

To the House Energy Committee,

I am writing to express my support for H 716 that would make solar more affordable for more people. Solar energy is clean, stable, reliable, and local. Supporting H 716 not only keeps our energy dollars local, but it supports local green energy jobs and helps us fight human-driven climate change. When the PUC has cut net metering compensation, adoption rates have dropped. We need more people to more to clean, locally-generated power, not fewer. Please support H 716.

Many thanks,

Duncan McDougall
