\$ 1,778.85

Info on filters and installations costs:

If you are installing a filtered Bottle Filling Station (almost always recommended), one filter will usually come included per bottle filler. On average the filter will last about six months. If you want to order replacement packs they come in 1, 3, 12, and 48 Packs. The [Elkay Filter Replacement 3 Pack](#) usually goes for about \$230-250.

Installation

The challenge in determining installation cost is that plumbing rates vary quite a bit across the country. Also, depending on your existing setup, it could take anywhere from 1-5 hours to install a bottle filler. A very rough ballpark estimate for an installation is anywhere between \$500-1,500 per unit.

Additional:

Vermont, through its adoption of the International Plumbing Code (IPC), requires one drinking fountain per one hundred building occupants.
