

▼ Environmental Attribute Election

Do you elect to (1) retain ownership of any environmental attributes associated with the system or (2) transfer the environmental attributes to your electric utility?

Retain/Transfer Ownership*

Transfer Ownership

*Note: **If you are a solar customer, this election will affect the rate at which you will be credited for your generation and is irrevocable after a certificate of public good is issued or deemed issued.** Please consult with your installer and/or your electric utility before making this election. Your electric utility must retire any environmental attributes received from net-metering customers, and the energy will count towards the state's renewable energy standard.*
