capital Funds;
- Ready for design and/or construction;
- Necessary for compliance with federal and state water quality laws;
- Prioritized for nutrient and sediment pollution abatement; and
- Sponsored by municipalities if the projects involve stormwater pollution control.

To view the Go List on line, visit:

<https://anrweb.vt.gov/DEC/IWIS/ARK/ARKReportViewer.aspx?Report=ImplementationReady>

3. Will the "Go List" projects count towards the TMDLs, Act 64 and CSO Policy?

Yes. The projects on the "Go List" will support and count towards Vermont's compliance with federal and state clean water laws and regulations, including:

- Total Maximum Daily Loads are set by U.S. EPA for Vermont (TMDLs),
- 2015 Act 64, Vermont Clean Water Act (Act 64), and
- 2016 Vermont Combined Sewer Overflow (CSO) Policy.

More information on these laws and regulations is below.

4. Does the "Go List" include other projects that are not capital-fund eligible?

The "Go List" includes only those projects that are capital-fund eligible. The "Go List" is a subset of DEC's Watershed Projects Data Base, which includes other projects that may be important to implement, such as stormwater runoff assessments that identify projects for implementation, but that are not capital-fund eligible.

5. **What are Tactical Basin Plans?**

Working with partners, DEC’s Mapping, Assessment and Planning Program staff have developed “tactical basin plans” for each of Vermont’s fifteen watershed basins. The tactical basin plans identify, inventory, and prioritize all possible water quality improvement projects in a watershed. These projects are then implemented using a mix of grants and loans from State and federal funding sources, which vary by sector. The Watershed Projects Database lists all of the projects identified in the Tactical Basin Plans.

<http://dec.vermont.gov/watershed/map/basin-planning>

6. **Does the Go List have projects identified from across the State? It appears that the Go List has more projects from the Lamoille and Missisquoi Bay basins than from other watersheds across the state.**

DEC has Tactical Basin Plans for all fifteen basins in the State. However, DEC relatively recently revised its watershed-based planning process to identify specific projects and actions necessary to protect or restore Vermont’s waters. The first two tactical basin plans using this new process are the Lamoille River Basin Plan and the Northern Lake Champlain Basin Plan.

7. **When will other tactical basin plans be updated?**

DEC updates each of the fifteen Tactical Basin Plans on 5-year cycles. See the following link for the TBP release schedule:

<http://dec.vermont.gov/sites/dec/files/wsm/mapp/docs/MonitoringAssessmentPlanningRotationWeb2016.pdf>

8. **How frequently does DEC update the Go List?**

The Watershed Projects Data Base and the Go List are “living” documents. DEC periodically revises them as projects are identified. Currently, there are over 2,600 projects on the data base.

9. **Who implements the projects on the Go List?**

Municipalities, regional planning commissions, natural resources conservation districts, watershed organizations, lake associations and others use the Tactical Basin Plans to identify priority projects for implementation. DEC’s Clean Water Initiative Program supports these partners through the ecosystem restoration grants program. Other federal and state grant and loan programs may also support these projects.

Obligations under the State and Federal Water Quality Laws

10. What is a TMDL?

TMDL means “Total Maximum Daily Load”, which is a cap on the amount of a pollutant that a waterbody can safely absorb and still meet the State’s water quality standards. The cap, or the maximum amount of that pollutant, is then allocated among the various pollutant sources and locations. (See the Federal Clean Water Act, Section 303(d)).

Vermont waters contribute to pollution, and are therefore subject to TMDLs, for three different water bodies: [Lake Champlain](#) (phosphorus), [Lake Memphremagog](#) (phosphorus), and the [Long Island Sound](#) (nitrogen). Between the Champlain, Memphremagog, and Connecticut River watersheds, 94% of Vermont’s land area is subject to a TMDL.

11. How does Act 64 relate to the Lake Champlain TMDL?

The U.S. EPA approved the 2016 Lake Champlain Phosphorus Total Maximum Daily Load (TMDL) in reliance on the State of Vermont’s Phase I Implementation Plan. Vermont’s Phase I Implementation Plan included various commitments, some of which were enacted into law by 2015 Act 64, which applies to waters statewide, and other commitments that were not enacted into state law, such as the requirement to upgrade wastewater treatment facilities (WWTFs). Some of the Act 64 commitments include:

- Stormwater Permit for Parcels with more than 3-acres of impervious surface
- Municipal Roads General Permit
- State Highway General Roads Permit
- New MS4 Permits
- New Stormwater Rules
- Required Agricultural Practices

Vermont’s Tactical Basin Plans are the State’s Phase II Implementation Plans. The Tactical Basin Plans identify steps and projects that are necessary to satisfy statutory and regulatory clean water requirements.

12. What are the most significant source of water pollution to Vermont’s waters?

The most significant sources of water pollution are stormwater runoff from developed lands, roads, farms and stream channel erosion. Stormwater runoff is mostly associated with rainfall and snowmelt. Nationally and in Vermont, these “nonpoint” sources of pollution are the leading cause of water quality degradation.

Capital Eligible Go List

April 26 2017

This list is periodically updated. See link for more up-to-date list: <https://anrweb.vt.gov/DEC/IWIS/ARK/ARKReportViewer.aspx?Report=ImplementationReady>
