

The PFAS chemicals are outrageous to me - alternatives exist, and the price tag on them should be irrelevant. The delay in cellular respiration which the fluoride in the current model of firefighting is not a small degree. Because freshwater is a mystery, I urge you not to place this tremendous weight and burden on our soil - Is more blue-green algae worth the price? We shouldn't even be manufacturing these products. And another thing, why isn't all bleach made to NSF standards? Freakish, disgusting heel world 🤮
