

FUNDING AND INCENTIVES

BROWNFIELDS INITIATIVE

Promoting the Productive Reuse of Under-Utilized Contaminated Sites

The Brownfields Initiative promotes the productive reuse of sites that are currently abandoned or not fully utilized due to contamination or the perception of contamination on the site. Financial assistance for cleanup provides economic growth, housing, and open space that strengthens our communities.

The Brownfields Revitalization Fund (BRF) offers grants and loans for remediation of brownfield sites with viable redevelopment potential. The Fund is administered by the Agency of Commerce and Community Development with funds made available to Vermont from the Environmental Protection Agency. Eligible applicants can be private developers, non-profits or municipalities. There is no limit on the size of a loan; it depends on the amount of capital available in the fund.

The Brownfields Initiative can help with:

- GRANT AND LOAN FUND CONNECTION
- IDENTIFICATION OF SITES
- PROJECT MANAGEMENT
- ACCESS TO RESOURCES

FREQUENTLY ASKED QUESTIONS

Q. WHAT ARE BROWNFIELDS?

Brownfields are properties for which expansion, redevelopment or reuse may be complicated due to the presence, or potential presence, of hazardous substances, pollutants or contaminants. Common sites include former gas stations, automotive repair shops, schools, dry cleaners, print shops, and other service-oriented businesses.

Q: WILL I BE LIABLE FOR CONTAMINATION AT THE SITE?

Typically, ownership of a contaminated property will give rise to liability under state and federal environmental laws. However, both federal and Vermont state laws provide a level of liability protection to purchasers of contaminated property when appropriate procedures are followed. Protection may also be made available to “innocent owners” of contaminated property.

Q: WHAT DO BROWNFIELDS CLEANUPS COST?

As with any development project, overall cost is affected by many variables. The type, volume, and concentration of contaminants are particularly relevant factors at brownfields sites. Completing a thorough environmental assessment and site investigation will provide most of the information needed to establish a cleanup cost estimate and assess a project’s feasibility. In Vermont, technical and financial assistance is available for site assessment, investigation and cleanup.

Q: HOW LONG WILL THE CLEANUP AND REDEVELOPMENT TAKE?

Once the cleanup plan is approved, a brownfields project will not take significantly more time than a standard development project. In some cases, redevelopment can take place simultaneously with cleanup activities. Consulting with the Department of Environmental Conservation at the outset will reduce the potential for delays related to the cleanup portion of the project.
