

# State Electric Vehicle Supply Equipment (EVSE) Grant Program

 A partnership to expand Vermont's network of electric vehicle charging stations.

## Overview

Since 2014 the State of Vermont has invested over \$3.5M in public EV charging stations in all 14 counties across the state including 42 fast charging stations and 89 Level 2 charging stations. Recent investments to bolster the EVSE network has positioned Vermont as #1 in the nation for the number of EV charging stations per capita, with 114 public charging stations per 100,000 people. Electric cars are spreading across the state with 4,360 registered EV's now in 92% of Vermont communities.

A new initiative, the Multiunit Dwelling EVSE Grant Program launched in January 2022, provides \$1,000,000 in funding to help overcome barriers to EV adoption that residents of multi-unit housing face by piloting EV charging solutions to provide accessible, affordable and reliable home charging at multi-unit housing. The State will continue investments in public charging stations as well as investments in home and workplace charging to ensure EV drivers have a reliable place to charge their vehicles.
