

Annual Snapshot: Report Card

ESSA requires all states to develop and publish report cards for all schools. Vermont does this through our Annual Snapshot. Vermont’s school report card will provide data on school performance and change for the five domains of the Education Quality Standards. Each domain has multiple indicators of success. The strengths and needs identified through the Annual Snapshot will guide the school needs assessment and continuous improvement. The Annual Snapshot will allow the public to look at broad measures of school performance and drill down to look at individual indicators and grade level and student group performance, provided the number of students is sufficient to report the data. *Please note that the Annual Snapshot presented below is only a sample to demonstrate the concepts the tool will address. The actual product remains in development. The final version will likely look substantially different than the one presented here.*

Education Quality Domains

The Academic Achievement domain also meets the reporting requirements under ESSA.

School Report Card Targets

Multiple Ways to Assess Domains

Each domain will be assessed both by current performance and by year-to-year change. Below is a sample school snapshot.

	Performance	Change	Equity Index*	Equity Change**
 Academic Proficiency				
 Personalization				
 Safe, Healthy Schools			N/A	N/A
 High Quality Staffing			N/A	N/A
 Investment Priorities			N/A	N/A

* The Equity Index assesses the difference in performance between groups of students.

** The Equity Change assesses a school’s success in closing that gap over time.
