

Lidar Data Acquisition

FY23 BUDGET ADJUSTMENT ACT

Senate Committee on Appropriations
January 17th 2023

John E. Adams
Director, Vermont Center for Geographic Information

Overview

Requesting \$1,734,000 to collect and process statewide Quality Level 1 lidar data in the Spring of 2023.

1. What is Lidar?
2. Current Status & Needs
3. Acquisition Plan

What is Lidar?

Point clouds
Derivatives
Uses

What is lidar?

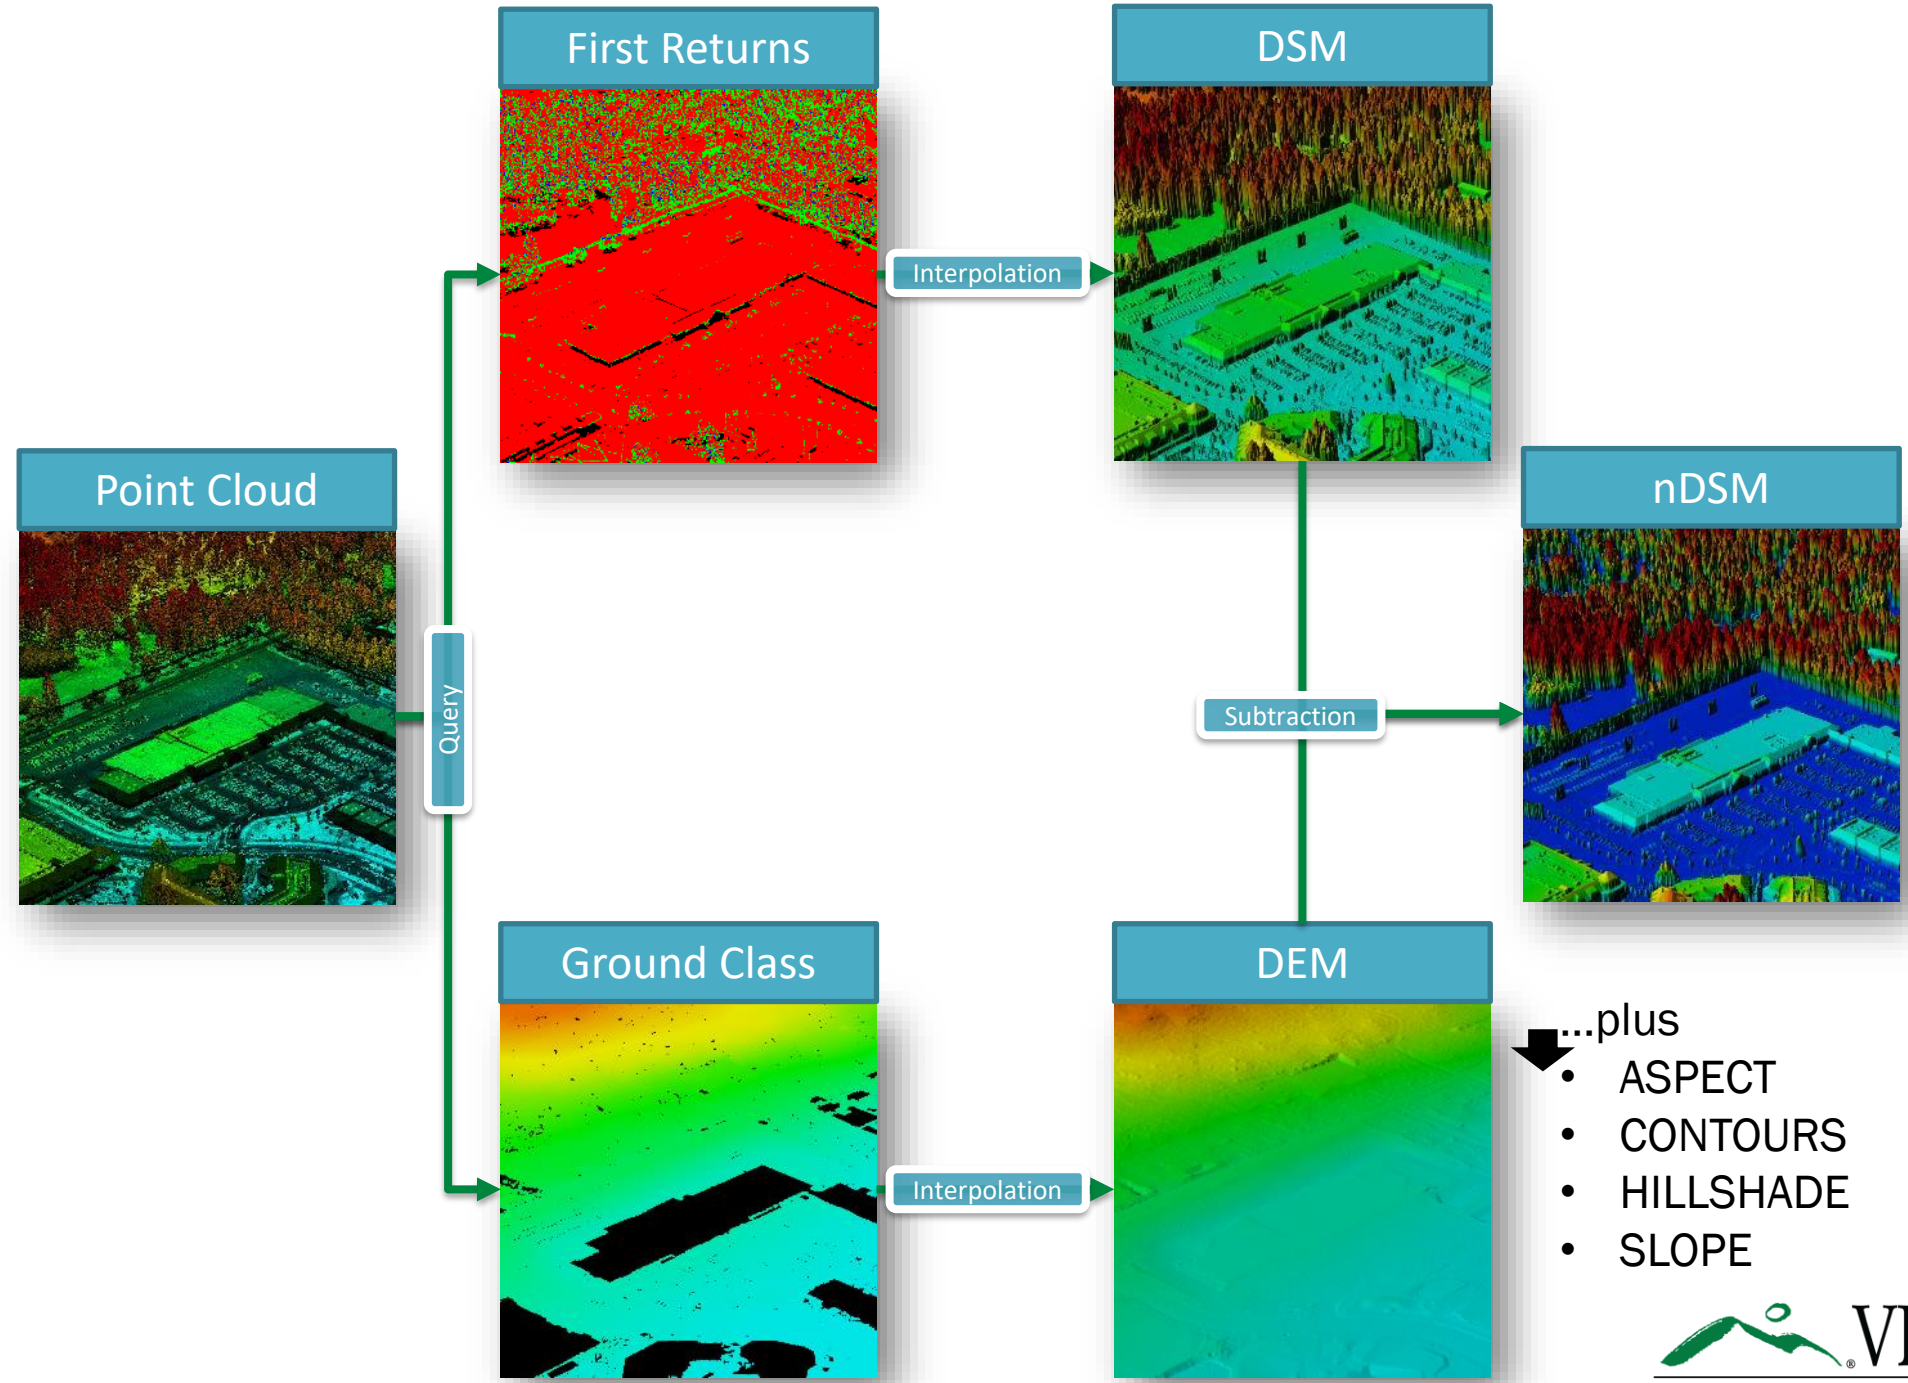

Light Detection and Ranging (lidar) is a technology used to create high-resolution models of ground and surface elevation. Lidar data are collected from aircraft using sensors that detect the reflections of a pulsed laser beam. The reflections are recorded as billions of individual points, which are processed into digital three-dimensional models of Vermont in formats readily accessible for use by state agencies, partners, and the public.

