# Reporting on Electric Vehicle Infrastructure in Vermont H.125

---

HOUSE ENERGY AND DIGITAL INFRASTRUCTURE

FEBRUARY 18, 2025

ANDREA WRIGHT, VTRANS ENVIRONMENTAL POLICY MANAGER

# VT Global Warming Solutions Act (GWSA)

---

Act 153 of 2020

- Reduce GHG emissions below 2005 GHG emissions in Vermont by no less than:
  - 26% below 2005 GHG emission levels by January 1, 2025;
  - 40% below 1990 GHG emission levels by January 1, 2030;
  - 80% below 1990 GHG emission levels by January 1, 2050.
- Create the Vermont Climate Council
- Develop a Climate Action Plan
- Identify the means to measure progress
- Assign Sectoral Proportionality

# GWSA - Climate Action Plan

## Transportation Pathway 1 – Vehicle Electrification

- 1) **Technology Forcing ZEV Regulation (100% by 2035)**
- 2) **EV Purchase Incentives**
  - a) New & used EVs and electric bicycles, designed for equity
  - b) Expand to fleets
  - c) Continue MileageSmart and Replace Your Ride
  - d) Vehicle Efficiency Purchase and Use Tax Adjustment
- 3) **EV Charging Investment**
  - a) Continue support for DCFC and Level 2
  - b) Public, workplace and multifamily priorities
  - c) Direct the PUC to consider EV charging rates
- 4) **Transportation Climate Initiative (TCI)**
- 5) **EV and VMT Reduction Outreach and Education**

INITIAL VERMONT CLIMATE  
ACTION PLAN

Vermont Climate Council  
DECEMBER 2021

# GWSA – Measure and Assess Progress

---

## (3) Identify the means to accurately measure:

(A) the State’s greenhouse gas emissions and progress towards meeting the reduction requirements pursuant to section 578 of this title, including publishing emissions data in a timely manner;

(B) the effectiveness of the specific initiatives, programs, and strategies set forth in the Plan and updates to the Plan in reducing greenhouse gas emissions;

(C) the effect of climate change on the State’s climate, wildlife, and natural resources; and

(D) the existing resilience of the State’s communities, infrastructure, and economy and progress towards improving resilience to adapt to the current and anticipated effects of climate change.

# DC Fast EV Charging

Sec. 23 of Act 148  
(2024 Transportation Bill)

## § 2906. ELECTRIC VEHICLE SUPPLY EQUIPMENT GOALS

It shall be the goal of the State to have, as practicable, a level 3 EVSE charging port available to the public:

- (1) within **three driving miles** of every exit of the Dwight D. Eisenhower National System of Interstate and Defense Highways within the State;
- (2) within **25 miles** of another level 3 EVSE charging port available to the public along a State highway, as defined in subdivision 1(20) of this title; and
- (3) co-located with or within a safe and both walkable and rollable distance of publicly accessible amenities such as restrooms, restaurants, and convenience stores to provide a safe, consistent, and convenient experience for the traveling public along the State highway system.

# Charging Equipment

Time to “fill up” a 60-kWh electric-vehicle (EV)<sup>1</sup> battery using different chargers<sup>2</sup>

<sup>1</sup>This assumes that the EV can charge at the higher kW direct-current fast-charging stations; most EVs today cannot charge faster than 100 kW.

<sup>2</sup>This assumes that the EV can charge at maximum speed during the entire charge. In reality, the charging speed varies.

<sup>3</sup>Level 1 equipment provides charging through a 120-volt AC plug; it generally refers to a household outlet.

<sup>4</sup>Level 2 equipment provides charging through a 240-volt AC plug and ranges from 16 to 40 amps. The most common is the 240-volt, 30-amp charger, which is 7.2 kW.

