Jim and Jane have each worked for the State of Vermont for 15 years and have a combined income of $\$ 160,000$. Their teenage son had a bad snowboarding accident in early 2022 and some of the medical expenses the family incurred over the year were not covered by insurance, totaling \$100,000.

AGI: \$160,000
2022 Vermont income tax without AMT: \$1,121
2022 Vermont AMT tax: \$4,800
AMT revenue to state: $\mathbf{\$ 3 , 6 7 9}$

What is "Bonus Depreciation"? A tax feature that allows a business to deduct the cost of new machinery or equipment in the equipment's first year of service. The federal Tax Cuts and Jobs Act increased the deduction amount in the first year from $50 \%$ to $100 \%$ of the cost of the item(s). Vermont generally allows a "straight line" $20 \%$ per year over five years. In year one, Vermont makes taxpayers addback the difference between the federal and Vermont schedules ( $100 \%-20 \%=80 \%$ ), but in years two through five, taxpayers are allowed to subtract the difference $(20 \%-0 \%=20 \%)$ on their Vermont return.

## Example 2) Bonus Depreciation Triggering the Vermont AMT

Kate and Ken and their two kids had been running a successful NEK organic dairy farm. But faced with the loss of their regional milk buyer in 2021, they decided to try to start bottling and selling their own milk. To help facilitate that transition, they spent $\$ 200,000$ on new equipment that year. In tax year 2021 they added back $\$ 160,000$ of bonus depreciation when calculating their Vermont taxable income leading to about \$10,000 of additional Vermont income tax because of that addback. But in 2022-2025 they are supposed to get to subtract $\$ 40,000$ from their Vermont income each year as their new business format gets going.

AGI: \$150,001
2022 Vermont income tax without AMT: \$2,921
2022 Vermont income tax with AMT: \$4,500

## AMT revenue to state: $\mathbf{\$ 1 , 5 7 9}$

[^0]
[^0]:    *Ken and Kate will continue to trigger the AMT in 2023-2025 if their AGI in those years is like 2022's
