FOOTNOTE: These indicators are the most consistent with the category, keep in mind that there may be variations due to individual reaction, dose taken and drug interactions.

- 1) Soma, Quaaludes and some antidepressants usually dilate pupils
- 2) Quaaludes, ETOH and some antidepressants may elevate
- 3) Certain psychedelic amphetamines may cause slowing

- 4) Normal, but may be dilated
- 5) Down with anesthetic gases, up with volatile solvents and aerosols
- 6) Pupil size possibly normal
