(E) significantly more likely to have been worried about having enough food in the past year; and

(F) significantly more likely to report no physical activity during leisure time.

(3) According to the Department of Mental Health’s analysis entitled “Race Data VPCH Admissions,” which reviewed patients admitted from May 1, 2019 to April 30, 2020, Non-White Vermonters are disproportionately represented in the highest level of involuntary hospitalization. At the Vermont Psychiatric Care Hospital, 15 percent of the patients are non-White.

(4)(A) Non-White Vermonters have also been disproportionately affected by COVID-19. According to a data brief published on the Department of Health’s website in December 2020, entitled “COVID-19 among Vermonters who are Black, Indigenous, and People of Color (BIPOC),” nearly one in every five COVID-19 cases in Vermont are among Black, Indigenous, and Persons of Color even though these Vermonters make up approximately six percent of Vermont’s population. According to that same data brief, the incidence rate for non-White Vermonters is 74.2 versus 26.2 for White Vermonters. The incidence rate for Black Vermonters is 225.7; the incidence rate for Asian Vermonters is 61; the incidence rate for Hispanic Vermonters is 41.7; and the incidence rate for other races is 20.5. Non-White Vermonters are also at a higher risk for more serious outcomes, such as hospitalization.

(B) According to the Department of Health’s December 2020 data brief, COVID-19 cases among non-White Vermonters tend to be younger than for White Vermonters. The average age of persons testing positive for COVID-19 is 33 among non-White Vermonters, whereas the average age is 46 among White Vermonters.

(C) While, according to the Department of Health’s 2018 Behavior Risk Factor Surveillance System, there are not statistically significant differences in the rates of preexisting conditions, such as diabetes, lung disease, and cardiovascular disease, among White and non-White Vermonters, the Vermont Department of Health’s December 2020 data brief indicates that there are disparities in the rates of preexisting conditions among Vermonters testing positive for COVID-19. As stated in that data brief, the preexisting conditions rate among COVID-19 cases is 19.4 percent for non-White Vermonters and 12.1 percent for White Vermonters. According to the same December 2020 data brief, this suggests that non-White Vermonters are at higher risk of exposure to COVID-19 due to their type of employment and living arrangements. Thirty-six percent of non-White Vermonters had household contact with a confirmed case of COVID-19, as compared to only 20 percent of White Vermonters as stated in the Department of Health’s December 2020 data brief.

(5) According to the 2018 Vermont Behavioral Risk Factor Surveillance System Report, adults with a disability are:

(A) five times as likely to consider suicide than adults with no disability;

(B) eight times more likely to report fair or poor health than adults with no disability;

(C) statistically more likely to delay care due to cost than adults with no disability;

(D) seven times more likely to report poor physical health than adults with no disability;

(E) statistically more likely to report poor mental health in the past month than adults with no disability;

(F) more than twice as likely to report rarely or never getting the necessary emotional support as compared to White adults with no disability;

(G) statistically more likely to report having arthritis than adults with no disability;

(H) statistically more likely to have asthma than adults with no disability;

(I) nearly twice as likely to have ever had cancer than adults without a disability;

(J) statistically more likely to have had skin cancer than adults with no disability;

(K) three times more likely to report having cardiovascular disease than adults with no disability;

(L) five times more likely to report having chronic obstructive pulmonary disease than Vermonters with no disability;

(M) significantly more likely to have depression than adults with no disability;

(N) three times as likely to report having diabetes than those with no disability;

(O) significantly more likely to report having hypertension than those with no disability;

(P) statistically more likely to report having kidney disease than adults with no disability;

(Q) significantly more likely to have been worried about having enough food in the past year when compared to adults with no disability;

(R) more than three times as likely to report housing insecurity in the past year than adults with no disability; and

(S) significantly more likely to report no physical activity during leisure time than adults with no disability.

(6) According to the 2018 Vermont Behavior Risk Factor Surveillance System Report, adults who are LGBTQ are:

(A) three times as likely to report seriously considering suicide compared to non-LGBTQ adults;

(B) statistically more likely to delay care due to cost than non-LGBTQ adults;

(C) statistically more likely to report poor mental health in the past month than non-LGBTQ adults;

(D) statistically more likely to report a disability than non-LGBTQ adults;

(E) statistically more likely to have asthma than non-LGBTQ adults;

(F) significantly more likely to have depression than non-LGBTQ adults; and

(G) significantly more likely to have been worried about having enough food in the past year when compared to non-LGBTQ adults.

