

# COMPLETE STREETS

Local Motion's **Complete Streets** Team works with communities across the state to provide technical assistance and advocacy support to improve conditions for walking, biking, and rolling. We collaborate with local walk/bike committees and groups, town officials, schools, regional planning commissions, or other local organizations.

## COMPLETE STREETS: BY THE NUMBERS

- 32 communities received direct safety technical assistance
- 7+ communities implemented or piloted new safety or traffic calming projects

**Technical assistance** includes a variety of types of support:

- Ordinance Review
- Walk and Bike Audits
- Walk/Bike action plans
- Grant Development
- Pop-Up Infrastructure Demonstration Projects
- Community Walk/Bike Surveys
- Design and Planning Input
- Bike Parking

**Demonstration projects** are temporary, low-cost infrastructure improvements, using materials like traffic tape, washable paints, and movable vertical elements to reconfigure a street for days to months.

**Traffic calming** refers to the process of adding humps, bump-outs, and lane striping to slow down cars or reduce traffic in an area. The goal is to make streets safer and more enjoyable for people walking, biking, and living nearby.
