ROTHSPEED.COM

Splitray is jammed packed with proprietary technology. Rothspeed partnered with Emtron Australia in 2024 in order to bring the driver experience and control to the next level. The result of this collaboration is the VC10M. This vehicle control interface is the centralized hub for a range of functions including but not limited to infotainment, driving assist, climate control and motorsports functions.

The superior handling is due to the completely in-house designed and manufactured chassis by Rothspeed. All suspension geometry and components are of a unique and proprietary design. Select portions of the chassis are quadruple reinforced with patent pending "X-Rail" technology.

Body	Carbon Fiber
Chassis	CR Steel
Weight	2800 LBS
Engine	V8
Horsepower	525-1100 HP
