

I would like to share my experience as a patient, and how medical cannabis, has helped me greatly through my Cancer treatments.

After my surgery, last October 2017 instead of the pharmaceutical tramadol and or opioids for my pain. That my Doctor prescribed. I chose the medical cannabis for my pain. That helped me significantly to manage it. Not just my pain, it helped me with my not wanting to eat, my nausea, fatigue and depression.

I strongly recommend other patients, to research and understand, medical cannabis has more benefits than you possibly thought.

Sincerely,

Karl Bush
