

Northeast partly a rewilding success,
beginning in Adirondack Park, but far
from complete

Continental Wildways for
Rewilding North America—
Great Plains and Gulf Coast
Wildways to be added.
Wildlands Network founded 1991
With the mission of protecting
biodiversity.
* connectivity – continental scale
Adirondack Park is key part
of much larger Eastern, or
Atlantic/Appalachian/
Adirondack/Acadian,
Wildway
* keystone species – restore,
protect
* restoration – habitat and species

Many species, like Beavers, now thriving after past exploitation

The Algonquin to Adirondack axis, A2A, is a regionally and continentally critical wildway, as shown by Alice the Moose, and likely the most viable pathway for recovery of Wolves in the northeastern United States.

Gulf Stream, northwest Adirondack Park, classic A2A habitat, and part of Oswegatchie wildlands complex, where Wolf and Cougar could roam again some day

Split Rock Wildway

Eastern Coyote our largest extant wild canine

Looking west to Adirondacks across Southern Lake Champlain Valley from Bald Mountain,
Adirondacks to Greens connection

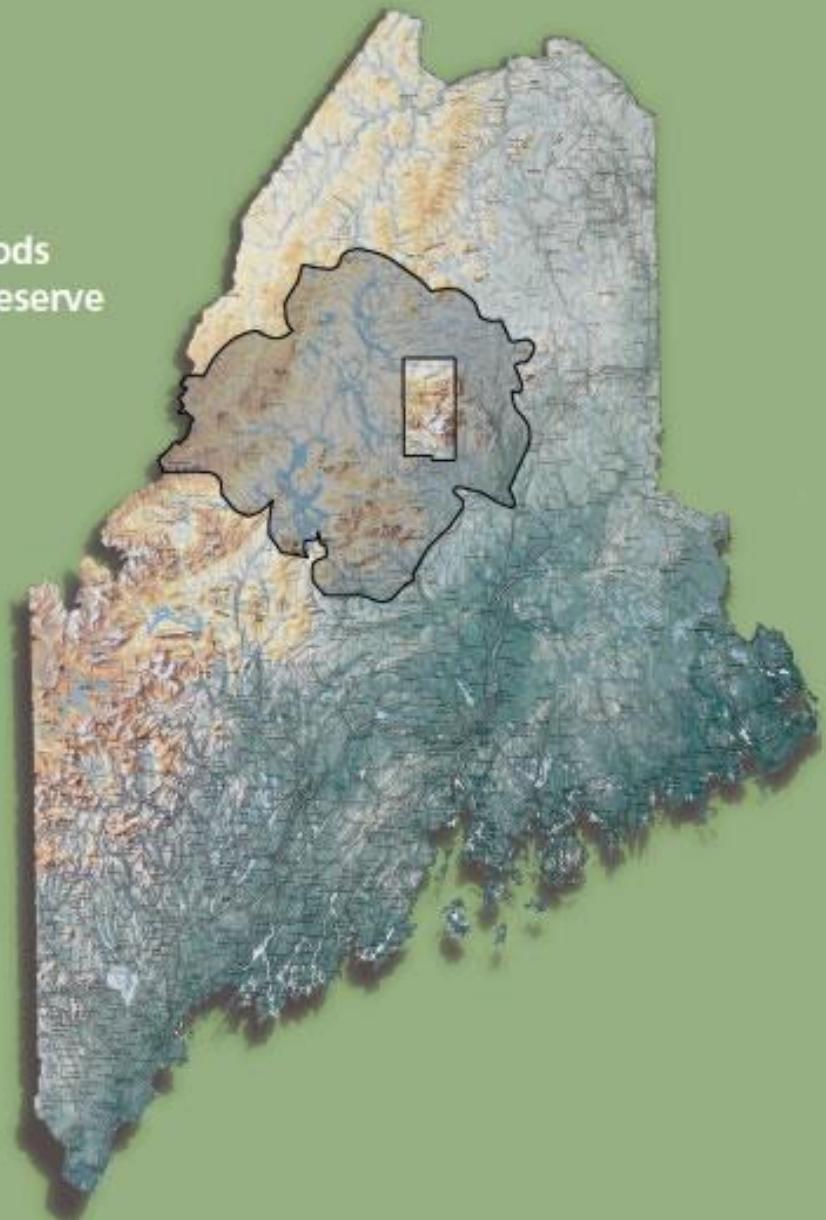

Northern Green Mountains from Belvedere Mountain, Cold Hollow to Canada, or
Greens to Suttons, linkage

Israel River near Bowman Divide, where safe wildlife crossing on Rt 2 in northern New Hampshire needed to reconnect Presidential Range with Kilkenny Range

**Proposed Maine Woods
National Park and Preserve**

St Francis River, Three Borders area where Quebec, New Brunswick, and Maine meet – potential Peace Park

