

Alex, solar can stand on its own from a cost standpoint, the need for government support is certainly diminishing. However:

- Fossil fuels still get billions in subsidies yearly - but this is at the source level, an uneven playing field.

- Solar costs are all up front (and a lot stays in VT, the installation), vs fossil fuel costs being spread out.

I'm all in on solar over a decade ago. Love it (and my Tesla Power Wall - which GMP loves also).

Henry