Legend

Available QL2 Lidar

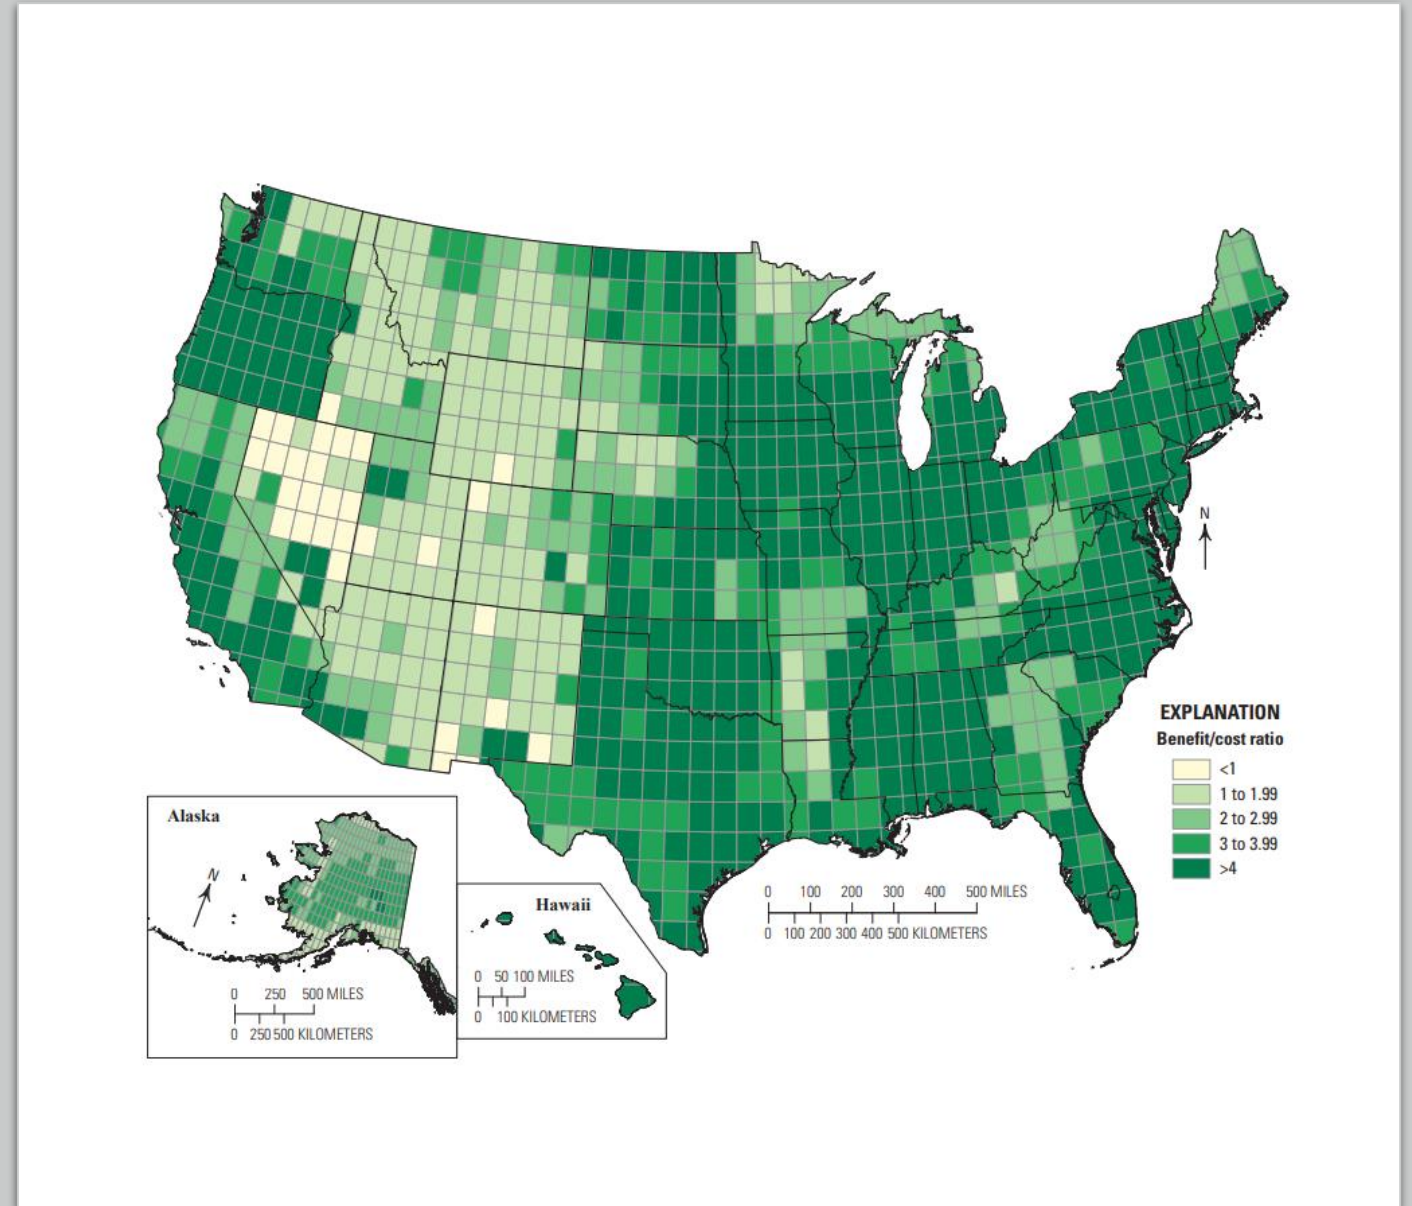

- 2013 Rutland/GI Counties
- 2014 Quad Counties
- 2015 Windham County
- 2016 Middle CT River Basin
- 2017 Western Vermont

