Subject: supporting documentation

Chair Townsend, I am sure the amount of emails and letters on the topic of the OPR bill has gotten somewhat out of control but I did note that Jessa Barnard has sent you articles maligning the work of NPs in clinical practice. There is overwhelming evidence that directly contradicts the few rogue articles she sent you so I am forwarding a very small sample of the evidence which points in the other direction regarding the cost effective and high quality care provided by advance practice registered nurses. Thank you for all the work your committee is doing on this topic.