# Charging Equipment

## Differences between Community and Corridor Charging

- Cost of infrastructure
- Cost of charging
- Charging speed
- Trip purposes
- Dwell times

Location	Charge Time	Price	Level	Driver
Interstate Travel	Travel 20 min	\$\$\$\$	Fast Charging	Parked
Entertainment/ Shopping/ Recreation	Public 0.5 – 3 hours	\$\$\$	L2/L3	Parked
Work/Transit Parking/Airport	Workplace 4 – 8 hours	\$\$	L1/L2	Parked
At Home	Residential 8 – 10 hours	\$	L1/L2	Sleeping Parked

# Charging Equipment – Capital Costs

	<b>Level 1</b>	<b>Level 2</b>	<b>DC Fast Charging</b>
<b>Equipment Price</b>	\$30 - 900	\$600 - 9,000	\$15,000 - 150,000+
<b>Installation</b>	\$200 - 450+	\$2,000 - 12,000+	\$10,000 - 100,000+
<b>Total Capital Cost</b>	<b>\$230 - 1,350+</b>	<b>\$2,600 - 21,000+</b>	<b>\$25,000 - 250,000+</b>

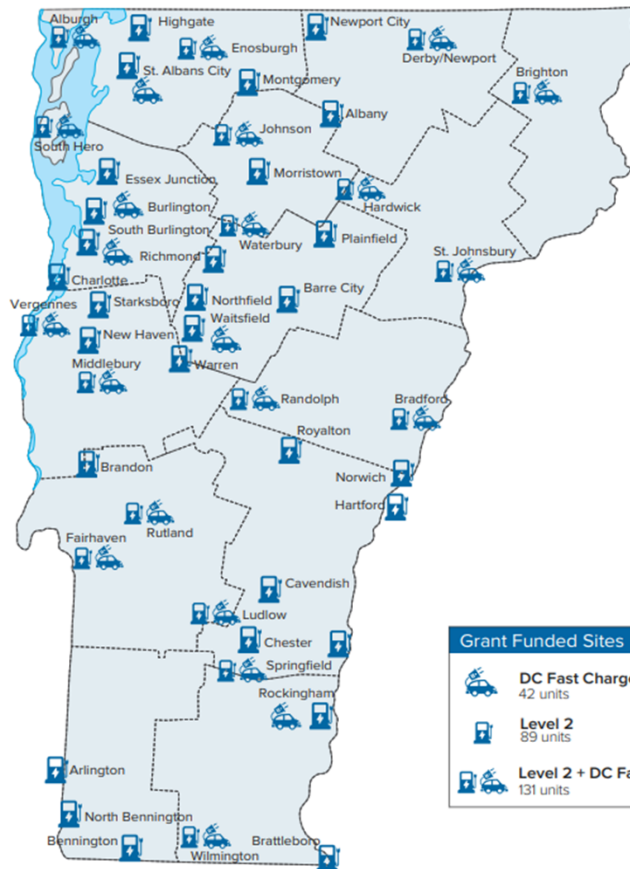

# Charging Equipment – Operating Costs

	<b>Level 1</b>	<b>Level 2</b>	<b>DC Fast Charging</b>
<b>Energy</b>	\$200 – 800+	\$200 – 2,500	\$500 – 15,000+
<b>Networking (optional)</b>	\$150 – 300	\$200 – 400	\$200 – 500+
<b>Maintenance</b>	\$200 – 400+	\$400 – 800	\$400 – 10,000+
<b>Total Annual Cost</b>	<b>\$550 - 1,500+</b>	<b>\$800 – 3,700+</b>	<b>\$1,100 - 25,500+</b>

# Funding Timeline

- 2014: VT launches Electric Vehicle Supply Equipment (EVSE) Program with \$200k
- 2017: VW Settlement, \$2.8 million
- 2019: ~ \$1 million for 75 Level 2 + 5 DC Fast Chargers
- 2020: \$1.7 million to Blink for 11 locations
- 2021: \$750k in capital funds to Norwich Technologies for 6 locations
- 2022: \$1 million to residential charging for multiunit housing
- 2023: \$10 million in state funds for community charging
- \$21.2 million in NEVI formula funds through 2026 + \$2 million in ARPA funds
- Charging Fueling Infrastructure Grants/Competitive Gap-filling Grants

# Public EVSE Investments in Vermont

## Alternative Fueling Station Density Across the U.S.

EV Chargers Per 100,000 Residents  
8.3 139.7

Ranking based upon EV charger density per capita; a rank of 1 is the best, most-dense.  
Source: CoPilot • Created with Datawrapper

Grant Funded Sites	
	DC Fast Charge 42 units
	Level 2 89 units
	Level 2 + DC Fast Charge 131 units