(7) LGBTQ youths, according to Vermont's 2019 Youth Risk Behavior Survey, are:

(A) four times more likely to purposefully hurt themselves in the preceding 12 months and four times more likely to make a suicide plan in the preceding 12 months than cisgender, heterosexual peers;

(B) five times more likely to have attempted suicide in the preceding 12 months than cisgender, heterosexual peers;

(C) over three times more likely to experience unwanted sexual contact as compared to cisgender, heterosexual peers;

(D) twice as likely to experience bullying during the preceding month and significantly more likely to skip school due to safety concerns at or on their way to or from school as compared to cisgender, heterosexual peers;

(E) nearly three times more likely to experience housing insecurity as compared to cisgender, heterosexual peers;

(F) twice as likely to face food insecurity as compared to cisgender, heterosexual peers; and

(G) twice as likely to report having a physical disability, long-term health problem, emotional problem, or learning disability as compared to cisgender, heterosexual peers.

(8) According to Preliminary Data from the 2018 State Health Assessment presented to the House Committee on Health Care by the Department of Health in January 2018, Vermonters who experience health inequities report that they:

(A) face discrimination, prejudice, and racism that is often invisible to others;

(B) do not trust and feel misunderstood by “the system”;

(C) do not feel valued, included, or safe;

(D) feel like services are not designed to support them;

(E) feel a lack of agency over their health and their own lives; and

(F) believe this takes place because our society has been structured to maintain a status quo that provides them with unequal opportunities.

(9) Vermont’s 2018 State Health Assessment indicates that social determinants of health are underlying, contributing factors of the foregoing health inequities. That is, disparities in social determinants of health contribute to health inequities. Disparities in the social determinants of health exist in Vermont. For example:

(A) According to the Vermont Housing Finance Agency, just 21 percent of Black Vermonters own their own homes, whereas 72 percent of White Vermonters own their own home. Nationally, 41 percent of Black Americans own their own home.

(B) According to the Vermont Housing Finance Agency, the median household income of Black Vermonters is \$41,533.00, while the median household income of White Vermonters is \$58,244.00.

(C) According to the U.S. Census Bureau, in 2018, 23.8 percent of Black Vermonters were living in poverty, while 10.7 percent of White Vermonters lived in poverty. In addition, according to the Vermont Housing Finance Agency, 57 percent of Black Vermonters earned less than 80 percent of Vermont’s median income, while 43 percent of White Vermonters earned less than 80 percent of Vermont’s median income.

(D) According to the Vermont Housing Finance Agency, about one in two non-White Vermonters experience “housing problems,” which is defined by the U.S. Department of Housing and Urban Development as homes that lack complete kitchen facilities or plumbing; overcrowded homes; or households paying more than 30 percent of income towards rent, mortgage payments, and utilities. One in three Vermonters experience “housing problems.”

(E) According to the Vermont Coalition to End Homelessness and Chittenden County Homeless Alliance’s 2020 Point-in-Time Count, Black Vermonters are overrepresented among Vermonters experiencing homelessness. While Black Vermonters make up about one percent of Vermont’s population, they make up six percent of Vermonters experiencing homelessness.

(10) According to the Indian Health Service, “[t]he American Indian and Alaska Native people have long experienced lower health status when compared with other Americans,” including a life expectancy among American Indian and Alaska Native people born today that is 5.5 years less than the U.S. all races population.

(11) As outlined in 2021 J.R.H. 2, Vermont’s “State-sanctioned eugenics policies targeted Vermonters of Native American Indian heritage, including French-Indian and Abenaki families, and persons of mixed ethnicity and of French-Canadian heritage, as well as the poor and persons with disabilities, among others.” These policies, including the State’s 1931 sterilization law, are examples of past injustices in the health care system that continue to impact members of these communities in present day.

Sec. 2. LEGISLATIVE INTENT AND PURPOSE

(a) It is the intent of the General Assembly to promote health and achieve health equity by eliminating avoidable and unjust disparities in health through a systemic and comprehensive approach that addresses social, economic, and environmental factors that influence health. To this end, the General Assembly believes that:

(1) Equal opportunity is a fundamental principle of American democracy.

(2) Equal enjoyment of the highest attainable standard of health is a human right and a priority of the State.

(3) Structural racism, defined as the laws, policies, institutional practices, cultural representations, and other societal norms that often work together to deny equal opportunity, has resulted in health disparities among Vermonters. Great social costs arise from these inequities, including threats to

economic development, democracy, and the social health of the State of Vermont.

