

Dear Alex,

I'm writing to you to request that the Committee on Energy and Digital Infrastructure include clear language in H. 740 that requires ANR to inventory and register GHGs from biomass power facilities like Ryegate and McNeil. ANR must use gross basis accounting, not net basis accounting, because it is contributing to an inaccurate reflection of our emissions which undermines the entire point of having ANR document them. Please help work towards creating more effective climate policy, and make these much needed changes.

All the best,  
Carol DeRose
