

We have both solar electric and solar hot water panels. We know how important they are to our homestead, and our environment. We support H.716. I want every home and business in VT to have solar, but it needs to be affordable. Please include this comment in the public record in support of this bill.

I also support any legislation that would allow plug-in solar, aka balcony or portable solar. Europe has millions of these units.

Sincerely,

Diane Teetsel
