Dear Legislators,

If Vermont is serious about addressing climate change, why would we invest in the opposite? Why would we endanger the health and safety of our environment and lives with pipelines that can potentially leak and contaminate soil and water, so that we can continue to put more carbon in the air? It is time to only invest in renewable energy systems. Period.

I urge you to support the No Fossil Fuel Infrastructure bill this session.

Thank you for your work to serve Vermont.
