The Energy Office is charged with administering the interest of the State in all energy management measures, the implementation of energy efficiency and conservation projects, and the use of renewable resources in State owned and operated buildings and facilities, and space leased to the state.

The office is also charged with overseeing the State Agency Energy Plan, providing up-to-date energy data for State buildings, ensuring that new state contracts and construction leverage the most environmentally friendly goods and services and serving as the primary point of contact for various energy and/or climate committees, coalitions and boards.
