

S.27 - Medical Debt Relief & Excluding Medical Debt from Credit Reports

Charlie Gliserman, Policy Director

April 10, 2025

Thank you for the opportunity to submit testimony in support of S.27, medical debt relief and excluding medical debt from credit reports.

The Vermont Network is our state's leading voice on domestic and sexual violence. Our members are 15 independent, non-profit organizations that offer direct services to survivors of violence and prevention programming in their communities. Together, they serve survivors in every town in Vermont.

Domestic and sexual violence remains a leading public health challenge in Vermont. We see S.27 as a step forward towards health and economic security for survivors.

The National Institutes of Health estimates that the lifetime financial cost from intimate partner violence exceeds \$100,000 per female victim, with health care expenses accounting for the majority of that loss.¹ Care ranges from emergency hospitalization and pregnancy complications to long-term mental health care and chronic illness treatment.

Survivors have higher health care costs because of their victimization, even years after escaping abuse, causing medical bills can pile up and preventing survivors from leading healthy lives, free from violence.²

Medical debt can force survivors to skip trips to the doctor, put them out of work, or create another barrier to leaving an abusive partner. Over time, it can drag down credit scores and make it harder to secure a loan to buy a home, start a business, and further their education.

S.27 is an investment in Vermonters' safety, health, and prosperity. It can support survivors moving forward with their lives.
