

I support bill H.716 to make solar more affordable for more people. We need to continue to incentivize adoption of renewables and we need to maintain the level of compensation from utilities for Vermonters who invest in renewables. Renewables make our entire infrastructure more resilient and average Vermonters need to be in the mix of those who benefit for their part in bolstering the system.

Please submit my comments as part of the public record in support of this bill.

Thank you.
