

I am writing to express my opposition to the expansion of conditions for treatment with medical marijuana. The language in this bill essentially makes any condition a “qualifying” condition. Marijuana is NOT a panacea and without proper medical evidence it should not be used under the guise of “medical treatment.” As a physician I am primarily concerned with the safety and wellness of my patients and changing the law with such broad language does not necessarily make my job easier, it just confuses those I am trying to treat.

Thank you for your consideration,
Jeff Young