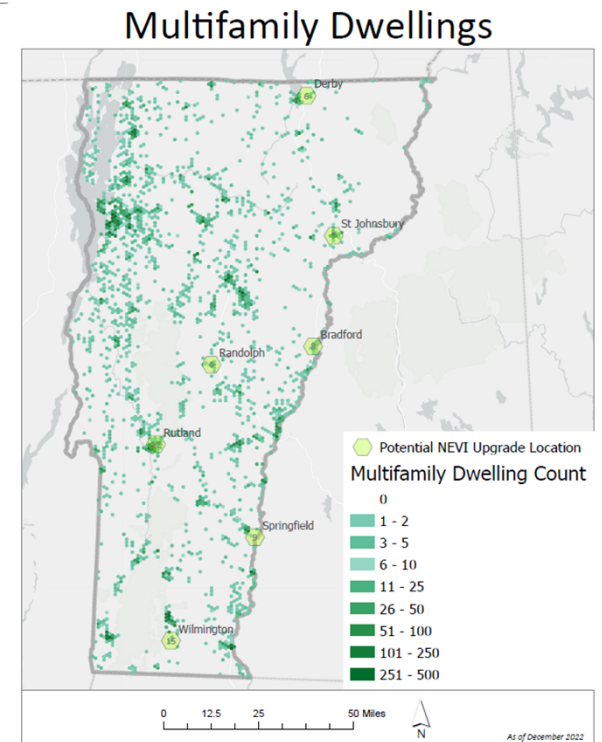

Vermont has highest number of public chargers per capita in U.S.

139.7 charging ports per 100,000 people

# General Location Prioritization Factors

- Highway traffic volumes
- Travel services and other employment
- Walkability
- Environmental justice factors related to income and race
- Multifamily housing units
- 3-Phase power availability
- Proximity to federally designated EV corridor
- Distance to qualifying EV charging location with four 150kW DCFC ports
- Gaps in charging availability

# NEVI

## 15 Priority Locations:

- 5 Standard Fast Charging Locations
- 9 High Availability Fast Charging Hub Locations

