National and UN climate reports say only 11 for transition from fossil fuels to renewables, or an irreversible change to our climate into feedback loops that deteriorate into unlivable, deadly, conditions. Do you doubt the science? This is an existential crisis!

Get a backbone, act fearlessly. All the legislature is focused on is plastic bags! You must do better! If our nation could mobilize for WWII, then we can mobilize, starting with Vermont, to save our life support system, our planet.