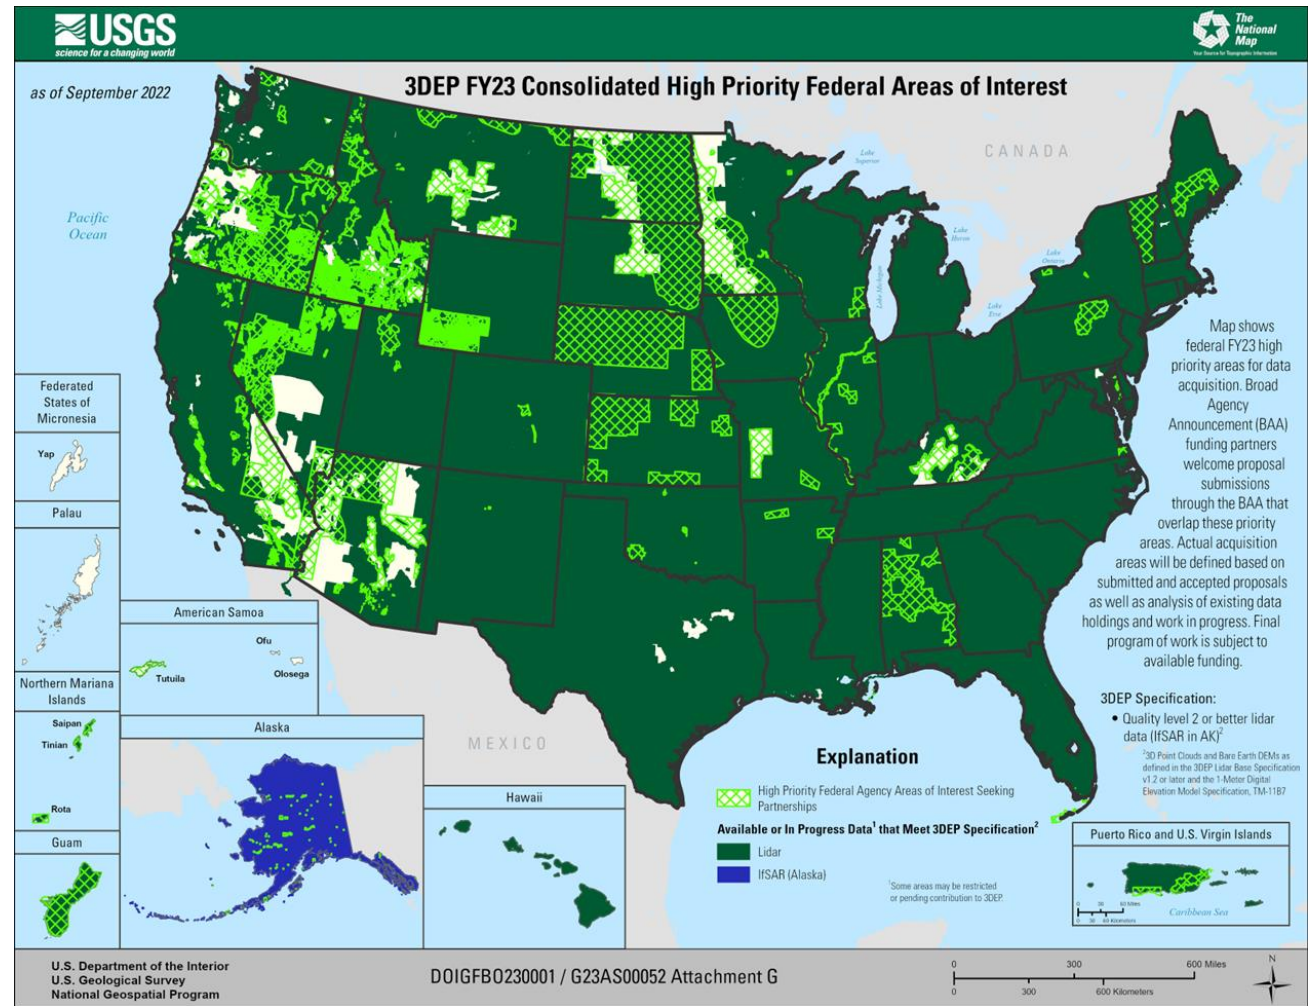

Return on Investment Study

“Nearly 5:1 return on investment, informing critical decisions that are made across our Nation every day that depend on elevation data, ranging from immediate safety of life, property, and environment to long term planning for infrastructure projects.” - United States Geological Survey

Priority: 8 years or older.

The average age of lidar data in Vermont is now >8 years old, qualifying the state as a high priority area.

Quality Level 1 (QL1)

“Consistently, we found that in order to support the work stakeholders wished to conduct, **quality level 1 (QL1) data with a minimum aggregate density of 8 pulses per square meter (ppsm) is required.** Without this level of density, the bare earth under even moderate vegetation cannot be accurately characterized.

For other applications, such as development and resource planning, a QL1 lidar dataset is needed as a baseline for future work, and ultimately QL1 data provides the opportunity to serve a much wider range of applications.”

Elevation Model
Quality Level 1
> 8 pts per square meter

FL Peninsular FDEM Orange 2018, USGS 3DEP
Distributed by Open Topography (15cm DSM)

Partner Needs

- 1) Vermont needs updated topographic data, which is now on average 8 years old and older than 10 years in parts of the state
- 2) Higher resolution data QL1 is needed to meet the most use cases
- 3) A consistent single year collection would simplify use of the data and leverage economies of scale.

