Subject: Please ammend bill H513 to pause 5G

Hello-

I am very concerned about the health and property rights implications of the bill currently in the Finance Committee.

I am urging Senators to ammend it to restrict the placement of pole antennas to current 2G standards until the health effects of such ubiquitous 5G radiation can be adequately studied and proven safe.

Further, as written, this bill would usurp the rights of property owners regarding cutting of their trees because the 5G signal requires extensive open space to function properly.

I am in favor of broadband expansion when it consists of fiberoptic cables to the homes.

5G could usher in major widespread negative health effects which would have far reaching economic consequences to a state that already struggles with the finances of healthcare.

Thank you.
