

Dear Committee,

When I moved to Vermont in 2012, I was grateful for the opportunity to opt out of a smart meter. I'm someone who seeks a healthy lifestyle and avoidance of excessive non-native EMFs (NN-EMFs) is an important part of that process.

Despite the industry proclamations, NN-EMFs are causing myriad health issues. The threats from the ever-growing levels of NN-EMFs are hidden from the general public and covered up by the three letter agencies who are captured by corporate interests.

Please don't add opt-out fees to those of us just trying to avoid un-necessary harm.
