

Representatives,

I am writing in opposition of H.57:

We have laws that protect endangered species, we have laws to protect the environment yet we are here today, as a society to talk about a bill that would codify abortion into state law and then in the state constitution, with zero restrictions and taking away any remaining rights that an unborn child has in Vermont.

I ask each of you, what issues are more important than preserving human life? The environment, education, gun control...? Do we really want to change the statute and our constitution, to support unrestricted abortion, a medical procedure that ends human life?
