

Cutlery made of 100% compostable natural components

Whether it is a knife, fork, ice cream spoon or drinking straw, all of them adhere to the highest quality and ecological standards.

Our hygienic, easy-to-use and compostable products conform to all relevant food safety regulations and we are officially certified for their compostability. Under industrial conditions, visible decomposition begins after 28 days even if the products have been discarded alongside leftover foodstuffs. Our products also adhere to the increasing environmental awareness expectations of consumers regarding material, texture, colour and design.

CUTLERY

We use raw materials optimized for cutlery manufacture. The products are unique in appearance as the natural fibers are clearly visible within them.

- Knife: 17 cm, 5g
- Fork: 17 cm, 5g
- Spoon: 17 cm, 7g

SMALL CUTLERY

Our ice cream spoons are available in several colours. In case of individual requirements we can also provide them in other colours.

- Ice cream spoon: 6 cm, 1,6g

DRINKING STRAWS

The main advantage of our unique product compared to other products on the market made out of paper or actual straw is that there is absolutely no aftertaste during use and it does not melt into the drink. Due to its fiber content its appearance is distinctly natural compared to pure PLA straws.

- Straws: 22 cm, diameter 6mm, 1g
