

Thank you for having us in yesterday. As referenced during testimony, here is the alternative language our counsel suggested to what we presented in our slides.

“The Secretary shall has authority to adopt rules that create a comprehensive greenhouse gas emission reporting program that covers all sources of emissions, including fuel supplier. Suppliers of transportation and heating fuels covered by the rules shall comply with requests from the Secretary for information. The Secretary shall adopt a rule that information collected shall at a minimum includes the types and volume of fuels sold, by sector for the transportation, residential, commercial, and industrial sectors, by county.”

This ensures that there is no ambiguity in advancing the rule.