1 Active Location Opened  
April 23, 2024

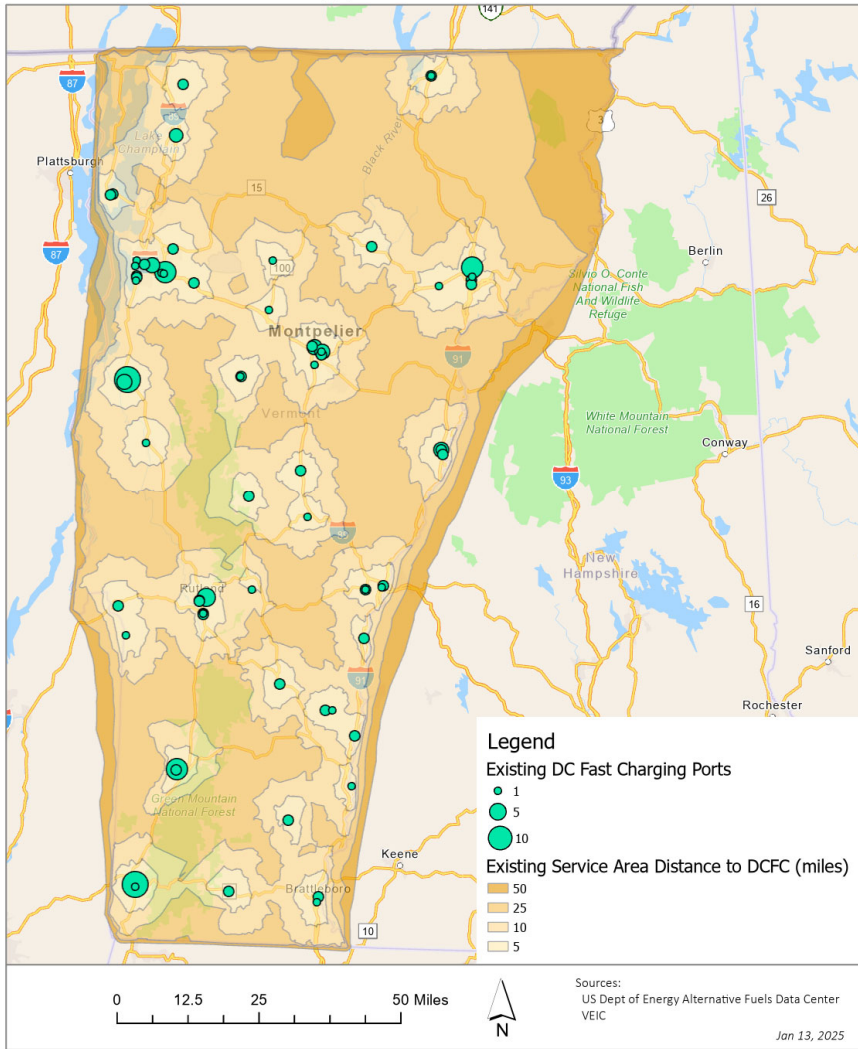

6 contracts out 11 awards  
for 14 Remaining Locations

Plans paused for next  
solicitation

# Vermont DC Fast Charging Availability

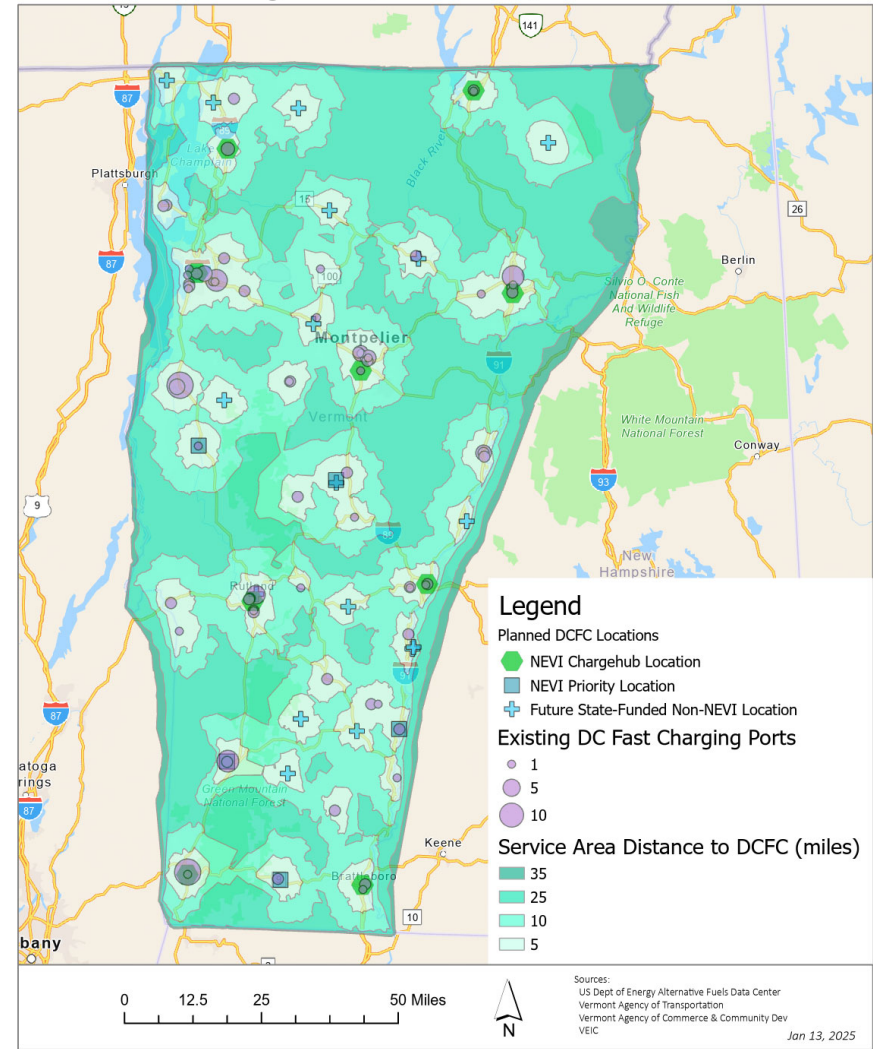

Distance to existing public locations as of January 2025

Existing  
←  
Vs.  
→  
Planned,  
Contracted,  
and Existing

# Vermont DC Fast Charging Availability

Existing Public, Contracted, and Planned

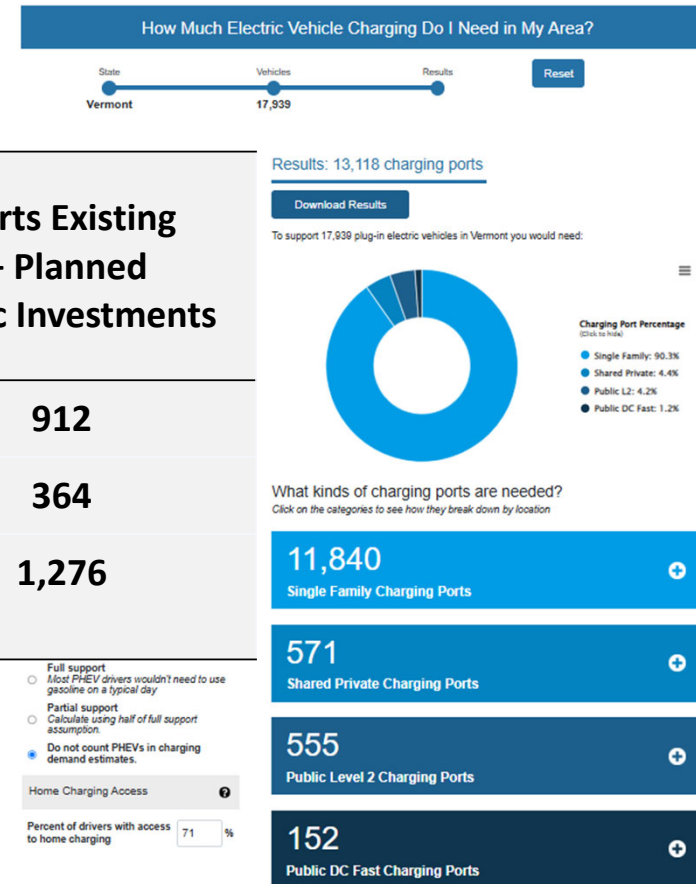

# Assessing Current EVSE Needs

Current Scenario – assuming 71% of drivers have access to home charging, 41% PHEVs.

Charging Level	Ports Needed	Ports Existing + Planned Public Investments
Level 2	555	912
DCFC	152	364
<b>Total Ports</b>	<b>707</b>	<b>1,276</b>

## EV Registrations

- 17,939 PEVs total
- 10,731 BEV
- 7,208 PHEV

<https://afdc.energy.gov/>

# Assessing Remaining DCFC Needs

To meet State targets:

- 126,000 EVs by 2030
- Within 3 miles from interstate exits
- Within 25 miles of next DCFC location

Scenario 1 – assumes 71% of drivers have access to home charging, 42% PHEVs.

Charging Level	Ports Needed	Ports Existing + Planned Public Investments	Gap
Level 2	3,105	912	2,193
DCFC	565	364	201
<b>Total Ports</b>	<b>3,670</b>	<b>1,276</b>	<b>2,394</b>