Rewilding work means good jobs. Right-sizing culverts and removing derelict dams can restore aquatic connectivity while making infrastructure more durable in the face of climate chaos

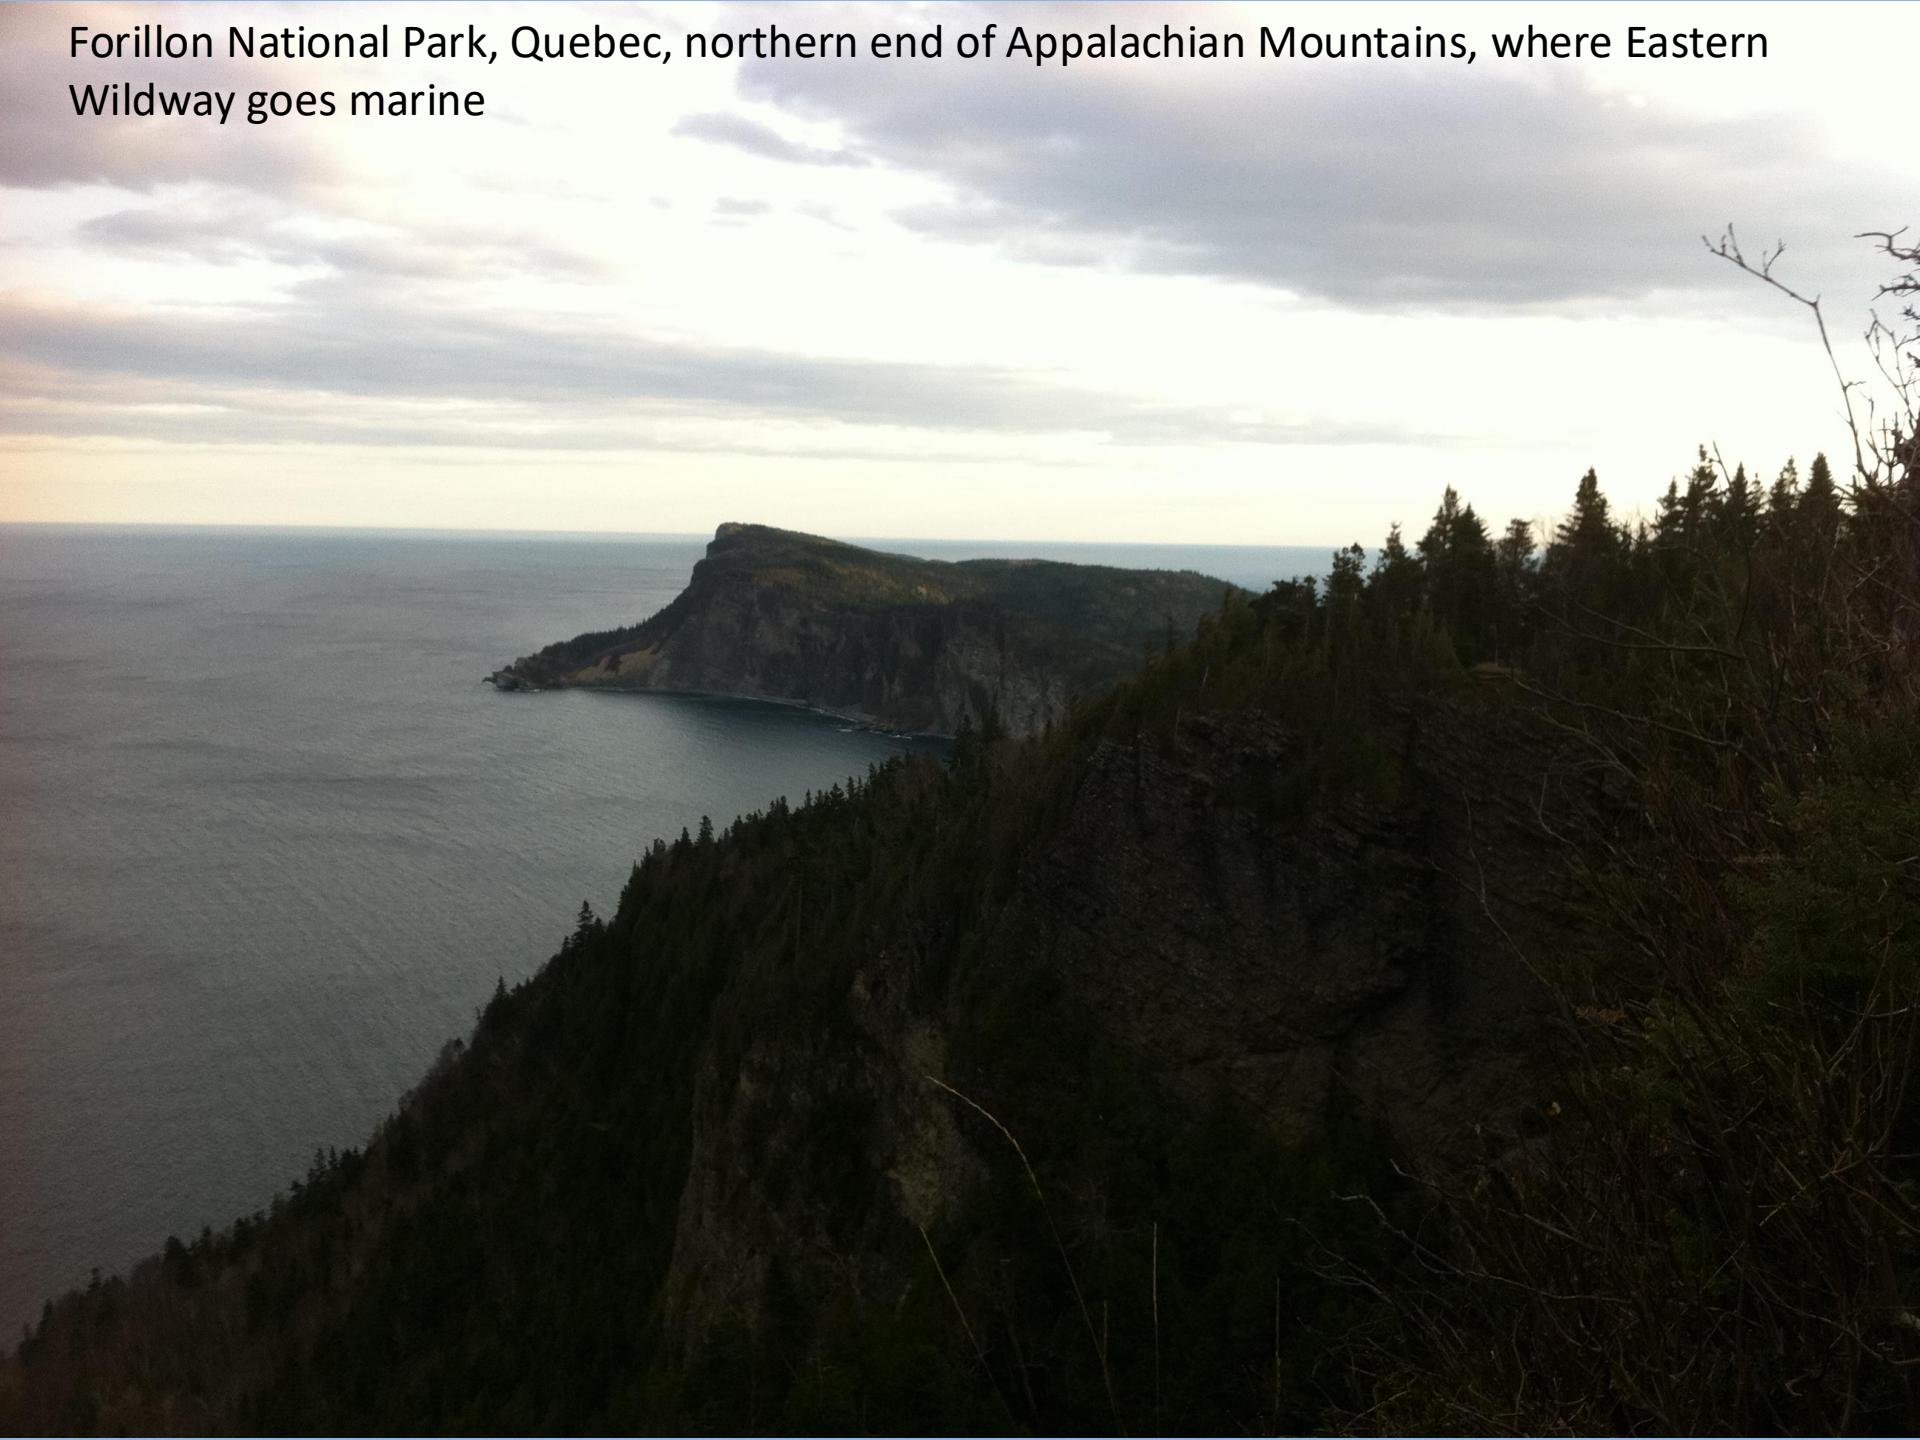

Restigouche River, New Brunswick, where Atlantic Salmon still spawn

Gaspesie National Park, Quebec, where Lynx and Caribou still roam,
near northern end of viable habitat reserve network for our region

Forillon National Park, Quebec, northern end of Appalachian Mountains, where Eastern Wildway goes marine

Puma, Almost Home
