

When I sent you an email asking you not to let 248a sunset I was clearly confused. Not only do I want 248a to sunset I would like to see oversight on the siting of small cell antennas. The review process is very important.

We need laws in place to protect towns and individuals that don't want towers or antennas installed by strengthening Act 250 or creating something new.

We need to work on changing the Telecommunications Act of 1996 to allow health and the environment to be considered.

What kind of world are we living in where health and the environment can't be used as a reason to stop a life damaging technology from being sited?

Don't let industry control the State of Vermont.

Thank you.