Scenario 2 - assumes 87% of drivers have access to home charging, 42% PHEVs.

Charging Level	Ports Needed	Ports Existing + Planned Public Investments	Gap
Level 2	2,126	912	1,214
DCFC	413	364	49
<b>Total Ports</b>	<b>2,539</b>	<b>1,276</b>	<b>1,263</b>

<https://afdc.energy.gov/>

# Assessing Remaining DCFC Needed

To meet State goals:

- 126,000 EVs by 2030
- 3 miles from interstate
- With 25 miles from next DCFC

## DCFC Funding - Available and Needed

Funding Source	Amount Available	Target # of Ports
<b>NEVI</b>	\$8.5 million plus 20% match from private sector	Up to roughly 62 DCFC ports: (12 required for NEVI build out, remaining toward filling gaps along corridors)
<b>CRP</b>	\$2 million plus 20% match from private sector	Up to roughly 14 DCFC ports to fill in the public DCFC network as quickly and efficiently as possible where gaps have been created by inoperable stations, remaining toward filling gaps along corridors
<b>CFI – corridor and community charging</b>	TBD – dependent on the outcome of future opportunities	TBD – dependent on the outcome of future opportunities
<b>Total Federal Funding / Ports Available</b>	\$10.5 million for DCFC plus 20% match from private sector	76 DCFC ports
<b>Funding / Ports Gap</b>	\$21.5 million	125 DCFC ports
