OUR STRATEGY

- Own, operate, and develop an integrated resource management infrastructure in the Northeast
- Provide necessary solid waste disposal infrastructure to protect human health and the environment
- Advance public private partnership to bring modern expertise and resources to public assets and infrastructure
- Leverage our experience and partnerships to help organizations reduce waste and attain zero waste goals
- Transform waste into valuable feedstocks for manufacturing, agriculture, and renewable energy production
- Provide innovative resource solutions: recycling, organics, residuals, logistics, environmental services

SUSTAINABLE GROWTH

We are positioning our business to adapt, evolve, and thrive in a rapidly changing world. We aim to sustainably grow our business by creating and sharing value with our external stakeholders, and by helping customers achieve their sustainability goals. Please visit our website casella.com/about-us/casella-sustainability for the latest information about our sustainability goals and commitments.

FOOD WASTE MEETS RECYCLING

Casella has designed and constructed the first state-of-the-art facility in Vermont that will separate expired and spoiled food products from packaging. The facility, referred to in the waste industry as a “de-packaging operation”, will allow valuable organic waste to be separated and diverted from disposal. Once collected and processed, the organic material will be shipped to a powerful, high-efficiency anaerobic digester and converted to biogas. The facility will also enhance Vermont’s organic infrastructure by allowing the material to be managed in-state, versus being transported out of state and will advance the State of Vermont in achieving greater organic diversion goals outlined in Vermont’s Universal Recycling Law.