(4) Health disparities are a function of not only access to health care, but also social determinants of health, including the environment, the physical structure of communities, nutrition and food options, educational attainment, employment, race, ethnicity, sex, geography, language preferences, immigrant or citizen status, sexual orientation, gender identity, and socioeconomic status, that directly and indirectly affect the health, health care, and wellness of individuals and communities.

(5) Efforts to improve health in the United States have traditionally looked to the health care system as the key driver of health and health outcomes. However, there has been increased recognition that improving health and achieving health equity will require broader approaches that address factors that influence health.

(6) Health equity is the attainment of the highest level of health for all people. Health equity can be achieved only by eliminating the preventable differences in the health of one group over another as the result of factors such as race, sexual orientation, gender, disability, age, socioeconomic status, or geographic location.

(7) Definitions of racial categories and identities can be difficult to agree upon, as they often create hierarchies and comparisons that center whiteness, prioritize one group or identity over another, or fail to recognize historical inequities and oppression. Definitions also shift over time as broader cultural norms change. While potentially problematic, in order to align with data collection standards and create consistency, this bill does use the term “non-White” as defined in 18 V.S.A. § 251 and also seeks to create new definitions that better reflect racial and ethnic identities and categories pursuant to Sec. 6 of this act.

(b) The purpose of this act is to eliminate disparities in health status based on race, ethnicity, disability, and LGBTQ status by:

(1) establishing better and more consistent collection and access to data;

(2) enhancing the full range of available and accessible culturally appropriate health care and public services across Vermont;

(3) ensuring the early and equitable inclusion of Vermonters who experience health inequities because of race, ethnicity, disability, and LGBTQ status in efforts to eliminate such inequities; and

(4) addressing social determinants of health, particularly social, economic, and environmental factors that influence health.

Sec. 3. 18 V.S.A. chapter 6 is added to read:

CHAPTER 6. HEALTH EQUITY

§ 251. DEFINITIONS

As used in this chapter:

(1) “Cultural competency” means a set of integrated attitudes, knowledge, and skills that enables a health care professional to care effectively for patients from cultures, groups, and communities other than that of the health care professional. At a minimum, cultural competency should include the following:

(A) awareness and acknowledgement of the health care professional’s own culture;

(B) utilization of cultural information to establish therapeutic relationships;

(C) eliciting and incorporating pertinent cultural data in diagnosis and treatment;

(D) understanding and applying cultural and ethnic data to the process of clinical care; and

(E) the ability to recognize the importance of communication, language fluency, and interpretation in the provision of health care services and assist with access to interpretation and appropriate communication services.

(2) “Cultural humility” means the ability to maintain an interpersonal stance that is other-oriented, or open to the other, in relation to aspects of cultural identity that are most important to the client or patient.

(3) “Health disparity” means differences that exist among specific population groups in the United States in attaining individuals’ full health potential that can be measured by differences in incidence, prevalence, mortality, burden of disease, and other adverse health conditions.

(4) “Health equity” means all people have a fair and just opportunity to be healthy, especially those who have experienced socioeconomic disadvantage, historical injustice, and other avoidable systemic inequalities that are often associated with the social categories of race, gender, ethnicity, social position, sexual orientation, and disability.

(5) “Health equity data” means demographic data, including, but not limited to, race, ethnicity, primary language, age, gender, socioeconomic position, sexual orientation, disability, homelessness, or geographic data that

can be used to track health equity.

(6) “LGBTQ” means Vermonters who identify as lesbian, gay, bisexual, transgender, queer, or questioning.

(7) “Non-White” means Black, Indigenous, and Persons of Color. It is not intended to reflect self-identity, but rather how people are categorized in the racial system on which discrimination has been historically based in the United States and how Vermont typically disaggregates data solely by White and non-White.

(8) “Race and ethnicity” mean the categories for classifying individuals that have been created by prevailing social perceptions, historical policies, and practices. Race and ethnicity include how individuals perceive themselves and how individuals are perceived by others.

(9) “Social determinants of health” are the conditions in the environments where people are born, live, learn, work, play, worship, and age, such as poverty, income and wealth inequality, racism, and sex discrimination, that affect a wide range of health, functioning, and quality-of-life outcomes and risks. They can be grouped into five domains: economic stability; education access and quality; health care access and quality; neighborhood and built environment; and social and community context. Social determinants of health are systematic, interconnected, cumulative, and intergenerational conditions that are associated with lower capacity to fully participate in society.
