

Pupil Weighting and Cost Adjustments - Estimated Impacts

Based on FY2020 data with minor adjustments

Estimated rates after full implementation for pupil weighting formula, cost adjustment formula, and hybrid formula

Estimated dollar change and relative percent change in rates after full implementation

These are estimates only and do not reflect future real world spending decisions.

*See Notes at the bottom for more details and assumptions

*** Notes:**

a.) All estimates are based on FY 2020 education spending, with some minor adjustments made to reflect data corrections. Total education spending is determined by local votes, so future spending decisions and tax rates will likely differ from what has been modeled. In this model, education spending was held constant at the FY20 level, even when modeling out years.

b.) The yield is based on the sum of local education spending decisions as well as other revenues coming into the education fund. All additional revenues are FY 2020 numbers, and have not been modeled to change in the future.

c.) LT ADM are from FY 2020, with some minor adjustments made to reflect data corrections. This includes LT ADM within each cost factor category.

d.) FY 2020 data was used without Act 46 merger incentives. This led to higher equalized tax rates than would be needed to raise enough for education spending. As such, the yield was readjusted, which, in turn, lowered equalized tax rates.

e.) Free and Reduced Lunch was used as a measurement for poverty.

f.) The yield was adjusted for rates to account for changes.

Column descriptions:

Column a.: The column labels the county a district is located in.

Column b.: This column labels the district.

Column c.: This column shows the rate for the adjusted FY 2020 data. This is used as the base rate for comparison purposes.

Column d.: This column shows the estimated pupil weighting rates. These were calculated assuming FY 2020 adjusted spending and using a yield of \$11,107.

Column e.: This column shows the estimated cost adjustment rates. These were calculated assuming FY 2020 adjusted spending and using a yield of \$7,133.

Column f.: This column shows the estimated rates for a hybrid formula in which weights are used for ELL and cost adjustments are used for all other categories. These were calculated assuming FY 2020 adjusted spending and using a yield of \$7,501.

Column g.: This column shows the dollar change in rates between the FY 2020 adjusted rate (in column c.) and the estimated pupil weighting rates (in column d.)

Column h.: This column shows the dollar change in rates between the FY 2020 adjusted rate (in column c.) and the estimated cost adjustment rates (in column e.)

Column i.: This column shows the dollar change in rates between the FY 2020 adjusted rate (in column c.) and the estimated hybrid rates (in column f.)

Column j.: This column shows the relative percent change between the FY 2020 adjusted rate (in column c.) and the estimated pupil weighting rates (in column d.). Cells highlighted in blue show relative percent changes that increase greater than 5%. Cells highlighted in yellow show relative percent changes that decrease greater than 5%.

Column k.: This column shows the relative percent change between the FY 2020 adjusted rate (in column c.) and the estimated cost adjustment rates (in column e.). Cells highlighted in blue show relative percent changes that increase greater than 5%. Cells highlighted in yellow show relative percent change that decrease greater than 5%. C147

Column l.: This column shows the relative percent change between the FY 2020 adjusted rate (in column c.) and the estimated hybrid rates (in column f.). Cells highlighted in blue show relative percent changes that increase greater than 5%. Cells highlighted in yellow show relative percent change that decrease greater than 5%.