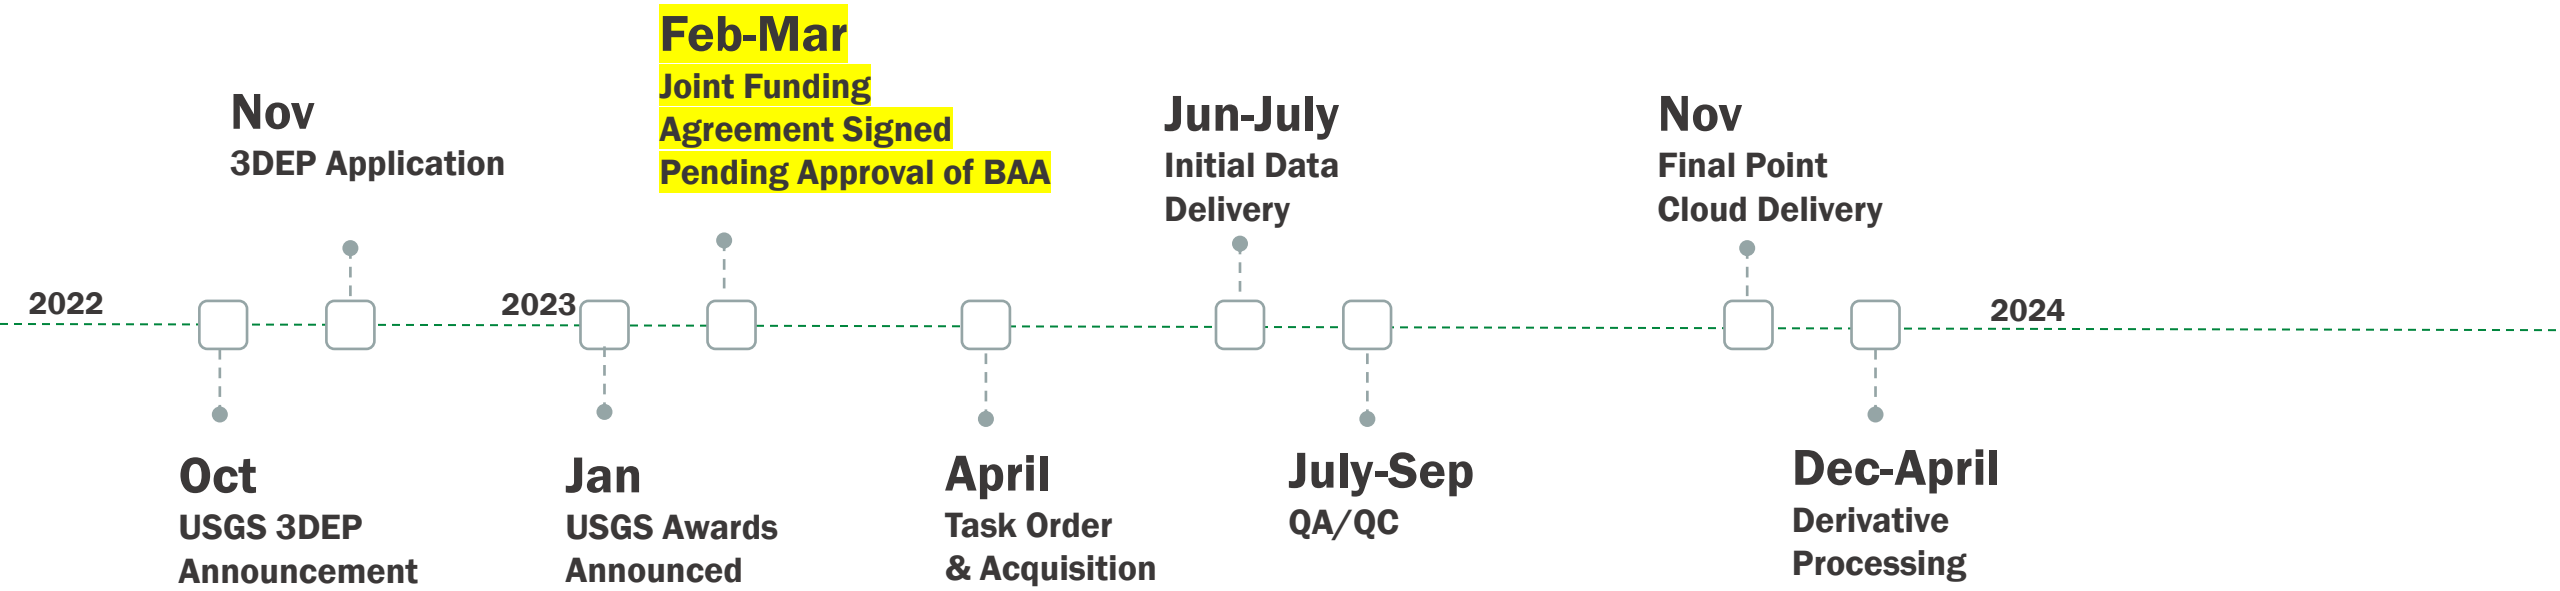

Acquisition Plan

Quality Level 1 lidar data collected statewide in the Spring of 2023 during leaf-off conditions

Steering Committee

Pam Brangan – Chittenden County Regional Planning Commission

Johnathan Croft – AOT Mapping Section Chief

Ben DeJong, PhD – State Geologist

Jess Robinson, PhD – State Archeologist

John Van Hoesen, PhD - USDA Natural Resources Conservation Service

Brian Voight, PhD – Central Vermont Regional Planning Commission
