CHEMICAL DISCLOSURE PROGRAM FOR CHILDREN'S PRODUCTS

There are many chemicals in our environment. Some of them are used in products we all use, including children's products. Vermont prioritizes protecting public health and the environment. Consumers are encouraged to learn more about the chemicals that are in children's products.

Beginning January 1, 2017, manufacturers who use chemicals designated by the State of Vermont as Chemicals of High Concern to Children, must disclose information about these chemicals to the Health Department.

- › [Vermont Law and Regulations](#)
- › [For Manufacturers](#)

Watch this video to learn how to use the Chemical Disclosure Program's online system.

DATA AND RESOURCES

List of Chemicals of High Concern to Children [PDF](#) [Excel](#)

Each of the chemicals on this list is included in accordance with the standards set forth in Act 188 (2014). The list is organized by chemical name and Chemical Abstracts Service (CAS) number.

Chemical Disclosure Datasets

The chemical disclosures have been submitted to the Health Department by manufacturers of children's products. The disclosures apply to children's products that are offered for sale in Vermont. These files will be updated every other week. For help interpreting the data, please see the [Public Data Dictionary](#).

Brand Name and Product Model (BNPM) includes brand name and product model data for each chemical report. Product models may be words or numbers. The numbers are typically the Universal Product Code (UPC) for the product. As some brand name and product model information is insufficient to identify the product, the data will be updated with additional information provided by manufacturers. *Please note that the data set is very large, and is split into multiple files below to be downloaded.*

> Brand Name and Product Model (BNPM) Data Set

[Function Set](#) includes Chemical Name, Function, Component, Concentration, and Brick (the Global Product Classification product description).

PLEASE NOTE: The reports on this website are based on data provided to the Health Department. The presence of a chemical in a children's product does not necessarily mean that the product is harmful to human health or that there is any violation of existing safety standards or laws. The reporting triggers are not health-based values.
