COMMERCIAL VEHICLE OPERATIONS ADMINISTRATIVE SYSTEM

What's Happening?

A modern administrative system is being implemented that will replace the current paper-based system used by the CVO Unit. IFTA, IRP and motor fuel (rental, diesel, gas, and aviation) taxes will all be handled in the new system.

Where Are We Now?

At the moment, the project is being independently reviewed to ensure that the proposed solution is a sound technology and to make sure that the State is prepared to successfully implement the desired solution.

Who Benefits from the New System?

- Everyone who files motor fuel taxes
- IFTA & IRP Customers
- DMV and AOT staff (Customer Service and Finance Units)

Efficiencies & Opportunities with New System

- Move applicants from paper-based to electronic submissions
- Dramatically reduce the number of returns
- Collect IFTA, IRP and motor fuel taxes online
- Increase number of audits performed and speed at which they are performed

Why Are We Getting a New System?

The contract for our current system has run out and the vendor has decided to no longer provide these types of services. The system in use today will no longer be supported and creating an internal solution with limited support resources is very risky for the State of Vermont.

What's Next?

Beginning in early 2019, project space will be configured and staff from DMV and the vendor will begin the initial planning phase. Planning is expected to kickoff in March with the project in full-swing by April 2019.

We anticipate an implementation and go-live in April 2020.

We are still very early in the planning stages, so more information to follow when it is available.
