Subject: Climate change

Please insure that the climate change crisis be addressed in all state government planning and decisions. Particular focus should be toward environmental and related technical education. Think of our state as the emerging source of software and computer equipment that can be used nation and world wide to address all aspects of climate change. Vermont is noted for the kind of development that can respond to the immediate crisis, such as the machine tool industry during WW2. We can benefit ourselves and the environment by getting out in front of the carbon pollution of our environment.

Thank you,
Craig Kneeland
