

The Pareto Chart below presents the relative proportion of provider-patient visits by CPT codes at White River Family Practice, 2015 & 2016. These numbers are *patient visits*, and do not represent charges or reimbursements. Lab services are not included in this analysis, and their aggregate affect on WRFPP reimbursement would merit a spot on this chart were the analysis to be done on charges or payments.

I present this chart to support my suggestion that a small number of codes should be the primary initial focus of our pay-parity discussion rather than the significantly larger number that was mentioned among the broader group.

G codes are Medicare Wellness exams of various kinds. The 9939X codes refer to established-patient well-child examinations.

Respectfully submitted,
Mark M. Nunlist, MD, MS
