## Fiscal Note

April 28, 2026

Ezra Holben, Fiscal Analyst

### **H.542 – An act relating to terminating testing of schools in Vermont for polychlorinated biphenyls**

As recommended by the Senate Committee on Education, Draft 4.2<sup>1</sup>

#### **Bill Summary**

This bill would extend the deadline for school districts to have the Agency of Natural Resources (ANR) complete air quality testing in both public and approved, recognized independent schools built or renovated before 1980 for polychlorinated biphenyls (PCBs). It would also create a new special fund to fund grants for investigating, mitigating, and remediating PCBs in Vermont schools.

Additionally, this bill would require school districts who apply for school construction aid to support work at a school built or renovated before 1980 to complete indoor air quality testing for PCBs. This bill would require ANR, working with the Agency of Education (AOE), to submit a PCB funding report to the General Assembly. Finally, this bill would repeal previous PCB funding language from session law. This bill is effective upon passage, except for Section 3, which would take effect on July 2, 2026.

#### **Fiscal Impact**

This bill would extend the deadline for school districts to have ANR complete PCB testing in their schools to August 1, 2031. There is no appropriation included in this bill for testing. Because this bill does not include a funding source, nor an appropriation for this purpose, it is unclear how this requirement would be funded.

#### **Background and Details**

The following sections have a fiscal impact.

##### **Section 1: New PCB Testing Deadline**

Section 1 would amend the deadline in Act 74 (2021), as amended by Act 166 (2022) and Act 78 (2023), for all Vermont public schools and approved, recognized independent schools built or renovated before 1980 to be tested for PCBs by ANR. Currently, Vermont schools that require testing must be tested by July 1, 2027. This section would revise that deadline to August 1, 2031.

The fiscal impact is unclear. This bill does not contain an appropriation or funding source for this testing.

## Section 2: Creation of the School Polychlorinated Biphenyl Program Fund

Section 2 creates the School Polychlorinated Biphenyl Program Fund. School districts would be eligible for grants paid out of the Fund for investigating, mitigating, and remediating PCBs. The program would be administered by the Secretary of Natural Resources and grants would be issued in accordance with the activities prioritized in this section.

The Fund would consist of:

1. reimbursements from a school that previously received a grant from the State for PCB investigation, mitigation, and remediation and has won a settlement related to PCBs;
2. funds received by the State from litigation over damages caused by PCBs;
3. any monies appropriated by the General Assembly; and
4. any gifts, donations, or other monies received.

JFO cannot estimate the fiscal impact of this section until the scope of funding is known. Unless monies are transferred to the Fund, grants cannot be issued to school districts. However, if monies are recovered through litigation or are transferred to the Fund, the Secretary may issue grants.

## Section 3: Amending School Construction Aid Requirements

Section 3 would amend the criteria that the Secretary of Education must consider before approving a preliminary application for State aid for school construction. Under this section, if a district applies for construction aid for a school that was built or renovated prior to 1980, it must have completed air quality testing for PCBs at the school.

The fiscal impact of this section is currently unknown. Per ANR, about 171 schools that were built or renovated before 1980 have not yet been tested for PCBs. Under Section 3, these schools would not be eligible to receive aid for school construction until they have completed PCB testing. This section could lead to districts undertaking PCB testing to become eligible for construction aid. If this occurred, this could result in additional Education Fund expenditures in future years. All else equal, any increase in Education Spending would result in an increase to the homestead and/or nonhomestead tax rates. However, as most district budgets have passed for fiscal year 2027, any impact from this section this fiscal year would likely be borne within existing budgets.

## Section 4: Funding Report

Section 4 would require ANR, in consultation with AOE, to submit a funding report to the House and Senate Committees on Education. This report would contain an estimate of the cost to complete testing, mitigation, and remediation of PCBs in public schools and approved, recognized independent schools built or renovated before 1980. This report would also include a plan to fund these estimated costs. The report would be due by January 15, 2027.

The fiscal impact of this section is unclear.

## Section 5: Repeal

Section 5 would repeal Section C.112(b)(1)(2) of Act 78 (2023), which contains current law PCB funding language.

This section is not expected to have a fiscal impact, as the funds appropriated under Act 78 for PCB testing have been obligated or spent. As there is no ongoing appropriation for this section, repealing it would not have an impact.
